Likewise when the politicians, smacking their lips because of the good taste of the new power, have gone too far, individuals have gotten together and thrown that outfit of politicians into the discard and put in a system, a new principle, a new party, or a new President.

And that kind of check and balance for over a century and a half has kept us dedicated to private enterprise.

It is a new philosophy, and it is a new concept—and it doesn't come out of the machine shop—it comes out of a conspiratorial source,

which now holds we should discard our American kind of check and balance system entirely and trust everything and everybody to the decisions of a little group of politicians here in the Capital City of the land. If and when we do that, we discard our concept of freedom for the concept of communism.

The Spence bill, which I hope you have all read, which you should read because there isn't any use even talking about an expanding economy if the Spence bill passes—the Spence bill was introduced on the 15th of February 1949 by BRENT SPENCE, of Kentucky, a man with whom I served in the House of Representatives for 10 years, a good American. He has no part in anyone's conspiracy, but as chairman of the House Banking and Currency Committee, one of the six most important committees of the House, he was asked by someone on top to introduce the Spence bill as an administrative measure.

If you haven't read it, before you leave Washington get a copy of it. In part it says: In event of an emergency—it doesn't say war, it doesn't say an atomic attack, it doesn't say a revolution—in the event of an emergency—and I dare say, Rolly Jones, you haven't got a member of your organization so old he can remember back so far that we haven't had a national emergency in government, but the bill says, "in the event of an emergency to be defined by the Chief Executive," whoever he may be at the time, that Chief Executive after making that finding shall then have the power, no other bill, no new appropriations, no new appeal to the people required—he shall then have the power to take over, to operate, to own, or to build any enterprise in America essential to our national defense.

And in an atomic age, I think that includes everything except the manufacturers of pinball machines, and it might include them, because up to now the Pentagon hasn't produced any better plan than hiding under pinball machines. We don't know what we are going to do if they drop those bombs on us.

That isn't in Britain; that isn't in Czechoslovakia; that is a bill produced by the chairman of the House Banking and Currency Committee 20 days after our President, talking to a joint session of the Senate and House, wrote a footnote to American history by becoming the first Chief Executive in the land to tell Congress, as he told us, that the time may come in the United States when it is necessary for the Government to take over the steel mills in the interests of security.

Let me tell you as a private enterpriser who knows something about competition with the Government, out of an experience of 12 years in that capacity, let me tell you as an ex-student of economics who has studied this problem in 27 different countries of the world, if our Government or the British Government or any other Government takes over the steel industry, you might just as well kill the canary and throw the cage away, there is no private economy left, because steel is the basis to our whole modern industrial enterprise.

We have had another balance in this country I would like to mention briefly. We have had the greatest balance in America, maintaining equilibrium between a security state and an opportunity state, that the world has ever seen.

There are people and areas and regions where folks have more security than they have under our American system of government now, and I am talking about American conditions today in April 1950, not the way somebody would make them over; as of now, we have all the security in our system that any good man should want, not as much as we can get, but an adequate status of security which can and should continue to evolve and improve as the years go on.

But there is more security, certainly, for a political prisoner in a salt mine in Siberia than there is for a retail merchant in America today. No question about that. Uncle Joe takes care of his security. He won't let you freeze the man in the salt mine because a frozen corpse can mine no salt; and he won't let you starve to death because if you starve, you are no longer a productive agent. You have security there certainly against being struck down as a pedestrian by a drunken motorist because you are never going to get out on the highway. You have security against any vicissitude of life overtaking you as you move around freely in the country because you are going to stay in the salt mines and die.

The prisoners in Alcatraz have more security from disaster and difficulty than you, better security in old age, better medical security; some doctor takes care of them every time they get ill; a better and more permanent guaranty of food and clothing and housing than any of you can expect to have.

Two or three bad buys in a depression and you move from your aristocratic home into a soup line, if you go broke, as many businessmen have. No guaranty in your adventuresome lives. But you do have it in Siberia and in Alcatraz. We don't propose to provide that degree of security in America, or at least we never have, nor are we going to give people unlimited opportunity. If it is completely unlimited opportunity you want, go down to the Caribbean; you can get it on the islands of the Caribbean. Go down to the West Indies—you can get it there. Go to any semicivilized area of the world where there are no codes of ethics, no laws, and no business standard or ethics and there you can practice the law of the fang, the tooth, and the claw. There you can have opportunity—unlimited, uncontrolled, and probably unrewarded. We have declared for a long time in America that government exists to prod and to penalize the people who need prodding and the people against whom a penalty should be attached. Such a rule of reason provides the maximum in opportunity dividends with just government supervision to provide a fair chance for a free people.

Aside from that, there is opportunity enough, there is security enough, and no other country has been able to establish that balance and that equilibrium of human objectives that we have in our American opportunity, and those who would now centralize all authority in Washington would destroy that.

To get an expanding economy, I think we are going to have to increasingly move in the direction of flexibility of decision on the part of the citizen.

There are at least 10 things now which are operating in your lives which tend to put in a strait-jacket your capacity to provide your share of an expanding economy.

You have a minimum-wage law. You have a maximum-hour law. We have price floors in certain phases of the economy. We have standardized, legitimized margins of profit in certain economic enterprises. We have established rules of competition in many areas, like transportation. We have been confronted with a salary limitation that anybody making over $25,000 a year must be considered a second cousin to Hitler. That bill didn't pass Congress, but it may come up again, and it could pass at that time. And you have it in fact, if not in substance now, in the income tax which makes it almost impossible, beyond a certain level, to acquire any wealth.

We have a Fair Dealers' theory of equalization of wealth and income as a new concept of taxation, the old theory being that taxes were levied primarily to support the Government. Now taxes are used to punish the wicked and reward the just—an equalization trend operating increasingly in America today.

We have allocation of materials in certain areas. We have the concept that the Government should establish a yardstick so holier-than-thou politicians can take crooks like you, in the minds of lots of people, and establish a yardstick to determine how you should operate and what you can do. Finally we have outright Government ownership in certain areas and moving rapidly in the direction of Government ownership in insurance, in medicine, in steel, and in many other areas, including the functions of banking and construction.

Now I submit to you that in my opinion those facts are the results of movements, movements which have been running around in the world for at least a hundred years and from which we have not been immune. Movements, if you please, which we are still importing from Europe.

In America we describe them mostly as part of a planned economy. In essence what does a planned economy mean? Those favoring a planned economy believe politicians can plan more wisely and equitably than individuals in private business, that is all.

A planned economy is, in my opinion, the most gratuitous insult ever thrown to the businessman, because it assumes the people you elect are so much abler or ethical than you that they alone can arrange it; and a planned economy is committed to failure unless it has authority in the hands of the planner to compel the people to go along.

What good is a planned economy if each of us is still going to follow the inclination of our own nose? Why give fellows like me in the United States Senate the authority to plan your lives if some of you can still lead your own lives? Why permit us to pass laws and establish bodies determining how you can mark up and where you can advertise and how big you can grow, and so forth, if we are still going to permit exceptions? So you have to put in our hands the police power they placed in the hands of Adolf Hitler and they placed in the hands of Joe Stalin. And when you fail to put that police power in the hands of the planners, you get the catastrophe that happened in New Zealand and the chaos that fell upon Australia, and the sorry situation prevailing in Great Britain.

Too many cooks spoil the broth—a lot of plans and nobody operating them so as to get efficiency, economy, or sustained direction. Consequently a planned economy always leads to tyranny where there is but one plan, and one man or group with power enough to make everybody conform with that plan. Thus you get communism, nazism, fascism, or national socialism. Same difference either way.

Let me suggest in my concluding statements some things that I think you must do if we are going to expand the economy and restore the areas of freedom to the American business colony, because I think it can be demonstrated by the book that the areas of human freedom all around the world have been shrinking startingly for the last 20 years. With the sole exception of Turkey, the areas of human freedom have been growing smaller, and that includes the United States of America.

The first thing I think you have to do is this: I think businessmen have got to get into politics. I know from experience that politicians have gotten into business, and by the way, we have some great plans we haven't talked about yet. I think unless business gets into politics, the labor organizations which are in politics, the farm organizations which are in politics, the pressure groups which are in politics—those big and brave and bold enough to make their influ-

ence felt on election day—are of course going to continue to determine the trend of our economy, and it isn't going to be an expanding one.

If you get into politics, you are the most influential people in your craft and in your community who can help determine the trend of destiny in America, and that pretty well, in my opinion, predetermines the trends of world affairs.

There is always a choice in your home district between two candidates. It doesn't mean you are always going to vote for a Republican against a Democrat or a Democrat against a Republican, but there is always a choice. You seldom find two fellows equally dedicated to the principles of private enterprise, equally articulate, equally influential, and equally supported by a voting record demonstrating where they stand when the chips are down.

Get on the side of the fellow fighting your battles whether he is a Democrat or a Republican, whether it is in the primaries or the fall election. If you don't support him, he may not win and cannot support you.

So I say, first of all, that this thing is going to be determined in large part in America at the polling places by what people like you do or do not do.

Secondly, I submit there might be a place for your organization in a great new movement which in America we hope is going to produce another fact. I refer you to the All-American Conference to Promote Freedom and Defeat Communism, called under the auspices of George M. Craig, holding its first meeting in the Astor Hotel in January, its second meeting last Sunday, and there is to be a big meeting in Chicago in the La Salle Hotel come next May 13 and 14, in which we propose to organize into one great phalanx for freedom, all of the organizations in America of good repute wanting to do something except grumble about what is happening to their freedoms and about the threat of communism here at home.

I am sure your organization is an organization of good repute. We have been able to bring the American Federation of Labor into this new conference along with the Federation of Women's Clubs, the Kiwanis Clubs, the Lions Clubs, the National Grange, the Jewish War Veterans, the VFW, the American Legion, and many others.

We now have organizations representing some 50,000,000 Americans we hope to unite in a program in Chicago to do something at the grass roots level to protect the freedoms which we have, to fight for them again the way Americans have done repeatedly in times past to make them work.

A third thing I think you can do, I think you can get behind legislation—and I am not going to press this point, because I didn't come down here to lobby.

But there happens to be a bill on which my name is associated with Senator FERGUSON, of Michigan, and Senator JOHNSTON of South Carolina, but it is a significant bill, one time called the Mundt-Nixon bill, now called the Mundt-Ferguson-Johnston bill. It should more significantly be called by its title which is the Subversive Activities Control Act of 1950. The Senate Judiciary Committee brought it out of committee with a favorable vote of 12 to 1.

What does it do in essence? In essence, it denies Communists the privilege of holding a job in the Federal Government, and if they sneak their way in it puts them in jail. And it also puts in jail the Government official who knowingly appoints them to the job. It doesn't outlaw the Communist Party. I wouldn't outlaw it. I want to permit them to circularize and hold their campaigns and stand for election because not many people are going to vote for them. But our bill would prevent them from getting jobs like Hiss got his, by appointment, like Wadleigh and Noel Field and Judy Coplon.

Also, it makes the Communists register themselves and operate in the open; and if they continue to sneak-thieve their operation in positions of importance it puts them in jail for violating a law which says, "You have got to operate in the open. You are not going to get into politics secretly."

You register if you vote in the primaries. You have to register your party literature in all States under the Hatch bill. Those things we are going to require the Communist Party to do.

And, fourthly, may I suggest the great educational opportunity that you confront if you really want to do your part in helping to keep America American?

May I show you just one exhibit here? If you think that the so-called Mundt-Ferguson-Johnston Act isn't going to stop this kind of Communist conspiracy in this country take a look at the Daily Worker published March 2, every page devoted to opposition to the so-called Mundt-Ferguson Act. They are working. They claim they are raising a million dollars to keep it from Congress and off the floor of the Senate. At least, the Communists know this bill will expose and curtail their racket.

If you feel as we do, and as the 12 Members of the Senate Judiciary Committee feel, that the time has come to deny Communists the right to represent us in appointive jobs, I believe men like you can offset this kind of attack which comes every day from the Communists.

Now, about your education opportunities in a broader challenge. I don't know any group of Americans in any line of activity that have contact with more individuals than you have. I think you can do a great job of educating your employees, your customers, and the general public against the growing tendencies toward collectivism here.

That is part of the program we hope to undertake in the All-American Conference. But think of the things you can do individually. Think of the great job General Motors has done by publishing this book Something To Think About, which records facts for everybody in the employ of General Motors to read and understand, simple facts about what private enterprise means in America, simple facts pointing out the difference between life under socialism and life in the United States, facts no American should ever forget.

It says that in Russia for example, the average worker with a week's salary can buy 17 pounds of sugar; 500 pounds of sugar in America, in Russia 17 pounds; under socialism in Great Britain 282 pounds—all with the same amount of work at exactly the same type of job.

Those are the facts that mean things. Take-home pay. That's what employees are interested in. They want to know what our badly inflated 59-cent dollar will buy and how many we must stack up on a counter some place to buy what we need compared to the purchase power of similar work under communism and socialism.

General Motors is telling its employees the lesson you could tell all the people in your community in a full-page ad, in a little message inserted some place on the back of a sales slip, in the material that goes out to the customer, and as you talk to people in the associations you belong to in our American towns and cities.

In April 1950, in the United States, one worker in a week can buy 276 quarts of milk, under socialism in Great Britain, 133 quarts of milk; for the same amount of labor in the same kind of job in Russia, 25 quarts of milk.

Page after page of facts and charts and diagrams like that, General Motors has sent to every employee of its groups, facts that you can get, facts that you should use.

If you haven't the book, you can write for it. General Motors will be happy to send it to you because they are working to protect an environment for all of us—Something To Think About, that is the name of this monograph.

Jobs such as Spiritual Mobilization is doing in California should be encouraged by you all. A great American, Donald J. Cowling, who has associated himself with great educators and preachers, is working with Reverend Fifield on this great project. You should help. For what would they defend freedom? For you to have the freedom. For whom? For you to fight politicians looking for more power and for you to continue as independent, respectable, and respected businessmen.

I am for you because I have been down here 12 years, and in that length of time I have yet failed to see any politician, executive or legislative, Democrat or Republican or independent, civil or not civil service, so good and so wise and so important that I for one am willing to turn over to him my America. And I have known them all, most by their first names. They are some good and some bad. We are doing pretty well in Congress, you know. We have two of our boys in jail, one in the White House. We have got them moving in both directions.

"We are interested in helping the movement," you can write to Spiritual Mobilization, if you want to do something effective to strike back against communism and its collateral creeds. The address is: Title Guarantee Building, Los Angeles, Calif.

I wonder how many of you have circularized the book you helped to pay for? The chamber of commerce helped to get out a book Socialism in America. It is a fine thing to distribute. Don't ever think politicians are going to distribute it for you. It is something you can distribute in the community, to the kids in schools, to the youngsters home from college, to offset the movement so highly financed by the sources from the left.

Let me point out to you what some Americans are doing individually; it is what I think has to be done generally as an education process if we are going to organize America within 5 years to defend the system which I think can collapse within 5 years if we continue to reward the apostle of collectivism and to defeat the fighters of freedom, which we are apt to do unless folks like you somehow can change the trends.

"Socialism, brother, you don't know the half of it." This is a Standard Steel Spring full-page advertisement. It tells in layman's language exactly what is wrong with state socialism and a planned economy.

If you write to this company at Coraopolis, Pa., they will send it to you so you can make it available, too, to the folks of your community because it is important. The same company has run many similar advertisements. It is encouraging to know that we are getting some individual support, at least, for this great system which protects the individual.

Here is one from the McGraw-Hill Co., manufacturers of, producers of, a great many periodicals a great many of us have read: "Give us the tools, your only chance of getting ahead."

It points out the only safe national policy is to make it possible for American industry to do its job, not to terrorize private business by political proposals and threats of ruinous taxation and take-over programs, but to defend it and give it a chance. How are you going to expand our economy if the reward for expansion is a Government penalty? How are you going to change the atmosphere without making the people of your community for whom expansion means the most—the employees, the customers, the housewives, the farmers, the workers—realize that their eggs are in the same basket and their chips are in the same game along with yours? What are you doing to bring this realization home to them?

That is an educational program. It has to be undertaken somehow by folks like you. Are you doing your part? Or are you trying to hitchhike a free ride on the freedom train?

Hats off to the Texas and Pacific Railroad Co. for its series of ads: "Because I don't want to move," the lady says in this advertisement. "Too bad," the article says, "but you are going to have to move." A Government bureaucrat runs your home and tells you you have got to move out. All the dividends from public housing are not tile bath tubs! A lot of them are unhappy people pushed around by arrogant politicians who become the landlords.

I have spoken my allotted time. I don't want to talk any further, but I do want to urge you, in concluding, that there is a job in America to be done, to save this country. I see nothing wrong in the formula which built us as great as we are. What we need is the will and the courage to defend it.

I see nothing in the technological foray of new inventions in machine shops that makes it essential for us to discard the formula of freedom. Ours is a political challenge not a mechanical one.

I see nothing in the atomic bomb or television which has glorified the politician to make us so wise that a few of us know so much more than all the rest of you in America.

I think it is just time that the individuals to whom this country belongs do something to protect it and to build it and to support it. I have suggested at least a few ways in which you yourselves can join in a fight for freedom to preserve it here in its last great bastion of the world. The movements of collectivism everywhere else have concentrated power in the capital cities of the land to the distress and despair of the people generally. In America, let us continue the formula that has made us great. [Applause.]

Mr. JONES. That was South Dakota that was talking.

Thank you, Karl, very much for that message. I knew this crowd would like it, and I think you have done us a great service.

Since the hour is growing late, are there any questions that we can have very quickly?

Dr. Nystrom.

Dr. NYSTROM. Mr. Chairman, this is not a question to Mr. MUNDT.

I am asking for the privilege of addressing our President, Mr. MUNDT, so if you care to sit down while I complete this.

I would like to offer three resolutions, either together or to be handled separately, as you may think best.

The first resolution is a thanks and deep appreciation to Senator KARL MUNDT for taking time out of his busy days in the Senate and coming here and making a highly inspiring, stirring address that will move us to action. Of that I am sure.

That is my first suggestion. I would move that resolution.

FROM THE FLOOR. Second.

Mr. JONES. All those in favor say "aye."

(Chorus of ayes.)

Opposed?

(No response.)

The motion is carried.

Dr. NYSTROM. Mr. President, the second resolution that I would like to offer is something that I think that we need to take in the way of implementation of the suggestions that Senator MUNDT has made here today.

They are ideas about which we have been thinking, but he has given them an enormous spur by what he has said here this morning.

One of the things we can do is to get the American public to get out and vote and to start with ourselves first of all.

I have been amazed and shocked at, ashamed, over the fact that in the last presidential elections only between 45 and 50 percent of the voters of this country actually voted. I would like, therefore, without any argument, any further than that, to offer this resolution:

Resolved, That the members of the Federation be urged to use their influence to carry out the following program so far as possible:

1. Speaking to ourselves, to register and vote in all elections.

2. To see that all members of our families who are qualified to vote also exercise their franchise.

3. To urge our employees and their families to register and go to the polls and exercise their right to vote; and

4. To urge others among our friends and their friend's families to vote.

I would like to move the adoption of that resolution.

Mr. JONES. Is there a second?

FROM THE FLOOR. Second.

Mr. JONES. Any discussions?

All those in favor say "aye."

(Chorus of ayes.)

Opposed?

(No response.)

The motion is carried.

Dr. NYSTROM. Mr. President, I offer a third resolution. I think we have done something of which we have a right to be proud, providing we do something about it, and the third resolution that I would like to offer is that you as President of the American Retail Federation designate a suitable committee for the implementation of this resolution—the appointment of a committee to consider all of the things that may be done in the way of a program for getting out the vote in this coming election, both for the registration for the primary election and the general election that will come next fall.

If there is any one thing that we ought to do, ladies and gentlemen, as business people confronted by the facts as presented here this morning, it is getting out the vote; and I would move the adoption of a resolution asking our President to name a representative committee from the respective retail trades to work out the ways and means by which suggestions can be made on what can properly be done by retail trade. That is my motion.

From the floor: Second.

Mr. JONES. Any discussion?

All those in favor, say "aye."

(Chorus of ayes.)

Opposed?

(No response.)

The motion is carried.

Thank you, Dr. Nystrom.

Is there anyone in the audience who would like to direct a question to Senator MUNDT?

Mr. HARMAN. Harman is my name, from Delaware.

I would like to ask the Senator a question. The former speaker in effect said spending is necessary to keep the standard of living expanding. How would you supplement the economy if it were not for Government spending? I would like to ask him if he thinks—and, in effect, he said if we keep on spending it will wreck the economy now—is Government deficit spending necessary to advance the standard of living or can we progress under a balanced economy?

Senator MUNDT. Of course, I very much dislike getting into an argument with a colleague who is absent, but since you have asked the question——

Mr. HARMAN. Would you pardon me if I just make one statement? He did not say that Government deficit spending was necessary.

Senator MUNDT. Let's assume the statement then read Government spending is essential to prosperity.

I would like to call attention to the fact, which I think is so equally overlooked both in public and private life, that I find nothing in my study of economics either from the books or from experience at home or abroad which points out any place anywhere that Government produces any new wealth.

I think we have got to recognize it is just a question of who is going to handle the dollars which are available. Are they going to be handled by people engaging in businesses, permitted to use the larger portion to put a new wing on the factory or a new floor in the store, or are we going to take the money from the people increasingly in the form of taxes to give the politicians in Government to turn back to the public in the form of subsidies or benefits or programs that Government operates?

The wealth of this country comes from one place, and that is pumping it out of the soil somewhere. New wealth has to be produced from the soil or from the water in the form of raw foods or fibers or from the timber industries or metal industries or oil or coal.

That new wealth is processed and turned over in the march of trade and pyramided up so that almost inevitably the national income is seven times, every year—good years or bad—the total amount of the price paid for the raw materials produced by new wealth in this country. The Government is simply a handler. It is the turnover and processing of each year's production of new wealth that brings our annual national income to seven times the value of the raw materials. The Government itself produces nothing.

So to my way of thinking, the less Government expense the more money for the people to spend in productive enterprises and in the expansion of new wealth, and consequently the greater is your expanded economy. The private dollar always buys more for America than the public dollar buys.

Mr. PETERSON. I want to say, first, Mr. President, that as one who was born and raised in the State of Alabama, it encourages me to hear a Republican from South Dakota defend States' rights and decentralization of power.

The comment I wanted to make, Mr. Senator, was this: You spoke of the conditions in England. England, of course, went socialist because the majority of the people who voted voted for socialism. Isn't it because the people were led to vote for socialism by the promise of the government for increased allotments and increased security, and aren't we moving down that same road very fast when we constantly increase our social-security benefits, when we lengthen the time of the unemployment compensation, when we give the farmer more and more billions for his potatoes and other products?

Aren't we moving down the same road that the English travel, buying the votes of these people for the purpose of perpetuating an administration that is moving more and more toward socialism?

Senator MUNDT. I want to say to my good friend from Alabama that I think the questions on that answer themselves: I think we are, and that was the basis of my observation that creeds and movements tend to produce facts. What we see is the result of an organized movement.

I know you people in business have been so busy you haven't had time, I imagine, to read the entire Communist creed. But I have studied that now for 20 years. I know what they planned and what they proposed, and this business of holding a carrot out in front of a horse, the long promise, is part of the program, of course, of every collectivist movement.

But since you are from Alabama, may I say something else?

I have been trying to discuss these problems which confront us now for a period of years, and in the last 2 years have had the termerity as a Yankee to go down into the deep South once or twice. I spoke down in Charlotte, N. C., 2 weeks ago today and Friday night to approximately 2,500 businessmen in Memphis, Tenn., in the city audi-

torium. My theme there was this: That time is moving mighty fast; that if we are going to stop this drive toward centralization, I think there are three things—three possible things—that might be done and which should be done in the very, very early future.

No. 1, I think, sir, that if your great Democratic Party of the South could recapture its party and rededicate itself to the principles of individual and State rights, nominating a candidate of the capacity, let's say, of HARRY BYRD, of Virginia, that all kinds of Republicans in my area would be delighted to vote for that kind of candidate. That would stop the current crusade toward collectivism.

Or, if that can't be done, I think if the Republicans were to nominate a presidential candidate who would make a fight for the American way and make it clear that he went straight across the board with that concept and avoided putting into his platform and program a few minor proposals which understandably are insulting to the South, I think there are hopes, perhaps, that the South for the second time in history might break its solid phalanx and vote for a principle instead of a prejudice.

If neither one of those two things happens, I think the tremendously significant analysis that Raymond Moley made of the British election in Newsweek is then in point. I think all of us should read and read again that significant report by Mr. Moley in the last issue of Newsweek. Moley pointed out that the forces against socialism in the last election cast 3,000,000 more votes than the forces of collectivism, but the forces opposing socialism were divided between Conservative and Liberal. And, as Moley said, "that is the trouble in America." More people believe in the system that has made this country strong than the theory that politicians can make the country greater, but they are divided, unhappily, by a historic, imaginary boundary drawn some place called the Mason and Dixon's line.

If there could come about a political realinement so that the forces believing in this system could make their influences felt on election days for President, I think you would see that well over 50 percent of all Americans, if they could vote in unison for the same candidate, would vote for a preservation of State and individual rights and for defeat of those who would glorify politicians at the expense of the private citizen.

I think those are three possibilities; none of them are very easy to bring about, but all of them are possible. Any one of the three, in my opinion, will rededicate America to the faiths of its fathers. I sincerely hope we shall not permit devotion to the Mason and Dixon's line in America to cause us to fall completely victim to those devoted to the Communist line in Russia.

Mr. JONES. Since we are running right close to our lunch hour and we have another very fine speaker, I think we will bring this session to a close.

I would like to say to Karl again, thanks very much for being here.

An announcement or two: This afternoon we have two very fine speakers on the program that will have something to say that I know will be interesting and informative.

First, Mr. Denham, the general counsel of the National Labor Relations Board who is now more of a controversial figure than he has been in the past, because of Reorganization Plan No. 12.

We also have Senator BRIEN MCMAHON, the chairman of the Joint Committee on Atomic Energy, who has consented to talk to us in a closed meeting and off the record on the subject of atomic energy and defense.

I think that is a full program for the afternoon, and tonight, of course, is our annual dinner at which Senator TAFT will speak on the subject, Are we heading toward financial disaster?

That speech will be broadcast coast-to-coast with the Columbia Broadcasting System.

The last count is that we still have nearly 300 Senators and Congressmen on hand, and I am sure that it will be an evening which you will all enjoy. So please don't anybody try to catch the Congressional today, and stick it out with us.

We will adjourn for luncheon in the same room we met yesterday.

(Whereupon at 12:20 p. m., the morning session adjourned.)

Equality of Treatment an Opportunity in the Armed Forces

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 21, 1950

Mr. JAVITS. Mr. Speaker, there is appended the extensive text of a text and picture story in a leading national magazine, Our World, of June 1950, entitled "United States Armed Forces, 1950." It is regrettable that the pictures cannot be shown here and it is to be hoped that Members will take occasion to review them as they are just as important as the text. The story is the culmination of a monumental project for this magazine, having required the work of 6 members of its staff working around the clock for 294 man-days, and who traveled 34,500 miles by plane, car, jeep and foot and shot 3,600 pictures in 10 military installations.

Such a story and the pictures accompanying it are most valuable to show the progress which has been made in eliminating segregation in the armed forces and encouraging equality of treatment and opportunity regardless of race, creed, color or national origin in response to the Presidential Executive order of July 6, 1948, and the directive of Secretary of Defense Johnson of April 6, 1949.

I introduced House Resolution 328 seeking an investigation of this whole situation by the Armed Services Committee at the opening of this session. At that time I said "Certainly our constitutional democracy cannot tolerate discrimination or segregation among men who wear the uniform of the United States and have sworn to uphold its national security at the cost of their very lives." I pointed out, too, the damage that had been done to us in the use by Communist propagandists of race relations policies, particularly in our armed forces.

The appended article shows that much progress has been made, but that much still remains to be made, particularly in the Army where due to the numbers concerned and other conditions progress has not been as rapid as in the Navy and the Air Force. This summation of the whole situation is put into the RECORD in a spirit of helpfulness as a progress report and also to show the area in which further progress is required. It is written with considerable objectivity and contains numerous facts which should be of interest to every Member concerned with the effectiveness of the National Military Establishment.

UNITED STATES ARMED FORCES, 1950—EQUALITY OF TREATMENT AND OPPORTUNITY IN ARMED FORCES IS NO HOAX BUT A WORKING POLICY OF UNITED STATES

The Executive order of President Truman calling for "equality of treatment and opportunity for all those who serve in our country's defense" works. It works because Secretary of Defense Louis A. Johnson has made it clear to all branches of the armed forces that within the immediate future he intends to accomplish complete integration of Negroes into all of our services. It works because tens of thousands of white and Negro boys and girls in all branches of the service—and from all sections of the country—have shown the democratic will to work, eat, sleep, play, and if need be, fight together in the service of their country.

Not every intention of the Truman order has been accomplished. The Department of the Army has only had an "acceptable" plan since January 16 of this year. Other branches of the armed forces have been at work implementing Defense Secretary Johnson's policy less than a year. There can be no doubt until every all-Negro unit is completely abolished full equality will not be achieved. But the degree of opportunity open to Negroes in our armed forces today is a far cry from those dim days 20 years ago when Negro cavalrymen were used as "officers' grooms" and Negro seamen were restricted to duty as mess stewards.

Pictorially this story is limited to 10 major defense installations in the zone of the interior (continental United States). But it gives a fair picture of the degree of Negro integration in all our armed forces. It is limited also to men and women in uniform. But it reflects the growing favorable treatment accorded a vast army (about 70,000) of Negro civilians who serve under the flag in United States and overseas.

Today in our armed forces roughly 100,000 Negroes are in uniform: 60,000 in the Army, 25,000 in the Air Force, 15,000 in the Navy and Marine Corps. Many of these troops remain engaged in service units. However, increasing numbers of them are in training in tactical units for combat duty. In all armed-forces schools of whatever branch of the service—the Army, the Navy, the Air Force, or the Marine Corps—the training program is carried on with no separation based on race. For all Negro personnel the integration program spells greater freedom.

ARMY'S OLD QUOTA SYSTEM WHICH ONCE STYMIED INITIATIVE IS OFF—HOW FAR NEGROES GET NOW IS UP TO THEM

The Negro soldier stands today strictly upon his own merits so far as promotion and advancement in the Army are concerned. How far he can go no longer depends on Army quotas. That is borne out by the integration policy. And to understand how sweeping it is, it becomes necessary to summarize the Army policy on the use of Negro manpower, announced January 16.

The Secretary of the Army, North Carolina's Gordon Gray, reiterated the Truman order of equality of treatment and opportunity. He made Army commanders responsible for the unreserved acceptance of the policies by all personnel under their command. He made them responsible for the execution of the policies. A board of senior Army officers was named to make a periodic review of the utilization of Negro manpower. Processing of raw recruits, training in Army schools, eligibility for promotion and assignment to military occupational specialties were all placed on an Army-wide nonsegregated basis. Selection and assignment of officers was also freed from any restrictions based on race.

These policies can and have had far-reaching consequences for the 58,864 Negro enlisted men and the 1,233 officers. There are still many white commanders unwilling or unable to carry out these policies. These can only delay but never halt the trend toward integration.

SHOULD WAR START TOMORROW, THE NEGRO SOLDIER IS BEING TRAINED TO BE READY TO DEFEND HIS COUNTRY—TODAY, NEGROES ARE GETTING THEIR BEST CHANCES

World War II taught us a lesson. Racial intolerance was preventing us from making full use of this country's manpower. Few Negroes were used or trained in combat tactics. The policy has changed. The Department of Defense plans to make full use of all manpower if war should come. Today, more Negroes than ever are being trained in all phases of modern warfare. They are in communications, field, and mobile artillery, learning to use the recoilless 75's, driving M-41's and M-26's. They're learning not only how to follow but also how to lead in combat tactics.

With white boys, many Negro youngsters at Fort Benning are grappling with the Army's paratroop training program. As part of the proud troopers, they're learning the rigid discipline, fighting know-how, and the rugged team spirit of the outfit. A paratrooper's life is no bed of roses, but these boys take to it like a 'chute to the breeze. They learn how to fall, how to put on their harness. For 4 weeks they learn how to jump from 2, to 34, to 250 feet, before they make the big 1,000-foot jump from a flying boxcar. They are in fine physical shape, don't drink, and do little smoking.

WHAT ARE THE ISSUES IN THE ARMY?—HOW FAR CAN A COMMANDING GENERAL TAKE INTEGRATION ON A POST?

There is still a wide gap between Army policy and Army performance. Separate infantry and artillery battalions of Negro troops, with separate quarters and only token integration of Negro and white officers, remain the rule at many Army posts. In auxiliary units integration on an individual level has begun. And it is the trend begun in these auxiliaries which seems certain to establish a pattern for all.

Some Army commanders have time and again raised the old fears that mixing the Negro and white soldiers indiscriminately in the same units will impair fighting morale. They have claimed that integration of so large a mass of Negroes as are in the Army is more difficult than in the Navy and Air Force with their fewer numbers. These are old dodges without foundation in fact. The facts are that the Air Force has integrated fully 25,000 Negro airmen on an individual level without a single serious incident. The reason for Air Force success can be found in such blunt and forthright comment as that made by Air Force Maj. Gen. Laurence S. Kuter, who wrote every officer in his command as follows: "Selected and qualified Negro officers and men will be assigned to duty throughout the Air Force without regard to race. * * * Commanders who cannot cope with the integration of Negroes into formerly white units or activities will have no place in the Air Force structure."

Within the month after this story is published the Fahy committee, established by President Truman, is expected to report on the execution of the integration policy. The firm attitude of the President, his Secretary of Defense, and the work of this committee are factors which face recalcitrant Army commanders unable to cope with the problem of complete integration. Dynamic public opinion inside (two out of three white soldiers do not oppose integration) and outside also faces them across their Maginot line of prejudice. And these are factors which make it possible to predict that within a matter of months (possibly at Fort Lewis) we will have the first completely racially mixed battalion.

NAVY'S POLICY OF INTEGRATION TODAY CALLS FOR STEPPING UP NEGRO RECRUITING

In comparison with the Army and Air Force there are fewer Negroes in the Navy (15,000). This number is less than 2 percent of the total strength. Traditionally Negroes were restricted to the Navy messmen's division. Today, 8 years after this ban was dropped, most Negroes (about 60 percent) still are stewards. But in contrast with former years, Negroes now hold every general-service rating and serve on every type of ship.

The Navy's drastically reduced appropriation is one of the main reasons for the Negro's numerically unimportant role in this service. With economy demanded, the Navy pruned out its least capable men, relegated much of its fleet to the "mothball" class, and operated installations with minimum crews. The Navy has witnessed a trend from complete segregation to one of integration. It began 6 years before the Executive order banned discrimination.

In April 1942 the Navy announced its experiment to train Negro volunteers as seamen. And in June 1942 it followed through by opening Great Lakes Naval Training Station to Negro apprentice seamen. In September of the same year, 150 of these trainees arrived at Hampton Institute for advanced training in such general-service ratings as machinist mates, electricians, metalsmiths, cooks, bakers, and carpenters. Subsequently, the Seabees division (similar to the Army's engineers) was opened to Negroes. And in November 1943 the Navy began using Negro seamen and rated men aboard ships.

Today its policies for equality of treatment and opportunity are fully approved by the Secretary of Defense. Implementing this policy, it has stepped up recruiting among Negroes and encouraged college students to enroll in the Naval ROTC. Also, the stewards branch has lost its "for minorities only" label.

Faced with unprecedented orders some ship and station commanders required several reminders before they adopted the equality program. But enlisted men accepted it and there were no incidents. Tan faces, once the symbol of the Navy's servant caste, now are recognized as skilled craftsmen on battlewagons, carriers, and subs.

WILL NAVY COMMISSION MORE NEGROES?—ANSWER IS "YES"

Today Negroes operate cranes, control radar apparatus, handle electrical and clerical jobs aboard such aircraft carriers as the *Roosevelt* and *Midway* (the Navy's pride). In the event of another war undersea strategy will figure prominently. And in increasingly important sub and antisub squadrons Negroes serve in a variety of general service ratings. Their job well done also extends to battle wagons, destroyers, and auxiliary craft.

Negro base personnel and trainees are just sailors at New London, Conn., Norfolk, and Great Lakes naval establishments. Northerners and southerners from every family background are buddies. But there is a problem. There are only 17 Negro officers in the Navy and Naval ROTC's and Annapolis will hardly produce more than 10 annually. This problem is being tackled by the President's Committee on Equality of Treatment and Opportunity in the Armed Forces, but as yet no solution has been found.

THE MARINES HAD NO NEGROES BEFORE 1942, BUT TODAY FOLLOW NAVY DIRECTIVES IN ATTITUDE TOWARD NEGROES

Although the Marine Corps takes its orders from the Navy, its policy toward Negroes does not always follow the Navy pattern. In fact, the Marines did not accept Negroes in their ranks until 1942 when the Corps was being mobilized to a strength of 70,000. Yet when the Marines hit the shore at Bougainville in 1943, Negroes were among them. Later they fought in all the Marine campaigns through Okinawa.

Today, of the 74,000 men in the Marines, about 1,500 are Negroes, most of them in pay grade 6, the next to lowest. The number of them in pay grade 1 is increasing, mainly because the quota system in the Marines has been abolished. Montford Point, once designated as "a recruit training center for Negro Marines" is deserted but for a few guards watching United States Government property. Now Negro Marines do their boot under the same conditions as the white boys at Parris Island, S. C., and San Diego, Calif. From there they move on either to the 173 square miles of Camp Lejeune or, depending on their ability, to basic schools at Quantico, Va.

As the east coast center of varied Marine Corps training activity, Camp Lejeune is the home of the famous Second Marine Division and the Marine Barracks, Headquarters and Service Battalion, in which are some 300 Negroes. They mess, use the same service clubs, and are billeted with white boys. Camp facilities include a free theater (in the Army it costs 24 cents), a 19-hole golf course and the use, on separate days, of Marston Hall, a palatial ballroom.

The Marines have four Reserve Negro second lieutenants, but none on active duty. But the way is open, if they can qualify.

WACS, WAFS, WAVES, MARINES—LESS PUBLICIZED, BUT VERY IMPORTANT IN THEIR OWN RIGHTS ARE SERVICES WOMEN

Negro women specialists served with the Army and Navy during World War II. Enlisting when the Women's Army Corps was founded in July 1942, Maj. Charity Adams commanded a Negro WAC unit overseas. Maj. Harriet West, another of the Army's Negro pioneers, was chief of the Planning Bureau Control Division in the Army's Washington headquarters. Pacesetters in the Navy were Lt. Harriet Pickens and Ensign Frances Wills. There were no Negro WAFS or women Marines during the war.

Today Negro women hold responsible jobs in all branches of the service within the zone of the interior, and in Europe and Japan. Capt. Blanche Scott commands the all-Negro WAC detachment at Fort Dix. Others who command Negro WAC units with strategic jobs are Lt. Margaret Barnes at Madigan General Hospital, Tacoma, Wash., and Lt. Doris Williamson at Fort Lewis, Wash.

At present Negro WACS number 594. There are 200 WAFS. Typical of these is Staff Sgt. Annie Moore at Lackland Air Field Base, Tex. Flight leader of 127 white and Negro WAFS, she is a member of the permanent party on the base. Figures on the number of Negro WAVES are not available. An estimate places them at 15. There are only two Negro women on active duty in the Marine Corps. After training at Parris Island, S. C., on a completely unsegregated basis, they are on assignment at National Marine Headquarters in Washington.

THE AIR FORCE MAKES NO BONES ABOUT WHAT IT MEANS BY INTEGRATION—NEGRO BOYS ARE BEING TRAINED IN ALL ITS HIGHLY TECHNICAL DEPARTMENTS

When the Negro unit at Lockbourne Air Base was decentralized last October, many Negroes had their misgivings. The "Race Base" (as Lockbourne was slanged) had operated so well under a Negro commander that they felt it was a crime to break it up. Some were convinced that Negro pilots would be lost in the diffusion, be grounded because of race, and would lose their flying pay. Others saw the glory of the Three Hundred and Thirty-second scattered to the winds.

Those were short-term views; in many cases, selfish. The Air Force proposals provided for the assignment and utilization of Negro personnel on the basis of individual ability. All references to race were to be stopped. Breaking up Lockbourne was only the initial step in the implementation of the policy. Soon enough the Air Force showed that it meant business. By December 31, last year—the time set for the policy to be in complete operation—the scheme had worked far beyond expectations without the least friction. The majority of Negro air officers with whom Our World talked are now sure that this is the best thing that ever happened to the Air Force in terms of a long-range plan. A few still "beef" about the high percentage of grounding among Negro pilots.

But investigations in Washington indicate to Our World that white boys have suffered just as much; and grounding, in most instances, has been ordered because of appropriation cut-backs or to conform with age limitations.

If anyone needs confirmation of the Air Force's good faith in the accomplishment of this program, a visit to Lackland Air Field Base, deep in the heart of Texas, will do it.

Being the "gateway to the Air Force," Lackland, more than any other base, needs the strictest supervision to mold its raw recruits. Maj. Gen. Charles W. Lawrence, the commander, has set down the strictest discipline for the acceleration of the integration plan. If any "jeep" has racial prejudices when he enters the indoctrination center, he had better get rid of them. From the time he hits the "Red Arrow" until he leaves the base at "Grand Central Station," his race is incidental. The flight chiefs, who practically teach them everything they learn, are carefully screened. And, on graduation, these boys receive assignment strictly on ability.

Officer personnel, too, like Maj. Lee Rayford and Lt. Bill Kelly, have been appointed here strictly because of their ability.

TOGETHER, "CHASING ELECTRONS" OR FLYING JET PLANES, NEGRO AND WHITE BOYS ARE BUILDING A GREATER AIR FORCE

And Lackland is not alone. In varying degrees of efficiency, dependent on local commanders and geographical position, the Air Force's nonsegregation program is going into high gear. We saw Negro youths at Keesler, in Biloxi, Miss., side by side with whites, studying the most technical elements of air traffic control, radar net defense, and communications. We saw Negro officers (many of them ex-Ninety-ninth men), side by side with white boys "chasing electrons," sweating through calculus, or studying the supersonic trainer. We saw them at officers' clubs, with their wives, eating at the same tables, slumped on the same bars as white officers and their wives. We saw them in the same EOQ's, in the same toilets.

At Williams Air Field Base in Arizona the same thing happens. There, the center of the jet-plane command, the boys—black and white—sleep, eat, and live "jets." To them and their wives the all-important project is jet planes, jet engines, and their performance. Four Negro officers are flying instructors here, among them the fabulous "Mr. Death," Lt. John Whitehead.

What does all this mean? It means that the Air Force is following the order to the letter and in its true spirit. In fact, giving the lie to the old bromide of racial incompatibility.

THE LOGIC OF THE COLD WAR DEMANDS COMPLETE INTEGRATION OF NEGROES IN ALL DEFENSE FORCES

As praiseworthy as are the moral and the ethical grounds for giving to all Negroes full rights in our armed forces, there are even graver considerations which make integration mandatory: The very security of the Nation is at stake.

The cold war now being waged against western democracy by world communism is making wide use of examples of antidemocratic treatment of Negroes in America to win the allegiance of darker peoples all over the world. The allegiance of more than seven hundred million is weighing in the balance. Segregation, denial of opportunity to Negro Americans, spells tragedy for America in the cold war of ideas. America cannot afford anything less than complete integration in her armed forces.

If the "cold war" becomes "hot" then there is even greater reason for the fullest utilization of all available Negro manpower to save the Nation.

It is against this background of clear necessity that one sees the Truman administration through its Department of Defense move into high gear to carry out its program of equality of treatment and opportunity for Negroes in the armed forces. Much remains to be done. There are still military commanders "overprejudiced in grade." But the race is against time. And time is short. United States armed forces in 1950 must march forward to complete integration for all of America's races.

Warmed-Over Biscuits

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1950

Mr. BIEMILLER. Mr. Speaker, with permission to extend my remarks in the RECORD, I attach the following column by Doris Fleeson, which appeared in the Washington Star, May 3. The column speaks for itself in its careful review of the absolute clearance of State Department personnel by the Republican Eightieth Congress, a clearance now being disputed by other less responsible Republicans.

WARMED-OVER BISCUITS—MCCARTHY'S FAMOUS LIST OF SUBVERSIVES COMPILED BY GOP EIGHTIETH CONGRESS

(By Doris Fleeson)

His fellow Republicans of the Eightieth Congress compiled Senator MCCARTHY'S famous list of subversives in the State Department during 1947–48.

Various committees analyzed it, took testimony on it, and concluded by praising the State Department and its security officer, Deputy Under Secretary John E. Peurifoy, for their zeal. Then they pigeonholed it without even bothering to make a report.

The Senator from Wisconsin thus stands in the grotesque position of accusing the only Republican-controlled Congress in 20 years of having failed to do its duty in rooting out communism.

WHOLE STORY IN DETAIL

The Tydings subcommittee of the Senate will momentarily disclose the whole story in detail. It will show that—

Every name on the list of 81 supposed Communist sympathizers handed to Senator TYDINGS by Senator MCCARTHY appears on the old House list.

The descriptions given by Senator MCCARTHY of the 81 tally in substance in every instance with the descriptions given in the House record as to ages, dates, type of work, background, etc. In some instances Senator MCCARTHY scarcely bothered to change the wording.

As the subcommittee reconstructs the story, the original list was put together by the staff of House Appropriations, then functioning under the iron hand of Representative JOHN TABER, of New York. At the time President Truman had not issued his loyalty orders so that Mr. TABER'S people helped themselves freely from State Department files.

Of files the Department had plenty. It had just been vastly swollen by the transfer of many war agencies. The investigators took a sampling of 108 names to the Hill and Mr. Peurifoy followed.

Before the Eightieth Congress bit the dust House Appropriations, Expenditures, and Foreign Affairs, and Senate Foreign Relations all had a whack at the 108 and Security Officer Peurifoy. The personal interest taken by Representative TABER, a tough customer, showed in the fact that it was the only State Department item to which he gave his own attention. The rest he entrusted to Representative STEFAN, of Nebraska, but when the list was at issue Mr. TABER sat in.

BALL HANDLED SENATE JOB

Senator Ball of Minnesota, then Senator TAFT'S principal backstop on labor policy, handled it for Senate Appropriations. The Senators not only cleared the State Department but never leaked the fact of the list.

Representative Chenoweth of Colorado headed the Expenditures Subcommittee which closed its hearings after 3 days and voted four to one not to continue with the matter.

The final sweeping exculpation came from Representative Jonkman, chairman of the House Foreign Affairs Subcommittee, who said on the House floor: "I want the Members to know there is one department in which the known or reasonably suspected subversives, Communists, fellow-travelers, sympathizers, and persons whose services are not for the best interests of the United States, have been swept out. That is the Department of State."

Representative Jonkman modestly took credit for the Republican-controlled Congress for his happy situation with a few kind words thrown in for himself and Mr. Peurifoy.

Then came Senator MCCARTHY. The Senator has bounded lightly from 205 fellow-travelers to 57 card-carrying Communists and he gave the Tydings subcommittee 81 names. His 81 all appear on the old House list of 108 by name and description.

Actually 51 of the 108 were never hired by State. It is presumed that Senator MCCARTHY got his 57 card-carriers by subtracting the 51 unhired from 108—and, of course, making a rather large assumption as well.

Of the 57 who were hired, only 40 remain with the Department. They have been found absolutely loyal after investigation and reinvestigation by the FBI and the President's loyalty boards.

Representative KARSTEN, Missouri Democrat, hinted at the above in his blast at Senator MCCARTHY for his attempt through deceit and fraud to hoodwink and inflame the American people.

Some politicos are slightly more tolerant. They suggest that Senator MCCARTHY needed a fiery speech for a Lincoln Day Dinner and some Republican handed him these warmed-over biscuits. Ambitious but little-noticed here, he then found the attention he attracted was irresistible. Perhaps he was a little stampeded by the headlines. Thus say the Democrats.

The Republicans apparently are left to moan: "Say it ain't so, JOE."

"Little Abner" Brannan

EXTENSION OF REMARKS
OF
HON. HENRY O. TALLE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1950

Mr. TALLE. Mr. Speaker, I want to take this opportunity to commend the Democratic National Committee for its realistic appraisal of the Brannan plan, as evidenced by its recent announcement that the comic book technique will be used to explain it to the people. This is a most intriguing development indeed. I am sure most of my colleagues will agree that there could be no more appropriate medium than the comic cartoon for depicting the Truman administration's so-called farm program. Unfortunately, the humorous aspects will be replaced by the tragic if this monstrous proposal to regiment the farmers is foisted upon the already overburdened American taxpayers.

Taxation of Annuities of Retired Federal Employees

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mr. HÉBERT. Mr. Speaker, under permission of the House, I would like to call attention to the following communication written by Mr. H. G. Richey:

STATEMENT RELATIVE TO UNJUST TAXATION OF ANNUITIES OF RETIRED FEDERAL EMPLOYEES

NEW ORLEANS, LA., *March 1, 1950.*

Hon. ROBERT L. DOUGHTON,
Chairman, House Committee on Ways and Means,
Washington, D. C.

HONORABLE SIR: The following statement and plea is submitted in behalf of those Federal employees who, when retired, had to sever their connection and withdraw membership from any employee organization in which they were associated, in order to reduce their living expenses to the level of the annuity they were granted by the Government. This group of retired employees, having no connection with any employee organization which may be represented before your committee in support of proposed legislation, will have no representation except this statement, submitted by their representative whose signature is hereinafter affixed.

This statement is submitted with the request that it be laid before the Committee on Ways and Means, and be made a part of the record of hearings on proposed legislation, such as bill H. R. 124, which is to clarify section 18 of the Civil Service Retirement Act, relative to the collection of any tax on the annuity paid to retired Federal employees. This group of retired employees requests favorable action by your committee on such legislation, and early enactment into law by the Congress. That our request is just is shown by the following arguments:

(a) The Civil Service Retirement Act (sec. 18) provides that the annuity of retired employees shall not, "be assignable either in law or equity, or be subject to execution, levy or attachment, garnishment, or other legal process."

The wording of this section clearly indicates that the Congress which enacted the Retirement Act, intended that the retired employee should receive the full value and benefit of the annuity, without any reduction by "levy" or "other legal process." The word "levy" as defined by Webster's New International Dictionary, is "to raise or collect, as by assessment, execution or other legal process; to execute or impose by authority, as to levy taxes, toll, tribute, or contribution." Note how closely the wording of section 18 of the Retirement Act follows the definition of the word "levy" as given by the dictionary, and that this recognized authority on the meaning of words states that "levy" means to collect taxes by "levy," and the Retirement Act exempts the annuity from "levy."

The word "levy" to the layman means to tax, or to levy a tax, and to date there has been no legal interpretation as to the meaning of the word "levy" as used in section 18 of the Civil Service Retirement Act. Taxing the annuities is the result of a decision by the Treasury Department, the agency which collects the tax. That it is an unjust tax is shown by the fact that no legal action can be taken, under the law, against the annuity, to collect any unpaid taxes. Therefore, it would seem that the collection of a tax, which cannot be collected by a legal process, is an illegal tax, and an illegal collection. Bill 124 should be enacted into law to clarify and make explicit the intent of section 18 of the retirement law, and the intent of the Congress which enacted the Retirement Act.

(b) The Railroad Employee Retirement Act provides that "No annuity payment shall be assignable or be subject to any tax or garnishment, attachment, or other legal process under any circumstances."

The Civil Service Retirement Act provides that "None of the moneys mentioned in this act shall be assignable, either in law or equity, or be subject to execution, levy or attachment, or other legal process."

The only material difference in the wording or meaning of the two separate acts, is any difference there may be in the meaning of the word "levy" and the word "tax." Webster's New International Dictionary defines the word "tax" as, "A sum imposed or levied upon the members of a society to defray its expenses; a charge or burden, usually pecuniary, laid upon persons or property." Note that the word "levied" has the same meaning as the word "taxed" or "tax." Comparison of the two sentences quoted from the two different acts, clearly indicates that the two words, "levy" and "tax," were intended by Congress to mean the same thing. However, under the Railroad Retirement Act, the annuity of a retired railroad employee is not taxed, while the civil-service employee, under a ruling of the Treasury Department, has to refund, or "kick back," a part of his annuity in an unjust tax.

When an attempt was made to obtain an interpretation of section 18 of the Retirement Act, by the United States Attorney General, that Office advised that such action could only be taken on the request of the President or the head of a department. When the President was requested to obtain such decision or interpretation, the request was referred to the Internal Revenue Bureau, the agency which collects the tax.

When a retired employee protested against the collection of a tax on his annuity, and made payment under protest, he was advised by the Internal Revenue Bureau that:

"Consideration was given to the question of the taxability of annuities received by retired civil-service employees in connection with the preparation of the income-tax regulations and the fact was established that section 18 of the Civil Service Retirement Act was not intended to exempt annuities from Federal income tax, and that such annuities were taxable under the provisions of section 22 (b) (2) (A) of the Internal Revenue Code."

The Internal Revenue Bureau also cited the following court decisions relative to the collection of income taxes: *Disouke* v. *U. S.* (297 U. S. 167); *Raymond* v. *Commissioner* (114 F. (2d) 140; 311 U. S. 710); *Gillespie* v. *Commissioner* (128 F. (2d) 140); *Nanne* v. *Commissioner* (165 F. (2d) 304).

A study of the decisions cited shows that section 18 of the Civil Service Retirement Act, or the meaning and intent of the word levy as used therein, was in no way a part of the cases decided; hence the decisions cited have no bearing on the present question.

The various tax laws passed by Congress, under which the Internal Revenue Bureau operates, instructs the Commissioner of Internal Revenue that, "There shall be levied, collected, and paid," etc., etc. Note the word levied as used in the tax acts, instructs the Commissioner to levy and collect the tax; then note that section 18 of the retirement act states that the annuity of retired Federal employees is not subject to levy. Thus to levy and collect a tax on the annuities granted to Federal employees, retired under the retirement act, is in violation of section 18 of that act.

It has been suggested by the collecting agency that a test could be made and an interpretation obtained, by a retired employee refusing to pay the tax, and take the case through the Tax Court, and to the higher courts. The retired employee, however, has neither the finances, or the expectancy of life to institute such proceedings, and can only seek relief through the Congress.

To give some relief from their present situation the retired employees request that proposed legislation, such as H. R. 124, be reported favorably by your committee, and enacted into law by Congress.

Congress has recognized the decreased purchasing power of the dollar by granting various increases in the salary of employees still in active service, but no such consideration has been given the retired employee. These aged retired employees, physically incapacitated by age or ailment from obtaining further employment, to augment their annuity, seek relief through your committee and the Congress, by enactment into law bill H. R. 124, or similar legislation.

As representing the herein described group of retired Federal employees, I thank you and the committee for your kind consideration.

Very respectfully,

H. G. RICHEY.

Runyon's Last Story

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Thursday, May 4 (legislative day of Wednesday, March 29), 1950

Mr. MAGNUSON. Mr. President, we are now in the midst of a Nation-wide cancer drive sponsored by the American Cancer Society. I participated in the opening ceremonies of this national campaign, at which time I presented a medal, the Clement Cleveland Award, to the

distinguished columnist, Walter Winchell, who at that time donated on behalf of the Damon Runyon Cancer Fund $250,000, with which to get the drive under way.

There appeared in the April 22, 1950, issue of Collier's magazine an article relative to the fight against cancer, which is a matter of vast importance to the American public. The article, entitled "Runyon's Last Story—By His Friends," was written by Albert Q. Maisel. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RUNYON'S LAST STORY—BY HIS FRIENDS

(By Albert Q. Maisel)

A few weeks before Damon Runyon died of cancer, he took the short end of a thousand-to-ten-dollar bet. It was the kind of bet you could get only on Broadway, where the bookies can figure the odds, even on life and death, more accurately than any actuary.

Runyon bet that he would return after his death. He had no expectation of ever winning that wager. "It's just," he shrugged, "that I couldn't resist the odds."

Yet Runyon, the gifted writer who knew Broadway and the race tracks and the prize rings far better than they knew themselves, has come back. Today, more than 3 years after the ashes of his wasted body were sprinkled into the winter wind over Manhattan, he is influencing the lives of all those who know him and of hundreds of thousands to whom his name was only a by-line beneath which they knew they would find a terrific story.

Runyon's last story is being written by all the weird and wonderful characters who peopled the tales he wrote while cancer slowly choked him. It's a magnificent story of a strange and democratic memorial erected by a million Joes and Janes, touts and chorus girls, crooks and con men, generals and Congressmen, who have jumped at the chance to buy their way into the business of being philanthropists.

Like much of Runyon's fiction, it is full of bad guys doing good things. But it isn't fiction. There is nothing fictional about 3,000,000 bucks in cold, hard cash.

It is also the story of Runyon's friends, the worldly wise denizens of table 50 at New York's Stork Club, who started out to raise enough money to endow a bed in Memorial Hospital in New York and ended up in the philanthropic big time, teaching new tricks to the experts.

The plot, like every Runyon story, has a surprise twist. The hep characters who touched off the Runyon Memorial Fund as a sentimental gesture have had their baby taken away from them. A million contributors have made it public property and thus proved what Runyan could have told them from the start: You never know what the people will do except that it's always better than you think.

The fund got its start 4 days after Runyon died, just before Christmas in 1946, when Walter Winchell grabbed his microphone to begin his staccato Sunday-night barrage of the air waves. "It seemed like nothing much at the time," Winchell recalls. "For more than a year I had watched one of my oldest and dearest friends dying. In all that time we had talked of everything but death, because you don't talk of death with a man whose voice has been choked out of him, a man who has to write down on slips of paper every word he wants to say. When Damon was released at last from the pain he never talked about, I had to say something, if only to get it off my chest.

"There I was, with the mike in front of me, and for the first time in my life the words came hard. But what I did say, they told me afterward, was that maybe other people felt the way I did about the thing that had killed Damon, that maybe they'd want to send a buck or so and take a share in building a Damon Runyon Memorial to fight cancer.

"I didn't have the slightest idea how much we could raise, twenty or thirty thousand, maybe even seventy-five thousand tops. But that wasn't the point. It was just one of those things you do first, then reason about afterward."

When Winchell walked out of the studio that night in Miami and began his usual tour of the night clubs, people sidled up to him and stuffed money into his pockets. The next day, at Tropical Park, you could have mistaken him for a bookie, getting the kind of heavy play most bookies only dream about. In restaurants head waiters, famous for itching palms, slipped him $5 bills. Guys on the rim of the underworld—the shadowy characters straight out of Runyon's books—stopped him in the street to say, "Lay this C note on the cancer deal."

Winchell, pad in hand, tried to be business-like: "What name shall I put this contribution under?"

More often than not the answer followed the line of one gangland figure who said, "Never mind me name—just put it down as from 'synonymous'."

The mail came in baskets. Three days after the first broadcast, Winchell got a panic-stricken call from his secretary in New York. "Help," she screamed. "I'm drowning in dollar bills."

Winchell, by then was deep in trouble himself. It had never occurred to him that you can't just set yourself up in the foundation business by making an announcement over the air. There were technicalities he had never heard of about the little matter of collecting money even for a good cause. The postal authorities and the Department of Justice, while not quite ready to throw the columnist into the calaboose, made clear that the formalities had better be complied with in a hurry.

Winchell put through a rush call to lawyer Morris Ernst. "Get us a charter, Morris," he begged, "before they throw me into the jug. But don't forget, we have no money to spend. Every cent we collect goes to cancer research. So shop around and see if you can get a charter for nothing."

Soon Winchell made another discovery. It was necessary to have officers if you were going to have a foundation. Again the phones buzzed. Winchell called Broadway columnist Leonard Lyons to ask him to be vice president. Lyons accepted. Sports columnist Dan Parker, Winchell tagged as "El Presidente." Parker demurred. "You started this thing," Dan said, "You be the president."

"Oh, no," Winchell replied, "I've got the money—I'll be the treasurer."

There still remained the problem of a secretary. Here Winchell tagged Leo Linderman, the Lindy of Lindy's Restaurant on Broadway. "That," Walter explains, "gave us a free board room in which to hold meetings, with free board guaranteed."

The Damon Runyon Fund was in business, and everybody wanted to get into the act. For a time Winchell appointed honorary directors like a Kentucky governor appointing colonels: Arthur Godfrey, Milton Berle, Gabriel Heater. Finally he just passed out word that every newspaperman in the United States was, willy-nilly, an official honorary director of the fund, their rights and duties to give the fund plenty of publicity and to forward all contributions without taking anything off the top for expenses. This was about as radical a departure from standard fund-raising practices as can be imagined. In over 3 years of operation, with the first $3,000,000 funneled through the banks and out into the research laboratories, the fund has spent not one penny for overhead or administration.

Whenever receipts have to be printed, Winchell calls Lyons and asks him to get some receipts. When letterheads are needed, he calls Parker and asks for letterheads. When the volunteer secretaries need a place to sit down, the Park Sheraton Hotel in New York is spontaneously moved to discover that it has an unrentable suite. Out of the blue comes a volunteer sign painter and on the door go the words: "Damon Runyon Memorial Fund."

The fund officers have applied their no-overhead rule as rigorously to themselves as to all others. Winchell, Lyons, and Parker, frequently traipsing around the country to officiate at Runyon Fund benefits or take part in ceremonies turning over money to a research institution, always pay their own way. Their expenses have averaged over $15,000 a year.

The very amateurishness of this approach to fund raising has had a curious effect. Since the three officers admitted they knew nothing about fund raising, everybody else could qualify as an expert. Suggestions, offers, and propositions poured in.

MEMORIAL HANDICAPS BOOST FUND

Jerry Brady, of Tropical Park, touched off an avalanche of contributions from the racing world when he ran the first Damon Runyon Memorial Handicap early in 1947. It netted the fund $5,000. Other tracks followed. Suffolk Downs topped Tropical Park with a 10-grand Runyon Handicap, which it now runs annually. Hollywood Park turned over a full day's receipts—about $35,000. Churchill Downs runs a Memorial Handicap and tops it with an additional $5,000 from the gate receipts on Derby Day. Chicago tracks turned over $33,000. All in all, some 38 tracks, virtually every major United States racing park, have worked out one twist or another to swell the coffers of the Runyon Fund.

Other contributions have come from sources that would shock the staid directors of more orthodox philanthropies. The coin-machine industry dropped a $350,000 jackpot into the fund. Bugsy Siegel, who left much unfinished business when he was shot to death 3 years ago in Beverly Hills, somehow had the foresight to slip the fund an $8,000 check only a few days before his demise. Joseph "Socks" Lanza, the ex-king of Fulton Fish Market, sent $250 from Sing Sing Prison, where he was serving a term. With the check was a note from Lanza's lawyer, apologizing for the meagerness of the offering. "'Socks' would be glad to raise much more," the letter said, "if it could be arranged for him to circulate more freely."

A few months later the Sing Sing grapevine brought news that Lanza himself was suffering from cancer. His friends, who still ran things in Lanza's old hunting grounds, the fish market, decided to tack a premature Lanza memorial onto the now burgeoning Runyan Memorial. By methods best not talked about they rounded up a bank roll.

It would have been simple enough to put the money in an envelope and trust it to the mails. But the underworld never makes a pay-off that way. Late one night Leonard Lyons received a phone call and a voice said, "Stay put, fella. Ya gettin' some visitors."

Lyons stayed put. Presently in walked three gentlemen, their coat collars raised high, their hatbrims pulled way down. Each one pulled out a cigar box and placed it on the table. Then all three of them gumshoed away, leaving the bug-eyed columnist to discover, inside the boxes, 6,000 greasy dollars, smelling strongly of fish.

A PUBLICITY-SHY STATESMAN

Actually, the underworld's part in the total fund is a very small one, far overbalanced by

contributions from the other end of the social scale. One of the earliest large contributions was a $5,000 check from a distinguished elder statesman. A scrawled note read simply: "Don't advertise this." A few months later Winchell buttonholed the donor and argued him into a release of his name on the theory that, if people knew that Bugsy Siegel could support the Runyon Fund, they also had a right to know it was approved and supported by Bernard Baruch.

Another small check came in, pinned to a letter which read: "I like what you fellows are doing about cancer. Please don't put this in the papers and don't look at the amount of this check. It's all I can afford from a humble soldier's pay."

This request for anonymity was honored until Winchell recently presented a check for cancer research at Columbia University. With Columbia's president standing alongside him at the microphone, he then read the note, ending with the signature, "Dwight D. Eisenhower."

Between the noteworthy contributors of high and low degree stands a vast army that now totals nearly 1,000,000 individuals—workmen, housewives, actors, ranchers, pensioners, and children.

A private stationed in the Canal Zone presented probably the most heartbreaking donation in fund history. His pay had been snafued for a long time. When the Army finally came through, he received nearly $1,500 in a lump sum. He bought ten $100 money orders, every last one made out to the Runyon fund. His letter ended with a simple postscript: "Hope this helps you catch that cancer. It killed my wife."

In New Yorks' teeming Bronx some 7-year-olds decided to help by putting on a cellar show and charging 2 cents admission. Neighborhood adults contributed pennies. After a few weeks, a swarm of grimy youngsters emerged from the subway and entered the fund's office. Each toted a clinking milk bottle which he promptly poured out on the desk. The pile totaled 9,000 pennies. In Warrenton, Va., a group of kids from the horsey set got the same idea. They trotted out their own ponies and let other children ride them for a 5-cent contribution.

At least a dozen individuals have converted the fund into their own memorials by remembering it in their wills with sums ranging from a few dollars to many thousands. The fund also is acquiring property. One woman gave it a share in an Arizona gold mine. The father of a 16-year-old cancer victim learned only through Winchell's announcement over the air that a close friend had donated the major share in a high-production oil well to the fund in memory of the boy. Oilman John Wrather turned over to the fund the renamed Runyon-McGee Well No. 1, with a guaranteed income of at least $100,000.

Actors and night-club entertainers have worked out ingenious methods of shaking down their audiences for the Runyon Fund. Comedian Joey Adams, for example, wrote a book and proceeded to peddle it at every performance, calmly charging $5 per volume and turning the entire proceeds over to the Runyon Fund. His collections total well over $10[illegible],000.

Richard Rodgers and Oscar Hammerstein II devised another fund-raising gimmick. With ticket scalpers getting $60 a seat for tickets for South Pacific they arranged to allot 14 house seats for every performance to the Runyon Fund. These tickets are sold to the highest bidders. St. Subber and Lemuel Ayers followed suit with their show, Kiss Me Kate. To date, this has netted the fund well over $60,000.

The latest innovation in Runyon fund raising, one that promises a tremendous sum for cancer research, was suggested in a letter by the wife of an Army colonel.

TRYING IT OUT ON GODFREY

Winchell tested it out first on Arthur Godfrey before a recent Sunday-night broadcast. "Whatever became of all the short snorters we used to collect during the war?" Walter asked him.

Godfrey dug out his wallet. Buried deep behind old auto licenses and honorary deputy sheriff cards, he found a yard or so of pinned-together short-snorter money. He displayed it, then began to return it to its hiding place.

But Winchell was too quick for him. He appropriated the short snorter and 10 minutes later was screaming the story on the air, ending: "Send me a million please."

For days vast bundles of soiled and folded samples of every kind of legal tender in the world came through the mails.

Another inspiration occurred the night fire swept Bar Harbor, Maine, and a cancer laboratory burned to the ground. A mile away, a doctor sat in his car watching 35 years of his lifework go up in flames. Then, over the car's radio, came Winchell's voice: "This is to tell Dr. Little up in Bar Harbor, Maine, that the Damon Runyon Fund is mailing him 50 grand tonight. He will get it in the morning."

A few months ago Milton Berle reached right through the television cameras to shake down all America for the fund in a 17-hour performance. By the time he dropped from exhaustion, he had gone through 76 cups of coffee and collected $400,000.

Occasionally, heels have tried to latch onto the growing fame of the fund. One of the boldest was a Midwest fight promoter who called Winchell to announce that he was going to put on a series of bouts for the fund. Winchell plugged the bouts on the air, and then waited for the check—which didn't arrive.

After 2 weeks Walter blew his top. He learned that the promoter had once been a partner of another shady figure whose fame rests upon his ability to get arm-twisting jobs done anywhere in the United States. The arm twister was sent for. Winchell banged the table: "Get me that money in 48 hours.

"And if I don't get it," he added, "you can tell that no-good welsher that I'll get on the radio every Sunday night until every boxing commission in the country has barred him from the fight business."

The astounded thug backed slowly out of their restaurant meeting place.

Two hours later, $5,800, the exact amount due the fund, was quietly slipped into the columnist's pocket.

PHONIES GET THE BRUSH-OFF

Occasionally a cancer faker touting a quack cure tries to horn in on the good will that envelops the fund. Winchell, Lyons, and Parker, however, have learned how to get rid of these phonies. All three, recognizing that their forte is fund raising, not cancer research, have wisely used the same experts who guide the allocation of grants for research for the American Cancer Society and the United States Public Health Service.

Even here the trio has followed the rule of "not one cent for overhead." Forty days after the fund was started they voted their first grant of $250,000 to the New York chapter of the American Cancer Society. They tied only one string onto the grant, that the society would provide them, free, with an expert adviser. That is how they acquired John H. Teeter, who makes order out of their chaos, yet lets them run as wild as they want to whenever they get an idea for raising money.

Teeter and other fund advisers have saved Winchell and his pals from a number of boners. Winchell, for example, felt that money coming from the 48 States should go back to all of them.

But, under Teeter's tutelage, the amateurs who run the fund discovered that you can't parcel out the money on a simple geographical basis. Some States just don't have the scientists and the laboratories capable of using research funds to full effect. So Runyon Memorial money goes to the institutions best fitted for cancer research.

More than $2,500,000 has already gone to colleges and hospitals in 34 States.

MORE WORKERS BEING TRAINED

Frustrated in its original scheme for geographical distribution, the board of directors is still trying to lick this problem, really the problem of a lack of cancer experts, by pouring more than $410,000 into fellowships for individual researchers who today work in the big cancer centers but who will eventually move out to fill gaps in the national cancer research pattern.

Although experts advise the amateurs who direct the Runyon Fund, the final decision on spending money as well as on raising it rests with the directors. Only two directors' signatures are required on a fund check, but never has any decision been reached without the O. K. of the entire board.

When the Runyon Memorial first began, many an old-line fund raiser and scientist looked askance at the brash, promotional-minded, high-pressure team. Today, many of their unorthodox methods, such as raising money by giving away a house and lot, have been adopted by other public-health and research foundations.

Winchell and Lyons and Parker have not only learned from the experts, they have taught them as well. And the greatest lesson they have taught is that the people—all people—will give and give and give and give if given half a chance.

Statehood for Alaska

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 4, 1950

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks, I include an excellent editorial from the April 24 issue of Trainman News, publication of the Brotherhood of Railroad Trainmen. The editorial, which presents so convincingly the case for Alaska statehood, follows:

ADMIT ALASKA NOW

The important Alaska statehood bill is soon to come up for consideration by the Senate, and we're hoping the lawmakers will lose no time in admitting this rich and strategically vital Territory into the Union.

Since a statehood plank is embodied in the platforms of both major political parties, there can be no legitimate reason for protracted delay. The measure passed the House of Representatives some time ago.

Although many BRT'ers live and work in Alaska and have repeatedly expressed their desire to have it made a State, our interest extends beyond the membership.

Alaska has earned the right to a place in the Union. Its population and resources are adequate to support State government. Its resources, in fact, and population of approximately 135,000, are greater than those of nearly half of the States at the time they were granted statehood. Some which were admitted with fewer people than Alaska include Delaware, Georgia, Rhode Island, Ten-

nessee, Ohio, Mississippi, Illinois, California, and Missouri.

The United States has received wealth from Alaska amounting to 400 times the purchase price of $7,200,000, a fabulously profitable investment. At present it has no public debt. Alaskans are subject to all the taxes, including the income tax, but have no voice in how the money is spent. And wasn't our battle for freedom based on the rallying cry that "taxation without representation is tyranny"?

Because of its lack of participation in our national programs, Alaska has suffered economically. Its underdevelopment is glaring by contrast when we consider that only 54 miles away, across the Bering Straits, the Soviets are pushing the limits of agriculture, erecting experiment stations every 100 miles, and establishing a permanent farm population to support a new industrial, mining, and military development.

This latter point must be weighed with considerations of self-preservation. Today, when every national act of our Government has its effect on the cold war, it would seem strategically and psychologically imperative that Alaska be admitted to statehood and be afforded the defenses necessary from such disquieting potentialities.

Gov. Ernest Gruening recently stated that Alaska today is literally defenseless; it could be taken in a few hours by two air-borne divisions, which could overwhelm the meager garrison of 8,000 men stationed there. Fact is, Alaska was the only portion of America invaded and for a time held by the enemy in the last war.

Granting of statehood would demonstrate to the other nations of the world that we practice what we profess about self-determination, self-government, and the superiority of the democratic process. This is of vital importance during these trying days when democracy is being challenged throughout the world by totalitarian propaganda.

The importance of these issues transcend narrow party lines. The Senators should pass the measure promptly.

Statement Submitted in Opposition to H. R. 7595, "To Protect the United States Against Certain Un-American and Subversive Activities," by Mr. Nixon, of California, or Any Similar Legislation

EXTENSION OF REMARKS
OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 31, 1950

Mr. KLEIN. Mr. Speaker, under leave, I am inserting in the RECORD my own statement submitted to the Committee on Un-American Activities in opposition to the Subversive Activities Control Act of 1950:

FORMAL STATEMENT BY REPRESENTATIVE ARTHUR G. KLEIN, OF NEW YORK, TO THE COMMITTEE ON UN-AMERICAN ACTIVITIES IN OPPOSITION TO H. R. 7595 OR ANY SIMILAR LEGISLATION

Mr. Chairman and members of the committee, I am opposed to the bill, H. R. 7595, "to protect the United States against certain un-American and subversive activities, and for other purposes," on the grounds that the bill is too vague, its criminal sanctions too harsh, that it is unnecessary and redundant, that every good purpose which might be served by the bill's enactment is better served by existing legislation and administrative action, and that its other purposes are themselves dangerous and subversive of American democracy.

It is my considered opinion that the mere introduction of this legislation, or any similar legislation, and the dignity given it by formal hearings, is an abject confession of lack of faith in the ideals of democratic living, and appears to me to be a serious effort to introduce totalitarian uniformity of political thinking under the guise of making totalitarianism unlawful.

I am sure that the sponsor of this bill is motivated by a sincere desire to protect the United States against foreign and domestic enemies, which is a meritorious and desirable purpose; but I disagree profoundly with the means.

I should like to remind the committee that one of the most brutal tenets in the whole depressing manual of revolutionary communism is that the end justifies the means. This does violence to the modern concept of ethics, and to the basic premises of the democratic way of life.

I feel that the enactment and active enforcement of such legislation would weaken our democracy and destroy that which all of us seek to protect.

With some change in language but with no change in its nature and ultimate ends, this is the measure which I fought in the Eightieth Congress, which I fight today, and which I shall continue to fight.

At the outset, I want it clearly understood that my opposition to all legislation of this kind springs from my own deep faith in the strength of American democracy, and not from any external influence.

1. The bill is redundant and unnecessary: Every useful and desirable purpose that could or would be served by the enactment of such legislation already exists in the statutes of the United States or in the explicit powers bestowed on the Chief Executive by the Constitution.

Mr. Chairman, I instituted a search of the United States Code for existing law to prove this measure to be duplicative and redundant. I was startled anew to discover with what minute supervision the 80 Congresses which have preceded this one into history have acted to safeguard the security, the dignity, and the sovereignty of this Nation, without violation of the letter or the spirit of the Constitution and the noble principles of representative self-government by majority rule, without threat to the rights of dissident minorities, on which this great Nation has flourished and endured since the Declaration of Independence in 1776.

We found that scarcely a chapter in any title of the code was without some measure of national protection. We found that every useful purpose which might be accomplished by H. R. 7595 or a variation of it is being accomplished under present law, or by executive action under explicit powers.

Because of the sheer bulk of the notes which resulted from this search, we have reduced the catalog of sections to those of major importance, and have prepared the notes in the form of an appendix annexed to this statement; I request that it be included as a part of my statement.

The 1946 edition of the code was used. Even in synopsis form, the resulting citations from titles 8, 18, and 50 are so voluminous that we mentioned some titles only by name and number; and we have skimped on the appendix to title 50 and the supplements issued since 1946, containing enactments subsequent to the general edition.

I was impressed by the fact that with the exception of the quickly repealed Sedition Act of 1798 statutory enactments up to 1939 had studiously refrained from entering the field of thought and association; beginning with the Hatch Act in that year there has been a regrettable tendency to attempt to emulate the Fascist and Communist dictatorships by prescribing "naughty thoughts."

The instant bill represents, perhaps, the most startling innovation in that field ever seriously considered by a congressional committee; and I trust sincerely that, as I shall show, the views of the author of the bill on other comparable legislation will prevail here.

(See appendix for recapitulation of citations to the 1946 United States Code, and for statement by Hon. William O'Dwyer, mayor of New York City, in 1948, in opposition to Mundt-Nixon bill in 80th Cong.)

2. The bill is vague and woefully lopsided: The title of H. R. 7595 instantly raises questions of constitutionality in its vagueness.

A careful search of the laws fails to disclose a statutory crime of subversion; as codified, the subtitles of the Smith Act refer to subversive activities but the text does not refer to them directly in the category of prohibited acts under the subtitles. (See U. S. C. 18, secs. 9 to 15, inclusive.)

Undoubtedly it would be possible, though difficult, to frame an objective judicial or legislative definition of subversion and to make specific acts definable as subversive illegal; but it is utterly impossible to arrive at any objective definition of un-Americanism.

Acts highly patriotic to one good citizen are despicably un-American to another. The phrase is, and must be, completely subjective, as a matter of semantics. It can have only that meaning by which it is clothed in the mind of the speaker.

To me, for example, the invasion of private beliefs and associations and the imposition of a standard of political and economic orthodoxy, together with the extremely dangerous current tendency to freeze the current economic system or systems into statute, are highly un-American.

To some of my colleagues, and in equally good faith, the very opposite is true.

I hope the time will never come in America when I can impose my beliefs on another person, or another person can impose his beliefs on me, by force of law or arms.

The policy statement incorporated in H. R. 7595 under the heading, "Necessity for Legislation," raises the same issue of subjectiveness.

There is no factual statement in this preamble with which I strongly disagree, and only one or two conclusions of opinion in which I believe the validity of the logic is dubious.

What I disagree with violently is the thesis that the remedy for the threat lies in undemocratic suppression of free opinion and the imposition of drastic criminal sanctions to enforce that suppression. In this I stand with Oliver Wendell Holmes and other great American lawyers and jurists who insisted on the capacity of truth to find acceptance in the free marketplace of ideas. If this is a pragmatic concept of political teleology, it is self-evident that the genius of America has been pragmatic, and any effort to bend that genius to dogma must fail, or destroy the genius which has made this country great.

The attempt in sections 2 and 3 to define totalitarianism only in terms of communism is absurd on its face.

The dogma on which a totalitarian government rests is unimportant to the effect on the governed; a totalitarian government may be a personal dictatorship, a dictatorship by a class, or by a caste, or by a clique, or junta. Totalitarian dictatorships may and often do repudiate in practice the principles to which they subscribe in their published ideology. Perhaps the most damning indictment of Communist dictatorships in those countries where they exist is their brutal perversion in

the practice of statecraft of the principles they publish to the world.

Aside from the philosophical inaccuracy of these sections, they quite obviously open the way to subjective interpretation and consequent abuses and injustices. It would be an emotional and intellectual impossibility for any group of fallible men to make an objective finding of the facts and the law under these definitions.

Similarly, the attempt in section 4 to define as acts what may be only thoughts or utterances introduces a novel principle into American concepts of justice and law.

There is a strong clash between succeeding sentences of this section. In the first sentence of section 4 (a) the act declared unlawful is anything substantially contributing to a totalitarian dictatorship "the direction and control of which is to be vested in, or exercised by or under the domination or control of, any foreign government, foreign organization, or foreign individual."

The succeeding sentence, much more rationally, gives a definition of a totalitarian dictatorship in terms of any dictatorship in which there is no practical distinction between the single dominent political party and there is forcible suppression of all opposition to the party.

But for the life of me, I cannot tell whether the crime the section attempts to define is limited only to an effort to establish a foreign-dominated dictatorship, or extends to any kind of totalitarian dictatorship.

Paragraphs (b) and (c) set up a category of crimes in which the principal factor is knowledge or reason to believe.

Apparently enforcement of these fantastic provisions is to lodge with the Attorney General; but what prosecutor, what court, what jury, can look into the minds and hearts of accused and of accuser and say what knowledge or reason to believe lay there? The paralyzing fear of prosecution through some error of judgment would reduce public administration to an ineffective palsy of indecision.

The bland disregard of existing dictatorships of the extreme right is not flattering to the intelligence and knowledge of the American people.

It is true that the three principal and explosively expanding totalitarian governments of the extreme right—Hitler's Germany, Mussolini's Italy, and Hirohito's Japan—have fallen; there still exists one totalitarian and authoritarian regime deliberately patterned on and fostered by the Italian and German Fascist dictatorships, and actively and expensively propagandizing in the United States today.

I refer now to Falangist Spain, in which Dictator Franco maintains a government no less absolute than Hitler's, and differing in political dogma from Hitler's only in about the same degree quantitatively and qualitatively as Mussolini's corporative state differed from Hitler's Nazi state.

There are a number of personal dictatorships of the nature of total government, but resting on little in the way of party dogma or ideology. At least one of these—that of Peron in Argentina—seems to be headed in the direction of complete totalitarianism, including absolute one-party rule, active foreign propaganda with an ultimate aim of imperialist expansion by force, suppression of dissident opinion by police-state methods, and abrogation of all civil rights. In Argentina's threat to the contiguous free republics of South America, and to the peace and harmony of the Western Hemisphere, there appears at this stage to be no real difference between the Russia of Stalin, the Germany of Hitler, the Italy of Mussolini, the Japan of Hirohito, and the Argentina of Peron.

Except as the phrase, "totalitarian dictatorship," is all-embracing, there is nothing in this bill to indicate any recognition of totalitarianism except that of militant revolutionary communism.

3. This bill is class legislation of a peculiarly vicious kind: It singles out for opprobrious sanctions a small and limited class of American citizens, and condemns them, not by judicial process, but by legislative and administrative fiat, and (with minor exceptions) not for overt acts of criminal nature but for passive association and for alleged thoughts and beliefs.

4. This bill would open the door to cruel distortion and abuse. No single person or administrative body should ever, in a nation calling itself democratic, be given such broad and sweeping powers of condemnation over other persons as would be bestowed by this bill to the Subversive Activities Control Board.

This bill would deliver to a small body of men of fallible knowledge and decision absolute power over the thoughts and associations of our whole population.

There is no use in saying that such power would not be abused, or that safeguards against abuse will be written in.

It is legalistically impossible to write safeguards which will prevent abuse of such vast and dictatorial power of destruction. The definitions in the bill are vague and sweeping, and the language constitutes an invitation to the Control Board to exercise its great powers on a subjective basis; the Board's answerability to the courts is less than perfect, since no aggrieved party could conceivably recover in a favorable judgment the good name lost by the original administrative decision.

Merely to carry out its defined duties the Board would require an army of investigators, with a constantly widening latitude of faulty and subjective judgments in each descending echelon of authority.

5. The bill is dangerous and subversive of American freedoms: Such legislation, by whatever name it may be called, opens the door to the very evils it seeks to guard against.

By proscribing an unpopular political and economic dogma, this measure would introduce totalitarian controls of thought and association, a principle deeply repugnant to the Constitution, to American traditions, and to the best that has been written by our founding fathers and political leaders.

Thomas Jefferson said:

"Subject opinion to coercion: Whom will you make your inquisitors? Fallible men; men governed by bad passions, by private as well as public reasons." (From Notes on Virginia, query 17.)

6. There is, and by definition can be, no adequate safeguard in the bill against false accusation of groups having no primary political significance: While I cannot conceive of a time when this measure would be sustained by the courts, judicial adjudication necessarily takes a long time; and in the meanwhile, with no recourse, many groups primarily ethnic or religious would be open to false accusation, shame, and disgrace. Labor unions would be vulnerable.

7. The penalties provided are unduly harsh: The bill abandons principles of court procedure and legislative standards which have grown up through centuries of slow evolvement to their present state, which is yet less than perfect.

8. This is the wrong way to preserve our democratic way of life: If the same energy put behind this bill were devoted to enactment of the President's civil-rights program, the country and the world would be better served.

The way to preserve our democracy is to make it more democratic, not less so.

When every man has an equal opportunity to earn a living, regardless of race, religion, national derivation, creed, or status; when every man is equally safe from assault, discrimination, and illegal action by law officers; when every man is equally free, and freely equal, within the obvious limitations of his own natural gifts; when every man is judged on his own worth, and not by any external qualification, then, I assure you, the Communist Party will wither away and disappear.

All revolutionary parties, regardless of their ideological content, thrive on discontent, insecurity, discrimination, and fear.

I condemn as boldly as any member of your committee the chicanery, the deceit, the double talk, and the absolutism of revolutionary communism. However, the whole approach of this bill to the very real economic, political, and social problems of our country is negative.

I differ from the author of this measure in believing that not repression and indiscriminate proscription but redress of grievances is the answer to the discontent on which, in the black depression years, the Communist Party gained its greatest membership in the United States and elsewhere, while revolutionary fascism took over absolute power in Italy, Japan, Germany, and Spain.

By your own figures, the Communist Party of America is today in a parlous state. Its membership has shrunk to a small figure, about one-thirtieth of 1 percent of the population.

As for fellow travelers, I am sure that those who were not shaken loose by the Hitler-Stalin alliance in 1939 have been jarred from their emotional moorings since the end of World War II.

The only members left in the Communist Party in the United States are the hard core of fanatics—those to whom communism is less a political and economic panacea for obvious wrongs than a religion to which they cling with psychotic fervor.

This legislation would create martyrs of the true Communists, and might even arouse sympathy among many people hitherto disgusted by the terrorism, the imperialist aggression, and the blind bigotry of communism, both as a world movement and as a personal religion.

Mr. Chairman, and members of the committee, I urge you to drop this bill and to devote the resources of your committee to ferreting out the real un-American activities which are on every side—the hooded terror of the Ku Klux Klan and its imitators; the insecurity, political and economic, of our Negro citizens in every State; the open advocacy of falangism and the existence of Falangist cells under one name or another in some of our States, especially where there is a Spanish-speaking population; economic and political discrimination against many minority groups, whether ethnic, religious, economic, or political; the resurgence of pan-Germanism in the United States; the creeping paralysis of monopoly enterprise which is clutching at the throats of free and open business competition of small units.

You have a vast field in which to operate.

It is a disservice to the House and to the country to become so obsessed with one danger that you fail to see other and equally real un-American activities.

I cannot add anything to my opposition. I am against the bill, section by section, line by line.

I can, however, if the committee will permit, point out a curious inconsistency on the part of the author of the bill, the gentleman from California [Mr. NIXON].

On page A2129 of the Appendix to the CONGRESSIONAL RECORD the gentleman inserted an editorial in opposition to a proposal made in the other body for the licensing of the motion-picture industry.

The gentleman's position on the censorship proposal almost precisely expresses my own views on the bill which you have under consideration.

I ask permission of the committee, Mr. Chairman, to include the remarks of the gentleman from California [Mr. NIXON] as

a part of the record on the instant bill, and I ask that the committee take into consideration the utter lack of consistency between his authorship and support of the Subversive Control Act of 1950 and his strong opposition to an almost identical proposal affecting the motion-picture industry.

"MORE FEDERAL CONTROL

"Extension of remarks of Hon. RICHARD M. NIXON, of California, in the House of Representatives, Wednesday, March 22, 1950

"Mr. NIXON. Mr. Speaker, one of the most startling and dangerous proposals which has been made in recent years is the suggestion that a Federal bureau should be set up for the purpose of licensing the motion-picture industry. Even actors and actresses would be required to take out licenses with the Government before they could appear in pictures. The ostensible purpose of this proposal is to improve the standard and quality of motion pictures. The ultimate effect of it, however, can be not only censorship of motion pictures themselves but also complete control of the individual lives of those who appear in and produce the pictures.

"But the greatest threat inherent in this proposal is the precedent that would be established. It would open the way toward licensing everybody who engages in interstate commerce. This, in the final analysis, gives the Federal Government the power to deny a license to anybody whose business standards and personal behavior it does not approve. Right now we should be giving more thought to reducing the power of the Federal Government to control our individual lives and fortunes rather than considering proposals to increase that power.

"The motion-picture industry has established its own governing body to enforce a code of morals and ethics. Under this procedure, the industry has been eminently successful in raising the moral standards of the films it produces. True, under this self-regulation, the code governs only the productions themselves and does not apply to the private lives of those who appear in the pictures. But I see no more reason for the Federal Government to set itself up as the arbitrator of the moral conduct of individuals in the motion-picture field than I do in any other field of private employment."

Mr. Chairman, and members of the committee, I agree with the gentleman's position here absolutely.

I am opposed to such authoritarian controls.

I am opposed to them in the moving-picture industry, in publishing, in politics, in religion, and in this legislation.

APPENDIX TO FORMAL STATEMENT BY REPRESENTATIVE ARTHUR G. KLEIN, OF NEW YORK, IN OPPOSITION TO THE SUBVERSIVE ACTIVITIES CONTROL ACT OF 1950

CITATION TO THE UNITED STATES CODE, 1946 EDITION, WITH SUPPLEMENT

I. Title 18, Criminal Code and Criminal Procedure

Part I. Crimes

Chapter 1. Offenses against the existence of government: Every one of the 17 sections of this chapter support my thesis that H. R. 7595 is redundant and unnecessary, and that every proper and desirable end which might be accomplished by its enactment is better accomplished by existing law or administrative action under explicit powers.

Sections 1, 2, and 3, codifying statutes going back to the first Congresses under the Constitution following the successful outcome of the Revolutionary War, define and prescribe punishments for treason and misprision of treason. (It is to be noted that the Constitution includes a restrictive definition of treason to guard against the very kind of indiscriminate accusation and proscription provided for in this bill; this bill and others of similar intent are, by definition, evasions of the constitutional limitations by creating a lesser order of offenses tainted with treasonable intent.)

Section 4 defines and prescribes penalties for inciting rebellion and insurrection. (See also title 50.)

Section 5 interdicts correspondence with foreign governments and their agents for all purposes except that of redress for private wrongs, in language more exact than that of the proposed legislation.

Section 5 defines and penalizes seditious conspiracy; sections 6 and 7 prohibit recruiting or serving in armed forces opposing the United States.

Sections 9 to 17, inclusive, codify the sweeping provisions, prohibitions, and penalties with very great delegations of power to the Attorney General, embraced in the act of June 28, 1940 (Alien Registration Act).

It is noteworthy that there is a similarity not only of intent but of language between these sections and the text of H. R. 7595.

Section 9 is one of several having subheads citing subversive activities, but with no specific reference in the text. The subhead reads: "Subversive activities; undermining loyalty, discipline, or morale of armed forces." The text is broad and sweeping, and is not confined to states of war or emergency.

Section 10 (same; advocating overthrow of government by force) is equally sweeping in its interdictions of seditious activities, while section 11 makes unlawful conspiracy to violate the sections.

Section 12, containing the broadest grants of power as to search and seizure ever granted by Congress to an executive agency in peacetime, is now covered by rule 41 of the Federal Rules of Prosecution (q. v.). See also note under this section.

Sections 14, 15, 16, and 17 provide for registration of a large category of organizations, with a wide grant of power to the Attorney General, in language paralleling the bill before you.

Since these sections are now undergoing their greatest court test I refrain from any comment beyond their citation as complete and adequate protection against any dangers of sedition or of seditious conspiracy, from within or from foreign sources, against our country, in peace or in war, when taken in conjunction with other provisions which I shall cite specifically or by reference.

Chapter 2. Offenses against neutrality: The 19 sections of this chapter act to guard this Nation against unintended involvement with foreign quarrels, and provide punishment for individuals commiting acts dangerous to amicable relations with other powers.

Chapter 3. Offenses against elective franchise and civil rights of citizens: Not only do sections 51, 52, 53a, 54, 55, 56, 57, 58, and 59 offer specific protection against the internal imposition of totalitarianism; the principle on which these sections are founded clashes headlong with the indiscriminate grant of power in H. R. 7595. Additionally, this chapter contains the provisions of the act of August 2, 1939 (Hatch Pernicious Political Activities Act), of which section 611 reads:

"It shall be unlawful for any person employed in any capacity by any agency of the Federal Government, whose compensation, or any part thereof, is paid from funds authorized or appropriated by any act of Congress, to have membership in any political party or organization which advocates the overthrow of our constitutional government in the United States.

"2. Any person violating the provisions of this section shall be immediately removed from the position or office held by him, and thereafter no part of the funds appropriated by any act of Congress for such position or office shall be used to pay the compensation of such person."

Chapter 4. Offenses against operation of Government: Every section in this long chapter relates directly, or can be made to relate without any wrenching of the plain intent of the law, to the national security and to that stability and freedom needed by a democratic and representative government against the overreaching power of unscrupulous individuals or conspiratorial groups.

All sections are cited by reference; but some sections are necessarily more specific and relevant than others.

Sections 71 to 87, inclusive, are concerned with defining and prohibiting false personation of United States agents and officials or private persons in negotiations with Government and fraudulent conversion of Government funds or property.

Section 88 is a general provision against conspiracy so all-embracing as to demand full quotation: "If two or more persons conspire either to commit any offense against the United States, or to defraud the United States in any manner or for any purpose, and one or more of such parties do any act to effect the purpose of the conspiracy, each of the parties to such conspiracy shall be fined not more than $10,000, or imprisoned not more than 2 years, or both."

Section 89 prohibits and penalizes threats against the President; section 91 prohibits and penalizes bribery of a United States officer.

Sections 94 to 98 contain detailed definitions and penalties for offenses directly concerned with the Army, Navy, national defense establishments and its reservations and plants, and international relationships.

Sections following close on this cover the counterfeiting of Government documents, passes, etc., interference with communications, etc.

Chapter 5. Offenses relating to official duties: It is natural that the provisions of this chapter should be chiefly designed to protect the financial probity of officers and employees of the United States Government.

Section 171 is so phrased, however, as to be of direct interest in connection with current discussions of employees who are security risks because of personal habits.

The section makes unlawful the performance of any act or attempted act of extortion.

It is respectfully submitted that consideration of an amendment to extend this section to acts or attempts at acts of extortion by other than officers or employees and directed toward officers or employees, by a committee having proper jurisdiction, would be of greater service than any effort at invasion of private rights of views and affiliation.

Chapter 6. Offenses against public justice: The recitation of the section titles of this chapter is a recitation of specific and detailed definitions of prohibited acts, with penalties, tending to interfere with public justice, and includes forgeries, destruction or concealment of records, perjury and subordination of perjury, bribery and other offenses, all of which further safeguard the peace and security of the United States against acts against public security and interest.

Chapter 9. Offenses against interstate and foreign commerce: While less directly relevant to internal and external security than other chapters cited, these sections have a real usefulness in protection of peaceful commercial intercourse.

It is especially to be noted that, in the criminal code, this is the entire statutory recognition of the private economy, and that the laws are designed to preserve a free competitive economy without attempting to freeze into immobility against future development any specific stage of the economy.

II. Title 50, War

Chapter 3. Alien enemies:

Section 21. Restraint, regulation, and removal: This goes back to an act of July 6, 1798, and has guarded this country against hostile activities of aliens owing allegiance to any enemy power very effectively. Sections 22, 23, and 24 give detailed instructions and definitions of powers.

Chapter 4. Espionage: The 11 sections of this chapter are all devoted to protection of the national security against espionage and sedition, by specific definitions of prohibited acts or of entities and places. It has long been my belief that a proper duty of the Congress is to reexamine this chapter, particularly sections 31, 32, 33, 34, to determine if the sections should be strengthened and broadened; proper jurisdiction lies obviously in the respective committees of lawyers—the Committees on the Judiciary of House and Senate. For my part I have no prejudgment except that the sections cited obviously offer no specific prohibition against activities in peacetime which in war are prohibited and heavily penalized. Even in this regard it must be kept in mind that most such activities can be kept under reasonable control through the invocation of appropriate sections of other titles or by administrative and educational methods. See also chapter 4A.

Chapter 4A. Photographing, sketching, mapping, etc., defensive installations: The powers bestowed on the Executive by this chapter, and the all-embracing language of Executive Order 8381, offer substantial safeguards against peacetime espionage.

Chapter 5. Arsenals, armories, etc.: Sections 56 and 57 provide specific safeguards against internal sabotage by Government employees.

Chapter 6. Willful destruction, etc., of war or national-defense material: The six sections of this chapter offer adequate legal defense against any sabotage operation, in war or in peace, by any person, alien or citizen, Federal employee or not, without invading beliefs.

Chapter 8. Explosives, etc.: By its licensing provisions and prohibitory language, this chapter guards against unauthorized manufacture of explosives of any kind, in war or in peace.

Chapter 12. Vessels in territorial water, etc.: Again, with minute detail, and in language so broad it can be extended to any type of machine for transportation, in war or in peace, the Executive is authorized to take security measures.

Chapter 13. Insurrections: Although most of the 26 sections of this chapter were enacted during the Civil War, the language is broad enough to meet any conceivable situation of internal disorder.

Title 50. War

The appendix, although merely a compilation of laws and executive orders of specified terminal date, applicable only to periods of open war or enacted for a specific purpose during that period, offers ample illustration of the ease and swiftness with which a democratic nation, without abandoning its freedoms beyond the time necessary for the completion of its war task, can act to meet an emergency. The Trading With the Enemy Acts, although included in the appendix, stand as permanent statutes available at all times for economic reprisal against enemy nations or allies.

III. Title 8, Aliens and Nationality

Chapter 6. Immigration (et seq.): Aside from the broad and general powers over the admission to the United States of aliens granted to the Attorney General and the Secretary of State, section 137 spells out specified categories of excludable aliens on political grounds; section 157 provides for deportation of aliens convicted of specified wartime offenses; sections 165, 166, 167, 171 guard against landing of excludable seamen. See also title 8, Code of Federal Regulations, 1949, part 175, sections 52–53, 57.

Chapter 10. Alien registration: This chapter embraces the provisions of the Alien Registration Act of 1940. Drawn with the active participation of one of the most distinguished members of your own committee, this chapter and the succeeding chapter have stopped every conceivable loophole through which alien disaffection might be spread. It is pertinent to note that these statutes have been termed too rigorous for a democratic way of life, and that they are confined to overt actions.

Chapter 11. Nationality: The many sections of this important enactment, embracing all provisions of the Nationality Act of 1940 together with unrepealed prior statutes, act as a whole to guard the safety of the United States against subversion of aliens and of citizens and to penalize disloyalty by loss of citizenship. Again, the punitive and prohibitory language is directed against acts, or the failure to perform specified acts. Certain sections do, however, stand out when evaluated against the instant bill.

Section 705 specifically denies the right of citizenship (naturalization) to individuals advocating overthrow of government by force and violence or the unlawful damage and destruction of property in sweeping language.

Section 706 denies naturalization to deserters or draft evaders.

Section 801 prescribes loss of citizenship as a penalty for taking any oath of loyalty conflicting with loyalty to the United States.

Section 746 contains a long list of penal provisions for offenses against the chapter, all of which are safeguards against fraud and misrepresentation of citizenship.

The powers already possessed by the President and by the Secretary of State to control the extension of passport privileges for citizens of the United States engaged in foreign travel approach the absolute, in language much more parliamentary than the direct and limiting provisions of this bill. If called to testify, I am sure the Secretary or the chief control officer would confirm my belief that existing law is broader and more useful than the narrow clause of H. R. 7595.

There are other provisions, notably in titles 10, 14, and 34, and in enactments subsequent to the 1946 edition of the code, which act to safeguard the national security in peace and in war; but no good purpose would be served by continuing what can be, in such brief compass, only a catalog of laws and Executive orders.

It is my belief, however, that the sections specifically cited and those cited by reference only make my point, almost to intellectual suffocation, that every useful end which might be accomplished by enactment of the Subversive Control Act is better accomplished by existing law, or by the consideration of amendments to existing law where there appears to be a specific lack.

Nothing in history or in the present strained international situation; nothing in the precarious domestic political economy with its unending threat of depression or of inflation, or of unemployment or of surfeit; nothing in all the ideological assaults which are being or may be made on our accustomed modes of living and doing business, nothing, I repeat, can conceivably excuse the enactment of any law which seeks to peer into a citizen's mind and say that what is found there is unorthodox and heretical and must be proscribed by severe criminal and economic sanctions.

Such a law, in the words of my colleague, the gentleman from California [Mr. NIXON] author of the bill under consideration, "would open the way toward licensing everybody."

Section 4 (e) of Nixon bill included in H. R. 4703: As a final citation I wish to draw attention to the fact that section 4 (e), which extends the statutory limitation on prosecutions for violations of section 4, is substantially included in H. R. 4703 (by Mr. BRYSON of South Carolina), introduced on May 16, 1949, and referred to the Committee on the Judiciary, and passed by the House on March 15, 1950, by a vote of 368 to 2; placed on Senate Calendar March 16.

I quote verbatim from the digest of the bill furnished by the Library of Congress:

"H. R. 4703. Mr. BRYSON; May 16, 1949 (Judiciary). Amends the Criminal Code to impose a $10,000 fine and/or 10 years imprisonment on any unauthorized person who controls, obtains, and so forth, any document, and so forth, relating to national defense and who transmits or communicates it to unauthorized persons or fails to deliver it to Federal employees entitled to receive it. Similarly punishes persons having lawful possession of such documents, and so forth, for failing to report promptly loss, theft, destruction, and so forth. The Statute of Limitations in such cases shall be 10 years.

"Requires registration under the Act of June 8, 1938 (U. S. C. 22; 611–621) of persons with knowledge of or having received instruction in espionage, sabotage, and so forth, tactics of a foreign government with certain exceptions.

"Subject to a $5,000 fine and/or 1 year's imprisonment persons violating orders of the Secretary of the Navy for protection of security of vessels, harbors, and so forth, or orders of the Secretary of Defense regarding protection of security of aircraft, airports, etc."

Biggest Story

EXTENSION OF REMARKS
OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 4, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the tenth article by Mr. Frank Waldrop on the infiltration of communism in our country:

BIGGEST STORY

(By Frank C. Waldrop)

Russia is a vast region, but is not now, nor has it ever been, what we understand in this part of the world when we speak of a "nation."

It is not a tight-knit body of men and women all educated in the same general language, law, and idea of life.

Instead, it is a disjointed confederation of races and languages held down by threats of personal death to the man in the street on orders from afar.

It is easier for that power from afar to rule now than it used to be, on account of bombers, artillery, and automatic rifles. But even yet, ruling Russia is a hard and complex job.

In the old days, the kings in Moscow who called themselves "czar" in a Russian corruption of the Latin "Caesar," extended their shaky rule by guile, intrigue, and sudden pounces with the sword.

But they were never sure.

The old duchy of Moscow was made up of Russians. But to the south were the people who called themselves the "Ukraine," and beyond them, "Turks."

To the west were the Mongols, who once spread their deathly touch from the shores of the Adriatic where Tito is trying now to

be a jitney junior Stalin, all the way down to India and across to China. In between were more than 20 varieties of tribes, languages, and races.

All in all, the Russian empire of old was as disorderly as it was disjointed, and revolt was instinctive with all, from the regional nobility and gentry down to the slaves.

The Moscow czars were perpetually overextended, always required to cut off heads to make themselves obeyed.

One of them, named Peter, went to western Europe and saw how countries could be orderly and progressive. So in 1700 he directed that a new "window on the west" be built for him on the marsh edge of the Baltic Sea, and called it St. Petersburg.

Peter (the Great) was an imaginative man. He defeated the Swedes when they attacked him under command of the dreaded Charles XII. He also reformed the state religion to suit his ideas and one day had 5,000 soldiers beheaded to keep discipline. In general he made the loose confederation of tribes tremble.

But he could not have foreseen that the town he called St. Petersburg, his "window on the west," one day would be ruled by a German woman empress called Catherine, also the Great.

Nor would Peter in his wildest hangover, for he loved to get drunk, have imagined that in 1894 there would come to St. Petersburg a country schoolmaster's son, Vladimir Ilyich Ulyanov, who would take the alias of "Lenin" as a preliminary to a career devoted to overturning the reign of Peter's successors on the Russian throne.

Least of all could he have dreamed that on the night of April 4, 1917, that same schoolmaster's son would step down from a train arriving in the Finland railroad station in St. Petersburg, then renamed Petrograd, and announce:

"We will now proceed to build the Socialist state."

What's more, that the Socialist state would soak in blood and terror worse than anything ever known in Peter's day.

Lenin was born April 9, 1870. Russia was ruled then by the Czar, Alexander II, who had spent the past 9 years giving freedom and land to some 23,000,000 slaves and then having to put down their revolts against his government.

Czars through the centuries had followed more or less the same pattern of extending their rule, acquiring new subjects and broader territories, and then having to kill large numbers to maintain control.

Lenin was born in the period of upheaval precipitated by Czar Alexander's attempt to bind the slaves to him by giving them citizenship and land, in an empire already over-extended and inclined to fly apart.

Lenin's older brother, himself named Alexander, was already a revolutionary when someone threw a bomb at the Czar that hit the bull's eye.

Then in a few years that older brother was one of a group that threw another bomb at the new Czar, Alexander III, and missed. So that time it was the bomb throwers who died, including the said brother.

Lenin became a law student, fell in with the college radicals even as students do today, and gave himself over to a life of revolutionary conspiracy.

As such he was a genius. But his fatal day came when he stepped down from that train in the Finland station to attempt the Socialist state.

He got as far as kidnaping the power of the government, a story next in this series, but he was an utter failure as a Socialist or even as a czar.

The science of Marxism failed as soon as tried. A girl put a bullet through his neck one day, he never really recovered, and then he died.

Relation of the Methodist Church to the Federation for Social Action

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by the Council of Bishops of the Methodist Church on the relation of the church to the Federation for Social Action, unanimously adopted at Cleveland, Ohio, April 20, 1950:

The Methodist Church takes pride in its achievements in the field of social action. It has always held that it had a divine obligation not only to call men and women one by one to repentance and faith in the Lord Jesus Christ, but also to serve as an instrument of God's will to define and defend those moral and spiritual standards which undergird Christian society. Such convictions have through the years made us the enthusiastic champions of movements which ever seek the reconciliation of our divided society, the removal of prejudice and hate, the cementing of the bonds of brotherhood, the exalting of God as the Father and Ruler of mankind and Christ as the Saviour of all men. We believe that God wills that all men be free to work out their destinies in a just society amid conditions favorable to the abundant life. We seek to be universal in our outlook and ministry without becoming partisan or political.

The pioneering of the Methodist Church in the field of social justice is evidenced by the social creed which came out of the mind and heart of the church as early as 1908, and which has become a kind of Christian Magna Carta for the churches of Protestantism. In line with the spirit pervading this creed, the bishops of the church declared in their most recent episcopal address, "We are determined that free preachers, occupying a free pulpit, preaching to free laymen in a free land, shall proclaim the freeing truth of the religion of Jesus."

The address of the council of bishops to the general conference in 1948 made unmistakably clear the position of the Methodist Church concerning communism: "We reject communism, its materialism, its method of class war, its use of dictatorship, its fallacious economics, and its false theory of social development; but we know that the only way to defeat it permanently is to use the freedom of our own democracy to establish economic justice and racial brotherhood."

We have recently received communications of various sorts from devoted and loyal Methodists in many sections of the church making inquiry as to the Methodist Federation for Social Action and its relation to the Methodist Church.

The federation was organized in 1907. Across the years, it has counted in its membership some of our most distinguished Methodists and loyal Americans, and has made notable contributions in the field of social justice. The federation, however, is not and does not claim to be an authorized agency of the Methodist Church. It is a voluntary and independent organization. It is not responsible to the church. It does not speak for the church, and over it neither the general conference nor the council of bishops has jurisdiction.

We are reliably informed that the executive committee of the federation has recommended to the federation's membership that the word "Methodist" be dropped from its title. We commend this action. Should this recommendation be approved, it would, in our opinion, clarify in the public mind the independent nature of the federation.

We deplore and sharply disagree with certain positions taken and statements published of late in the federation's official bulletin. Many months ago, members of the federation initiated actions which have made clear their similar judgment.

Our position as bishops in the church affords us unusual opportunity to know the mind and character of our Methodist people. We are convinced that no group of American citizens can be found possessed of a more stalwart loyalty to our Christian ideals and the evangelical emphases of Protestantism.

These are days of fierce perplexities. Enormous forces have been released in the world which challenge our faith and courage. We Methodists must not allow hysteria and fear to rob us of confidence in our leadership nor divert us from our task. We therefore summon both ourselves and our people to a new consciousness of God's power; to quickened insight by which we are made increasingly aware of human need; to a more constructive Christian statesmanship through which the gospel may be preached in language all can understand, with a thoroughgoing application of its ethic to all the affairs of the world's life.

The Postmaster General's Order to Curtail Services Not Warranted

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1950

Mr. TOLLEFSON. Mr. Speaker, on April 18 Postmaster General Donaldson decreed that the letter carriers of the postal service, in residential areas, should work twice as hard. He in effect ordered these public servants to carry double their usual loads.

The Postmaster General is an expert on this subject. He, too, has carried mail from door to door. At the beginning of his own career he faced personally the problem of getting as much mail as possible delivered in the shortest time.

What record the Postmaster General set in hauling mail on his back, I do not know. I do know that he soon moved on to a higher position. Now, instead of carrying mail on his back, he has instead the difficult, distasteful, unfriendly job of policing these "couriers in the swift completion of their appointed rounds."

He has made the postal service his career. His son is also making this service his career and holds the position of Assistant Chief Inspector of the Post Office Department. His rise to that post was meteoric.

We all know the letter carrier. He is a friend of all of us. Has any one of us ever experienced anything but courtesy, friendliness, and sincere devotion to duty on the part of the quiet, efficient, and faithful mailman who serves us daily? Dignity, decency, and uncomplaining performance of duty are expected of the letter carrier for the simple

reason that we all have never known anything else.

If it were necessary for the Postmaster General to take the step he did in ordering curtailment of service, my voice would be silent. But it seems to me that this step was completely unnecessary and impractical. The Postmaster General is the last person to deny this. His own testimony before various committees of Congress, on numerous occasions, he is in no position to repudiate. The mail must move. Post offices are not places of storage. What comes in must go out to make room for more incoming mail. The letter carrier moves the mail out to the people on his route. He makes whatever number of trips are necessary to keep the mail moving. The length of his route is fixed in such a way as to keep him busy and his sack loaded.

Can a letter carrier's load be doubled by a stroke of the pen of the Postmaster General? If so, why was this not done before?

We all know that the volume of mail has increased tremendously in recent years, even in recent months. This increase is continuing. All the more reason for keeping the mail moving. Postal facilities are already overtaxed. What will happen when the letter carrier becomes a bottleneck, stopping the flow of mail and causing it to pile up in already overburdened post offices? The Postmaster General must know about this condition? But he cannot solve this problem by another order. He cannot decree that each post office be doubled in size.

All this in the name of economy—but a ridiculous, impossible, deceptive economy, perpetrated at the expense of the letter carrier—the friend and faithful servant of every man, woman, and child in the United States. This is no real economy; there is the appearance of an effort but no genuine effort to economize; and this action treats the friendly mailman with the lack of the consideration to which he is entitled.

This so-called economy would be more understandable if there were no real opportunity available to the Postmaster General to economize in the true sense of the word. But such opportunity does exist; it has been ignored, even though it would result in increased service to the American public while a saving is being made. When the Postmaster General passes this opportunity by, and instead reduces service to the public with no real saving, what language can be used to characterize his action?

The Postmaster General has undoubtedly traveled much, particularly in recent years. It is fair to assume that he has frequently been a railroad passenger. We can also take it for granted that when the Postmaster General pays for a first-class ticket, he rides in the parlor car, not the coach; and if he pays for a lower berth, he does not climb into an upper. Jesse M. Donaldson, as a railroad passenger, gets what he pays for. To this he is entitled. He does not pay two fares for one ride.

But what happens when he as Postmaster General, is paying the fare for mail. To begin with, he pays double for the service he is supposed to receive. According to his own testimony before the House Committee on Post Office and Civil Service, in connection with his bill to increase postal rates (H. R. 2945), the Post Office Department, in shipping mail by railroad, "used about half of the space that we paid for."

In other words, in shipping mail, the Postmaster General pays for two seats, and uses only one. And sometimes he does not even get a seat. Instead he rides a boxcar in a freight train, despite the fact that he is paying a parlor-car rate. Any product can ride in a freight train without paying a passenger fare.

A very interesting and enlightening report on this situation has very recently been made by the General Accounting Office. This report states, page 35:

> Many cars of mail are moved in refrigerator and other kinds of freight cars on which passenger-train rates are paid.

This report of the General Accounting Office, made to the Senate Committee on Post Office and Civil Service, is entitled "A Study Made of the Round Trip Provisions of the Railway Mail Pay Act of 1916."

This is a serious statement, made by an agency of Congress. It is short and to the point. So much is said in so few words that it will bear repeating and I accordingly repeat it:

> Many cars of mail are moved in refrigerator and other kinds of freight cars on which passenger-train rates are paid (p. 35).

This report makes the similar additional finding:

> Much mail traffic moves in freight trains at passenger rates. There are no mail freight rates approved at this time (p. 4).

The Post Office Department is now paying a railroad bill each year of approximately $250,000,000 (a quarter of a billion dollars, two hundred and fifty millions of dollars). We are paying this sum for first-class, de luxe service in passenger trains. Yet we are getting not even coach service. We are putting our mail in box cars, and shipping it in freight trains.

The Postmaster General is interested in both service to the public and reducing expenses. Here is his opportunity. Let him take the mail out of slow freight trains and increase service to the public by putting it in fast passenger trains. Since he is paying for passenger-train transportation, this will not cost the Post Office Department one cent.

When mails can be transported in freight trains without damage to the service, I suggest that the Postmaster General reduce his expenses by paying a freight rate instead of a first-class passenger rate. Perhaps he might also wipe out a large part of his deficit by recovering for what may be called overcharges already paid the railroads.

The report of the General Accounting Office which I have mentioned is a very interesting document. Most interesting is the fact that it does not tell the whole story of the transportation of mail by the railroads of this country. It is many pages long, accompanied by many exhibits. It shows that the Post Office Department has been overcharged by the railroads many millions of dollars a year, in many ways. Paying passenger-train rates for freight-train service is only one of the ways in which the overcharges come about.

This entire matter should be thoroughly investigated. The General Accounting Office should go into this matter completely. It is that agency of Congress which is charged with the duty of supervising payments by the Post Office Department.

In the meanwhile, I suggest the Postmaster General revoke his order making the mailman the scapegoat of his effort to effect alleged economy. If he is sincere, let him do what he can to economize by paying the railroads no more than the law entitles them to.

The American Merchant Marine

EXTENSION OF REMARKS

OF

HON. ERNEST W. McFARLAND

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Friday, May 5 (legislative day of Wednesday, March 29), 1950

Mr. McFARLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Our Merchant Fleet," from the New York Times of this morning.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR MERCHANT FLEET

As a last resort the subsidized American-flag shipping operators submerged their minor differences last week and appeared in force before Senator MAGNUSON'S Maritime Subcommittee to lay before Congress disclaimers of excessive earnings under the subsidy system. It was a demonstration of unity that will do the industry good. The operators gave an answer, documented and accompanied by an unusual composite financial statement drawn by independent accounting firms, that should have been given last year when the whole question of Maritime Commission subsidies, both construction and operating, was brought under fire by the General Accounting Office and members of the House Expenditures Committee.

The steamship industry is a relatively small facet in the national economy, but it is a critical one. It has aptly been described as less an industry than an instrument of foreign policy. The subsidy to shipping is small. It is not a gift to the operators.

Subsidized operation carries well-defined obligations and restrictions, and from all of these the nonsubsidized line is free. Moreover, the subsidy system has strong recapture provisions. The company board chairmen and presidents showed that more than 70 percent of the operating subsidies went back to the Treasury in outright recapture. In some individual cases all of it was retrieved by the Government.

To permit the shipping industry to wither, as it has too often in the past, would be folly, for the country must have a strong merchant marine. We do not want a top-heavy merchant marine, and we do not want one that will put friendly maritime nations out of business; we must remember that foreign shipping services are a means of support and dollar aid to Marshall plan countries. But we want a good fleet, and one

with enough modern passenger ships to carry our share of travel and provide a reservoir of potential troop transport in time of emergency.

Senator MAGNUSON, who has devoted a great deal of time and interest to the hearings, is to be congratulated on his job. We hope he can arrive at a dependable estimate as to the size of the fleet needed, and then press for legislation on the phases his committee covered.

Saving at the Spigot and Wasting at the Bung

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. MURDOCK. Mr. Speaker, today we are appropriating more than $56,000,000 for the conservation of our soil. I approve every cent of such expenditures when wisely and effectively made to accomplish the intended purpose. Naturally, I vote for such appropriations as the one contained in this agricultural appropriation bill. Just as naturally, I am grieved to see a glaring waste of soil and water great enough to counteract or to cancel, five times over, the effect of the present appropriation we are considering. What is this avoidable and glaring waste?

The avoidable and tragic waste large enough to counteract the amount of the conservation appropriations in this bill, several times over, is the senseless spilling of Colorado River water annually into the ocean to the extent of $300,000,000 worth of potential wealth in the 8,000,000 acre-feet of water flowing, unused, to the Gulf of California. That water could be used on soil in the United States and still supply the Republic of Mexico with the amount guaranteed her under the recent water treaty. This 8,000,000 acre-feet wasted annually could produce perpetually $300,000,000 of agricultural wealth in seven States of the Colorado River Basin, and, as I see it, existing law provides for a proper division of this water in the fairest way that human beings can devise among the seven States of the basin.

Proposed Curtailment in Mail Deliveries

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, May 5 (legislative day of Wednesday, March 29), 1950

Mr. WILEY. Mr. President, 50,000,000 American families have been hit in the mail box.

Mail deliveries to residences are being cut from two a day to one a day, and other vital services are getting the ax. So, on April 19, a few hours after reading the announcement of Postmaster General Donaldson's drastic ruling curtailing these postal services, I issued a strong protest against that ruling. I stated that it seemed very inappropriate for the Post Office Department to slash postal services:

(a) Before the Hoover reports on the Post Office Department were applied.

(b) Before an efficient budgeting and accounting system was set up, so that we would know exactly how much various postal services really cost.

(c) Making a few humble postal workers the victims of a slash which will not really save money, but which will merely put out of employment some $40-a-week veterans—clerks and carriers.

I am glad to say that the favorable response to my statement from all over Wisconsin has been very gratifying. In addition, I have heard from many other States of the Union. I ask unanimous consent, therefore, at this time that a supplementary statement which I have prepared be included in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

WE MUST CONTINUE ADEQUATE MAIL SERVICE

"Why slash the Post Office Department's services at the very time when the need for more and better mail service is being constantly felt?" This is a question asked all over our Nation.

We all know that this is an age of high-speed mail communication. Modern business depends to a tremendous extent on fast mail service. American newspapers and magazines operate on hair-breadth deadlines which require getting out the copies at high speed. Countless wage earners depend on the mail for prompt job information. Old folks, veterans receiving certain types of aid must get their mail promptly.

WE CAN FAVOR ECONOMY AS WELL AS ADEQUATE SERVICE

But someone may ask:

"Can one be both for Federal economy and against this drastic service cut?" The answer, I feel, is very definitely yes. It is entirely consistent to favor Federal economy as well as to favor adequate mail service to the American public. Let us see how that works out. By adequate service, we help businesses using the mails and by helping these businesses we help to assure a large amount of revenue ultimately for Uncle Sam. Obviously, a prosperous America can help make for a healthy American Government. Crippling our mail service certainly does not make for a healthy America.

Any Government expert knows that the greater the volume handled, the greater economy can be achieved through assembly-line techniques providing scientific management principles are of course really utilized.

POST OFFICE DEFICIT IS ARTIFICIAL IN PART

Yes, we are all indeed interested in cutting down on the huge deficit facing our Government. That includes the deficit facing the Post Office Department. However, I have contended for many years that the deficit in the Post Office Department is in many respects an artificial concoction. Why? Because there are many items in the Post Office Department budget which have no business being there. These items serve to increase the size of the budget.

I refer, for example, to the air-mail subsidies, to the cost of carrying so-called penalty mail free for Government agencies, and yes, the cost of carrying congressional franked mail. I believe that each of these respective costs should be set up within the budget of the department units. In other words, the budget for the legislative branch should include the charges on franked mail. I do not believe that Congress should make the Post Office Department carry Congress' mail costs. We should pay our own way in our own budget. We all realize the fact that franked mail (that is, postage-free official mail) is about the only way by which the Members of Congress can contact the public, and so it is a necessary service. But that does not mean it should be carried in the Post Office Department budget.

POSTAL UNIONS ARE FIGHTING CUT

It is an important fact to note that America's able postal unions—the organizations which are most familiar with the actual operations of the first-, second-, and fourth-class post offices throughout our country have taken a very determined stand in opposition to the Postmaster General's ruling. I have received many fine communications not only from the national officers of these various postal unions and their auxiliaries, but from the State officers in Wisconsin. These conscientious unions are rightly fighting for elementary justice for their members and particularly, as I have pointed out, for the new folks who have only recently come to the Post Office Department and who have just been fired as a result of this drastic order.

We do not lose sight of the fact that post-office workers are, after all, taxpayers as are other Government employees and the rest of us. They realize that the tax burden on the American people is very high. They realize that it is necessary for the Government to become more and more efficient. But they do not believe, and I join with them in this conviction, that it is necessary to slach service to the American public recklessly, arbitrarily, and without heed as to consequences.

EXCERPTS FROM WISCONSIN LETTERS

The people can speak for themselves.

Let excerpts from various expressions which have come to me from Wisconsin be printed at this point in the CONGRESSIONAL RECORD. In the instance of individuals who have written to me, I have necessarily, of course, respected their confidence, and I have not included their names. However, in the case of organizations which have sent me public letters, I have included the name and the title of the various folks who wrote to me. I could add to this list literally hundreds of other messages, e. g., from the Wisconsin State Federation of Labor as well as many other distinguished groups too numerous to mention.

To be sure I have received some few messages which support rather than oppose the curtailing of postal deliveries. But I do want to point out that these messages are based upon the premise of saving the Government's money. However, I, for one, firmly believe that we are not going to save the Government money by ruthlessly cutting down on mailings, because inevitably there will be decreased volume and decreased volume will mean increased costs to the Post Office Department.

Now, we all appreciate the fact that the farmers of our Nation receive only one mail delivery a day. At the same time, we all recognize that the farmer, like everyone else, is increasingly using mail service.

So, now from the city as well as the country areas of Wisconsin, this is the voice of our people:

SHEYBOYGAN, WIS.

DEAR SENATOR WILEY: It gave me a great deal of pleasure and satisfaction to read your blast against Postmaster General Donaldson's cut-back order hitting the "50,000,000 tired taxpayers in the mail box" (and the postal employee below the belt). This on top of the

infamous "mail-handler order" of October 27, 1949, will do much to demoralize the postal service and the employees. It will certainly not improve the service nor save any appreciable money for the Department; not to the extent of taking it out of the red.

Your statement regarding the removal of air-mail subsidies, free-mail costs of Congress and other Government agencies from the budget of the Department is consistent with the bill H. R. 6103, introduced August 23, 1949. This bill, if passed, will accomplish that objective and will give us the proper credit for all the extra services that are at the present time considered a deficit.

ED W. KNABE,
President, Wisconsin Federation of Post Office Clerks.

MILWAUKEE, WIS.

It is the sincere hope of the Milwaukee County Industrial Union Council, CIO, that you work actively to have the cut in postal service, as recently ordered by the Postmaster General, rescinded.

FRED A. ERCHUL,
Secretary-Treasurer, Milwaukee County Industrial Union Council, CIO.

OSHKOSH, WIS.

Millions to destroy food; billions for foreign relief; no money to deliver the mail. In Oshkosh Post Office, 10 men, all veterans, are being laid off. Is this what we fought for? We are counting on you to help end this fiasco.

LYLE E. ROE,
Secretary, Branch 173, National Association of Letter Carriers.

MILWAUKEE, WIS.

We hereby petition you to support Senate Resolution 261 by Senator LANGER and to use your best influence with the Postmaster General to have him rescind his recent mail curtailment order.

LOUIS BEDALOR,
Treasurer, Croatian Central Committee, Inc.

SHEBOYGAN, WIS.

We heard on the radio the same night that the Postmaster General's orders were given, that our Senator WILEY, from Wisconsin, was opposed to cutting down mail deliveries in curtailing the post-office expenses in the Post Office Department.

We appreciate what you have done in the past and we know that you will support and urge any legislation in the Senate that will redound to our well-being, namely, security of our husbands' jobs, continued ownership of our homes and our present standard of American living.

MRS. WALTER A. BRAND,
President, Auxiliary to the National Federation of Post Office Clerks.

INDIVIDUAL MESSAGES FROM BADGER CITIZENS

A message from an unemployed veteran in De Pere, Wis.:

"Congratulations to you on your strong opposition to the recent cut-back in our mail-delivery service. It gives me great pride and pleasure to know that my home State Senator is in there pitching for fellows like myself.

"Because I, as substitute carrier, am one of the many thousands affected by this so-called economy move by our Government experts. Yes, Senator, I was good enough during the recent war to serve 35 months for a government such as this; but now we aren't needed so out we go. Today our postmaster handed ME my walking papers after serving 25 months in the postal department."

A message from Fennimore, Wis.:

"I wish to thank you for your courage and action in opposing the drastic reduction of postal service which the Postmaster General has instructed to be put into effect."

A message from Green Bay, Wis.:

"We are in full agreement with you on the post office cut-back to one delivery. The people pay for better service and expect it."

A message from Milwaukee, Wis.:

"My hat is off to you, Senator WILEY, for standing up against this disgusting situation, and so are the hats of every other mailman in the United States. Keep up the good work, we all appreciate it."

EDITORIALS IN BADGER PAPERS

Excerpts from editorial in Fond du Lac (Wis.) Commonwealth Reporter:

"We are inclined to agree with Senator ALEXANDER WILEY, of Wisconsin, that the Post Office Department action is outrageous and that there is a need for more mail service rather than less mail service.

"We believe the American public is willing to pay for what it receives; we doubt, however, whether it is willing to pay for service that it does not receive and we fear that is what the retrenchment order of the Post Office Department is going to mean."

Excerpts from editorial in Waukesha (Wis.) Daily Freeman:

"If you don't think it is costly business to use the Post Office Department as a tool of the Democratic Party, reflect a moment upon what is about to happen to postal service all over the country. The number of deliveries are about to be reduced, post offices will be closed sooner in the day, there will be fewer street box collections, windows will be closed Saturdays and the bulk of the mail will reach its destination on delayed schedules.

"Today, in the face of the greatest peacetime budget and the greatest Federal deficit in the history of this Nation, the post office must go on shorter hours, the people must wait longer for their mail to be delivered and the fewer are the hours when post offices the country over will be open to give the public service. Does it make sense? It makes about as much sense as turning the Waukesha post office, lock, stock, and barrel, over to the county Democratic Party as was done a few short weeks ago. This is the gift of the DOC in Wisconsin to the people of Waukesha and the State."

Termination of Rent Control

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Friday, May 5 (legislative day of Wednesday, March 29), 1950

Mr. CAIN. Mr. President, the question of Federal rent controls is of continuing interest and concern to a large number of communities and States throughout the Nation. I have recently received two provocative letters on the subject from citizens living in Minneapolis and St. Paul, Minn. I ask unanimous consent that these letters be printed in the Appendix of the RECORD, where they may be read by anyone who is concerned with the thinking of others. The question of whether Federal rent controls shall be permitted to terminate on June 30, 1950, as the 1949 Rent Act provides, or be continued in the future will soon be before the Congress. The letters and observations I have offered, and others to be offered, come from those whom we serve, American individuals. They often are more familiar with what is taking place in their own areas than we can ever be here in the Congress. I think we ought to give consideration to their reflections before extending legislation which first was initiated because of a wartime emergency.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

MINNEAPOLIS, MINN., *April 24, 1950.*
Senator HARRY P. CAIN,
Senate Office Building,
Washington, D. C.

HONORABLE SIR: The attached article on rent control appeared recently in the Minneapolis Star.

I am renting what are called luxury apartments. Some have in excess of 2,000 square feet of living space, including four bedrooms and three baths, and are located in one of our exclusive residential districts, overlooking one of our beautiful lakes. I have very fine tenants, some are the heads of the largest concerns of their kind in the United States and are perfectly willing to pay fair rental.

Through rent control, I am compelled to rent these luxurious apartments for 40 percent less than similar accommodations rented for 20 years ago. On a square-foot basis, I get 40 percent less than the city of Minneapolis is getting for their cheap Quonset huts that they rent to veterans.

Last year my rental income gave me a net of 2 percent on my investment, with no allowances for management fees, vacancies, or collection losses. FHA on new construction, loans about the entire cost of the project, and rentals must provide for an annual return of 6½ percent after expenses and taxes, and after an allowance of 7 percent to cover vacancy and collection losses.

I am a World War I veteran and due to a recent illness I am unable to work, and about my only income is from my property that I have worked for years to accumulate. Is it fair that I should have to rent my property at an unfair rental, to tenants who pay many times more in income taxes than they pay me in rent?

Luxury apartments are rented to tenants in the higher-income bracket. To put these units in balance, may I suggest that all unfurnished housing units now renting for $90 or more per month be decontrolled, if rent controls are continued.

Yours very truly,

D. G. CHANDLER.

P. S.—Yesterday's Sunday Tribune listed 428 advertisements for housing accommodations, many for more than one unit. Unfurnished apartments were offered as low as $24.50 per month.

NOW, ABOUT RENT CONTROL

To the EDITOR:

It amuses me when I read that by removing rent controls there would be more homes at lower rates available. If these people would glance through the Sunday want ads and find one below $90, I'd gladly like to see it. It's the poor people who have to rent, and who can afford that on average wages?

E. J. WATSON.

MINNEAPOLIS.

To the EDITOR:

I read the letter of Mrs. Benston, April 13. If some of these owners didn't think so much of their own pocketbooks and more of the

average working people who make a salary of $35 or $40 a week, the tenants would be more agreeable.

M. NELSON.

MINNEAPOLIS.

To the EDITOR:

I sacrificed many necessities to put up an apartment building completely furnished, heated, electric refrigeration, etc. Now the rent dollar I receive will buy half the necessities of life it did in 1942. I am not asking for a subsidy such as the farmers get, but if somebody comes along and offers an American citizen a better job with more pay, he should be allowed to accept it. If not, is this not forced servitude or slavery?

I would like to offer my solution to this situation. Wages for many occupations are figured on the United States Department of Labor cost-of-living index. Why not rents?

If there is a housing shortage, why did the politicians pass a law allowing 359,000 displaced persons to enter our country and then tax us $2,500,000,000 to build houses? Figure the cost of homes, possible schools, and all other institutions they will require, and where do you get off?

EDWARD T. WARDELL.

ST. PAUL.

To the EDITOR:

Your April 12 article on AFL Local 359 urging continuing rent controls after June 30 shows a selfish and unjust move on their part. At one time monthly rentals in budgets were figured at a week's salary. I wonder if the AFL officials pay a week's salary for a month's rent.

OLE JOHNSON.

MINNEAPOLIS.

To the EDITOR:

I am deeply impressed by the pitiful letters written by tenants in your Everybody's Ideas column. For 8 years they have been living off the blood and sweat of honest people who have sacrificed in order to own income property. I admit it is becoming increasingly unpopular to work for anything since our Democratic give-away government or soak the rich politicians decided they could remain in office indefinitely simply by confiscating the property of minority groups and feeding it into the maw of the public.

W. H. ASHFORD.

MINNEAPOLIS.

To the EDITOR:

Why don't you publish more letters against rent control? Taking rent control off is the only thing that will solve our housing shortage. If rent controls come off, rents on older places would probably go up for a short time, but would gradually be adjusted and everybody would have an equal chance.

Mrs. EDNA SMITH.

MINNEAPOLIS.

To the EDITOR:

I am a landlord, but first of all I am a humanitarian, so I believe in fairness in all things. We all, including tenants, know that landlords have not had a fair deal. Rent controls should have been discontinued immediately after the war and rents would have been adjusted to a fair price long ago. Now, here is where I hope the landlords will be fair if controls come off: Please, landlords, do not increase your rentals for 3 months. In that length of time, an adjustment will take place and still will permit a raise fair to tenants and landlords.

Mrs. V. C. KRANER.

MINNEAPOLIS.

To the EDITOR:

Your recent article (April 10) regarding rent controls being outmoded was very fitting at this time. Tenants who are now well set in rent-controlled property are opposed to decontrol. No doubt the landlord is wondering how he will meet increased real-estate taxes and other expenses, and needy young couples can't find places to live. Isn't it time rent controls are discontinued so all may have an even chance?

Mrs. M. ALLEN.

MINNEAPOLIS.

To the EDITOR:

The AFL must have enough to do without interfering with all the politics. They say if we ended Federal rent control in June, rental fees would skyrocket and they would have to get higher wages. Everything that was rationed has been lifted except for the landlord. If we are the only fools left, then we need a guardian, not a bunch of political racketeers, to run our business.

MAUDE ANDERSON.

MINNEAPOLIS.

ST. PAUL, MINN.

Subject: Facts about Federal rent control.

MY DEAR SENATOR: We are just struggling landlords between the ages of 63 and 68; one, a teacher for some 34 years, now retired, one a retired farmer, and one a retired building contractor. All of us worked for wages or salary for many years—all took their parents' advice to work hard, save if possible, and invest in real estate, and to look to ourselves rather than to our Government for old-age security, and we all support ourselves from rental income.

If our story was not representative of millions of other small landlords we would not presume to burden you with these facts.

During the war, wages, salaries, prices and rents were frozen, and we all felt it would help the war effort and that it was justified, but when wages, salaries and prices were decontrolled, leaving only rents still under drastic Government control, the problem of the landlord became increasingly more difficult as all other prices and wages increased approximately 100 percent. Thus the landlord was forced to pay ever-increasing prices for items of maintenance as his net income diminished. He also must now pay 100 percent more to cover his living expenses or reduce his standard of living.

A book could be written to explain why the rent-control laws as revised from year to year and administered by OHE did little else than give lip service to meet this ever-increasing difficult position of the landlord, but suffice it here to say that its accomplishments are summed up by the United States Bureau of Labor Statistics who report that rents increased an average of less than 12 percent from 1942 to 1950.

During the same period the farmers cash income increased over 200 percent, corporations earnings increased over 200 percent, personal income over 180 percent, coal over 100 percent, homes over 100 percent, wholesale prices over 100 percent, wages and salaries increased 170 percent, cost of living increased 67 percent, Federal taxes over 600 percent, and rents increased less than 12 percent.

In my humble opinion the seeds of disaster have been planted and will come to fruition if Federal rent control is not uprooted and allowed to die—and we give you the following facts to prove our position:

1. Rent control, as administered, has sickened the entire business of private building for housing rental, and the repair and redecorating of existing rental properties, because the landlord has insufficient income under rent control to hire this work done, which adds to unemployment. This weakness in our otherwise prosperous economy may well be the cause or contribute largely to our next possible depression.

2. While all other segments of our economy are prosperous and able to set aside a nest egg for possible hard times, the landlords have no reserve whatsoever and in addition must compete with Government subsidized housing.

3. The landlords, for lack of sufficient rent income, have of necessity let their property run down for lack of repair, redecorating, and replacements. What is to happen to the landlord when the heating boiler or refrigerating system needs replacing or gas stoves, carpets, and furnishings wear out? I ask what is to be his fate and what effect will it have on our economy in general?

4. The landlord, instead of the Government, has been compelled by rent control to subsidize the tenants, so they will have more money to bid up the things they buy, and this greater purchasing power has created added pressure on prices. It is most doubtful if their standard of living has been thereby increased. It is a fact however, that if the landlord was allowed a just rent he could keep up his properties better, which would mean better living for his tenants. We do not believe that good can blossom from injustice. When the farmer is subsidized the cost comes out of the United States Treasury or the consumer, or both, but when the tenant is subsidized it comes out of the landlord.

5. Russia confiscates the lands of the landlord and gives its use to the tenants. Rent control, as now administered, takes part of the rent income which belongs to the landlords and gives it to the tenant. The principle involved is the same in each case—for one's property is taken away without just compensation.

As disastrous as rent control may prove economically if continued, it has sown far more deadly seeds which can do much more harm politically, as explained below:

A. When a democratic government deliberately takes away unjustly from one minority class of its citizenry without just compensation and gives to another class, no matter how worthy the cause is thought to be, no class is safe from exploitation, and representative government is tottering for a fall.

B. If the farmers' representatives in Congress or any other important voting groups would, at the request, let us say, of the organized labor groups, vote for the extension of rent control, solely to get labor's support of some pet legislation of their own, even though the farmers' representatives felt rent control unjust—then I say integrity is dead and it is only a matter of time when chaos will become rampant and representative government is doomed.

C. The farmer, through direct aid and price support, has been subsidized to the extent of over $2,000,000,000 in 1949 alone—can it be that he favors continued rent control for others who receive less than 12 percent more rent income than in 1942? The landlord asks for no subsidy or price guarantee or profit guarantee—all he asks for is common justice and fair dealing. He asks for a chance to run his own business. He asks that the farce that World War II is still in progress, be forever buried.

D. We challenge you to strike a blow for equity and justice and for our representative form of government by voting against the extension of Federal rent control, before it destroys our way of life, and also discourage the States from attempting State rent control with its disastrous results as shown so clearly in France.

Respectfully submitted.

ISABELLA F. BOYD.
LEON H. BOYD.
JAS. H. BOYD.

Curtailment of the Veterans' Hospital-Construction Program

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 5, 1950

Mr. TEAGUE. Mr. Speaker, last week the House of Representatives reaffirmed its position on the veterans' hospital-construction program by passing H. R. 5965 to direct the Veterans' Administration to proceed with the construction of new hospitals totaling 16,000 beds.

For a little history of this program we should remember that the Veterans' Administration reported in January 1945 during hearing on the independent offices appropriation bill for 1946 as follows:

In compliance with section 101 of the Servicemen's Readjustment Act of 1944, the Veterans' Administration, in collaboration with the Federal Board of Hospitalization, submitted an estimated program covering the hospital needs of the Veterans' Administration up to and including June 30, 1947. This program covered the estimated requirements for additional neuropsychiatric, tuberculosis, and general medical and surgical beds and provided for the acquisition by new construction, or by transfer at such time as they might become available from the Army and Navy of approximately 22,000 beds. This program was approved by the President on September 12, 1944, and the Administrator of Veterans' Affairs was authorized to submit a specific construction program totaling approximately 14,100 beds for inclusion in the appropriation estimates for the fiscal year 1946.

Subsequent to the program for 14,100 beds that was approved by the President on December 2, 1944, the Veterans' Administration submitted additional programs—one covering 19 new hospitals that was approved on October 16, 1945, and one covering 30 new hospitals that was approved on December 3, 1945. The final program submitted by the Veterans' Administration provided for 15 new hospitals and was approved by the President on October 19, 1945. This program was designed to meet our requirements through the fiscal year 1951.

You can see from the testimony of the officials from VA that the proper armed services officials and the VA medical people were working out a hospital program for veterans as authorized by Congress and the Federal Board of Hospitalization had approved of the planned projects.

Mr. Speaker, I believe that it is important that the established policy of Congress should be carried out as directed by the elected representatives of the people and if the policy by later events appears to be in error, then the facts should be presented to Congress for its action. By no means should the established hospital construction program authorized by Congress be changed by the drastic expedient of curtailing beds as was done by the executive branch last year.

Mr. Speaker, I wish to insert at this point an explanation of the Federal Board of Hospitalization and its duties to show that this was a responsible group which approved the planned VA hospital program:

FEDERAL BOARD OF HOSPITALIZATION

On August 1, 1943, the Executive Office of the President directed a new Federal Board of Hospitalization to serve as an advisory agency to the Bureau of the Budget. This Board was charged with the duties of analyzing and reviewing hospital, convalescent, and domiciliary activities and programs developed and operated by all departments and establishments of the Government for the purpose of—

(a) Preventing the overlapping and duplication of services and overbuilding of facilities;

(b) Insuring the most efficient and complete utilization of the total services and facilities of the Federal Government by each department and establishment;

(c) Determining the need for existing or additional facilities of each department and establishment;

(d) Determining the area or locality in which additional facilities should be provided;

(e) Determining the extent to which non-Federal facilities may be utilized in the administration of the hospital activities or programs of any department or establishment;

(f) Developing a complete over-all program for providing hospitalization for the veterans of World War II; and

(g) Furnishing recommendations with respect to such matters as the Director of the Bureau of the Budget may refer to the Board.

The above will be recognized as very significant, in view of recent announcements in the press and developments otherwise. No less important is another instruction given to the Board at the time it was reestablished, so to speak, which reads as follows:

"No project for acquisition of additional beds by new construction, major alterations, or leasing of or contracting for existing facilities shall be undertaken by any department or establishment until it has been submitted to and reviewed by the Board as to need, location, type of construction, and any other factor which the Board may consider pertinent to the performance of its responsibilities, nor until the resulting recommendation of the Board has been transmitted and considered * * * as approved by the President."

An article appearing in the Washington Evening Star of Friday, April 28, 1950, quoted Dr. Paul B. Magnuson, Medical Chief of the Veterans' Administration, as saying that he wished more Members of Congress, chamber of commerce heads, and Legion commanders knew what a hospital was. Further, he stated that he could not use 16,000 more hospital beds if they gave them to him, stating that it took 1½ people to take care of each bed year in and year out and that he had nearly 4,000 of their present beds empty for lack of staff.

However, in 1949, the Senate and Public Welfare Committee prepared a committee print including the hearings which were conducted by it on the curtailment of veterans' hospital construction which included an exhibit prepared by the Veterans' Administration and can be found on page 16 under the heading "Exhibit F," as follows:

Staffing requirements as presented by the Veterans' Administration for the facilities proposed to be cut back, with pertinent information indicating whether or not the problem can be met by the Veterans' Administration in the case of the institutions proposed to be cut back.

EXHIBIT F

COMMENTS REGARDING STAFFING OF HOSPITALS INVOLVED IN CUT-BACK IN THE VA HOSPITAL PROGRAM

1. In the 16,000-bed cut in the VA hospital program the following 14 hospitals were reduced in size:

Syracuse, N. Y	GM.
Philadelphia, Pa	GM.
Pittsburgh, Pa	GM.
Washington, D. C	GM.
Pittsburgh, Pa	NP.
Atlanta, Ga	GM.
Cincinnati, Ohio	GM.
Cleveland, Ohio	GM.
Cleveland Ohio	NP.
Louisville, Ky	GM.
Chicago, Ill	GM.
Kansas City, Mo	GM. and TB.
Oklahoma City, Okla	GM.
St. Louis, Mo	GM.

All of these hospitals are to be located in communities where there are medical schools, and no difficulty in staffing these beds would be encountered.

2. Among the hospitals eliminated from the program, we could very readily staff the following hospitals:

Detroit, Mich	TB.
New York City	Rehabilitation.
Charlotte, N. C	GM.
Grand Rapids, Mich	GM.
Greenville, S. C	GM.

3. Hospitals that would be moderately difficult to staff:

Norman, Okla	NP.
El Paso, Tex	NP.
Chattanooga, Tenn	GM.
Tallahassee, Fla	GM.
Harrisburg, Pa	GM.

4. Hospitals that would be difficult to staff properly:

Salisbury, N. C	NP.
Americus, Ga	TB.
Gainesville, Fla	NP.
Memphis, Tenn	NP.
Thomasville, Ga	GM.
Decatur, Ill	GM.
Duluth, Minn	GM.
Mound Bayou, Miss	GM.
Tupelo, Miss	GM.
Klamath Falls, Oreg	GM.
San Diego, Calif	GM.

In determining the difficulty of staffing certain hospitals, consideration has been given to recruiting of all types of needed personnel, including the necessary medical specialists. Without complete coverage of all the various types of technicians and doctors, a hospital cannot be operated satisfactorily.

If only an X-ray specialist is not available, it may mean a difference of several days' hospitalization resulting in greater cost to the Government. The same thing applies to other specialists and technicians in the hospital.

Mr. Speaker, several of our cities, such as El Paso, Tex., spent considerable amounts of money preparing for the expansion of their water and sewer systems on the promise of Congress that authorized VA hospitals in their cities would be constructed. I have given considerable thought to all of the various aspects of our hospital construction program and I believe that the 16,000 beds that we previously deleted from the program should be restored.

Under leave to extend my remarks in the RECORD, I wish to include a resolution adopted by the Veterans' Affairs

Commission of Texas in regards to the VA hospital program:

RESOLUTION

Whereas there are many vacant beds in the old section of the Veterans' Administration Hospital at Legion, Tex., that are not being used; and

Whereas there are many tubercular veterans in Texas and surrounding States who are being denied hospital treatment as a result of these vacant beds; and

Whereas this situation could be relieved by the Veterans' Administration if they would complete the renovation of these ward rooms and reactivate the complete facilities at this hospital: Therefore, be it

Resolved, That the Veterans' Affairs Commission of Texas in executive session at Austin, Tex., this 25th day of March 1950, hereby calls this deplorable condition to the attention of the Veterans' Administration, Washington, D. C., and hereby requests that immediate action be taken to complete the renovation of existing facilities and reactivation of the complete facilities whereby the acute need of tubercular veterans may be alleviated; and be it further

Resolved, That a copy of this resolution be sent tor the President of the United States, to the Governor of Texas, to the major veterans' organizations, to Administrator Carl R. Gray, Jr., to Chief Medical Director Dr. Paul B. Magnuson, and to the manager, Veterans' Administration Hospital, Legion, Tex.

RENE A. GARZA,
Chairman, Zapata, Tex.,
ROBERT W. AKERS,
Vice Chairman, Beaumont, Tex.,
JOE M. DANIEL,
Secretary, Corsicana, Tex.,
LEWIS P. FIELDS,
Member, Amarillo, Tex.,
MARCUS WEEMS,
Member, West Columbia, Tex.,
Veterans' Affairs Commission of Texas.

Colorado's Senator Johnson

EXTENSION OF REMARKS
OF
HON. CHARLES W. TOBEY
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Friday, May 5 (legislative day of Wednesday, March 29), 1950

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Colorado's Senator JOHNSON," by Thor Severson, from the April 15 issue of the magazine Frontier. The article is an extremely interesting profile of our esteemed colleague, the senior Senator from Colorado [Mr. JOHNSON].

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE MAN WHO GAVE HOLLYWOOD A HOTFOOT—COLORADO'S SENATOR JOHNSON

(By Thor Severson)

Big Ed's voice quaked with indignant wrath. His mammoth head lifted in righteous purpose. Shoulders back, he stood proud and erect. His bold finger, this day, was searching out a woman who had sinned. Magnificent was the word for Big Ed in his role as an apostle of virtue.

The place: The most public stage in all the world, the United States Senate. The subject: Ingrid Bergman, her Italian lover, Roberto Rossellini, and an island called Stromboli.

The day: March 14, 1950.

This was the day big ED JOHNSON, the razor-tongued master of the unpredictable, the bull-shouldered Senator from Colorado, made his now celebrated attack on Hollywood's motion-picture industry and the stars the industry has made wealthy and famous.

This was the day big Ed cast the biblical stone, labeling Miss Bergman a common mistress and costarring her with Princess Rita Hayworth Kahn as Hollywood's two apostles of degradation.

This was the day he dismissed Rossellini as vile and unspeakable and a common love thief, and the day he bull whipped RKO studios for its nauseating commercialism in releasing the picture Stromboli, even while Miss Bergman was giving birth to Rossellini's child.

This day, too, the Coloradan called upon the United States Senate to take a bold action—to license the motion-picture industry and its stars' morals.

Said JOHNSON: "Miss Bergman, Rossellini, and RKO have invited restraints by law, and I shall do my best to see that they get what they have asked for."

And JOHNSON has.

His attack has touched off a full hearing for mid-April on his proposed film licensing bill. Hollywood, at that hearing, will be called to account.

Now this article, most certainly, does not attempt to plead the justice or injustice of Senator JOHNSON'S castigation of Hollywood.

It is interested, primarily, in the why, and in the man JOHNSON, himself.

But Hollywood did not lack for defenders. The film capital, smarting under the senatorial lash, squirmed with almost equal pain and embarrassment, when many of its professional in-print and on-the-air babblers—the source themselves of more Hollywood smears than the Senator is accused of inventing—rushed to its defense with cries of outraged virtue.

Fortunately, Hollywood had its defenders, also, in more respectable quarters. The Motion Picture Producers' Association, for instance, took sharp exception to JOHNSON'S barrage of charges when he daubed the entire film colony into the picture of degradation he painted.

Said the Senator: "Stars go to jail for brawling or peddling 'reefers' or they get into the papers for negotiating a Mexican mail-order divorce, whereupon they are cast in a leading role so that the industry may cash in on their notoriety while it is still hot."

REBUTTAL

The producers association replied:

"Hollywood, like every other community, has its share—but no more than its share—of people who violate the moral code. The majority of people in Hollywood are the finest type of Americans, devoted and loyal to their families and their country."

Aly Khan laughed off the Senator's reference to his screen-star wife, Rita Hayworth. He asked: "What should I do every time some idiot utters imbecilities?" But even the Senator's most devoted enemies—and he has some—would have a reservation about Mr. Khan's wrathful reaction. In many controversial situations in the past, it has not been JOHNSON who looked foolish, in the opinion of the voting public, when the box score was totaled.

Rossellini took the charge with more humility. He said: "The Senator threw the book at us." As for the famous Ingrid, she did not comment at all.

The all-out attack on Hollywood and its stars by an acknowledged movie patron of 40 years standing and a long-time admirer of Ingrid, opened wide avenues of thought on what manner of man JOHNSON himself is, and his motive in setting a torch under the Hollywood camp.

Variety, the trade paper among show folk, saw the fine hand of politics involved. It viewed the assault as more politically contrived than morally inspired—as a move to drag the carpet out from under the growing boom in Denver to elect Frank H. (Rick) Ricketson Governor of Colorado.

Ricketson, president of FOX Intermountain Theaters, Inc., and the man who reaped a fortune with the bank-night theater gimmick, has not announced for the governorship but his name is figured prominently as a potential Republican Party candidate.

And, says Variety, JOHNSON'S attack was timed to link Ricketson with the "big, bad people of Hollywood"—just in case Rick does declare for the post.

This view, perhaps, is taking the long way around—a little like walking around to the back door to get into the front living room. But it is an opinion, another slant.

Walter Winchell, who quoted the Variety charge, drew a prompt reply from JOHNSON, who said, "Screwball Walter Winchell devoted a lot of his valuable radio time last Sunday to spreading a yarn about Rick Ricketson, which does not even make good sense. The Peephole Kid does not know how sincerely I admire Rick and how affectionately I regard him."

And Ricketson stated:

"This whole Johnson story that appeared in Variety sounds ridiculous to me. I don't believe politics are played that way in Colorado. Although ED JOHNSON and I do not agree on politics, I don't believe this attack would be any part of his program."

Others are divided on JOHNSON'S motive. Some say a motion the like of JOHNSON'S was inevitable. Others say it was just a play for page 1. JOHNSON, himself, explained his stand thus:

"I'm not a prude nor a Puritan. But it seems to me the motion-picture industry is getting to the point where all an actor has to do is get arrested for something or get messed up in some immoral affair and stardom is guaranteed."

This, says JOHNSON, is his principal concern. This along with the far-reaching effect that movies and the lives of the stars have on American life.

But what of the man, himself—this powerful voice in the United States Senate? This man whom politics reckons with as a figure of tremendous influence, as a good friend when he's a friend but a capable and dangerous enemy when he's an enemy? This man who pointed a righteous finger at the Nation's lucrative film industry? And why?

THE COMMON TOUCH

You'd probably give JOHNSON more than a passing glance if you met him on the street at high noon. He's a man of the rough cut, a man with the common touch. His frame is huge—big-boned, powerful. His hands are muscled, like the hands of a boilermaker. His brow, beneath a heavy shock of graying hair, is knuckled, bold.

He can be gracious. And he can be vitriolic. He fears no man. Yet he is among the most sensitive of men. This man can speak and write in the character of the indomitable Churchill. Yet his schooling was meager.

You see him at a formal gathering—and he is a man who never seeks you out; you seek him out. He has the face of a lonely man. He never impresses you as entirely comfortable. No one has ever said of JOHNSON, "There is a man at a loss for words"; yet he speaks only when there is occasion to speak. Idle chit-chat is lost with this Senator.

His dress is conservative, unless you take into account the red suspenders he sometimes wears and is not loath to show when he shucks his coat, as he will when the spirit moves him, at public gatherings. He dons a tuxedo occasionally, when he must.

The rough-hewn Senator from the mountain State turns a cold eye on the social blandishments of Washington. He lives in a modest apartment not far from the Capitol

and is reputed to have saved money from his salary when other Senators are complaining about the high cost of living in Washington.

But what of the man?

JOHNSON'S character, his personality—the JOHNSON, himself—has been tempered by an early life of a son of a Swedish immigrant homesteader; dedication to the God his parents taught him to worship; a turn at homesteading himself; illness with tuberculosis in his young manhood; and, finally, politics as a Colorado State representative, lieutenant governor, governor, and United States Senator.

This man has never been defeated in a political campaign. He talks to a farmer as a farmer, to a businessman as a businessman. The languages of the land and the market place—he knows them both.

All told, JOHNSON has served in public office since 1922; four terms as State representative, one as lieutenant governor, two as governor, and, at present, he's in his third term as United States Senator.

His politics: Ostensibly Democratic. But sometimes the question is raised: Is not JOHNSON a party unto his own? Many times, he has confounded even his own party by his trading with the Republican camp. He is no lone wolf; yet, he has switched packs so often he cannot be tied, without allowance for error, with any certain group.

This trait in the political character of JOHNSON has led him more than once into the stumbling path of inconsistency. His record, in spots, is pocked with the crosscurrents of contradiction. Political-wise, he's about as predictable as next year's weather. At that, however, his vote is cast along party lines about 75 percent of the time.

TALENT FOR TIMING

JOHNSON has the same ear for politics that a piano tuner has for musical pitch. This man, JOHNSON, seems to have an inborn talent for timing: Despite this, he's hit a few discords in his political career.

The man recovers beautifully, however—this, when another would perish. It's been said that every time JOHNSON appears to have cut his own throat politically, another man bleeds to death. And there are many reasons to believe the truth of the observation.

For example—

During his last senatorial campaign in 1948, JOHNSON gave but very feeble, left-handed assistance to the reelection of President Truman.

His speeches—especially, in the one example when he debated with his opponent, Will F. Nicholson, at the University of Colorado—were geared to put across one thought:

Whichever candidate won in the Presidential election, Truman or Dewey, JOHNSON would give his full support whenever his own principles were not violated. He could work with Dewey, he hinted. There was no sound reason to object to him as a candidate in the event of a Dewey victory—which, then, appeared inevitable—simply because he, JOHNSON, was a Democrat.

This, by another man, could have smacked of party traitorship. The party-line voter could have been enraged. What JOHNSON did was to open the door to the maverick Republican vote. And he got a goodly share of them, too, trouncing Nicholson unmercifully. Nicholson, a sound, liberal Republican with youth and the veteran vote on his side, knew he had been up against a pastmaster vote-getter when the ballots were tallied election night. His throat was unmarked, but it was his blood, not JOHNSON'S, which flowed.

Backtracking a few years further, JOHNSON was elected as a New Dealer when Colorado first put him in the governor's chair in 1932. Partially, JOHNSON'S victory was traced to the Democratic landslide of '32; but, for JOHNSON, let it be said he polled more votes in Colorado than even F. D. R. that election year.

Yet, he was elected as a New Dealer, too, when Colorado sent him to the United States Senate for the first time in 1936. Yet he was never an administration man during the tenure of F. D. R., just as he is not an administration stalwart under Truman. He seemed, in the time of F. D. R., to be eternally in and out of the good graces of the White House. Under Truman, he's just out—except that Truman, after keeping JOHNSON dangling on the string for several months, finally accepted his choice of Colorado's Governor Lee Knous this month to a Federal judgeship.

Today JOHNSON supports this Nation in its role as a world leader, the same Senator who was a driving force against intervention in any phase of Europe's troubles before the last great war. A fellow traveler with the isolationists was ED JOHNSON. He lampooned Roosevelt for lend-lease; he preached the Monroe Doctrine. The United States, he suggested, was sufficient unto itself.

But it would be unfair to shake this skeleton without pointing out that JOHNSON, in the prewar years, believed sincerely this Nation could avoid war—that, at least, it should leave no stone unturned to avoid that war. His fight to keep the United States free from foreign entanglements was based on that belief. It was, on the part of Johnson, a sincere effort to prevent this Nation from spilling its youthblood. And who is to say he, JOHNSON, was wrong in so trying?

JOHNSON, of course, has been the target of many editorials in the national press during his 14 years on Capitol Hill. He has been both damned and blessed. His dramatic career—dramatic without the trappings of affected drama—has been fertile soil for Washington observers.

Even before he went to the Hill JOHNSON had a knack for hitting the headlines. There was the time, for example, when he called out the national guard to prevent Mexican beet workers from entering Colorado to take jobs away from Colorado's own.

FLIES BY THE SEAT OF HIS PANTS

In politics, the observation has been made that JOHNSON flies by the seat of his pants—that he wouldn't know how to read a political instrument board if it were thrust under his nose.

This may be true. But, despite this, he always seems to land safely.

Take the recent television broadcast the Senator made on the A-bomb, the telecast which rocked Capitol Hill.

David E. Lilienthal, then Chairman of the United States Atomic Energy Commission, said JOHNSON discussed questions which could not be discussed publicly without serious involvement of national security.

His telecast, in effect, alerted the world on the H-bomb. It provoked editorial comment pro and con on the so-called disclosures he made.

As far as JOHNSON was concerned, he denied saying anything that had not been stated time and time again by officials and published over and over—that he made no new disclosures.

They're still talking that one over.

This, then, is ED JOHNSON. His attack on Hollywood, right or wrong, was apparently voiced with conviction that the State should curb the film capital, since, in his belief, Hollywood has no proper sense of restraint itself.

He's 66 now. He's been married to the same woman since 1907, and happily. His pleasures are simple; his capacity for work immeasurable.

He walks his way a sensitive man, but insensitive to controversy. Admired. Disliked. He is never ignored. He is EDWIN CARL JOHNSON, of whom no man can predict a course of action.

Cargoes and Pacific Northwest Power

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

CARGOES AND PACIFIC NORTHWEST POWER

(By Ivan Bloch, of Ivan Bloch and Associates, consultant to the Port of Portland Commission)

Tonight I would like to speak of ships and kilowatts; of distant lands and Pacific Northwest industry; of bauxite mines in Dutch Guiana and Sumatra, and the aluminum plants of our region; of Alaskan limestone and Portland's calcium carbide industry; of Australian zinc concentrates and electrolytic cells; of Turkish, New Caledonian and Philippine chromite for Pacific Northwest electric furnaces. And I will speak of the water-borne cargoes needed by the new and potential electrochemical and electrometallurgical plants of Oregon and Washington, and of the water-borne shipment of their products to distant markets.

All of us in the Pacific Northwest have developed a conscious understanding of the magnitude of our hydroelectric power development—with at least 25,000,000 of kilowatts yet to come. We admit to the abundance and excellence of our pure water supplies, even though perhaps we may not fully appreciate their industrial importance. We all know of the fabulous population increases of the past decade; 53 percent for the Pacific Coast, and 59 percent for Oregon—as compared to 12 percent for the Nation. These are the things whereof the future of the Pacific Northwest is made. These are the things which make possible a new era for the Pacific Northwest. The scope of the opportunities at hand is immense. It is going to take thinking and action of similar magnitude.

We of the West have passed over a very significant hump, the importance of which is not yet appreciated: our own backyard market—the 15,000,000 people of the Pacific Coast States—is now big enough to support the output of most modern plant production units. It is becoming less necessary for us to market a sizable portion of the goods we manufacture over long and expensive distances to eastern, midwestern, and southern consuming centers in order to sustain economic plant operations. This important fact is beginning to soak in to the planning of our own business and of industry. The result cannot fail to mean the expansion of all types of manufacture in the West.

Each subarea of the Pacific Coast will have its own peculiar pattern of development, largely dependent on traditions, attitudes, and basic resources. Thus, for some years to come, it is clear that although enormous strides will be made in the Pacific Northwest in all categories of industry, major growth will take place especially in those relying on our supplies of low-cost power and pure water. The very nature of those industries will place a premium on increased water-borne commerce and appurtenant facilities. It is this phase of future development which I will discuss this evening.

The growth of electroprocess industries in the United States has been enormous. That segment of basic industry is now indispensable to the maintenance of our modern way of life and shows every indication of

becoming even more necessary. This is due to the fact that a large portion of today's metals and chemicals can only be manufactured in the electric furnace and the electrolytic cell. Among these materials are aluminum, magnesium, titanium (now called the metal of the future), stainless steel, electrolytic zinc, chlorine and caustic soda, calcium carbide and many others. Another important reason for the growth of these industries is that the purity of their products cannot be attained by any other method. Furthermore, our supplies of mineral raw materials are becoming increasingly more complex and low-grade in their make-up, and frequently can be treated only by electroprocess methods. These factors all increase dependence on electrical power as a basic raw material.

Electroprocess industries require such extremely large quantities of power that the amounts of electric power per pound of end product are a primary element of cost. For example, a 2-mill per kilowatt-hour cost is equivalent to 2 cents per pound of aluminum, or about 20 to 25 percent of its production cost. In addition, the over-all quantities of electricity required per plant for the production of electroprocess materials are very large and their supply must be continuous, 24 hours a day for 365 days of the year. For example, the Vancouver aluminum plants consumed over 1,400,000,000 kilowatt-hours in 1949. This was about 25 percent more than the consumption for the Portland, Oreg., area. The entire aluminum industry in the Pacific Northwest—producing about one-third of total national consumption—required almost half of the output of both Bonneville and Grand Coulee Dams in 1949. Titanium—a light metal now in its infancy and for which an auspicious future is in sight—requires even larger quantities of electric power for its reduction from the titanium-bearing ore. Estimates are now on the order of 20 kilowatt-hours per pound, or twice the requirements for aluminum. The production of 100,000 tons of this metal would require close to half a million kilowatts, or roughly the equivalent of the generating capacity of Bonneville Dam.

This dependence on large blocks of lowest-cost electricity, available continuously, necessitates the locating of industry in close proximity to large hydroelectric installations. As a consequence, electroprocess industries generally have clustered in those areas having ample supplies of hydroelectric energy, such as at Niagara Falls, in the Tennessee Valley, and in the Pacific Northwest. It is now an indisputable fact that the major portion of further expansion of electroprocess industries in the United States must take place in our region. As a matter of fact, were it not for the temporary deficiency in power capacity which has plagued the Pacific Northwest since the end of the war, a very sizable expansion of existing electroprocess industry would already have taken place and several new plant units would have become established here.

If power supplies are a control in the location of electroprocess industries, what about requisite raw materials and markets? The picture is relatively clear: raw materials will be moved to the region of abundant power supplies, and the finished products likewise will be transported to distant markets. A prime example of this is our Pacific Northwest aluminum industry. Its raw material—bauxite—now originates in areas of the Caribbean Sea. These supplies are initially processed into alumina by chemical plants in the southern part of the United States. The alumina is transported overland to the Pacific Northwest for reduction to metal. The resulting ingots of the metal are shipped away to distant consuming markets, except for that portion which is rolled in sheet and plate at Spokane and which will be processed into wire and cable at the new plant now under construction by the Aluminum Co. of America at Vancouver, Wash. Another example can be found in chlorine and caustic soda: the salt required as a basic raw material is produced in California and is shipped to Pacific Northwest plants to be processed with Pacific Northwest power. The finshed products find a world-wide market, although a large portion is consumed in our own pulp and paper plants.

These two examples illustrate the fact that, by and large, the availability of power is more controlling in the location of most electroprocess industries than the factors of local raw materials or immediately adjacent markets.

In addition, there is another situation to be considered. A substantial number of electroprocess industries are utilized for the production of important industrial materials obtained from minerals of which the known domestic supply is far below national needs and which therefore must be imported from distant world points. These minerals include bauxite for aluminum metal and abrasives; chromite for ferrochrome and stainless steel; manganese for the production of ferromanganese for the steel industry. Also involved in varying degrees are the ores of copper, lead and zinc, iron, nickel, tungsten, and titanium. The sources of these materials are all over the world—some have been drawn upon consistently during the past decades to maintain the national industrial structure in operation. Others are gradually coming into being, due to the rising tempo of our industrial requirements and our domestic "have not" status. This dynamic situation, although it must reflect exchange and political world conditions, is directly tied into the nature and trends of the United States' industrial economy. In general, the diversity of materials we must import is steadily increasing, and the tonnages are mounting.

The nature of this over-all situation therefore draws attention to the potential tonnages of inbound raw materials which will flow in increasing quantities to the Pacific Northwest, and to the outbound shipments of finished and semiprocessed materials which will leave our shores for coastal, intercoastal, and world markets as a result of what I would term the inevitable growth of electroprocess industry in the Pacific Northwest.

In presenting the following estimates of some of the potentials, I am fully aware of the hazards of so doing. It is not possible to describe the "absolutely feasible," but it is desirable to try, at least, to provide a framework of reference to guide our thinking, and to justify our giving consideration to the establishment of facilities and practices which will hasten the development of tonnages of the industries to which I will refer.

The estimates I will present are based on the results of an intensive study of potential Pacific Northwest electroprocess industries. For 2 years, starting with 1945, a staff of highly qualified technicians and industrial consultants at the United States Bonneville Power Administration, under my direction, carried on an analysis to be incorporated in the United States Corps of Engineers' monumental report on Columbia River and tributaries. The directive to this group—assigned as consultants to the Corps of Engineers for the purpose—was to develop estimates for a rational level of power capacity which would be required in 1960 or thereabouts for electroprocess industries believed to be feasible of establishment in this region. The staff therefore studied critically all of the factors underlying such establishment—industry by industry—processes, raw materials, costs of production, national, west coast, and local markets, and the structure of industry. The final rough drafts of the reports for each industry were circulated among leaders of the industry for review and criticism, so as to make sure that estimates of potential growth in the Pacific Northwest reflected general agreement with the industry's own beliefs.

The results of this analysis show enormous growth, given a continuation of good economic conditions, no war emergencies, and ample continuing power supplies. I feel certain that the expansion forecast is entirely possible of realization. Because of our power shortages I think it highly probable, however, that some of the expansion may take place some time during the decade beginning with 1960, rather than as of 1960 itself.

In order to arrive at an estimated level of potentially feasible inbound shipments of raw materials and the resulting outbound shipments of semi-finished products, I have estimated what portion of over-all future Pacific Northwest electroprocess industry development may logically take place in the lower Columbia River area. From this examination, raw material requirements were developed for each industry. These are shown in tabular form, "Estimated Potential Inbound Shipments for Some Major Electroprocess Industries—Lower Columbia River Area, 1960–1970."

A few details on the background of these estimates I believe will be of interest to you.

Estimated potential in-bound shipments for some major electroprocess industries, lower Columbia River area, 1960–70

Raw material	Electroprocess use	Annual potential tonnage	Annual tonnage requirements, established aluminum industry	Some places of origin
Bauxite	Alumina, artificial abrasives.	2,700,000	1,200,000	Dutch Guiana, Jamaica, Haiti, Sumatra, India, Caroline Islands.
Petroleum coke	Aluminum, ferro alloys, calcium carbide.	500,000	160,000	California, etc.
Limestone	Alumina, calcium carbide, glass.	400,000	150,000	Alaska.
Soda ash	Alumina, glass	120,000	50,000	California, etc.
Zinc ore and concentrates	Electrolytic zinc	65,000		Australia, Bolivia, Peru, Chile, British Columbia.
Chrome ore and concentrates	Stainless steel, ferro alloys, chemicals.	50,000		Philippines, New Caledonia, Cuba, Gold Coast, Turkey.
Lead ore and concentrates	Refined lead	50,000		Australia, Peru, British Columbia, etc.
Salt	Chlorine and caustic soda	50,000		California, etc.
Cryolite	Aluminum	50,000	20,000	Greenland, United States east coast.
Manganese ore and concentrates.	Ferro-alloys, electrolytic manganese.	40,000		Philippines, Indochina, Netherlands East Indies, India Gold Coast, Turkey, etc.
Silica sand	Glass, artificial abrasives	20,000		Belgium.
Grand total		4,045,000	1,580,000	

To begin with, the largest electro-industry group now in existence in the Pacific Northwest is for the production of metallic aluminum from alumina. As pointed out, the principal present raw material requirements for this 300,000-ton capacity industry—600,000 tons annually of alumina—are now shipped by rail from eastern alumina plants at Baton Rouge, La., Hurricane Creek, Ark., Mobile, Ala., and East St. Louis, Mo. These alumina plants obtain bauxite, the now preferred primary ore for the industry, from various Caribbean areas, principally Dutch Guiana, and a relatively much smaller portion from domestic bauxite deposits primarily in Arkansas. For some time it has been evident that the economics of this widely separated industrial structure are not satisfactory. There is little doubt that the industry is actively thinking of—and planning for—the ultimate establishment of alumina plants here in the Pacific Northwest to process bauxite ores to be shipped from such areas as the Caribbean—Dutch Guiana, Haiti, and Jamaica—possibly from the Caroline Islands and India, and undoubtedly from Bintan in the Dutch East Indies. An unknown amount of local ferruginous bauxite located near Portland, Oreg., will also be utilized some day. The equivalent amount of bauxite which the present Pacific Northwest aluminum industry requires totals 1,200,000 tons. As the industry expands to the production level estimated for the decade 1960–70 the bauxite requirements of possible alumina plants on the lower Columbia River would be 2,700,000 tons. Assuming a bauxite cargo capacity of 8,000 tons per ship, the present requirements of the existing industry would be equivalent to the arrival and unloading of 150 ships per year, or about 1 ship every 2 days. The potential requirements would be equivalent to 325 ships per year, or almost 1 per day. To cut down time at unloading dock, modern bulk unloading facilities will be necessary.

It is important to remember that there are other bulk materials which the establishment of alumina capacity will require, such as limestone and soda ash. Also needed for the aluminum reduction plants are petroleum coke and cryolite. For example, petroleum coke is now shipped into the area by rail, with tonnages well over 150,000 tons per year. It is my belief that a very large portion of this tonnage, if not all of it, could be shipped in by boat from southern California, for example, if modern bulk unloading facilities were available here in Portland. Natural cryolite from Greenland and synthetic cryolite from the east coast could also be shipped and unloaded at lower Columbia River points. Present tonnage is on the order of 20,000 tons per year.

As to chrome and manganese ores, the Pacific Northwest already processes these materials into ferro alloys. The outlook is one of slow but certain expansion, together with possibilities for the production of stainless steel. In general, as western steel demands and production increase, so will the requirements for ferro chrome and ferro manganese. These two materials are very high on the list of so-called strategic and critical materials, the consumption of which has been steadily rising. As a consequence, the United States must draw upon foreign sources, such as in the Pacific basin, which provides an unusual opportunity for processing in the Pacific Northwest. The availability of modern bulk unloading facilities—should these be installed—would cut costs and enhance the competitive position of Pacific Northwest production.

As for electrolytic zinc and refined lead, the aspects of the situation involve both Pacific Northwest production and the importation of foreign concentrates. For many years considerable thought has been given to the establishment of an electrolytic zinc refinery in the lower Columbia River area. It would appear that in the not too distant future such a plant will probably be established somewhere along the lower Columbia River; this could be expected to stimulate the development of some local Pacific Northwest ore reserves at present without an economic outlet, and would also have the advantage of drawing upon such producing areas as Australia, coastal British Columbia and, in time, Alaska. The refined slab zinc could then move by water shipment to consuming centers in the East, providing over-all economies much to be desired. Whether copper refining capacity could be established in the lower Columbia River area is highly speculative and problematic, and is best left for contemplation at some later date.

As to the production of calcium carbide, the demand for this material, which is the base for the production of acetylene and such chemicals as calcium cyanamid, is increasing so that the outlook for expanding carbide production in the Pacific Northwest is highly favorable. One of the factors providing grounds for such optimism is the increasing interest in the production of chemical substances known as acrylonitriles. These chemicals are manufactured by the interaction of acetylene with hydrogen cyanide, both of which are made from calcium carbide. It is reported that the most important new use of acrylonitriles is for the manufacture of synthetic fibers such as Orlon, and others which it is believed will eventually outstrip nylon in use and importance. In addition, there is an expanding market for chemicals based on acetylene and chlorine. The key to the expansion of the Pacific Northwest calcium carbide industry will probably rest in the development of high-grade tidewater limestone deposits to provide much lower costs than those now prevailing. In this connection, shipments of extremely pure limestone from southeastern Alaska are definitely in the cards. Modern bulk unloading facilities would provide a reduction in laid-down prices for limestone, resulting in a sizable expansion of its use—not only for calcum carbide but for other chemical purposes, for cement, and agricultural soil-conditioning purposes.

The production of chlorine and caustic soda in the Pacific Northwest plants in Tacoma and Portland is on the upward move. The markets for both products have been increasing and the future appears quite bright. The tonnages of salt—the basic raw material for chlorine and caustic production—can become significant.

Another industry which eventually will locate in the lower Columbia River area is the manufacture of flat and bottle-wareglass. No flat glass is made in our region; the only producer of bottle-ware in the Pacific Northwest, at Seattle, employs both electric and fuel-fired furnaces. The observed benefits of electric operation would seem to indicate possible expansion of this type of production. The raw material requirements of soda ash and silica sand will provide substantial tonnage possibilities for water movement. Although the Pacific Northwest does have sources of silica and undoubtedly more will be found and exploited as time goes on, one should not overlook the possibilities of shipments from such sources as Belgium, a practice well established prior to the last war.

Considering these industries alone—and I would like to point out that they are only a portion of those which may ultimately locate in the Northwest—the total inbound tonnage level which may be expected to develop between now and sometime during the next decade can be set without too great question at around 4,000,000 tons per year. As I have pointed out before, the present requirements of the aluminum industry alone in the Pacific Northwest represent an inbound tonnage potential of around 1,500,000 tons per year. Of this I believe at least 75 percent, if not all, of these tonnages will move by deep-draft seagoing vessels. The resulting outbound shipment potentials involved for the industries described are more difficult to estimate, but I believe that 1,000,000 tons is not beyond possibility for shipment by water.

In this discussion I have dwelt only on electroprocess industries and only on those which, as of today, seem feasible of expansion along the lower Columbia River area. To this list should be added an unknown number of electroprocess industries now in the laboratory stage. The enormous advances of electroprocess technology and the increasing reliance of manufacturing industry on the products of the electric furnace and the electrolytic cell lead me to believe that the potentials for the years 1960–70 may be even greater than those just outlined.

In addition, our vast inland empire can directly benefit from—and contribute to—the expansion of maritime commerce on the lower Columbia River, in ways which are not always apparent. For example, I would like to suggest consideration of some of the opportunities which may arise as a result of the economic development taking place in southeastern Idaho, western Wyoming, and northern Utah. In my judgment, this area may become one of the great chemical production centers of the United States. Located within a radium of 100 miles of its center are large natural gas reserves, oil, coal—including major sources of coking coal for the West—high concentrations of potash salts and other natural chemical substances, sulfur (from natural gas and sulfur-bearing ores), and the Nation's largest reserves of phosphate rock. This is only a portion of the roster of raw materials available in that area, as it abounds in metallics such as copper, lead, and vanadium. Already great developments have been taking place there, such as the operations of copper and lead refineries, of the Geneva steel works, and of the recent large fertilizer and phosphorous producers. This is but a beginning, and it behooves us to anticipate a substantial movement of the output of these industries westward for export to the world. The question is whether the existing and potential export movement will be via California ports or via the lower Columbia River area. The primary problem obviously is one of transportation economics and I wonder what validity there may be to the thesis that the lower Columbia River area could capture this potential tonnage. It would necessitate a combination of competitive modern bulkhandling facilities at original and terminal points, and the use of both rail and inland waterway facilities. The challenge of this possibility is certainly intriguing, and typical of the maritime commerce opportunities afforded in the expansion of industrial activity of our inland areas.

Throughout this discussion you will note that I have referred to the need for competitive transportation and cargo handling facilities. Although I believe in the inevitability of industrial establishment in the Pacific Northwest and the resulting movement by water of very large tonnages, I am just as aware of the competitive position of other port areas on the Pacific Coast and particularly on the Gulf of Mexico. In this connection, time is working against us—at least as far as the Gulf ports are concerned—as they are steadily increasing the establishment of industry and the consequent movement of traffic by means of the most modern port facilities.

What we must do, therefore, is to supplement now our undoubted natural advantages to improve our competitive position. No single factor can probably resolve the situation, but in terms of the movement of bulk commodities one of the major answers seems quite clear; those ports on the west coast which provide the most efficient and economical facilities for loading, unloading, and otherwise handling cargo will have a tremendous advantage over those which do

not have these facilities. Surely we must have faith enough in the future of our lower Columbia River area and its tributary inland empire to provide those facilities without further delay and thus accelerate the development of inbound tonnages. There already is a substantial bulk tonnage moving to this area, which undoubtedly could be transported by water at a saving if we had modern bulk unloading facilities. The establishment of such facilities would be a very strong competitive talking point with industries now casting about for possible locations on the west coast.

In all of this, and particularly with respect to the Portland-Vancouver area, our intermediate future cannot be viewed within any concept less than that of a major world seaport and industrial center. This calls for a consolidation as well as an extension of our port and industrial facilities into a homogeneous and integrated structure to handle, warehouse, process, and manufacture inbound outbound cargoes. That is to say, no single isolated facility—whether it be an industrial site, a rail siding, or a bulk handling dock—can do the job alone. It requires an effective combination of all of these—and more—to bring maximum results.

For such a unit the physical location and character of present and future facilities will require careful consideration. Any emerging well-knit system of docks, cargo handling, access to land transport, warehousing, and industrial plant sites must recognize the peculiar requirements of heavy and light industry. For example, it would appear that the downstream portion of the St. Johns Peninsula is ideally situated for heavy industrial development and hence heavy maritime commerce. The portion of the Peninsula and its adjacent areas on both shores of the Willamette lying closer to the center of Portland are decidedly more favorable for lighter manufacturing, warehousing, and the like. In a very real sense, such a segregation is taking place. The question is whether it is occurring in the manner most conducive to the long term well-being of our community, or whether it is merely happening. Is there not need for a carefully conceived set of blueprints and program of consequent action to facilitate our building a greater port, a greater industrial center, the Portland of the future?

There is another ingredient which is necessary if our area is to reap the full benefits of its potentials. It is that intangible known as aggressiveness. Purely as an observation and not as a criticism, I have a feeling that we lack the kind of aggressiveness which is building up Gulf and California ports. This is not a matter which reflects upon the shipping men of the area, but I think it does reflect somewhat on the attitude of the general community which ultimately can gain so much from maritime activity. What aggressiveness we have—and we have demonstrated it in numerous instances—is spasmodic rather than continuous. After reaching a partial objective we are too often prone to sit back and relax with a feeling of satisfaction. Perhaps in a sense we have not always raised and maintained our sights high enough as to the magnitude of our potentials and of the things we must do. Today we cannot afford not to be expansionist-minded in this expanding west coast of ours—a west coast with a forecast population of 25,000,000 by 1975—an increase of 66 percent as against an estimated 32 percent for the United States as a whole. We cannot afford to be timid about the planning and building of facilities the use of which will eventually bring us returns in jobs and in taxable wealth amounting to several times the original investment. One thing is certain: looking at the past is not going to tell us where we are going. Even the conditions of our amazing growth of the past 10 years are no guide as to the conditions of the next decade.

Thus our task ahead is a clear-cut one. Kilowatts mean cargoes, and cargoes mean the use of kilowatts. Both mean pay rolls and increasing wealth. We cannot falter in supporting an aggressive program of power development, of waterways development, of port development. We owe this to ourselves and to those who are coming from all parts of the United States to live and work with us. The stakes are high. The opportunities are great. Our effort must match the vision of the near future.

Compensatory Spending

EXTENSION OF REMARKS
OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1950

Mr. REED of New York. Mr. Speaker, I regard it a very great privilege and a distinct public service to insert a masterly speech delivered by Mr. George E. Stringfellow in his capacity as vice president of the Thomas Edison, Inc., before the Purchasing Agents dinner at the Builders Exchange Club, New York City, on April 18, 1950.

The vital issues before the country are clearly and forcefully expressed by this distinguished gentleman, and should be read with interest and profit by all those who are interested in the preservation of our Government. The socialistic trend is now obvious to everybody and they should be supplied with all pertinent facts relating to this national danger.

Under leave to extend, heretofore granted, I am inserting Mr. Stringfellow's address:

COMPENSATORY SPENDING

Some years ago Lenin, the chief architect of communism, said, "Some day we will force the United States to spend herself to destruction."

Eighteen years ago the annual cost of Federal Government was under 5 billion dollars and the national debt was slightly under 20 billion.

The cost of Federal Government for the fiscal year ending June 30 next will exceed 46 billion dollars. The Federal debt is now approximately 260 billion, not including some bad loans which will have to be charged off.

In order to understand the enormous increase in the cost of our Government, let me make a few comparisons:

During President Roosevelt's three terms, the average yearly spending of the Federal Government was $31,000,000,000, including most of the military cost of World War II and F. D. R., as you recall, was no miser in spending public funds. In the four post-war years of Truman's administration, the average yearly spending jumped from $31,000,000,000 to $45,000,000,000—an increase of almost 50 percent.

The Truman administration collected an average of $42,000,000,000 per year in taxes, or three times the average collected by Roosevelt.

It would, therefore, appear that we are well on the way to making Lenin's prediction a grim reality.

In 1932 the Democratic Party pledged all candidates who ran on its platform to reduce the cost of government at least 25 percent by abolishing useless commissions and offices, consolidating departments and bureaus and eliminating extravagance. "That platform," said candidate Roosevelt, "is a covenant with the people and when I'm elected," he continued, "I shall put it into effect in every detail."

In the words of a former governor of this State, "Let us look at the record".

Immediately following his inauguration to the presidency, Franklin Roosevelt set out to implement the promises set forth in the Democratic platform which, in my opinion, was one of the greatest documents ever submitted by any political party in the history of our country. The Republican Party would do well to adopt it in 1952 unless it wants to continue to be a "me too" party.

During the first 4 months of Roosevelt's first administration he did a remarkable job of cutting the cost of Government. It has been estimated that as a result of this almost unprecedented service to the people, at least 90 percent of the people of this Republic were enthusiastically supporting the President at the time of his first fireside chat.

Almost immediately afterwards he showed a complete reversal in his policy on cost of Government and Federal debt. How can candidate and President Roosevelt's right-about-face on cost of Government and debt be reconciled with his advocacy of economy during his campaign and the first 4 months of his first term? Here, I think, is the answer to that question. He embraced the philosophy—compensatory spending—of Lord John Maynard Keynes, British Socialist economist, who visited President Roosevelt in 1933. According to the British press, Keynes' ideas "captivated President Roosevelt." Those who are in a position to know say that Roosevelt's about-face stemmed from this "captivation." The Keynes philosophy—the more you spend the more you have—has been practiced in this country in an increasing degree since Roosevelt embraced it in 1933.

It has infiltrated the States and municipalities of our Nation; it is largely responsible for our inflated debt, unbalanced budget, and general extravagance. Let us follow its destructive effects:

In 1932 there were 30 major Federal agencies. There are today 62 major Federal agencies, an increase of 110 percent.

On December 31, 1932, there were 564,103 Federal employees. On December 31, 1949, there were 1,981,156—an increase of 252 percent.

When he first took office, President Roosevelt was terribly disturbed about the size of our debt, which was less than $20,000,000,000. Five years later, when that debt had reached $38,000,000,000, he said, "Our national debt, after all, is an internal debt owed not only by the Nation but to the Nation. If our children have to pay interest on it, they will be paying interest to themselves." In a short span of 5 years after taking office, President Roosevelt was looking upon an increased debt as a national asset.

Keynes' philosophy of "compensatory" spending has about bankrupted Britain. That philosophy destroyed Rome. Keynes' philosophy is advocated by the Communists for our destruction and is certainly taking root here to the gratification of Joe Stalin, whom President Truman referred to in the last presidential campaign as "good old Joe."

Rome fell because her rulers gained and retained power through false promises and the use of taxpayers' money with which to corrupt the electorate, a procedure not different from that which our British brethren and our American politicians have been employing.

Our politicians appear to be more interested in balancing the budgets of foreign countries than they are in balancing our own. Let me give you a couple of examples. Within a week, Dean Acheson, Secretary of State, rebuked the Government of Korea for not balancing her budget. Acheson said the

Korean unbalanced budget is bringing about an inflationary crisis in that country. He told them in effect that if they didn't cut expenses and balance their budget, our Government might stop giving the Koreans American taxpayers' money. Acheson also instructed our Ambassador in Greece to inform the government there that it must balance its budget to avoid inflation, otherwise we might withdraw our subsidies.

Yet, President Truman budgeted a deficit this year of $900,000,000. That deficit will exceed $7,000,000,000. He is budgeting a deficit for the fiscal year ending June 30, 1951, of $5,000,000,000 which could easily exceed 10 billions since he is notorious for overestimating Government income and underestimating Government expenditures.

If we continue to spend more than we take in, inflation in this country is as certain as night follows day. And, it was inflation that made Mussolini; it was inflation that made Hitler; it was inflation that made Stalin, and inflation will produce a dictator in America. Let us not delude ourselves into believing that an American dictator would be more benevolent, more generous, or more decent than Mussolini, Hitler, or Stalin.

Much has been said in recent years about Britain's dollar shortage, but very little has been said about the cause of that shortage. Britain's dollar shortage is caused by inefficient management, confiscatory taxes, and the chloroforming of incentives by the Socialist government.

We are doing the same thing in this country in a measure. We, too, have a dollar shortage. Our dollar shortage doesn't seem to disturb our Government officials. Our budget has been balanced but twice in 20 years, and then by accident. Our dollar shortage is the result of our spending more than we can afford. It stems from the same trouble that Korea is having; it stems from the same trouble the Greeks are having—both have been told by our Secretary of State that they must reduce their outgo to meet their income. It never dawns on our politicians that if we do not reduce our outgo to meet our income that we, too, will have inflation from which chaos and communism grow.

In pleading for a balanced budget and a reduction in Federal cost of government, as well as a reduction in Federal debt, Candidate Roosevelt in 1932 said that a government, like a family, can spend more than it takes in for a year or two, but any government or any family that becomes a spendthrift and spends more than it takes in for more than a year or so is headed for the poorhouse. I think he was right. Our Government has been spending more than it has been taking in, not for a year or so, but for 18 years, and there is no prospect for a balanced budget until we discard the Keynes' theory of compensatory spending, which is another way of saying "until we get rid of Truman."

When a corporation gets into financial difficulties the courts appoint a receiver who either liquidates the corporation's assets or reorganizes and staffs it with new management. In either case, the stockholders lose most of their investment.

When a government gets into financial difficulties there is no court to appoint a receiver. A self-appointed dictator arises who takes over, not as a receiver responsible to a court of law, not as an elected public official responsible to the people, but as a dictator responsible only to his whim. He prescribes their way of life. The people become his subjects.

There is still clamor in this country for aid to Socialist Britain and other nations at the expense of the sorely pressed American taxpayer. It seems to me that we might give thought to the fact that since World War I our Government aided Britain to the tune of approximately $44,000,000,000. This is equal to the cash-in value of all life-insurance policies in the United States. Since World War II we have aided Britain and other nations, by grants, exceeding $33,000,000,000—grants which have kept socialism alive in Britain. Had the British Socialist government not been subsidized with American taxpayers' money, Britain's socialism would have died on the vine long, long ago.

The Socialists in Britain tell us that American capitalism and free enterprise are on their last legs. Indeed, they will be if we continue to subsidize the various segments of the peoples of the world in idleness.

Much of the American taxpayers' money is used both to fight and to support communism. Let me give you an example. Since World War II we have given the Greek Government around $600,000,000 with which to fight communism. Since World War II we have given Communist Russia, through lend-lease and other grants, $440,000,000 of our taxpayers' money and we have given her satellite, Poland, more than $480,000,000, and until recently we were buying rye from Poland which aided her economy. Even morons know that we have a great surplus of rye in this country. I know that this aid to the Communists, amounting to more than $920,000,000 since World War II, is hard to believe but I would have you understand that the United States Department of Commerce and Senator HARRY FLOOD BYRD, of Virginia, are my authority for this statement. It is obvious, therefore, that we are fighting communism on the fringe and wooing and feeding it at the core.

It is clear from Truman's record that he, like his immediate predecessor and his Socialist-minded British brethren, has embraced the Keynes' philosophy of compensatory spending and not unlike former President Roosevelt, he seems to look upon a mounting debt as an asset. "We owe it to ourselves" is perhaps his philosophy too.

On his return from a month's vacation in Florida, at the taxpayers' expense, President Truman was quoted in the press as having said, "The country is in fine shape." There would be some justification for such enthusiasm if the income of the Government was in excess of our outgo and our national debt and annual cost were being systematically reduced.

If we cannot balance our budget when the country is in fine shape what will happen to us when we run into the next tailspin? That is something that never dawns on Fair Dealers, liberals, or pinks.

If anyone ever supposed that the Truman administration was interested in economy, a look at a recent report of the armed services committee of the House would correct the impression. It mentions the following five items:

A budget request is pending for a new $18,000,000 veterans' hospital in the Los Angeles area, while the Navy is closing the 1,500-bed Long Branch Naval Hospital in the same area.

A 500-bed veterans' hospital is being built in Philadelphia, while the Army is closing the 2,000-bed Valley Forge Hospital 20 miles away.

The veterans' agency plans to build 1,000-bed hospitals in Boston and Brockton, Mass., while the Army is closing the Murphy General Hospital at Waltham, Mass.

The Veterans' Administration wants to build a 500-bed hospital in Atlanta, while the Army is closing the Oliver General Hospital at Augusta, Ga.

A 500-bed veterans' hospital is planned at Ann Arbor, Mich., while the Army is closing the 1,600-bed Jones Hospital at Battle Creek.

There won't be any Government economy until there is another and a different kind of man in the White House.

During the last 18 years a Roman holiday has been declared by and for our spendthrift and muddling politicians. Governmental extravagance has been the order of the day. The national debt has increased from $20,000,000,000 to $260,000,000,000—an increase of 1,200 percent. The annual cost of Government has increased from $5,000,000,000 to close to $46,000,000,000, an increase of over 800 percent.

How long will it take the American people to learn the lesson of the collapse of the Roman Empire and understand why Britain is tottering? How long will it take them to realize that the Keynes philosophy of compensatory spending will lead to ruin if we don't put a stop to it soon?

I conceive it to be the duty of the men in our segment of the human family to become Paul Reveres. We owe it to our founding fathers; we owe it to the present generation; and we owe it to posterity to do our part in saving our way of life—a way of life which has given us a higher living standard and greater liberty in 160 years than any peoples have experienced in 6,000 years.

Those businessmen who are unwilling to risk their necks in the defense of a great cause will likely lose their souls. Those who by their inaction are saying to the selfish politicians, whose greed for gold and lust for power is rapidly consuming us, "Go ahead, we will do nothing to block your way to our destruction" are aiding and abetting our destruction.

If America fails, it will be from extravagance, internal decay, and cowardice. We see these three adversaries around us constantly. America will not follow the Roman road to ruin if we and millions of others like us discharge our duty as citizens and thus prove that we are worthy of our great heritage.

The times call for the election of men to public office of:

"Strong minds, great hearts, true faith, and willing hands;
Men whom the lust of office does not kill;
Men whom the spoils of office cannot buy;
Men who possess opinions and a will;
Men who have honor, men who will not lie;
Men who stand before a demagogue and damn his treacherous flatteries without winking;
Tall men, suncrowned, who live above the fog,
In public duty and in private thinking."

Two such men, who reflect the philosophy of our founding fathers and place principles above patronage and principles above party loyalty are the senior United States Senator from Ohio [ROBERT A. TAFT], and the senior United States Senator from Virginia [HARRY F. BYRD]. They, in my opinion, constitute a symbol of our way of life. These men are constantly being smeared by New Dealers, Fair Dealers, pinks, professional liberals, and Communists.

When you find where BOB TAFT and HARRY BYRD stand, there is where those of us who would preserve our liberties and be worthy of our heritage should also stand. These two men will not take us down the Roman road to ruin. These two men know the fallacy of compensatory spending.

Will you get behind them with your voices, with your influence, and with your substance?

Report of Petroleum Imports Committee

EXTENSION OF REMARKS
OF
HON. E. H. HEDRICK
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 5, 1950

Mr. HEDRICK. Mr. Speaker, under unanimous consent I include in the Appendix of the RECORD the report of petro-

leum imports committee to the National Bituminous Coal Advisory Council, dated March 1, 1950, adopted by the council, March 8, 1950:

REPORT OF PETROLEUM IMPORTS COMMITTEE TO NATIONAL BITUMINOUS COAL ADVISORY COUNCIL, MARCH 1, 1950

1. FUEL SUPPLY

The development of oil imports since World War II has caused significant shifts in the American fuel structure. Continuation of current imports, much less further increases as are prospective, will have far-reaching effects. Eventually the country's pattern of fuel supply will be revamped such as few today may realize.

Energy availability is the foundation upon which the American economy has been built. Its source has been almost entirely in fuels—coal, petroleum, and natural gas—which have been abundant in the country's natural resources. Had there been less energy available, the American economy would not have grown as it has. Hence, the fuel structure as changed because of oil imports is of great consequence, and its final appearance, no matter the form, is of national concern.

Progress of the economy with its expanding mechanization has required a multitude of fuel products. The tendency has been for an increasing need of petroleum products such as gasoline and other refined oils to power a variety of machines. Advancing technology likewise has promoted the use of natural gas for special purposes. It, too, has given coal added opportunities by improved methods for converting into electric power, coke, and additional products. Coal, as yet, does not have the advantages that petroleum and gas enjoy in the production of products that much of new technology needs. Nevertheless, it has the essentials for steam-raising and other power needs which still represent a sizable place in the energy pattern, and eventually, since it can be converted into oil products and technological advancement will make this feasible, coal with its huge reserves will be a substitute indefinitely for petroleum as so required. Presently, however, to satisfy all of the economy's fuel requirements efficiently, it takes a combined use of petroleum, natural gas, and coal. Of the three, no one or two can do the job.

Growth of the economy will demand larger amounts of petroleum for gasoline and many refined oils. It will give natural gas a vast special-purpose market. Coal in the course of this trend will lose in relative importance as a solid fuel, although the area it now serves will need a greater volume of energy. In the aggregate, total fuel requirements will increase.

But what about oil imports? Companies financially interested in foreign oil claim that imports are essential if future fuel requirements are to be met. In other words, American petroleum reserves are not going to be adequate forever.

Few will disagree on this long-term outlook for petroleum reserves. It is getting harder to find and produce American petroleum. The country will have petroleum output indefinitely, but its natural reserves are fixed and sometime a point is going to be reached where the production rate cannot be bettered and probably not maintained. American production deficits in terms of an expanding market will have to be made up by synthetics or oil imports. The latter provide advantages according to proponents of foreign petroleum development.

The country's proved reserves of petroleum are equivalent to a dozen years' supply at their present depletion rate. New oil will have to be found continually and in substantial volume to maintain this relative position of reserves. Companies promoting foreign petroleum question that this can be done for very long. In comparison, proved reserves of natural gas have a life exceeding 25 years. Their life is figured, however, on a lower production rate than petroleum. Gas reserves are not much larger than those of petroleum on a B. t. u. basis. On the other hand, coal reserves are far greater than those of petroleum and natural gas, measured in terms of centuries, although estimates vary as to how great they actually are. One fact is clear: As fuels are now used, American petroleum supply is in the weakest position and coal supply is in the strongest over the distant period.

Yet, while general agreement can be found for the principle that American interests should be active on foreign oil, there is wide disagreement about the way foreign oil development has been handled. It has been demonstrated that oil imports increase as American interests advance their development in foreign fields. Stated in another way, production of American fuels must be decreased to allow foreign petroleum output to grow; nor is there general agreement that the development of foreign oil should overshadow that of American synthetic output.

The pushing of foreign oil into the American fuel market in a volume not required for supply reasons obviously is disturbing. This has been the case during the last year. Effects have been adverse to coal and even to the oil industry itself. Immediately ahead, oil imports are scheduled to increase and a further shake-up of the fuel structure is expected. The question is prompted: What will be the outcome of the import program as conducted in terms of national welfare?

2. DEVELOPMENT OF IMPORTS

American development of foreign petroleum production and the importation of oil are not something of recent origin. After World War I, when it appeared that the country's petroleum output might soon be inadequate, both the Government and the oil industry emphasized the necessity of finding outside sources of supply. Proposals in Congress to enter the Government as a partner with industry in foreign ventures were rejected, but American companies supported oil exploration in many parts of the world. During the twenties, great progress was made in the development of foreign oil, particularly in Latin America.[1]

Large reserves were discovered in the United States in the meanwhile. This plus the depression in the early thirties discouraged foreign development. From then until World War II, there was a problem of excess supply in the American fields. In 1932, an excise tax of 21 cents per barrel on crude, and $1.05 on gasoline was authorized. These duties were reduced in 1939, but a quota on imports was reached by agreement. However, it was in 1933 and 1934 that American companies secured large concessions in Arabia.

Changes in oil supply that have taken place during the last 3 decades are indicated by the trend in imports. Between 1920 and 1922, when the adequacy of American reserves was in serious question, imports ranged from 297,000 to 373,000 barrels daily, 19 to 21 percent of the country's new supply. Thereafter and until World War II, imports declined, averaging from 144,000 to 162,000 barrels daily by the 1935–39 period, or from 4 to 5 percent of new supply. They averaged 266,000 barrels in 1941 when American oil supply started to tighten but 252,000 barrels in 1944 was the peak during a full war year when oil was short and after import quota restrictions had been removed.

Following World War II, fuels of all kinds were in tight supply. American business had shifted rapidly to a record level of peacetime activity and was consuming fuels in vast volume. Foreign countries battered during the war needed fuel help from the outside as they started on the reconstruction of their economies and they looked mainly to the United States.

In the comparatively cold 1947–48 winter, fuel oils were short in various markets. This situation led to a series of developments. Inadequacy of American petroleum reserves were again featured particularly since international conditions were unsettled. Elaborate plans were proposed for synthetic oil production. In the meanwhile, the oil industry made preparations to avoid any oil shortage the next year, by pushing American production, and the companies with foreign interests also began to see additional oil in imports.

During World War II, petroleum production was hit hard in certain countries like Rumania and the Netherlands East Indies, but expanded in others like Latin America and the Middle East through military necessity. Development in the Middle East was to open fields with tremendous reserves. The wartime expansion in Latin America and the Middle East gave the impetus for rapid postwar growth of foreign production. In turn, what appeared to be an oil scarcity in early 1948 gave evidence of a ready market for the foreign output. Thus, while plans on synthetic oil were being given general consideration in America and there was still worry about petroleum supply immediately ahead, foreign refineries representing a sizable capacity were nearing completion. Also, in each succeeding month, some of the strain was disappearing from international relations.

Following is a table that shows trends in American oil market and supply, and the part played by imports. Between 1945 and 1949, the volume of imports has more than doubled. It is interesting to note in the table the extent to which the American oil market has grown since 1940 and the substantial increase in American petroleum production. Moreover, in 1949 as against 1948, while total demand increased slightly, American production was reduced in order to make room for additional imports. The country went on a net import basis in 1947 for the first time since the early twenties.

United States petroleum market and supply

[Thousand barrels daily]

	Total domestic demand	Total domestic and export demand	United States production	Imports	Total new supply
1940	3,625	3,981	3,858	229	4,087
1941	4,071	4,369	4,073	266	4,339
1942	3,972	4,293	4,034	99	4,133
1943	4,168	4,579	4,372	174	4,546
1944	4,566	5,134	4,864	252	5,116
1945	4,857	5,358	5,010	311	5,321
1946	4,912	5,331	5,074	377	5,451
1947	5,452	5,903	5,452	437	5,889
1948	5,775	6,143	5,922	514	6,436
1949	5,792	6,119	5,470	642	6,112

Source: U. S. Bureau of Mines.

The world supply of petroleum rests on a complex framework. A number of countries have small or no reserves and a few countries have the greater part of the reserves.

Currently, the United States could meet its own requirements by stretching facilities. Canada is developing what may be sizable reserves, and Latin America has an excess in production. Hence, the Western Hemisphere can more than take care of its wants.

[1] See *Arabian Oil* (1949), by R. F. Mikesell and H. B. Chenery, ch. 1; also United States Crude Petroleum Reserve Productive Capacity (1950), report of National Petroleum Council.

Europe, the Far East, Africa, and Oceania, have production deficits. The Middle East is the only area in the Eastern Hemisphere that has potential excess oil in quantity, but its development still is in the primary stages. In a matter of a few years, the Middle East can be in a position to add enough oil so that the Eastern Hemisphere will be self sufficient. As a consequence the Western Hemisphere would lose one of its large outlets and, in turn, have excess capacity.

Over a longer time, with an increasing market, there would be a period of years when both hemispheres would be self-sufficient in petroleum from a physical standpoint. But if the Middle East continues its remarkable development and features cost advantages as now claimed for it, it could gain a strong foothold in the Western Hemisphere market. If this proves to be the case, petroleum development as well as that of other fuels in the Western Hemisphere will be retarded. Events of the last year point in this direction.

3. IMPORTS VERSUS FOREIGN PRODUCTION

Oil imports since World War II take on an appearance different to the one they had previously. They evidently are part of a long range program that schedules almost continual increases in their volume. Sizable expansion that has taken place in the last few years is to be followed by additional growth which, in a few years, will make imports a relatively large segment in the American fuel structure.

In 1949, imports of 642,000 barrels daily, were more than twice the volume necessary to supplement prevailing domestic capacity in order to assure a full supply for consumption and export requirements. In other words, what had been American petroleum production in 1948 was cut over 400,000 barrels daily because of the foreign oil. Indications are that imports will continue to increase at a much faster rate than needed to supplement American production.

A number of reasons may be listed as to why imports have and may continue to be developed on a scale much larger than required to take care of deficits in American production. American companies that have invested heavily in foreign oil expect to realize a return to cover their capital outlay by enlarging their market, which includes movements to the United States. Foreign exploration and production costs are much lower than those in the United States, and can offer competitive advantages. Royalties from oil provide a major source of income to governments of countries where foreign oil is produced. To keep royalty income at a satisfactory level to protect concessions sometimes means that foreign production must be kept at a full rate, if not increased. Foreign oil controlled by American interests has been limited in the world markets more recently as other countries, partly financed by United States funds, have increased their oil output. Its disposal will depend more upon an American market. Finally, American investment in foreign countries and the expansion of foreign trade, as to which the development of oil imports is attached, express a policy strongly supported in important parts of the United States Government. Moreover, the Government has long encouraged American activity in foreign oil fields.[2]

Development of oil production in the Middle East area since World War II has been at a faster rate than many had expected. Changes taking place in supply as a result are shown in the following:

Crude-oil production in select countries

[Thousands of barrels]

	First 6 months of 1948	First 6 months of 1949	Percent change
United States	988,011	931,144	−5.76
Venezuela	238,355	223,761	−6.12
Total, United States and Venezuela	1,226,366	1,154,905	−5.83
Iran	88,217	101,254	+14.78
Saudi Arabia	60,283	92,036	+52.67
Iraq	14,589	9,701	−33.50
Kuwait	15,103	44,823	+296.78
Bahrein Island	5,505	5,463	−.76
Total Middle East	183,697	253,277	+37.88
Grand total	1,410,063	1,408,182	−.13

Source: U. S. Bureau of Mines.

In the above table it will be seen that the combined crude-oil production changed little between the two periods. But the output decreased in both the United States and Venezuela in 1949 as compared to 1948, the difference being made up by the increased production in the Middle East. The latter passed Venezuela from a production standpoint, although its growth has barely started.

American holdings in the Middle East are of great magnitude, said to be over 40 percent of the area's known petroleum reserves. They include concessions having proved reserves that appear as large as those in the United States, and with far greater potentialities. Refining capacity and transportation facilities have hardly been started in terms of crude oil available. The larger American companies dominate Middle East, like other foreign development, as might be expected because of the tremendous investment and great risks involved.

United States imports of crude petroleum and refined products by 11 principal importing companies, 1948, 1949, and company estimates for first 6 months of 1950

Importing company (in order of estimated imports for first 6 months of 1950)	Barrels daily				Percent change first 6 months 1950 over year 1948

4. ORIGIN OF IMPORTS

In 1949, imports consisted of 66 percent crude oil and 32 percent residual oil, the remaining 2 percent being largely distillate fuel oil. Imports other than crude and residual have been on the decrease in recent years.

Of the crude oil imported, one-fourth came from the Middle East, the rest from Latin America, principally Venezuela. As against 1948, the proportion originating in the Middle East was more than twice as great. Crude-oil imports were entirely from the Western Hemisphere until 1947.

Nearly all of the imported residual fuel oil has been from refineries in the Netherland West Indies located off the Venezuelan coast.

Part of the crude imported from Latin America is of a heavy grade and used mainly for the making of residual. It is tantamount to the importation of residual. According to the National Petroleum Council's import study, this particular crude averaged approximately 16,000 barrels daily during the first half of 1949. Moreover, the total crude imported from Latin America and the Middle East, averaging nearly one-half million barrels daily, is said to give a larger yield of residual than comes from American crude under ordinary refining conditions but figures evidently are not published in this regard. It is clear, however, that residual fuel oil is the major product derived from imports.

Imports of petroleum products

[Thousands of barrels]

	Crude oil	Residual oil	Other	Total
1940, year	43,085	29,366	11,162	83,613
1948, year	129,093	53,269	5,782	188,084
1949, year	154,922	74,555	4,654	234,131
1949, daily average	425	204	13	642

5. IMPORTS AND THE FUEL MARKET

Effects of oil imports since 1948 have been felt throughout the American structure. They have had a depressing effect on American petroleum production. They have shrunken the coal market. Aspects of the latter are of special concern in this report.

The major product furnished by the imports, as indicated above, has been residual fuel oil, which can compete directly with coal. It is sometimes called the waste product of refining. The annual proportion or

[2] Note: The Effect of Oil Imports on Independent Domestic Producers (Jan. 26, 1950) a report sent to President Truman by Representative WRIGHT PATMAN, chairman of the Select Committee on Small Business of the House of Representatives.

yield of residual resulting from the manufacture of oils has been on the decline in the United States because of advancements in refining methods. It is now around 20 percent where it was nearer 30 percent in the early thirties. However, because of the great increase in refining volume, the amount of residual has grown substantially although its relative place among petroleum products has dropped. This is pertinent since the market it serves is on the decrease unlike the markets for gasoline and other refined products which are on the rise.

The market residual served during 1947 and most of 1948 was mainly noncompetitive from a practical viewpoint. It included consumption for ship bunkers for which another fuel could not be easily used, plants located near oil fields or in congested areas where coal or gas could not be distributed except at a disadvantage and for special purposes. In 1948, in New York City, for example, the average price for residual was approximately $3 per barrel; 50 percent higher than coal on a heat basis. This was at a time when extra coal was available to take over residual accounts, had consumers wanted to switch for price reasons.

As late as 1946, railroads were the major buyers of residual. Carriers in the Southwest and on the Pacific coast used this oil as their main fuel for steam locomotives. In recent years, rapid dieselization of the carriers has decreased the use of residual as it has coal. The railroads could be entirely dieselized and would burn only about the same volume of oil represented in the 90,000,000 barrels of residual that fueled but one-sixth of the railway system in 1948. While switching largely to Diesel oil, the carriers are adding nothing to total petroleum consumption because of technological advancements.

Sales of residual fuel oil, 1947–48

Uses	Thousand barrels		Percent total, United States	
	1947	1948	1947	1948
Railroads	97,500	89,588	18.8	17.8
Vessels, inc. tankers	101,900	95,763	19.6	19.1

Miscellaneous uses	6,859	6,623	1.3	1.3
Total United States	520,529	502,051	100.0	100.0
Exports	10,623	12,539	------	------
Grand total	531,274	512,590	------	------

Source: U. S. Bureau of Mines.

Current large uses of residual are as vessel fuel and in the general category of smelters, mines and manufacturing. Vessel fuel is dropping because of a slackening in shipping and also with the growth of the Diesel engine for marine purposes. During 1949, the sale of residual was pushed in the manufacturing field, among utilities, and larger amounts were burned as company fuel. Data are not available yet to give the complete picture of the 1949 residual market.

In 1948, the total demand for residual amounted to 513,000,000 barrels, of which 13,000,000 barrels or less than 3 percent was export. Residual production has been increased and imports about maintained compared to 1947. This resulted in a new supply of 543,000,000 barrels, 30,000,000 above market requirements. Stocks which had been relatively low were built to 64,000,000 barrels by the end of 1948. Allowing for improvement in stocks, residual was in excess probably 20,000,000 barrels—4 percent of total requirements at that time.

This comparatively small excess was to start the dumping of residual, a practice that gained momentum in 1949 and reached significant proportions. Residual prices were cut in half in a matter of months to invade markets of other fuels.

The year 1949 was a hard one for fuel like residual and coal suitable for heating and steam generation. The winter and fall were extremely mild. Business activity dropped. Shifts were taking place among fuels such as brought by dieselization. These were the conditions under which an attempt was made to increase the sales of residual.

It is not startling that residual prices had to be cut drastically and generally—at least a dollar a barrel on the average over the year, a subtsantial sum figured on a half-billion barrels, and a loss not to be offset by price advances on gasoline and other products although that was tried. Nor is it surprising that coal, along with railroad transportation that depends heavily on coal for revenue, was squeezed in the process.

Supply and market of residual fuel oil

[Thousands of barrels]

	1947	1948	1949 (estimated)
Production, including transfers from crude	474,886	490,164	429,579
Imports	54,244	53,269	74,555
Total new supply	529,130	543,433	504,134
Exports	10,623	13,011	12,641
Stocks, end year	(1)	64,021	60,193
Domestic demand	518,510	500,543	495,321
Daily average	1,421	1,368	1,356

[1] Not available on basis comparable with figures for 1948 and 1949.

Source: U. S. Bureau of Mines.

Why should this happen? Why should the oil industry lose so much money? Why should coal and transportation be depressed? On the face, these questions lack a satisfactory answer. Residual excess did not average more than 50,000,000 barrels during 1949, less than imports and approximately 10 percent of a normal market. United States production of residual was lowered more in that year. But here is where imports enter. The imports of residual were increased along with the imports of crude, some of which gives a high yield of residual. In the circumstances, the new supply of residual could not be kept within appropriate limits. If the volume of residual imports could have been adjusted to remain as a supplemental source to domestic supply, the fuel disturbance of the last year could have been avoided. But apparently the volume of imports is not subject to fluctuations in the American market. Instead, it must be increased.

Dumping has caused residual to be widely disturbing to coal, and to invade coal's eastern coastal market with success. A large number of coal consumers located in the New England, Middle Atlantic, and South Atlantic States, have switched to residual oil after receiving attractive price offers.

As an illustration, most of the electric utilities located on or near the eastern seacoast have shifted from coal to oil in part or whole within the last year. A check of 15 utility plants in New England which converted showed that 6 were entirely fueled by oil, and 7 were from 50 to 100 percent on oil. Similar changes have taken place in New York and south.

The table following, taken from Federal power records, measures the displacement of coal at 26 plants between September 1948–49, which amounts to over 6,000,000 tons, as oil consumption increased five times. Additional oil imports will mean that residual will widen its attack, and further depress American fuel production.

Coal and oil consumption by select electric utilities

	Coal consumption (thousand tons)		Oil consumption (thousand tons)	
	September 1948	September 1949	September 1948	September 1949
New England (19 plants)	293	79	373	1,176
Middle Atlantic (7 plants)	680	363	58	903
Total	973	442	431	2,079

6. EFFECTS OF THE IMPORT PROGRAM

The case for oil imports rests upon the contention that the country will need outside petroleum sources in the years ahead to supplement its own production. Otherwise, the imports proponents say, the United States will have inadequate fuel in terms of what is available in volume and costs to the world and thus to other countries, and will be at a disadvantage to that extent.

Oil imports also receive support in the promotion of foreign trade. This is important but not the controlling economic factor. Fuel supply is too vital to the economy's operation to be secondary to foreign trade per se. Imports, where essential, fit nicely into foreign market development. But the country cannot let trade promotion alone interfere with a sound fuel policy.

One weak point in the argument for oil import is the time aspect. When will American petroleum production be inadequate? Oil companies without foreign interests claim there can be plenty of American production for years to come. The National Petroleum Council has a similar view. Certainly, the growth of foreign production controlled by American interests has been at a faster rate than indicated by needs.

Another point not clear is the loss of interest in synthetic output with the development of foreign oil. Preliminary reports by the Government and industry contain favorable statements on the making of synthetic oil. From a long-range view: Might not synthetics be advanced to a position comparable to oil dependent upon foreign supply?

Technologists say there is no physical problem in converting coal to oil. They admit that their exploratory research has shown that costs for synthetics are higher than those for oils gained from petroleum refining. But synthetic production costs would be bettered with further research and experience. Even if higher they might tax the economy less than it would to provide protection for foreign oil supply.

When reference is made to an adequate oil supply in the future: What is the meaning? In brief, the answer covers a satisfactory volume of gasoline to run planes, automobiles, trucks, and similarly fueled vehicles. It includes diesel oil for locomotives, marine engines, and other equipment. It also includes additional light oils, lubricants, and various refined products, that serve numerous uses. More and more of these products will be consumed as the economy progresses with the benefits of additional technology. Without gasoline, diesel oil and other refined output, the economy would be paralyzed. If needed, obviously imports should be developed to assure that such refined products will be in ready volume.

However, this is not the way imports have been handled. The main product from foreign countries has been residual fuel oil. This product has certain special uses for which there is no convenient substitute but which aggregate into an amount that could be supplied by the country's ordinary refining operations. A given amount of residual will be required in the future but the volume will tend to decline unless it proves more profitable than gasoline and other refined products which is unlikely in view of technological trends. But the imports program has been mainly to bring residual into the country, pushing supply above normal requirements and dump the excess, largely into coal markets. The effect has been to develop oil imports principally to displace coal as to which we have vast reserves.

American financing of coal development in some foreign country that features immediate cost advantages could have given the same results as has the oil-import program. Coal then could be imported to displace tonnage mined in the United States. Benefiting would be particular coal consumers while nothing would be gained by millions of other fuel users. Nothing would be added to strengthen fuel supply ahead.

American interests in foreign oil may hold that the present import program is a necessary step in securing later benefits. Depressing domestic oil and coal production—displacing the country's labor with foreign—are only temporary expedients for developing imports as to be essential in the future. But how far is the future? Oil imports now make for an excess oil supply and still are on the increase. Their impact has been seriously felt within only a matter of a single year. Their prospective development can remodel the fuel structure within a few years.

The manner in which the oil-imports program discourages the continuation of a sound coal industry may be briefly summarized.

Coal is an essential energy source for the economy. Suddenly stop coal supply and American industry will come to a standstill and civilians will face severe hardship. During the peak war and postwar years, bituminous and anthracite coal was produced at an annual rate of between six hundred and eighty to six hundred and ninety million tons. In 1949, the consumption and export of coal amounted to 520,000,000 tons, nearly 25 percent below peak levels but yet the most important source of energy among the fuels. Coal as a solid fuel will continue to be essential and will take on extra importance should there be a war.

The basic structure of the coal industry consists of equipped mines which, today, have mining capacity to meet requirements. It has a heavy investment in plant and equipment, is geared to produce and prepare the numerous coal products needed. Mines are depleted from day to day and new operations must be brought into service to maintain capacity. It sometimes takes several years to reach full production in a new mine. Both existing and prospective mines reflect the trend in improved mechanization.

Besides the equipped mines, marginal operations are developed during peak periods. They mine out crops and other deposits easily reachable which, though generally of poor quality, help supplement supply in periods of heavy demand. The marginals ordinarily have little capital outlay. A good deal of the coal suitable for marginal mining has been depleted since the start of World War II.

A requisite for coal mining is an experienced labor force. Miners have to acquire considerable training before they can undertake responsible assignments. Approximately 500,000 men are engaged in mining at the present time.

Capacity at a coal mine is of no value unless there is transportation. Tonnage must be moved in great volume and over long distances to service consumers. Coal is the largest source of revenue for the railroads, and it is important tonnage in trucking and water movement. A rough measure of the place of coal in transportation is one railroad employee for each miner.

Now as to the importation of residual fuel oil. It takes about four barrels of this oil to supplant a ton of coal. On the average, each million barrels of residual displaces 250,000 coal tons, 250 miners and the same number of railroad employees, and 5,000 cars of coal that would provide a freight revenue of $750,000. The dumping of residual takes part of coal's market and puts a downward pressure on prices as to the remainder. With 75,000,000 barrels of residual imported in 1949 and apparently larger amounts to be brought in during the succeeding years, it is easy to understand how the coal industry has been and will be squeezed. Coal confronted with the import situation will be unattractive to the miner, to the investor, and to the railroad. Its employment will decrease, its plant will deplete without replacement, its transportation facilities will shrink.

In conclusion, there is the question: Why does the country need a sound coal industry? Imports that permit oil to displace coal because of advantages and an assured supply would benefit the economy. This seems logical but nothing has been put forward to make it practical. The country is never sure of imports. It failed to maintain its movement from Latin America during World War II when it desperately needed oil. Imports from the Middle East would be even harder to protect. In addition, the oil industry admits that less residual will be made in the more distant future as refineries must concentrate on gasoline, Diesel oil, and other products, in order to meet requirements. Thus, by shifting from coal to residual the country would depend upon a foreign fuel with a possible interrupted supply as well as a declining supply in the long run.

But some contend, if the import movement is cut and residual is short, consumers again can turn to coal. The trouble with this thinking is that coal may not be available. Take the extreme case, a war declared several years hence after residual has taken a good part of the coal market. Imports stop and consumers like the eastern utilities place orders for millions of tons of coal, deliveries to start in a few days. Coal's plant capacity, employment, and transportation, having been depressed, already is overloaded because of war activity. Where is additional coal to be obtained immediately? This would be difficult to answer, especially if at that time it is decided to rush the establishment of a coal-to-oil industry that will use millions of tons of coal per year.

Without war, the problem of fuel supply would appear gradually rather than suddenly. Late in the fifties, as an example, it may be found that residual is short. World activity places heavy demands on refining capacity for gasoline and light oils, and the volume of residual falls. Again, coal is called upon to supply energy. But like in Great Britain after World War II, coal would be unable to meet demands adequately and operations of the economy would be restricted. You cannot build mines, increase employment, and supplement transportation on a short-term basis.

True, coal as a solid does not have the increasing market that oil enjoys. But the country must have a coal supply in the future as it does presently. And the country is entitled to receive this supply upon an efficient basis such as can be expected from a well-run coal industry with reasonable competitive opportunities.

In conclusion, it appears that the current oil imports program is going to result in a development opposite to the one declared to be its objective. The program will tend to weaken instead of strengthen the country's fuel structure of the future. Its effects will be to depress American petroleum and coal production, and to discourage advancement in synthetic oil output. What it will do is make America unnecessarily dependent on foreign fuel supply and, at the same time, without proper safeguards in case import flow is blocked or reduced. If this is a proper conclusion, then the country is moving in the direction of fuel shortages, not a pleasant prospect for an economy that should expand, and remain powerful for security purposes.

The Hydrogen Bomb

EXTENSION OF REMARKS
OF
HON. CARL HINSHAW
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 21, 1950

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following talk given by Dr. Robert F. Bacher, former member of the Atomic Energy Commission, now of the California Institute of Technology, at Town Hall, Los Angeles, March 27, 1950, entitled "The Hydrogen Bomb":

On January 31 President Truman issued a short and momentous statement about the hydrogen bomb. Quoting the central part of his statement, he said: "I have directed the Atomic Energy Commission to continue its work on all forms of atomic weapons, including the so-called hydrogen or superbomb. Like all other work in the field of atomic weapons, it is being and will be carried forward on a basis consistent with the over-all objectives of our program for peace and security."

There has been no amplification of this statement.

During the weeks before the President issued his statement and in the following weeks there have been many conflicting statements about hydrogen bombs and what we should do about them. Some of these statements have become distorted in repetition. Others, while clearly stating physical possibilities, concern events which are so improbable as not to warrant serious consideration at the moment. Some of the statements made by scientists, whether intentionally or otherwise, have been very frightening to our citizens. Back of such statements seems to be the idea expressed by some that if the United States citizen will just become sufficiently frightened somehow, we will not have any war in the future.

There is no question that the hydrogen bomb has terrifying possibilities, and a little later I shall try to give some estimate of what such a bomb might be like. It is our very deep obligation, however, as citizens in a democratic country, to consider this whole question objectively, dispassionately, and as carefully as we can under the circumstances to decide just what our country should be doing. It will not improve the judgment of the citizen to scare him to death first. This is a very serious time for the United States. We cannot afford any irrational or purely emotional action. Our future safety and security depend today on keeping our heads and using wise judgment.

Many people in considering the national policy on the hydrogen bomb have been able to formulate their opinions of this weapon very quickly on moral grounds alone. They say, and with justice, that the hydrogen bomb is a weapon of tremendous mass de-

struction and that accordingly no civilized country should consider its possible development and use. This is a comfortable position and one very easy to take, but where do we stop? Atomic bombs are also weapons of mass destruction. Are they moral or immoral? Nothing could be more gruesome or immoral than the reports which many of us have heard of some of the hand-to-hand conflicts during the past war. Nothing could be more uncivilized than some of the torture to which war, conflict, and slave states have led.

There is no question about it. War inevitably leads to many acts which are immoral. The relative immorality of various weapons and acts of war becomes difficult to distinguish. The hydrogen bomb, being a weapon of tremendous destruction, is more to be condemned than lesser weapons on these grounds if used for needless mass destruction. Indeed, no one can argue that the moral position of the United States will be improved by the possession or use of this bomb. Immoral as war is, war consumes a large part of the efforts of the people of the world. Situations arise in which war seems to be the lesser of two evils. The moral problem is therefore a much deeper one. The real question is: "What should the United States do in order to diminish the probability of world conflict and to increase world peace and international accord?"

To this question many answers are given. One man will say that the only approach is pacifism. Another man will say that the only approach is to be fully and completely prepared to act against any aggressor immediately and effectively. The problem seems to be much more subtle. No such simple solution has been found in the past to be effective.

I have no complete answer to this question for you today. But what we do about the hydrogen bomb in the future may affect world peace, and is directly related to this basic question. One man says that to make the hydrogen bomb starts us on a weapons race which will inevitably lead us to war. Another man says that we can only maintain our security if we make hydrogen bombs and thus are able to hold an aggressor at bay. Which one is right?

Many of our citizens have lost all faith in the United Nations and believe that there are no possibilities at all for international agreements which will have any meaning. Others feel that we have not made the right approach to the Russians as yet. Certainly there is little reason from our experiences in the United Nations and particularly from our experiences and efforts toward the international control of atomic energy, to be very hopeful. While yielding no tangible results these discussions of the control of atomic energy have been very useful in pointing out where the difficulties lie.

Our Secretary of State, Dean Acheson, stoutly maintains that if Russia will face the real needs for international agreement on vital issues and will show a desire to reach agreement, then it would be possible to lessen the tension which grips the world today. While he is not optimistic on Russian willingness to decrease that tension, he believes that accord on the international control of atomic energy is one of the vital issues. If international accord seems so unlikely, we should be interested in whether a vigorous development and production of the hydrogen bomb will increase or diminish the probability of war.

Of course, there will be some who will argue that any weapon development at all leads to war and therefore we should make no development of any kind. Though this is in agreement with some of our most deeply rooted Christian ideas it cannot be followed. There is no question at all in my mind, that for our Nation to pursue such a policy in the present world would be for us greatly to increase the probability of a world holocaust and a national calamity.

Throwing aside then such a pacifist view, let us ask the questions: "What weapon development is important to the national security? How important is the hydrogen bomb to national security? Will hydrogen bombs increase our chance of winning a war with minimum loss?"

Before trying to answer these questions, let us look briefly at some of the technical background of the hydrogen bomb. It has been known for a great many years that if one could somehow find a way of putting light atomic nuclei together to make heavier nuclei, it would be possible to extract energy. It has also been known for a long time that if one could take the heaviest nuclei and split them apart, one would be able to obtain energy.

The first indication that either of these processes might be important to us as a source of energy came from the suggestion by Hans Bethe that the fusion of the light elements was our fundamental source of energy in the sun and stars. Dr. Bethe worked his ideas out in some detail and scientists now believe that this is the origin of solar energy. These ideas were well developed before the fission of uranium was discovered. The discovery of the fission of uranium in 1938 was immediately recognized as a possible source of energy for man. Released gradually he could use this energy for power. Released suddenly this energy could provide an explosion.

Two fundamental scientific discoveries which followed soon after the discovery of fission were of far-reaching importance. The first of these was that in the fission of uranium caused by the absorption of low-energy neutrons, additional neutrons were released in the process. The importance of this fact is that the fission of uranium could produce neutrons which could then produce another fission, hence the term chain reaction. These neutrons released in fission could make the reaction self-perpetuating.

The second discovery was that some of these neutrons were emitted some time after the fission took place. It was this fact that made the controlled chain reaction or nuclear reactor a possibility. Without these delayed neutrons we would have no way of controlling a nuclear reactor.

With the fusion of the light elements the situation is entirely different. Here the basic nuclear reactions which lead to the release of relatively large quantities of energy are those which occur when the nuclear particles collide at high velocity or high relative kinetic energy. At the center of the stars the temperature is many millions of degrees centigrade and the particles of matter are moving at such high speeds that these nuclear reactions may take place. Even then, only a few nuclear reactions are possible. There is no possibility that the energy release from this type of reaction can be controlled on the earth. In the stars the reaction is controlled because of their great size. On the earth these self-sustaining thermonuclear reactions will either give an explosion or nothing at all.

Whether or not a hydrogen bomb can be made depends upon whether it is possible to create on earth, an assembly of materials which will produce a nuclear reaction if heated to a sufficiently high temperature and then to devise a way to raise these materials to that temperature.

The temperature required is comparable to that reached in the interior of the sun which is more than 10,000,000 degrees centigrade. The only way that we know to reach such a temperature today is an atomic bomb where the sudden release of energy causes the materials of the bomb to be heated to an extremely high temperature.

The main light element, of course, to which I have been referring is hydrogen. Now ordinary hydrogen just won't work. The scientific evidence for this seems to be quite clear. But hydrogen as it is found in nature has two forms or isotopes. The heavy hydrogen discovered by Urey nearly 20 years ago, is a possibility. In recent years heavy hydrogen, as contained in water, has been separated in relatively large quantities.

There is another possibility. For more than 15 years it has been known that another isotope of hydrogen called tritium because it has mass three, is produced in nuclear reactions. This material is radioactive and ordinarily does not exist in nature. It has a half life of 12 years but its nuclear properties are such that it is of basic interest in the release of energy by fusion.

It has been known for many years that tritium could be produced in a nuclear reaction in which neutrons are absorbed. As you all know the big nuclear reactors which are now in operation, do produce neutrons in large quantity. These neutrons are ordinarily used in the production of plutonium. But they could be used just as well to produce quantities of tritium. Any nuclear physicist can sit down and figure out the theoretical limit of the amount of tritium that can be produced with a given number of neutrons. He would quickly recognize that since you need neutrons to produce plutonium and neutrons to produce tritium, a nuclear reactor could be used to produce one or the other at will. It would be necessary, of course, to know a great deal about the actual workings of a nuclear reactor in order to say just how much tritium could be produced in that reactor if one were willing to forego the production of a certain amount of plutonium. It sounds as if the production of tritium in quantity is at least a fairly expensive if not formidable process.

That these two isotopes of hydrogen can possibly play a fundamental role in the release of nuclear energy by fusion is well known. Just exactly what relative role they play and how they might play it, is not a subject for open discussion today. These questions are secret and we can have no discussion of them. But any nuclear physicist will quickly grasp the basic science requirements even though the bomb technology is much more complicated.

The real problem in developing and constructing a hydrogen bomb is: "How do you get it going?" The heavy hydrogens, deuterium and tritium, are suitable substances if somehow they could be heated hot enough and kept hot. This problem is a little bit like the job of making a fire at 20 degrees below zero in the mountains with green wood which is covered with ice and with very little kindling. Today, scientists tell us that such a fire can probably be kindled.

Once you get the fire going, of course, you can pile on the wood and make a very sizable conflagration. In the same way with the hydrogen bomb, more heavy hydrogen can be used and a bigger explosion obtained. It has been called an open ended weapon, meaning that more materials can be added and a bigger explosion obtained.

Let us look for a moment at what sort of an explosion is imagined. Here I shall take the figures which have been commonly reported in the press and stick to round numbers. I believe that these are quite adequate for you to obtain some general idea of what such an explosion is like.

In 1945 President Truman stated that the atomic bomb was equivalent to 20,000 tons of TNT. In talking about the hydrogen bomb it has commonly been speculated that such a bomb would be one thousand times as powerful as the bomb dropped on Hiroshima. If it is 1,000 times as powerful this would mean that it would have an explosive effect equivalent to about 20,000,000 tons of TNT.

Now it happens that the radius of damage from a big explosion increases as the cube root of the energy is released. With a bomb a thousand times more powerful than the Hiroshima bomb the radius of damage will be 10 times greater. Since the radius for almost complete destruction from blast was approximately 1 mile at Hiroshima, the corresponding radius for a hydrogen bomb 1,000 times as large would be approximately 10 miles.

Such a hydrogen bomb would be sufficiently great to cause almost complete destruction of any metropolitan area known today. In Los Angeles, for example, a circle of 10 miles radius would cover most but not all of the metropolitan area. Outlying communities would not be included but would still suffer damage.

There are other damage effects from atomic weapons. At Hiroshima people who were in the open and exposed directly to the light of the bomb were seriously burned. With a hydrogen bomb these effects will be much greater and may extend to an even greater radius than the blast affects. On the other hand, the radiation which produces these burns is very easily absorbed. It is very much like the radiation from the sun and a shadow or a blanket of smog is a great protection. The same evil smelling smog blanket which cuts off our sun may after all be some protection.

Generally speaking one would expect the flash burn effects to increase as the square root of the power of the bomb. In other words, for a bomb a thousand times greater than Hiroshima the effects would be expected to extend roughly 30 times as far. At Hiroshima flash burns were severe out to two-thirds of a mile and without smog absorption or shadows similar burns might be expected out to 20 miles for a hydrogen bomb. Except for a hydrogen bomb exploded at extraordinarily high altitude, such a damage radius would mean that shadows of buildings, trees, bushes, and other objects would be very important in cutting down the direct effect of flash burn. If you couldn't see the bomb directly you would expect no effect of flash burn. For a bomb exploded at an elevation of 2 miles it would be rather like trying to see Mount Baldy from 20 miles away. Even without atmospheric absorption there would be relatively few spots where some building or other structure would not be in the way.

Atomic bombs and hydrogen bombs as well, may be expected to release neutrons and penetrating gamma radiation. These particles and rays, however, are absorbed fairly easily in air and will not have an appreciably greater radius of action for a hydrogen bomb than for an ordinary atomic bomb. People who are sufficiently close to be killed by penetrating radiation would very likely be killed by blast effects either direct or indirect in any event. Among those injured, some will definitely show effects of radiation damage.

There has been a great deal of speculation about the radioactive products produced by a hydrogen bomb. The disintegration products produced in the explosion are themselves not radioactive as are the fission products from an atomic bomb. But since an atomic bomb would be needed in order to get the conflagration going, some fission products from that bomb would doubtless be present. But large quantities of radioactivity may be produced from the neutrons which are released in the nuclear conflagration.

If the neutrons released in the hydrogen bomb explosion are absorbed in some material which becomes artificially radioactive, then a very large quantity of this radioactive material will be produced in a big explosion. On the other hand, many of these neutrons might be absorbed in material which would be inactive and the effects of the radioactivity at least in part avoided. If the neutrons escaped into the air, many of them would be absorbed by nitrogen and, by a nuclear reaction, produce radioactive carbon. This material is most disagreeable as a radioactive contaminant since it has a half life of many thousands of years.

If such a bomb were exploded under water, however, very few of the neutrons would escape and most of them would be used to produce radioactive sodium or to activate other elements in sea water, or to produce heavy hydrogen by neutron capture in ordinary hydrogen.

The radioactivity effects of a hydrogen bomb are thus difficult to estimate, since they depend very much on where the bomb is exploded and what material surrounds it. Under conditions in which the largest amount of radioactivity is formed it would be a dangerous hazard. One of the real scare stories about the effects of radioactivity, has postulated the complete explosion of 500 tons of deuterium, which, while not impossible as far as anyone can say, is stretching probabilities a long way.

From our brief analysis of well-known scientific information it appears that a hydrogen bomb would require a considerable quantity of heavy hydrogen, both deuterium and tritium perhaps, as well as an atomic bomb to set it off and raise the temperature sufficiently so that a nuclear conflagration can exist. Technically the problem is to figure out how a sizable fraction of the energy of the heavy hydrogen can be released before the material is cooled too much by emitted radiation or dispersed by the explosion. In the stars the radiation is retained because the steller atmosphere is relatively opaque and there is an enormous temperature difference between the center and the outside of the star. In a hydrogen bomb there is no such protective layer and the central problem is to get a large fraction of the energy released while the temperature is still high enough.

Whether this can be done will of course not be certain until it has been done. There are many opinions as to how difficult it may be. Since the President has directed the Atomic Energy Commission to continue with the development, we can assume that this development is regarded as both possible and feasible.

So much for the technical problems which must be solved in order to develop a hydrogen bomb. While it seems possible that these problems may be solved, whether or not a hydrogen bomb can be developed will be fully determined only when a bomb has been made and exploded. But let us for the moment, assume that the development can be completed. In order that we may try to determine whether or not hydrogen bombs will add materially to our national security, let us try to summarize briefly their effectiveness as military weapons and compare them with atomic bombs already in existence.

If we assume that the hydrogen bomb is a thousand times as powerful as the Hiroshima bomb, it will have a radius for blast damage which is 10 times as great. For severe blast damage that means a radius of about 10 miles. For flash-burn damage, the radius will be theoretically 30 times as great as for the Hiroshima bomb. Absorption and shadow effects will cut this down greatly at the larger distances, so that an effective radius for flash burns for those in the open might be roughly the same as for severe blast damage. Effects of neutrons and hard gamma radiation from the hydrogen bomb, would not be expected to extend very much further than they would for an atomic bomb.

The effects of radioactivity would depend very greatly on where and how the bomb was exploded. Exploded in the air, the effects of radioactivity from a hydrogen bomb would be quickly dispersed and for long-lived activity, the effects would be almost the same for all parts of the world unless brought down by rain. It might be possible to enhance these radioactive effects by surrounding the bomb with the proper materials and to arrange it so that the active material is deposited near the point of explosion. How successful such an unpleasant operation might be, would again depend upon where the bomb was exploded and upon the general climatic conditions which existed at the time. Whether or not our Nation would ever want to use radioactive poisons or a bomb so designed that it would produce them in quantity, is very doubtful. Without trying to answer this question, we see that the effectiveness of radioactive contamination from a hydrogen bomb designed and exploded to enhance that effect seems to be somewhat uncertain and at least in part unpredictable.

We can easily see that a hydrogen bomb is capable of destroying any major city, with the exception perhaps of some of the outlying districts. How does this compare with what could be done with atomic bombs? We have been comparing the hydrogen bomb with the atomic bomb used at Hiroshima but it has been stated that since the war there have been significant improvements in atomic bombs. These improvements have resulted in more powerful bombs and in a more efficient use of the valuable fissionable material.

Most large metropolitan areas include many areas covered by water or otherwise unsettled so that a hydrogen bomb would include many square miles whose destruction would contribute in no way to the effectiveness of the bomb. Atomic bombs could presumably be dropped so as to avoid these areas. Furthermore, it was found in the last war that a saturation raid which greatly hampered fire fighting caused damage far beyond the areas of immediate blast effects. Considering all these factors, it seems likely that there is no metropolitan area which could not be thoroughly destroyed with 25 atomic bombs. It is more likely that less than 10 atomic bombs would be needed to destroy major metropolitan areas and that two bombs would completely paralyze even large cities.

Except for the psychological effects and for the most unpleasant and somewhat unpredictable effects of the radioactivity produced, it appears that a hydrogen bomb which is a thousand times more powerful than an atomic bomb might cause more destruction but would probably not be much more effective than 10 atomic bombs. For smaller industrial targets it would not be much more effective than a single atomic bomb.

One begins to wonder just how powerful a military weapon the hydrogen bomb would be. There does not seem to be very much to the statement which has been made by some, that the hydrogen bomb is such a tremendous new weapon that it can completely revolutionize warfare. The hydrogen bomb seems to be a terrible weapon and certainly large numbers of these bombs could cause untold destruction. Even a relatively small number could be a major blow to any highly industrialized and centralized country.

But what about the atomic bomb and the damage which might be inflicted with a sizable stock pile of these weapons? Suppose, just to take a round number, that the United States possessed 1,000 atomic bombs of the improved variety. If they could be delivered to military objectives at all, they would go a long way at the rate of 10 for a major metropolitan area and perhaps an even smaller number for major cities. With a thousand bombs, there would be a great many for relatively minor military objectives and I imagine that the military commanders charged with the responsibility of the prosecution of a war would have a hard time figuring out what to do with the last hundred.

It appears that if any nation has as many as a thousand atomic bombs, that the world

is already in the position where any nation could be blasted thoroughly and completely insofar as bombing alone can be effective. If this is the case, just what additional military use is a hydrogen bomb? For the most part it just seems that everyone is fascinated by the idea of "the bigger the better." There are a few examples in the history of the world that should lead us to question this view and not accept it, at least not without argument. We should not forget the dinosaur nor the dodo. We should not forget the battleship, now almost extinct.

Of course it might turn out in a war that it would not be possible to deliver atomic bombs or any big bombs, to the targets which the military commanders might want to destroy. If this is the case and if atomic bombs or any big bombs are any major part of our military preparation, then from the military standpoint, the solution of this problem is vastly more important than exactly what kind of bombs would be carried if they could be delivered.

If hydrogen bombs would not add very much to the military effectiveness of the United States we might ask whether they would add much to Russia's military potential. Here, of course, one gets involved in even more speculation. One is not able to judge very well whether the Russians have an appreciable chance of delivering the hydrogen bomb by air against the radar defense of the country which is now being constructed. But even if such a defense is constructed and is reasonably effective and even if the Russians do not have the same strength of long-range bombers which the United States has, still there is another method of delivery which for them would be perhaps quite effective.

Many of the big metropolitan areas of the United States are located on the seacoast. Into these harbors, or at least reasonably close to them, a hydrogen bomb might easily be brought in the hold of a tramp steamer. While this might not be the most effective place to detonate a hydrogen bomb, it would be a simple method of delivery for a surprise attack. On the other hand, there are practically no Russian cities which could be reached using a similar method of delivery by the United States. Another variation might involve the use of relatively small unmanned craft which would run ashore with a hydrogen bomb aboard.

It would thus appear that while the potential effectiveness of a hydrogen bomb in the interior of either the United States or Russia would be about the same for both countries, the hydrogen bomb would be a more effective weapon used against seacoast cities. This means that the hydrogen bomb would be a more effective weapon for the Russians than for the United States.

Some people have argued that if we develop the hydrogen bomb and can really keep its details secret, the Russians will never be able to develop it. There is absolutely no reason at all to believe that this would be the case. Recent experience has shown that the Russians have an atomic energy enterprise adequately developed to make a sizable atomic explosion. In addition they probably have fairly detailed information on our atomic weapons work and at least some of the early thoughts on the possibility of a hydrogen bomb as a result of well-known scientific information combined with the blundering indiscretions of some months ago and also from their espionage activity. Given adequate time, they can most surely make a hydrogen bomb if it is possible at all.

From these arguments it appears that hydrogen bombs will not add greatly to the military effectiveness of the United States. How much they would add to Russia's effectiveness against the United States is not exactly clear, but probably somewhat more than they would add to ours. The President's decision to go ahead with the development of the hydrogen bomb 6 weeks ago created a tremendous stir in the Nation. Viewed only from the standpoint of its military effectiveness there seems to be little reason to attach such great significance to the hydrogen bomb. While it is a terrible weapon, its military effectiveness seems to have been grossly overrated in the mind of the layman.

What is probably much more serious about the hush hush subject of the hydrogen bomb is that here is a weapon about which the average citizen is so ill-informed that he thinks it can save the country from attack. Pumped full of hysteria from Red scares and aggravated by political mud slinging, the average citizen is easily convinced that he can find some security and relief from all of this in the hydrogen bomb which will protect him. The most tragic part is that the hydrogen bomb won't save us and it isn't even a very good addition to our military potential.

Here we have the outcome of what can happen in a democracy when decisions of far-reaching national significance are made without public scrutiny of pertinent information. While most of the pertinent information is not secret at all, some of the information which the citizen should have in order to judge whether a national policy is sound, is secret. One of the most important facts which the citizen should have to make a reasonable judgment is the approximate number of bombs in the United States stock pile. It would be quite surprising if the Russians from the information which they obtained could not figure this out. Senator McMAHON raised the question of making the number of atomic weapons available generally. He was vigorously criticized. As of last spring, not even the members of the Joint Congressional Committee on Atomic Energy knew how many atomic bombs the United States had.

Additional information which would help the citizen to appreciate the relative cost of hydrogen bombs and atomic bombs would be the fissionable material needed to get the hydrogen reaction started and the plutonium equivalent of the tritium to be used. Since neutrons are required to produce either plutonium or tritium, the neutron cost of a hydrogen bomb may be larger than it first appears. These neutrons could, of course, be used to produce additional plutonium so that there is a very real sacrifice of potential atomic bombs in order to obtain the ingredients for hydrogen bombs. There have been such wide discrepancies in the estimated dollar costs of the hydrogen bomb that the citizen cannot make any sensible conclusion about the money costs at all.

It is most important in our democracy that our Government be frank and open with the citizens. In a democracy it is only possible to have good government when the citizens are well informed. It is difficult enough for them to become well informed when the information is easily available. When that information is not available, it is impossible. While there may be some cases in which the information which the citizen needs in order to make an intelligent judgment of national policy, must be kept secret so that military potential will not be jeopardized, the present use of secrecy far exceeds this minimum limit. These are the methods of an authoritarian government and should be vigorously opposed in our democracy.

The hydrogen bomb and its potential usefulness to the United States as a military weapon is a subject on which the citizens should be much more fully informed. It is a subject of national inmportance, not only because it is a weapon whose effectiveness has been grossly exaggerated but it is also one in which we can place relatively little reliance for the future. Quantities of hydrogen bombs will not contribute very much to the security of the United States. Unfortunately the citizen today believes that they will.

If the development of the hydrogen bomb will probably not do much to increase national security, what then might be done which would have importance in this direction? There are probably many answers to this question but let me just make one suggestion that I am sure is clear to anyone who has thought seriously about the problem.

If the Russians should decide to move into western Europe, we would immediately be faced with the prospect of fighting a war. Presumably, we could use atomic bombs. It would not be long, however, before we would need a big United States Army and supplies not only for that Army but also for our allies in Europe. We would have to send these supplies from the United States.

But just how would we get those supplies to Europe? During the past war on at least two occasions, the Germans came dangerously close to shutting off our supplies to England. This was before the development of the schnorkel-type of submarine which we are told the Russians now have in quantity. It is well known that the schnorkel submarine, while not absolutely impervious to detection by radar, is most difficult to run down. No method of detection of submarines has been developed which can locate them at any great distance under water. At the moment there is no good solution to the problem of hunting down the schnorkel submarine and it appears that a determined enemy with adequate bases and submarines could go a long way toward preventing us from delivering men and supplies to Europe. We could presumably deliver a certain amount of material by air, but when it comes to delivering millions of tons, our experience with the Berlin air lift should show us that this is not a feasible solution.

Here is a problem whose solution would contribute greatly to our military strength and, therefore, to our security. Its solution might even deter the Russians from overrunning western Europe if they had planned to do so. On this ground it seems to be much more important than the more spectacular hydrogen bomb development.

There are probably a great many more developments which are almost as important as the solution of the problem of antisubmarine warfare. For example, there are the problems of the development of long-range guided missiles. This development is clearly important to military strength. During the last war both the Germans and the Russians were very successful in the tactical use of airplanes with ground troops. New technical developments might be made which might greatly increase the effectiveness of airplanes in tactical use.

It seems very likely that there are many developments related to military strength which may be important for us to pursue. For some of these, as in the case of the development of atomic energy, we may need to choose between weapons and other developments of nuclear power which may have long-range, peacetime significance. This long-range, peacetime significance may add to our increased industrial strength and thereby make a greater contribution to our long-range strength than the more immediate development of weapons themselves.

At the present time it is most difficult to ascertain how our Government decides what policies to follow regarding national security. High Government officials find themselves with advice to pursue this or that development and construct this or that weapon without being very sure how one weapon compares with another. Where the development of a weapon may compete with a long-range industrial development the problem is still more difficult. The real way to make sure that a reasonable policy is followed, is to have those policies and the information

on which they are based open for public scrutiny.

Furthermore, although the United States is a rich country, we are not in the position of being able to follow every recommendation that anyone believes will increase our national security.

The citizen must choose insofar as that is possible. Today if he tries to come to some conclusion about what should be done to increase the national security, the citizen runs up against a high wall of secrecy. He can, of course, take the easy solution and say that these are questions which should be left to the upper echelons of the Military Establishments to decide. But these questions are so important today, that to leave them to the military men to decide is for the citizen essentially to abrogate his basic responsibility. If in time of peace, questions on which the future of our country depend, are left to any small group not representative of the people to decide, we have gone a long way toward authoritarian government.

The United States has grown to be a strong Nation under a Constitution which wisely has laid great emphasis upon the importance of free and open discussion. Urged by a large number of people who have fallen for the fallacy that in secrecy there is security and, I regret, encouraged by many including eminent scientists who prophesy doom just around the corner, we are dangerously close to abandoning those principles of free speech and open discussion which have made our country great. The democratic system depends on making intelligent decisions by the electorate. Our democratic heritage can only be carried on if the citizen has the information with which to make an intelligent decision.

Another President Comes

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, May 5, 1950

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Oregon Journal of April 30, 1950:

ANOTHER PRESIDENT COMES

President Truman's schedule has been partly announced. He is to "dedicate" Grand Coulee Dam on May 11. A week later, such political implications as his visit contains will be transferred to Spokane and a speech by Vice President ALBEN BARKLEY who never thinks he needs to pull his punches on whether his subject is politics. It always is.

The President's coming starts all kinds of agitation. Will he stand in the presence of the Nation's greatest hydroelectric plant and propose, "Turn it over"?

Turn it over, that is, to CVA?

Or will he put the Presidential weight back of the present development program stimulated by a new form of coordination?

FDR PLAYS PROPHET

Will HST, when he departs, leave as memorable a phrase as did his predecessor, FDR, who came at the outset of Columbia River power development and said:

"More power to you."

Franklin D. Roosevelt had come into the Pacific Northwest in 1920. In Spokane he made a speech. Pointing toward the Columbia River basin, he said:

"Great stretches of physical territory now practically untouched are destined some day to contain the homes of thousands and hundreds of thousands of citizens like ours, to be developed by the Nation and for the Nation. * * * We have made beginnings with reclamation projects, but I like to think they are only beginnings and that in our lifetime, yes, in the immediate years to come, we are going to see with our own eyes these problems taken up on vastly larger scale. We have got to have a national policy that will put in not $100,000,000 in 10 years, but $100,000,000 every year for 10 years."

This was Roosevelt playing prophet to himself.

Thirty years ago, the idea of Grand Coulee was not born. The idea, so far as it had been formed, was of a diversion dam near Albeni Falls on Coeur d'Alene River in Idaho. Its purpose was to divert enough water to make five Spokane Rivers, carry it 130 miles to the head of the Columbia Basin, thence to distribute it over 2,000,000 acres of arid lands and make them smile with abundance.

Years were to pass before the campaign for Bonneville Dam was more than an isolated effort. The organized drive was for Umatilla Rapids (now McNary) Dam, and the goals were navigation and reclamation with power the incident.

Economic depression was to be the rough key that unlocked the power of the Columbia. Roosevelt admitted reclamation to the recovery program in response to western appeal. A pressure that mounted and found its focus in the late Senator Charles L. McNary and Representative Charles H. Martin in Washington led the President to authorize initial construction of Bonneville. Even then it was a struggle to secure authority for a power development or for a dam of more than navigation height, due not to the reluctance of FDR, but to the notion of Harold L. Ickes, then head of PWA, that the low dam was enough.

President Roosevelt, in 1934, stood at the site of Bonneville Dam to say, "More power to you." Ten months before he had authorized the first money allocation. "I think we have gone a long way in less than a year," he commented with pride, gazing at the busy scene of construction.

He went on to Grand Coulee, following by motor the route of the ancient and enormous channel of the Columbia. On August 5, 1934, he pledged himself to a high dam. He was confident against a lot of pessimists that the power could be marketed. He explained why Western States were getting what seemed a disproportionate amount of public-work funds. The money was not only for those now in the West, but for the many who would come from regions of blight and limited opportunity.

Here again Roosevelt was playing prophet to himself. The people had begun to come before he passed away. They are coming in ever-increasing numbers.

But did FDR prevision all that was to come and how swiftly?

WAR USE AT FIRST

With Bonneville and Grand Coulee there was power in new dimensions for new calculations. Big reclamation, such as that in Malheur County, Oreg., came into fruitfulness.

War caught us napping in armament, but there was power for shipyards, for aluminum, for many other war-connected industries. It had been like whistling in a graveyard at first to say all the power would be marketed. The problem became how to develop power fast enough to meet demand.

That continues to be the problem, although the shooting war ended in 1945.

And one of the greatest consumers of hydroelectric power was the mysterious industry at Hanford which had contributed to the atom bomb.

But the changes were not to be limited to the evolution from power to war industry to the most frightful of all weapons and to the recovery program.

There was also coming, unseen, the play of new things upon our own way of life in the Oregon country. We had seen the power policies of the New Deal linked to a plan for wider distribution of population as a means of checking the overgrowth of the great eastern industrial districts.

A longer time was necessary to see how the collectivism we abhorred in older, dictator-governed parts of the world was creeping in upon us in the form of new schemes of government and new controls by government upon the individual. The veteran who had dreamed of his own home for his own family on his own land in a Columbia Basin reclamation project began to feel the push of a proposed collectivist valley authority standing between him and his smiling Uncle Sam.

INDIVIDUAL SUBMERGED?

Obscurely, it is true, but with increasing light it could be seen that the individual himself might become only a unit of a planned economy that dealt with men in the same terms as machinery and land and sought to control all in the same way.

That's a pretty bad fate for the American individual. James B. Conant, president of Harvard, writes in Foreign Affairs:

"The American public is quite uncertain as to the relation of the physical and natural sciences to the set of moral and spiritual values by which the average individual guides his daily life."

REALITY OF FREEDOM

Maybe it reads here like mere "highfalutin' talk" to insist that the set of factors to be applied to the people concerned in the development of the Columbia Basin will have a lot to do with their moral and spiritual values in the years to come.

And a lot to do with the reality of their freedom.

To repeat, President Truman is coming to dedicate Grand Coulee on May 11, about 10 years after the big dam began producing power. When President Roosevelt came, he set in motion a train of events that bear upon the interests of every one of us living in the Pacific Northwest.

We have no doubt that President Truman's coming to Grand Coulee was originally planned to lend strength to the CVA campaign. Some insist that his big immediate purpose is to lend strength to the candidacy of his friend, Senator WARREN MAGNUSON, whatever may happen to CVA. However, the President, while committing himself to the valley authority program, has also supported the plan for coordinated development evolved by the big construction agencies of the Government.

Since these big agencies, such as the Army engineers and the Reclamation Bureau, have done the building and created the properties that now make the Federal interest in the Columbia Basin such a rich political and ideological plum, the President has been no more than just in allowing them to go ahead.

"KEEP AMERICA FREE"

Likewise, it saves the Columbia Basin program from debacle.

The train of events will move more swiftly. If what has happened since was incomprehensible to the beginnings of Bonneville and Grand Coulee, but is the accepted order today, what is to happen in the next few years will be as much greater as momentum and change are greater.

Compare jet propulsion with the Columbia voyageur in his bateau.

In the past we've kept the American way and compelled the American kind of progress because we had an instinct for the right choice.

We'll have to stick tenaciously to the simple old maxim that America is the sum of its free individuals.

Another President comes.

Japanese Competition Threatening Industry

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 5, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Southern Textile News.

JAPANESE COMPETITION THREATENING INDUSTRY—PLAN DRIVE IN CONGRESS TO PROTECT MILLS

(By Charles Sampas)

LOWELL, MASS.—Representative EDITH NOURSE ROGERS is spearheading an all-out drive in Congress to preserve northern and southern textile industries from foreign competition which is today threatening the entire industry.

A number of foreign factors are threatening the textile manufacturers of America and their competition and actions are responsible for the fact that thousands upon thousands of New England woolen mill employees are currently out of work.

The factors:

All-out Japanese competition, the Russians' bidding in the Australian wool market, British devaluation, the rise of the Italian textile industry, among others.

Is is pointed out that Japanese mills were once the biggest exporters of textiles in the world. The war reduced Japan's exports of cotton goods by 2,000,000,000 yards. The number of spindles in operation were cut from 12,000,000 to something under 3,000,000. This resulted in a gain for American cotton mills, whose exports increased from 3.6 percent of the world's total in 1934–38 to 26.8 percent 2 years ago—in 1948.

MORE SPINDLES

Now, however, Japanese mills expect to have at least 4,000,000 spindles in operation by the end of this year and to add 500,000 spindles every year thereafter.

This year, the Japanese expect to export about 1,000,000,000 yards of cotton cloth. This would be 25 percent over the Nipponese figure of last year—and marks 60 percent of her total production.

New England experts point out that Japan is already shipping gray goods to England and Italy for finishing and reexport—more competition for New England and Dixie. It is also emphasized that the Japanese are selling even finished cotton to Great Britain and Holland. Last year, 35,000,000 yards of fabric silk were exported to the United States of America from Japan.

The Boston Globe's business editor, "T. G. M.," reports that last week in New York he got as much as possible of this postwar story of Japanese textiles from two Japanese importers. He writes:

"It is of necessity a fragmentary story in which the segments do not entirely fit. But it holds interest both because of its possible effect on the domestic textile industry and the broad question of Japanese recovery."

He points out that Japanese looms and spindles before the war carried the economic threads upon which the country's whole exporting insular economy depended, providing the foreign exchange with which Japan purchased the food and raw materials by which she lived.

This, he stresses, brings the United States face to face with a rather uncomfortable dilemma. We must have an economically strong Japan as a bulwark against communism in Asia, yet the sole means to such economic strength lies in allowing Japan to rehabilitate a textile export trade with which we cannot help but find it difficult to compete.

Wages in Japan are low, 7,000 yen ($16.19 a month) for a 48-hour week, and while productivity is as yet below this country, efforts are being made to increase it. (A new wrinkle, for instance, is the equipping of female workers with roller skates for greater speed in moving between machines.)

TARIFF BARRIERS

The Ministry of International Trade, however, which regulates the industry, has set export prices at a figure which will not allow Japanese cotton entry into this country over freight and tariff barriers.

Eighty square percale, for instance, is quoted at 17 cents f. o. b. Japan. With a 35 percent tariff and three-quarters of a cent freight, however, the cloth comes to an American cutter at 24 cents a yard as against a 22 cent price for cloth of like quality and domestic manufacture.

Thus the competition in cottons is not in our domestic markets, but in foreign trade.

In silks and certain specialties, according to the Globe writer, however, the story is different. Take pinwale corduroys, Japanese corduroys, for instance, may be imported for 78 cents a yard as against a price for the domestic product at 87½ cents.

If we have so far felt no very serious competition in the domestic market in these lines, it is because a shortage of vat dyes has kept down Japanese production, a situation that may soon be expected to change. Indeed, the pressure of Japanese textiles on our own and the world markets may soon force our whole Asiatic economic policy to a head.

CHINA IS CRUX

The crux of the matter, the Japanese say, is China. This nation was once Japan's great source of raw material and her principal outlet for manufactured goods, accounting for roughly 25 percent of all Japan's foreign trade.

We have now cut that trade to only a trickle, with the result that we have created a distortion of the normal trade pattern. Japanese goods now press for markets to the west, which inevitably works to our own disadvantage by forcing upon ourselves a competition we are bound to find increasingly hard to meet.

The cold war, on the other side of the world, is cutting the heart out of New England's woolen industries. The price of wool is being boosted by Russia's bidding in the Australian market and it is estimated that 38,000 woolen workers are out because of this.

Freedom and Petroleum Geology

EXTENSION OF REMARKS
OF
HON. HERBERT A. MEYER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 5, 1950

Mr. MEYER. Mr. Speaker, on April 25, at the annual convention in Chicago of the American Association of Petroleum Geologists, Mr. C. W. Tomlinson, of Ardmore, Okla., retiring president of that large and highly important organization, expressed most eloquently certain truths which are basic to our entire social and economic system.

These are days of planning for controls of industry, of business and of the intellectual resources of our country. It is most timely that one who has been a leader for many years in the application of a science that has brought great good to all the people should have spoken frankly and fearlessly on the reasons why the efforts of his profession have met with a high degree of success. What he has said concerning petroleum geology applies with full and equal force to all sciences, professions, and occupations.

Under leave to extend my remarks in the RECORD, I quote Mr. Tomlinson's address herewith:

FREEDOM AND PETROLEUM GEOLOGY

What part has freedom played in the development of petroleum geology in the United States? To a degree never before equaled on so great a scale, we have honored here in America the principles of national and personal freedom balanced by a personal responsibility; of local self-government and individual ownership of property; of competitive private enterprise under rules of fair play to all. Have these been influential in the progress of our science? If so, have they been an obstacle or a stimulant?

Unquestionably, a tremendous stimulant. Though the achievements of petroleum geology, geophysics, and paleontology in the twentieth century have not so greatly altered basic scientific concepts as have those of physics, chemistry, and astronomy, no science or profession except medicine can claim a greater share of credit for increasing the comforts and the happiness of men. By the use of petroleum, millions of people have moved from the slums to the suburbs. The entire American people has been put on wheels or wings, and given the pleasure of distant vacations and the even more cherished privilege of week-end outings many miles from home, conferring freedom in return for freedom. The range of effective action in many lines, including our own, has been multiplied, and individual accomplishment correspondingly increased. Oil and gas have supplied the fuel for most of the vast upsurge in the use of power, with its prized and manifold applications not only in domestic comfort and convenience, in better food and sanitation, but in the industries which make the useful gadgets that achieve those ends: gadgets whose use is fortunately spreading now throughout all countries where the individual may buy what he wishes and has opportunity to earn it. As they are acquired, these tools and comforts of modern life increase the productivity of men, make possible more leisure for them, and open opportunities to other men. The beneficent circle widens to assist all people.

In this half century annual production and use of oil in the United States has been multiplied by 30, and that of natural gas has had a parallel growth. Though proud of their profession and intensely interested in their work, petroleum geologists are so modest that few have dared, at any time in those 50 years, to predict such growth for more than a few years ahead. Which of us now would be more daring? For in any branch of science, who can be sure of the undiscovered? Less than 3 years ago predictions were heard that little, if any, increase in productive capacity could be expected in this country, even with higher prices for crude oil. But, as has happened often before, the law of supply and demand did not fail us—nor did you. The increased pace of exploration made possible by good prices, and by the postwar flood of well-trained young geologists and geophysicists, engineers, and paleontologists, has more than kept pace with demand;

resulting in an excess capacity to produce oil here in North America, which is one of the hemisphere's most essential assets in event of war. The excess is perhaps not yet large enough for safety. But with vigorous competition, both international and domestic, it helped to bring a shrinkage in allowable yields per well and in profits, and a lull in the expansion of exploration; though demand still grows. At the first new hint of even prospective shortage there will be another forward surge in exploration.

In this record of achievement for humanity we must acknowledge that our exploratory sciences have been but one of many factors. The chemists in the refining industry have played an outstanding role. Nearly all branches of science have assisted. They can take pride that their studies have been put to useful service for mankind. And perhaps even greater credit should go to the investors who have taken the risks we recommended; to the engineers, inventors, and industrialists who have developed and marketed our equipment and that which employs our products; to the consumers who use them in ever-increasing volume; to those who have taught in our schools and colleges; and to the efficient workmen in our industry and in those which use our products or facilitate their use. Those who guard our health have had a part of it; and the churches which have kept us conscious of the Golden Rule—of the responsibilities that go with liberty. In fact, every constructive element in American life has helped make our achievement possible. And they have prospered with us.

But what part has freedom played in this great progress? It has been the lifeblood of the industry. Freedom of any man to search for oil in the United States and Canada. Freedom for any savings, foreign or domestic, to be invested here. Freedom of every farmer or even town-lot owner to obtain the best trade he can from anyone willing to pay for the privilege of exploring for oil on his land. Freedom of each of our many thousands of oil and gas producers to risk their savings in projects of exploration or development chosen on their own judgment or on that of their scientific employees. Freedom to advance, to grow, so long as one plays fair and does not trespass on another's rights. Freedom of the scientist to use to the limit his own imagination and ingenuity, to differ with others of his ilk.

And how we do differ! And what great resources are found as a result! There is hardly an oil or gas producer in the United States who has not had the pleasing experience of succeeding in a venture which had been rejected by others in the light of differing judgment. Some of them make quite a habit of it. And yet practically every producer has also rejected or overlooked ventures he had equal opportunity to make, in which another took the risk and won. Ours is still an inexact science, in which failure comes more often than success.

What old oil district has not seen newcomers arrive and find oil not found by those who knew the region best? In that free play of thought and of competition, and in widely disseminated ownership of subsoil rights, lies the chief key to the success of the United States in producing for nearly a century far more than its share of the world's oil. We have not had greater resources than some other equal segments of the world. But we have found a larger part of what we had. We have developed them and put them to use, because we have kept open the doors of opportunity to every man who had the vision and the energy to walk through. The rapid growth of our domestic market has been possible because the same freedom to seize opportunity existed for those who devised new ways to use our product; and because American devotion to freedom and to equality of opportunity, reflected for example in ever-rising levels of public education, gave our whole economy a dynamic power of expansion unknown under monopolistic or totalitarian regimes. And Americans were free to buy what they wished with their increasing purchasing power.

Our growth in service has not been the result of central planning, but a tribute to the lack of it. It is the fruit of freedom. No central planning body, no State monopoly or private cartel, could have accomplished half as much. Not even with the same personnel. For their freedom in choosing exploratory and development projects and methods would have been restricted to conform to a single policy centrally determined. A single office would have controlled it all, in contrast to the many thousands which do not choose such projects independently of all the rest.

When you mix an acid and an alkali in a test tube, no central planner (save God himself) lays out or coordinates the action which takes place. Each molecule seeks out its own opportunity for combination with another; and when it finds it, acts. There may be left a surplus of one type, but not of both. Every single possibility of action is utilized. Individual, chaotic action achieves the maximum result.

We have considered the fruits of freedom in discovery and development of resources, in industrial production, in human productivity and comfort. Has it borne good fruit in science itself also?

The answer lies partly in technical programs such as that of this convention. More fully, it is told on the shelves of our libraries and in those of universities throughout the world. Perhaps in no other branch of science do the publications of a single society comprise so large a fraction of the total literature of that science, as those of the American Association of Petroleum Geologists constitute in the literature of petroleum geology. Consider also the publications of our friends the geophysicists, who have cooperated so helpfully with us through the years in the work of exploration and in these annual programs; the Journals of Paleontology and of Sedimentary Petrology; and the guidebooks, structural and stratigraphic sections and periodicals made available to the science by our 30 affiliated local geological societies, largely composed of our own members. Taken together, they contain the most inclusive and complete assemblage of subsurface geological and geophysical data, of geology in three observed dimensions, that ever has been published; together with both comprehensive and detailed interpretations of those data in terms of structure, statigraphy, geologic history, geologic processes, the evolution of living things, and the genesis of oil and of oilfields. They record also a great part of the incisive and imaginative thinking on basic and theoretical problems which has been vital to the progress of our science.

The value of these publications lies in their usefulness to you and to all geologists. Perhaps no comparable set of volumes has been more fully used, or is more actively in use today. Testimony to that lies in every volume we have had to reprint to meet demand in later years; and in the constantly increasing number of copies required of everything we print. The Bulletin and our many special volumes are an enduring monument to our profession: to the authors who have contributed, to the thousands who have helped them, to the editors who have checked their work; to our skilled, hard-working, loyal personnel at headquarters, and to our printers.

We owe a deep debt too to the far-sighted and public-spirited employers and executives who have encouraged the members of their scientific staffs to publish studies that would be useful to all the industry. For that we truly thank them. Companies active in all parts of the world where Americans may operate, contribute to our annual reviews of development. Many companies and individuals have participated in preparing the symposiums of fact and thought that you will hear at this convention. They are free to withhold if they wish their own modicum of information; but they have far more to gain than to lose from free exchange of factual data. Some of the greatest as well as some of the smallest units in the industry have been most generous with it. Those who have most encouraged independent study and research, and publication, have fared at least as well as the few who have been more cautious in this matter. The former deserve special credit for having been most helpful to our science, to the oil industry as a whole, and to the public.

It is recognized that in competitive private enterprise there is a commercial value in some types of newly acquired data or ideas, which one is fully justified in first applying to his own advantage if he can. The ability to do just that is the prime incentive and motive power in a free economy—one which many magnanimous employers of geologists have found it profitable to preserve to some extent to their employees as well as themselves. Incentives are effective only through individuals. But in the great masses of information accumulated at private expense in our industry, there is little of real scientific value and of general interest which is not ultimately made available to all. Voluntary cooperation for the common good is typical rather than exceptional among us. And if we keep that spirit, and continue to cherish freedom and fair play at the threshold of its greatest service to mankind. We have just begun.

1949 Report of the Newton County, Ark., PMA

EXTENSION OF REMARKS
OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 4, 1950

Mr. TRIMBLE. Mr. Speaker, Mr. William J. Nanney, county administrative officer of the Production and Marketing Administration of Newton County, Ark., has just sent me the report for Newton County for 1949.

In each of the counties which I represent, the Production and Marketing Administration is doing an outstanding job in soil conservation. This is being done by terracing, check dams, crop rotation, pasture development, and applying potash and lime. A fine feature of the program is that it is controlled by the local people as all farm programs should be.

I insert this report as a part of my remarks:

ANNUAL REPORT, NEWTON COUNTY (ARK.)
PMA, 1949

INTRODUCTION

This report has been prepared by the Newton County PMA Committee to give the general public of Newton County, as well as the farmer himself, a better understanding of just what was accomplished by the PMA here in this county in 1949.

Until only a few years ago very little had been done by the general public, or the farmer, to encourage conservation of the Nation's most natural resource, the soil. It

we will only stop to think and review the agricultural situation as it was only a few years back we can readily see that at the alarming rate we are going it would not have been many years until our productive land would have been so depleted it would not have been humanly possible to maintain our present high standard of living. It is the aim of the Production and Marketing Administration to conserve the topsoil we have left and to restore that which already is depleted of the necessary minerals for a prosperous agriculture, to a productive basis. Since people from all walks of life depend upon the soil for their food and fiber and the prosperity of the Nation depends upon a strong and prosperous agriculture we feel it is the public's responsibility to help the farmer in paying the cost in this tremendous job of conserving our Nation's soil. Through the Production and Marketing Administration, farmers receive assistance for about one-third the cost of approved soil-conservation practices and without this assistance many of our farmers would not be financially able to carry out these needed practices.

OSCAR VILLINES,
Chairman.
J. T. SEXTON,
Vice Chairman.
GARLAND BALAN,
Regular Member.

MINERALS

In 1949 those farmers who participated in the program applied 1,478,255 pounds of superphosphate, 4,019 pounds of potash and 822 tons of limestone to meadows and pasture land. We, as your county committee, realize this is a very small amount of minerals applied, compared with the actual needs, but in checking through the records we find that approximately 42 percent more phosphate was applied to meadows and pastures in 1949 than any previous year. The county office personnel and the county committee received many requests from farmers for potash and limestone that they were unable to fill. The vendors could not get enough potash to take care of the demand. Due to road conditions and the distance limestone would have to be hauled, most farmers were not able to pay the cost of getting the material delivered and spread. But according to the records on phosphate and the increased demands for potash and limestone we feel that the farmers in Newton County are realizing more than ever before the necessity of applying these minerals that they may have a better protective cover from wind and water erosion, as well as a more productive cover, which is the making of a strong and prosperous agriculture.

PASTURE DEVELOPMENT

In 1949 the farmers in this county improved or established an estimated 7,313 acres of pasture land by seeding 87,757 pounds of approved pasture grasses and legumes. In addition to the estimated 7,313 acres seeded, these farmers sodded 208 acres of bermuda grass for permanent pasture. Bermuda grass makes an excellent pasture, and at the same time provides one of our best protective covers against soil erosion.

Farmers are beginning to realize that controlling weeds on permanent pasture by mowing is about the best method we have in maintaining a good pasture after it has been established. They have found, through this method, that in a short period of time they can just about eliminate all competitive plants and receive approximately one-third more pasture from the same acreage.

ENGINEERING PRACTICES

Thirty dams were constructed and five springs or seeps developed in 1949 in order that a year-round supply of water for livestock purposes would be available on these farms. Dams constructed in the proper location always serve a twofold purpose. However, a dam qualifies for payment for only one purpose, and that is to collect a year-round supply of stock water, but if constructed in the right location, these dams aid greatly in conserving the topsoil.

In 1949 there were 20,049 feet of terraces constructed in Newton County. Where we find fields that have been terraced, we not only find the soil protected from water erosion but we also find a more fertile soil with better yields per acre.

PRODUCTION GOALS

Each year the PMA committees are informed of the supply and market conditions of all the farm commodities with suggested State and National goals for each commodity. After reviewing these State and National goals, the committees then set up county goals to meet the estimated needs for the county. In previous years these production goals have proven to be very beneficial in helping to adjust the production of certain crops to meet the demand.

PRICE SUPPORT

The price-support program is another part of the Production and Marketing Administration and is administered by farmer-elected PMA committeemen. In reality, price supports is a form of insurance and without it the farmers would have to sell the entire year's production on a market that's glutted with a surplus of such commodity. None of the agricultural commodities produced in Newton County in 1949 were directly affected by the price-support program. However, some of our commodities, such as dairy, poultry, and meat products were affected indirectly.

MARKETING QUOTAS AND ALLOTMENTS

Acreage allotments were not established in 1949 for any of the commodities produced in Newton County. However, cotton allotments have been established for the 1950 crop. These allotments were worked out on the cropland basis and past history of the crop on the farm. Marketing quotas are put into effect only when approved by two-thirds of the number of eligible voters taking part in a referendum. When acreage allotments and marketing quotas are in effect a producer is guaranteed full parity price for all of the commodities produced on his farm, if he planted within the allotment established for the farm.

COMMITTEEMEN

In November of 1948 an election was held in each of the 15 communities in Newton County at which time a community committeeman and delegate to the county convention was elected by the farmers in each community to serve during the 1949 program year. In December of 1948 the delegates that had been elected in November, gathered together on county convention day and elected three farmer county committeemen to serve during the year 1949.

A committeeman's term of office runs for one calendar year and expires December 31 of the year for which elected. But he may be reelected in the next election or at the next county convention. Contrary to some thinking, committeemen do not receive a salary and are reimbursed only for time actually spent in connection with the program. In many instances these committeemen are not reimbursed enough to pay for a hired hand to take their place on the farm, that the necessary activities may be carried on during their absence.

Following are the names and addresses, by communities, of the community committeemen that were elected by their farmer friends in November of 1949, to serve as their PMA representatives during the 1950 program year.

A. Lurton: Ernest Daniels, Stanley Smith, J. L. Awbrey, Lurton, Ark.

B. Bass: Ben Dickey, Cave Creek, Ark.; Ira Dodson, Verble Manns, Bass, Ark.

C. Mount Judea: Frank Cheatham, Ralph Kent, Elmer Campbell, Mount Judea, Ark.

D. Vendor: W. H. Flood, Garland Smith, Claude Smith, Vendor, Ark.

E. Hasty: Alvie Hoppis, Richard Hancock, Marion Gipbson, Hasty, Ark.

F. Yardelle: Veatle Waters, Mose Hill, Yardelle, Ark.; A. B. Jones, Western Grove, Ark.

G. Marble Falls: Mirl Neighbors, Marble Falls, Ark.; Arlin Tinsley, Erbie, Ark.; James Shore, Marble Falls, Ark.

H. Limestone: J. A. Curtis, Ira Spradley, J. S. Norton, Limestone, Ark.

I. Deer: Joe Wylie, Deer, Ark.; George Essex, Jasper, Ark.; Grover Breedlove, Deer, Ark.

J. Parthenon: W. J. Brasel, Jasper, Ark.; I. G. Snow, Wayton, Ark.; Lawrence Vaughn, Parthenon, Ark.

K. Jasper: J. A. Harrison, W. C. Struck, Wayne Harrison, Jasper, Ark.

L. Compton: J. H. McFerrin, Lex Burge, Alpha Sims, Compton, Ark.

M. Fallsville: Walter Cowan, Paul M. Smith, Fallsville, Ark.; Virgil Wyatt, Red Star, Ark.

N. Boxley: Troy Fowler, Boxley Ark.; George Petree, Waymon Villines, Ponca, Ark.

O. Swain: Harley Berry, Alpha Weston, Walnut, Ark.; Alvin Ashlock, Fallsville, Ark.

At the county convention in December of 1949 the following county committeemen were elected to serve during the 1950 program year:

Chairman: Albert H. Raney, Marble Falls, Ark.

Vice chairman: Oscar Villines, Parthenon, Ark.

Member: J. T. Sexton, Mount Judea, Ark.

First alternate: Garland Bolin, Bass, Ark.

Second alternate: Mose Hill, Yardelle, Ark.

On January 20, 1950, Mr. Albert H. Raney resigned as chairman of the county committee. Mr. Raney had served as chairman on this committee for the past 5 years, and we regret losing his services, but he stated that due to more and more pressing business in farming activities and other matters around his home and community he felt that he should spend more of his time there.

COUNTY OFFICE PERSONNEL

William J. Nanney, county administrative officer; Mary Jo Spencer, clerk; Eva Isenberger, clerk.

Two part-time clerks were employed during the spring of 1949 to help with tabulating crop-acreage data for all commodities produced in the county since 1941.

COOPERATION

There were 887 farmers on 869 farms that reported one or more soil-conservation practices for assistance in 1949. The 869 farms participating in the program shows an increase of 10.4 percent over the 1948 participating farms. Using the payment rates offered under the 1949 program for carrying out these various conservation practices these 887 farmers earned $29,635.79. This is approximately one-third the total cost of these practices, so the farmers themselves invested an estimated $59,371.58.

CONCLUSION

The Newton County PMA program worked with 1,769 farms during the 1949 program year. The funds allocated to this county each year, to help the farmers pay a part of the total cost in carrying out approved soil-conservation practices, is available to every farmer in the county, and all are urged to participate in the program. It is the aim of the PMA program to get all active farmers within the county to take part in this tremendous battle we now have under way against wind and water erosion and the restoration of depleted minerals to the soil. We, as your present PMA county committeemen,

are very proud of the accomplishments made in the 1949 program year and want to take this opportunity to express our grateful appreciation to the editors of our two county newspapers for the space given to this program throughout the year and all others who assisted us in making our PMA program a success in the year 1949.

OSCAR VILLINES,
Chairman.
J. T. SEXTON,
Vice Chairman.
GARLAND BOLIN,
Member.
WILLIAM J. NANNER,
Secretary and Treasurer.

Czechoslovak Imports

EXTENSION OF REMARKS
OF
HON. WILLIAM H. BATES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 5, 1950

Mr. BATES of Massachusetts. Mr. Speaker, the newspaper editorial below, from the Newburyport News, of Newburyport, Mass., indicates, in my opinion, the American approach to the problems that now face us in regard to international trade.

The paradox of spending billions of dollars in Europe to stem communism and at the same time purchasing goods from behind the iron curtain to the detriment of our own industries is extremely difficult to understand and should not be tolerated, and unless action is taken immediately, thousands of our American workmen will be thrown out of their jobs.

The editorial follows:

THE OLD HIGH TARIFF-FREE TRADE DEBATE

Our younger readers don't remember when the home market question was the dividing issue between American political parties. The Republican in general wanted a high tariff on goods imported into the United States so that our own factories could keep our markets, and high wages could be paid their workers. The Democrats pleaded for tariffs for revenue only; just tax on them to support our then not-very-expensive Government.

As the world has grown smaller and more closely knit together these party planks have been more or less shuffled about, though possibly Democrats and Republicans still stand more vaguely in their old positions.

One new issue that has confused the old one arises from the war weakness and debts into which many countries which have been our allies and are our natural friends have fallen. We want to help them get on their feet, and are in general disposed to let them sell us goods, and thereby get money, without a too high tariff barrier.

We have always recognized, however, that such cooperation must not be extended to such a point as to wipe out one of our own industries. And two instances, of particular importance to us about here, have lately arisen where there is no question of what stand the United States ought to take.

Imports of two lines of manufactured articles, hats, and shoes, both from the same European country are threatening our own neighbors who make such goods here. And these imports come from one and the same country, and a country that is now the vassal of the Communists: namely, Czechoslovakia. Congressman BATES has brought onto the floor of the House at Washington the question of stopping this attack on our means of support. We here cannot make shoes in competition with the cheap Czechoslovakian labor. Mr. BATES recalled how such competition—from the Czech manufacturer Bata—drove much of Haverhill to the wall 10 or 15 years ago. The same thing is happening now. Connecticut hat makers have told the same story about their products, which is made hereabouts, too.

There seems no question that the Government should clamp down on these imports by a sufficient tariff. The problem is simple. We might make a sacrifice for a friendly country. But the present Czechoslovakia is, if only by a sad necessity, the tool of Russia. No argument exists for our letting it build up Stalin by killing our prosperity here.

Pulitzer Prize to St. Louis Post-Dispatch

EXTENSION OF REMARKS
OF
HON. FRANK M. KARSTEN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, May 5, 1950

Mr. KARSTEN. Mr. Speaker, I should like to congratulate the St. Louis Post-Dispatch on its receipt of a Pulitzer prize for 1949 for the most disinterested and meritorious public service by an American newspaper.

This prize was shared with the Chicago Daily News for last year's exposure of the fact that more than 50 Illinois newspaper editors and publishers were on the State pay rolls. In accepting this money, these men compromised themselves to such an extent that they could no longer be regarded as capable of fulfilling their obligation to present their readers with news of graft and corruption.

A distinct service to the newspaper profession was rendered by Roy J. Harris, of the Post-Dispatch, and George Thiem, of the Daily News, the reporters who worked for weeks to dig out the names of the editors and publishers in the pay of the State.

This latest prize to be won by the Post-Dispatch is proof that the principles of crusading journalism established by Joseph Pulitzer, founder of the Post-Dispatch, are still a vital force in America. I should like to include the Post-Dispatch platform as a part of my remarks:

THE POST-DISPATCH PLATFORM

I know that my retirement will make no difference in its cardinal principles; that it will always fight for progress and reform, never tolerate injustice or corruption, always fight demagogues of all parties, never belong to any party, always oppose privileged classes and public plunderers, never lack sympathy with the poor, always remain devoted to the public welfare; never be satisfied with merely printing news; always be drastically independent; never be afraid to attack wrong, whether by predatory plutocracy or predatory poverty.

JOSEPH PULITZER.

APRIL 10, 1907.

American Zionist Council Denounces Arms Sales to Arabs

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 28, 1950

Mr. KLEIN. Mr. Speaker, under leave, I am inserting a news story from the New York Times of May 4, 1950, reporting the public denunciation of British sale and delivery of arms to the Arab States. Text of the story follows:

LIPSKY DENOUNCES ARMS AID TO ARABS—ACCUSES BRITAIN OF TRYING TO EXCLUDE UNITED STATES INTERESTS FROM THE MIDDLE EAST

Louis Lipsky, chairman of the American Zionist Council, spokesman for all major Zionist groups in this country, strongly denounced yesterday the British sale of arms to the Arab states and maintained that Great Britain was attempting to control the Middle East and exclude American interests from that territory.

At the same time, Mr. Lipsky, at the council's offices, 344 Madison Avenue, announced that the council would convene a national conference of its affiliated members in Washington on June 4 and 5 in protest of the arms shipment and also of the State Department's refusal to permit Israel to purchase arms for cash in this country. About 500 delegates are expected to attend.

The sending of arms to the Arab states, particularly Jordan and Egypt, Mr. Lipsky asserted, "was a double-barreled threat to Israel which can be used in the first place to pressure a peace disadvantageous to Israel and in the second place which can be used to attack Israel."

Mr. Lipsky declared that "the leaders of our foreign policy have been maneuvered into a position of giving Britain the lead in middle eastern affairs and of backing to the hilt, without reservation, the anti-Israel policy of the foreign secretary of the British Government."

The Zionist official held that "the forces in Britain who are interested in prolonging chaos and confusion in the Middle East—and unfortunately these forces seem to have gained the upper hand in our State Department—are bent on the resumption of warfare between Israel and her neighbors."

Sadist's Holiday

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 5, 1950

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article by Leo A. Lerner:

THE FIRST COLUMN
(By Leo A. Lerner)
SADIST'S HOLIDAY

A Chicago real estate lobbyist, whose opinion I suppose I must respect because he is a man of property or at least a representative thereof, has made the statement that within

6 months after rent control is abandoned rents will be lower than they are now.

This is a shining promise, so encouraging and apocalyptic, that it ought to be set in neon lights and carried around the streets on the top of an elephant, perhaps with the promiser's signature attached thereto.

A signature is a very good thing to have on a promissory note. If those who are pushing for rent control to be dropped are doing it for the good of the renters, they might prove their good intentions by signing the promise which was so cheerfully made by the gentleman from the real estate board. They should contract to make good on a possible forfeit by putting up something substantial and valuable to guarantee to the public that the result will be as sanguine as promised.

I would be satisfied, for instance, if the fellow who made that promise would come forward and offer to put up $5,000 cash that his prediction will come true. Then, at least, I would believe that he is willing to back his predictions with that neatly engraved green stuff which is so widely cherished elsewhere, but scorned by landlords. As they say in the bleachers out at Cubs park, let the gentleman put up or shut up.

I wonder if the people who are likely to believe that rents will go down remember the promises of the American Meat Institute. The American Meat Institute is a charitable organization run for the benefit of indigent meat packers. Before the lids were lifted on meat prices they promised us that meat prices would go down as a result of ending the OPA.

Well, they didn't.

Guess what happened. The prices went up.

And meat prices are still far away and above what they ought to be, 4 years after that juicy promise was made. The farmers who feed grain to beef cattle are being broken in two by high grain prices and low-market prices. The spread between the average price paid for cattle on the hoof and the retail price of meat is worse today than it has been at any time since 1940. But the Meat Institute spent millions to sell the idea that lifting controls would mean lower prices. The only trouble is, they didn't offer to pay a forfeit, and they could well have afforded it, as you will agree if you have seen the 1949 profit statements of the big meat packers.

Now let's look at areas where rent control was lifted. Dallas, Tex., had an average increase of 36 percent. Lincoln, Nebr., which does not have a housing shortage as bad as Chicago's, had a nearly 30-percent increase. The only rents that went down slightly were in the high brackets, above $100 a month. The rest went up, and that wasn't all. Evictions were heavy and many people were thrown out on the street with no place to go. In Chicago, this situation would be much worse because there are at least 300,000 families which are inadequately housed. Lack of controls would be a sadist's holiday.

To come down to saying the thing plain, it would be suicidal to lift rent controls in Chicago. There are not enough places to live, and the resulting chaos would be a serious blow to the whole city.

Add 30 to 40 percent to Chicago's total rent bill and then ask yourself where that money would come from. In New York, the State legislature has already passed a rent-control act in case Congress fails to renew rent controls after June 30. In Illinois we haven't done a thing except fret.

Businessmen have a big stake in this problem because billions of dollars of national income would be diverted in the mad scramble for housing in the shortage districts. Sales and employment would surely go down. Variety magazine has just finished a survey showing that business has been seriously injured in areas where rents have been decontrolled.

But, of course, if that fellow who says rents will go down is right, there's nothing to worry about. In fact, if rents are sure to go down, why are they pushing so hard to kill rent control? Maybe the real estate lobby is on the wrong side.

Award to Maj. Frederick Sullens for Best Editorial of the Year

EXTENSION OF REMARKS

OF

HON. JAMES O. EASTLAND

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Friday, May 5 (legislative day of Wednesday, March 29), 1950

Mr. EASTLAND. Mr. President, at the annual meeting of the Education Writers Institute, sponsored by the National Education Association, held in this city last night, the capital award for the best editorial of the year was awarded to Maj. Frederick Sullens, editor of the Jackson, Miss., Daily News. It was one of a series of editorials from the pen of Maj. Sullens which inspired the Mississippi legislature at its recent session to make the largest appropriation for education in the State's history, and to make more liberal provisions for the education of Negroes and general betterment of Negro schools. I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR DISGRACEFUL NEGRO SCHOOLS

Whether we like it or not, the Supreme Court of the United States has declared that Mississippi, in common with other Southern States, must provide equal educational opportunities for Negroes.

No use fussing, cussing or fuming about it.

That decision is the law of the land and we have no alternative save to obey.

It is far better to obey promptly, cheerfully, and in our own way, than to be forced to do so.

Moreover, that decision embodies justice and common sense.

In the matter of education we have for many years been treating Negroes most outrageously.

The type of education we have been providing for them is nothing short of a disgrace. It might well be called a public scandal.

Let us face a few of the ugly facts—not all the ugly facts, for it would take too long to tell the whole story. Statements that follow are based on official reports in our State department of education.

The estimated value today of all school property in Mississippi being used for white children is $57,000,000.

The estimated value of all school property being used for colored children is only $11,000,000.

According to the latest survey there are today in our State 3,700 Negro schoolhouses, but not all of them are school property. About 2,300 of these buildings are owned by counties and communities, and many of them are the old Julius Rosenwald school buildings constructed at the time when that great philanthropist was spending money freely in Mississippi—and a goodly part of it being stolen and diverted to other uses.

Over 1,400 of the buildings now being used to house Negro schools belong to churches and Negro fraternal bodies. Some of them are tenant cabins, used where no other structures are available.

As a matter of fact, Negro churches and fraternal organizations in our State are furnishing nearly one-half what little Negro children get in the way of educational facilities. It is a shame and a disgrace that such should be the case.

Our white rural schools, as a rule, are fairly well maintained, but Negro schools are poorly equipped, shabby, dilapidated, and unsightly.

Go into any rural school building for Negroes and see for yourself how things are. Almost without exception they are one-room structures, rickety stoves are propped up on brickbats, blackboards are absent or worn to the point of uselessness, sanitation is sadly lacking and the common drinking cup is still in use.

In many hundreds of instances it will be found that one Negro teacher is struggling along trying to teach children in all the grammar school grades.

Here in the county of Hinds, wealthiest in the Commonwealth, our school facilities for Negroes are so poor and shabby that churches and lodges are furnishing 18 of the buildings in which Negro schools are housed.

Moreover, in recent years we have not had official honesty in the matter of providing for Negro schools.

During the administration of Gov. Thomas L. Bailey a legislative survey committee headed by Senator John Kyle, studied our public school system and submitted a report to the lawmaking body—a report that should have made our people blush for shame. It fully revealed the appalling conditions in our Negro schools and gave the legislature such a shock that it was decided to vote an appropriation of $3,000,000 for the purpose of aiding communities in the construction of new school buildings.

It was a sort of gentleman's agreement, fully understood among lawmakers who voted for the appropriation, that this money would be used for the improvement of Negro schools.

But it didn't happen that way.

The fund was administered by the State building commission. Due to political pressure, and other causes, most of that $3,000,000 was spent on white schools. It was explained by the commission that in most rural areas the Negro schools had no way of raising funds to supplement State allowances and they received practically no help whatsoever from boards of supervisors.

In other words, that $3,000,000 appropriation—a sum wholly inadequate for the purpose—was a good gesture, a noble experiment, and all that sort of thing, but the Negro schools for which it was intended didn't get the benefit.

And it has been that way for so long that the mind of man runneth not to the contrary.

It has been that way quite too long, and it must quit being that way.

Our educational theory of all for the white folks and nothing for the Negro must be abandoned.

The Daily News here and now serves notice that when the next legislative session is convened this newspaper, aided and supported by a large majority of the newspapers in Mississippi, is going to wage a fight to see to it that a good portion of that treasury surplus, about which there has been so much boasting and on which so many avaricious eyes have been cast, is used to provide a decent educational system for Negroes.

It is well-nigh unbelievable, but it happens to be a fact that in an area nearly 2 miles square in great and growing Jackson, Miss., biggest, best, and most progressive city, there is not a single Negro school building.

It happens to be a fact throughout the State that in some Negro school buildings there is not even standing room for pupils. In many cases hard-working teachers are trying to do the best possible with a deplorable condition by teaching Negro children in two or three shifts each day. Under such conditions the children get little or nothing in the way of education.

The United States Supreme Court has decreed equal educational opportunity for the races.

That's the law of the land. It must be obeyed.

It is up to our lawmaking body to handle this question intelligently, to meet all phases fairly and squarely. Whatever may exist in the way of race prejudice must be thrust aside and a program prepared that will deal justly with the Negro race.

West Coast Statue Proposed

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, May 5, 1950

Mr. ANGELL. Mr. Speaker, on September 22, 1949, I had placed in the Appendix of the CONGRESSIONAL RECORD, page A5847, a proposal for a monument on Mount Tamalpais which was made by a resident in my congressional district, Miss Alma Schulmerich. Under leave to extend my remarks I am placing in the Appendix today a letter from Miss Schulmerich which appeared in the Portland Oregonian on April 10, 1950, entitled "West Coast Statue Proposed" which contains interesting observations on the proposal made by Miss Schulmerich:

WEST COAST STATUE PROPOSED

To the Editor: The world is suffering from "atomitis." It is true there has been an atomic scare, but in reality we should feel more secure in the knowledge that Russia has a bomb. Didn't both sides have germ and chemical warfare during World War II and refrain from using these implements of destruction because of fear of retribution? Why, then, must we talk unconstructively about world war III? Cannot we so conduct ourselves that other nations will be able to work with us for peace and the one world about which Wendell Willkie spoke?

Uncle Sam is pouring millions into Europe which we know will not be returned—we do not intend that they should be. Why, then, cannot a few dollars be advanced toward a memorial to honor our boys who have paid with their lives, and those who continue to pay, though they still live, in our hospitals?

As a member of the secretariat of the United Nations conference at San Francisco in 1945, it was my pleasure to visit Mount Tamalpais, just across the Golden Gate Bridge from that city. From the summit it is possible to view the entire bay area, as well as far out to sea. Nearby stand those solitary sentinels, the Muir Woods.

Many UN delegates visited Mount Tamalpais to get away from man-made things and ponder their problems and the effect of their decisions on future generations in the clear, fresh air atop the mountain, where one seems a bit closer to the infinite. Franklin Roosevelt found it necessary to go to the mountain top to think things out and get a clearer picture and a broader horizon for the problems before him. So must we have time to meditate.

While I watched from the mountain, formations of bombers thundered by on their way to the Pacific theater. Far below, ships, with capacity loads of our finest young men, were threading their way through the Golden Gate and on out to sea and distant combat areas. Those boys didn't know what was in store for them. Many of their buddies had passed on. Many of their numbers would not return. Therefore, as they stood on deck watching the Golden Gate and the familiar landmarks disappear from view, I am sure they felt they were leaving behind everything that stood for America and the things they were fighting for.

I, too, once stood on the deck of the *Queen Mary* and watched the Statue of Liberty disappear from view, and I will always remember the picture she made as she lighted the way through the fog on our return journey. Therefore, as I watched the procession overhead and the ships far below, I earnestly wished that there had been erected on top of Mount Tamalpais, as our Pacific coast Statue of Liberty, an illuminated sign of the cross which would be visible far out to sea—the last thing those boys would see when they left America, and the first thing that would greet those who returned. This cross would serve as a beacon for all who travel, be it by land, sea, or the air.

It would be a constant reminder that those who gave their lives did not die in vain and that if we are to remain the strong world power we now are we must work together for peace with the same energy we expended in war.

In this respect you will recall the words of Jan Masaryk, of Czechoslovakia, on the closing day of the San Francisco Conference:

"Please stop talking of the next war. The language one hears in certain places is lamentably unconstructive; it arouses suspicions at a moment when mutual confidence is all-important. Not one of these selfless children of ours, whose graves are scattered as sacred mementos all over the face of the scarred earth—none of us want these children to die in another war in another generation—we want them back to live and work for their respective countries in peace and security in a socially just and safe world. That's why we assembled here, that's why we drafted the Charter. It contains all the necessary safeguards against future wars. Let us see to it that our lofty aims are carried into deeds worthy of the memory of our heroic beloved youngsters."

Miss ALMA SCHULMERICH.

Mr. Truman on Power

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 5, 1950

Mr. KILBURN. Mr. Speaker, under leave to extend my remarks, I include an editorial appearing in the Watertown Daily Times of May 3, 1950:

MR. TRUMAN ON POWER

President Truman knows, as so many of us do, especially here in the north country, that the United States is short of hydroelectric power. He now urges the Senate to ratify a United States-Canada treaty to develop power in the Niagara River.

The Niagara Treaty certainly seems to have caught on in Washington. Senator HERBERT H. LEHMAN'S joyous declarations when the treaty was proposed are not easily forgotten. And there is much to be said for the Niagara development, for it is recognized that the St. Lawrence River project alone will not be able to supply all power needs either here or in Canada.

But, and it is an important but, the St. Lawrence project would not only produce more power, it would also be more economical to construct. In view of the testimony now piling up before the House Public Works Committee in Washington, we may well wonder why the hold-up on the St. Lawrence, and why the sudden eagerness over Niagara. The State power authority's annual report this year was clear enough. Both projects are needed. First, the St. Lawrence; second, the Niagara.

Another crucial consideration is public or private handling of the development. President Truman's message reiterates his stand for public construction of the additional power facilities in order that the benefits of the hydroelectric power produced there can be passed on to the people at the lowest possible cost to them. All well and good, but construction of the facilities is one thing, and the people's getting the electricity is another. In between is the little matter of distribution. Who is going to do it?

Private power sources are angered over the treaty, presumably because the Federal Government is going to build facilities. That anger would fade in the twinkling of an eye if distribution rights were handed over to them.

Things look pretty good for the Niagara Treaty. Senator TOM CONNALLY, the Foreign Relations Committee chairman, thinks chances for passage at this congressional session rate high. We appreciate these efforts to satisfy the need for power in the Northeast. The danger lies in two directions, forgetting the St. Lawrence once the Niagara Treaty has been signed and turning over publicly constructed power facilities to private companies for distribution of the current.

Admiral Thomas Cassin Kinkaid

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, May 5, 1950

Mr. SADLAK. Mr. Speaker, the last of the wartime four-star admirals of World War II went into retirement on April 30. Of course, I have reference to Admiral Thomas Cassin Kinkaid, commander of the Eastern Sea Frontier and of the Atlantic Reserve Fleet. Admiral Kinkaid is a veteran of most of the major naval engagements in the Pacific in World War II and with his retirement, he will conclude a 46-year career, extending back to 1904 when he was appointed to the Naval Academy by President Theodore Roosevelt. During my service as a communications watch officer and top secret officer on the staff of the command of the Seventh Fleeters, I was privileged, through these duties, to have association and contact with Admiral Kinkaid, who was then the com-

mander of the Seventh Fleet. Today I look back upon that association with a most pleasant memory because I always found Admiral Kinkaid to be a gentleman, a great patriot, and a man of outstanding character, devoted to the highest traditions of the Navy. I deem it a great privilege to incorporate with the good wishes I extend to my former commander on the occasion of his retirement, the history of his career:

ADMIRAL THOMAS CASSIN KINKAID, UNITED STATES NAVY

Admiral Kinkaid, born in Hanover, N. H., on April 3, 1888, the son of Thomas Wright Kinkaid, late rear admiral, United States Navy, attended Western High School in Washington, D. C., before his appointment to the United States Naval Academy by President Theodore Roosevelt in 1904. While a midshipman he won his red N and was stroke of the varsity crew as a first classman. Graduated in June 1908, he served the 2 years at sea then required by law before he was commissioned ensign in June 1910. He subsequently progressed in grade until his promotion to admiral, to rank from April 3, 1945.

After graduation from the Naval Academy in 1908, Admiral Kinkaid served consecutively on the U. S. S. *Nebraska* and the U. S. S. *Minnesota* until September 1913, when he reported to the postgraduate school, Annapolis, Md., for instruction in ordnance engineering. He continued this course at the Navy Yard, Washington, D. C., and various other places until May 1916, with time out for a period of duty from April 1914 to January 1915 on the U. S. S. *Machias*, operating in Mexican waters. From May 1916 until April 1918 he was attached to the U. S. S. *Pennsylvania*, with duty during the latter part of that period with the British Admiralty.

Admiral Kinkaid served as gunnery officer of the U. S. S. *Arizona* from May 1918 until July 1919, while she operated in the Chesapeake Bay area during the last months of World War I; when on November 18, 1918, she sailed from Hampton Roads, Va., to Portland, England, for duty in company with other battleships to meet and escort the U. S. S. *George Washington*, with President Woodrow Wilson aboard, en route to the Peace Conference at Versailles, into Brest, France; and when, as part of the Atlantic Fleet, she was reviewed on December 26, 1918, in the North River, N. Y., by Secretary of the Navy Josephus Daniels, other members of the Cabinet, and fleet commanders.

He continued to serve in the *Arizona* during operations in Cuban waters early in 1919, and was aboard when she made a cruise to France, thence to Smyrna, Asia Minor, in connection with the occupation of that city by the Greeks. Returning by way of Constantinople, Turkey, and Gibraltar, on June 30, 1920, he was detached with orders to the Bureau of Ordnance, Navy Department, where he served until June 1922.

From August 1922 until July 1924, Admiral Kinkaid was Assistant Chief of Staff to Rear Adm. Mark L. Bristol, United States Navy, Commander, United States Naval Detachment in Turkish waters (U. S. S. *Scorpion*, flagship), and after his return to the United States commanded the U. S. S. *Isherwood* from November 1924 until the summer of 1925, when he reported for duty at the Naval Gun Factory, Navy Yard, Washington, D. C. Detached from that assignment in October 1927, he served as fleet gunnery officer and aide on the staff of Admiral Henry A. Wiley, United States Navy, Commander in Chief, United States Fleet, of which the U. S. S. *Texas* was flagship, until May 1929. After completing the senior course at the Naval War College, Newport, R. I., a year later, he was secretary of the General Board, Navy Department, Washington, D. C., from June 1930 until November 1931, with additional duty during that period as naval adviser to American members of the Preparatory Commission for the Disarmament Conference, Geneva, Switzerland, in November and December 1930. Returning to Washington, he had further duty in connection with the Disarmament Conference, and in 1932 was technical adviser at the Geneva Conference.

Admiral Kinkaid was executive officer of the U. S. S. *Colorado* from January 1933 until October 1934, and after duty in, and later as head of the Detail Section, Officer Personnel Division, Bureau of Navigation, Navy Department, Washington, D. C., until May 1937, he commanded the heavy cruiser *Indianapolis* from June of that year until August 1938. He was naval attaché and naval attaché for air at the American Embassy, Rome, Italy, from November 1938 until March 1941, with additional duty from March 1939 as Naval Attaché and Naval Attaché for Air at Belgrade, Yugoslavia. He was serving in the assignment at Rome when Italy declared war on France. Returning to the Navy Department, he was on duty in the Office of the Chief of Naval Operations from March to December 1941. Upon the outbreak of war with Japan, he left immediately for the Pacific theater where on December 30, 1941, he assumed command of Cruiser Division 6. He commanded that Division until October 29, 1942, when he became commander, cruisers, Pacific Fleet.

During those commands, which extended to December 6, 1942, Admiral Kinkaid participated in many of the major engagements in the Pacific. He commanded a task force in the Battle of the Coral Sea, May 4–8, 1942, which marked an end to the period our forces were totally on the defensive. He was commander of cruisers, one of the two task forces which in the Battle of Midway, June 4–6, 1942, inflicted on the Japanese Navy the first decisive defeat suffered in 350 years, put an end to the long period of Japanese offensive action, and restored the balance of naval power in the Pacific. He commanded a task force preceding and during the Battle of the Solomon Islands in August 1942, and in October of that year, in the Battle of Santa Cruz Islands when a big Japanese battle fleet was turned back from Guadalcanal, he commanded one of two task forces, with two carriers, one of them the *Enterprise*, 1 battleship, 3 heavy cruisers, 3 antiaircraft light cruisers, and 14 destroyers comprising his force. In the Battle of Guadalcanal (third Savo), November 12–15, 1942, he commanded a task force, built around the *Enterprise* Air Support Group and battleships, in support of Rear Adm. (now admiral) Richmond K. Turner, USN. In spite of heavy losses sustained in battle, it was a decisive victory for United States forces as it assured that our positions in the southern Solomons would not be threatened seriously again by the Japanese.

For his services in command of a task force during the Battle of the Coral Sea, and for the period preceding and during the Battle of Solomon Islands, Admiral Kinkaid was awarded the Distinguished Service Medal, and Gold Star in lieu of the second Distinguished Service Medal. He also received a facsimile of, and is entitled to wear the ribbon for, the Presidental Unit Citation awarded the U. S. S. *Enterprise*, which was his flagship during part of the Pacific operations. The citations follow:

Distinguished Service Medal:

"For exceptionally meritorious and distinguished service to the Government of the United States in a position of great responsibility as commander of a task force in the Battle of the Coral Sea, May 4–8, 1942, and specifically on May 8, 1942. Due to Rear Admiral Kinkaid's aggressive leadership and determined action, and through the skill and courageous devotion to duty of the units under his command, heavy losses were inflicted on attacking enemy Japanese air groups, thereby contributing immeasurably to the ultimate success of our forces in these notable engagements."

Gold Star in lieu of second Distinguished Service Medal:

"For exceptionally meritorious service to the Government of the United States in a duty of great responsibility as commander, Task Force 16, prior to and during the Battle of the Solomon Islands on August 24, 1942; the Battle of Santa Cruz on October 26, 1942; and during the naval action to the southward of Guadalcanal on the night of November 14–15, 1942. With flag in the U. S. S. *Enterprise* throughout these three major engagements, Admiral (then Rear Admiral) Kinkaid conducted the operations of his command with superb tactical skill, striking repeated blows at Japanese supply lines, naval strength, and air power during this early critical period of hostilities. Cool and decisive, he effectively coordinated the units under his direction to repel and destroy a massed air attack by Japanese planes during the Battle of the Solomon Islands, retiring from the action with but minimum damage to his own ships; he hurled the full fighting power of his forces against the enemy's sea and air strength at Santa Cruz to blast more than half the Japanese planes from the sky and knock out two large carriers; he reached out with his search and attack planes to track down and hit Japanese warships, troop transports, and cargo vessels off Guadalcanal, with *Enterprise* aircraft shooting down several Zeros in addition to inflicting heavy damage upon the enemy's surface vessels. Unwavering in his devotion to the fulfillment of the obligations of his command, Admiral Kinkaid contributed essentially to the success of the determined offensive in the South Pacific. His dauntless leadership and sustained aggressiveness throughout reflect the highest credit upon himself and upon the United States naval service."

Presidential Unit Citation, U. S. S. *Enterprise*:

"For consistently outstanding performance and distinguished achievement during repeated action against enemy Japanese forces in the Pacific war area, December 7, 1941, to November 15, 1942. Participating in nearly every major engagement in the first year of the war, the *Enterprise* and her air group exclusive of her far-flung destruction of hostile shore installation throughout the battle area, did sink or damage, on her own a total of 35 Japanese vessels and shoot down a total of 185 Japanese aircraft. Her aggressive fighting spirit and superb combat efficiency are fitting tribute to the officers and men who so gallantly established her as a solid bulwark in defense of the American Nation."

Gilbert and Marshall Islands raid, February 1, 1942.

Wake Island raid, February 24, 1942.

Marcus Island raid, March 4, 1942.

Battle of Midway, June 4–6, 1942.

Occupation of Guadalcanal, August 7–8, 1942.

Battle of Stewart Islands, August 24, 1942.

Battle of Santa Cruz Islands, October 26, 1942.

Battle of Solomon Islands, November 14–15, 1942.

From January to October 1943, Admiral Kinkaid was Commander, North Pacific Fleet, and in that capacity was Aleutians Area Commander, with the over-all responsibility of coordinating and implementing the various forces involved in the Aleutians operations, Army, Navy, Air, and Canadian Air Forces.

His was the responsibility of transporting troops to points of attack; of air attacks before and after landings; of cooperation with Army forces, and with pilots of the Royal Canadian Air Force. During his command, Amchitak was occupied in January 1943, and in February good progress had been made in establishing and equipping the base on Adak. Meanwhile, Kiska was attacked by planes almost daily, and in March when the Japanese attempted to support their garrisons at Kiska and Attu, there ensued the Battle of the Komandorski Islands in which a superior enemy force was driven off with slight damage to our force. On May 11, 1943, landings at Attu, Massacre Bay and Holtz Bay were made, covered by our naval forces, and in the bitter fighting which followed, various naval units assisted Army troops by furnishing fire support and air cover. By May 31 the Island of Attu had been captured from the enemy. During July and August, Kiska had been heavily bombed by our planes and on numerous occasions bombed by our naval forces. When assault troops landed on the island on August 15, 1943, it was found to have been evacuated by the Japanese under cover of fog. Thus with the occupation of Kiska, the Aleutian campaign was ended with our forces once more in possession of the entire chain of islands.

For carrying out these joint military operations in the Aleutians in the face of adverse weather conditions, fog, cold, and high seas, Admiral Kinkaid was awarded a Gold Star in lieu of the third Distinguished Service Medal with the following citation:

Gold Star in lieu of the third Distinguished Service Medal:

"For exceptionally meritorious and distinguished service to the Government of the United States in a position of great responsibility as commander, North Pacific Force, United States Pacific Fleet, from January 6 to October 12, 1943. In cooperation with the Army, Vice Adm. Kinkaid planned offensive operations and established advance bases while our forces moved steadily westward in the Aleutians. Exercising, his command of all naval forces and certain Army amphibious and air forces with sound judgment and tact, he conducted a determined and successful offensive drive in this strategic area which resulted in the occupation of enemy-held Attu and Kiska and in the final expulsion of the Japanese from the Aleutians."

Following the conclusion of the Aleutians campaign, Admiral Kinkaid returned to the operations on the opposite side of the Pacific and on November 26, 1943, reported for duty as commander, Southwest Pacific Force, and commander, Seventh Fleet. As commander of the Seventh Fleet, he was under the command of General of the Army Douglas MacArthur, commander in chief of the Southwest Pacific area. In December 1943, as area naval commander, Admiral Kinkaid participated in the Bismarck Archipelago operations, and when in May 1944, Biak Island, off the New Guinea coast, was invaded by United States Army units under the command of General MacArthur, Admiral Kinkaid's Seventh Fleet supported the operations with bombing and naval bombardment.

In October 1944 when forces under General MacArthur carried out the landings in the Philippine Islands, Admiral Kinkaid commanded the central Philippine attack force, composed of Seventh Fleet units greatly augmented by temporarily transferred Pacific Fleet forces. This force comprised more than 650 ships, including battleships, cruisers, destroyers, escorts, escort carriers, transports, cargo ships, landing craft, mine craft, and supply vessels. The landing on Leyte on October 20, which established our troops in the central Philippines, where challenged by Japanese naval forces determined to drive us from the area. Between October 23 and 26 a series of major surface and air engagements took place with far-reaching effect. These engagements, designated the Battle for Leyte Gulf, culminated in three almost simultaneous naval actions, the Battle of Surigao Strait, the battle off Samar, and the battle off Cape Engano, involving ships of the Third as well as the Seventh Fleet. At the successful conclusion of the battle for Leyte Gulf, the three enemy forces which had attacked were either destroyed or in full retreat, the major Japanese threat to our initial Philippine landing was averted, and the enemy's total surface power was severely crippled. Following the carrier strikes on Manila Bay in mid-December 1944, Admiral Kinkaid was placed in command of the Luzon attack force, composed of the augmented Seventh Fleet and comprising more than 850 ships. Early in January 1945 that force transported, put ashore, and supported elements of the Sixth United States Army, Lt. Gen. Walter Kreuger, commanding, and assisted in the successful seizure and development of the Lingayen area of Luzon, largest island in the Philippines.

For his services in that command, Admiral Kinkaid was awarded a gold star, in lieu of the fourth Distinguished Service Medal with the following citation:

Gold star in lieu of fourth Distinguished Service Medal:

"For exceptionally meritorious service to the Government of the United States in a duty of great responsibility as commander, Seventh Fleet, and commander, Allied naval forces in the southwest Pacific area, during the Leyte operation of the Philippine Islands campaign, from October through December 1944. A master of naval warfare, Admiral Kinkaid planned and carried out the naval phases of this operation which made possible the liberation of the Philippines. Welding the diverse and limited forces available to him into a highly effective fighting organization, he directed the offensive with outstanding strategic skill, as evidenced by the annihilation of powerful Japanese fleet units in the battle or Surigao Straits phase of the battle for Leyte Gulf. As a result of his aggressive leadership and brilliant overall strategic control, his determined forces repulsed and decisively defeated two major task groups of the Japanese fleet which had seriously threatened the operations for the capture of Leyte and the entire Philippine campaign. His indomitable courage, inspiring leadership, keen foresight and exceptional professional skill were primarily responsible for the complete success of all naval operations under his cognizance in the southwest Pacific areas during this period and reflect great credit upon Admiral Kinkaid and the United States naval service."

In November 1945, after the capitulation of the Japanese in August of that year, Admiral Kinkaid was relieved of command of the Seventh Fleet by Vice Adm. Daniel E. Barbey, United States Navy, and ordered to duty as commander, eastern sea frontier. In January 1946 he was assigned additional duty as commander, gulf sea frontier. In February 1946 he was relieved of the additional duty, and in June of that year was assigned additional duty as commander, Sixteenth Fleet (the inactive Atlantic fleet).

The operating forces of the Navy were reorganized as announced on January 1, 1947, and all numbered fleets abolished except for one fleet in each ocean. Admiral Kinkaid became commander, eastern sea frontier, with additional duty in command of the Atlantic Reserve Fleet, composed of ships in and out of commission.

In addition to the Distinguished Service Medal with three gold stars, and the Presidential Unit Citation Ribbon, Admiral Kinkaid has the Mexican Service Medal (U. S. S. *Machias*), the Victory Medal, Atlantic Fleet Clasp (*U. S. S. Arizona*), and is entitled to the American Defense Service Medal, the Asiatic-Pacific Area Campaign Medal, and the World War II Victory Medal.

Senator McCarthy's Charges

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Friday, May 5 (legislative day of Wednesday, March 29), 1950

Mr. CAIN. Mr. President, a great many things, some unkind and others complimentary, have recently been said about the junior Senator from Wisconsin [Mr. McCARTHY]. Without discussing the merits of the case which the Senator from Wisconsin has placed before the Senate Committee on Foreign Relations, I wish to point out that the Senator from Wisconsin is not without those supporters who believe in fair play and who believe that the Senator from Wisconsin is right in having brought the issue of communism to the attention of the Nation.

I ask unanimous consent that a column by John Fisher from the Times-Herald of May 5, an editorial from the Dubuque Witness of May 4, and an article by Father William H. Rowan from the Dubuque Witness of May 4 be printed in the Appendix of the RECORD, where they may provide the Senator from Wisconsin with some encouragement and stimulate the determination of the Senate committee to determine the truth regardless of who may be found to be in the way.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

[From the Witness, Dubuque, Iowa, May 4, 1950]

THE TRUTH DOESN'T HAVE A CHANCE

We are well aware that it is up to the courts to decide whether Owen Lattimore is, or has been, a Communist spy. We don't intend to make any accusations about him that would make us liable to libel suits. But we can't help but ask what to us is an obvious question, Why is there so much effort being put forth to clear Lattimore of the charges made against him by Senator JOSEPH MCCARTHY?

Louis Budenz, former editor of the Daily Worker, has testified in Congress that Lattimore had been a member of a Communist cell. The ex-Communist also testified, among other things, that Lattimore had organized Red writers in behalf of the Soviet policy in the Far East. Now why is the testimony of Budenz being questioned?

He was one of the key witnesses who named Alger Hiss a Communist. Budenz' testimony was not questioned then—except perhaps by the Communists.

He exposed Gerhart Eisler as the Soviet's top espionage agent in this country. Budenz' word was accepted as true—except perhaps by the Communists.

He was used by the Government as a star witness in the trial of 11 Communist leaders in New York. He was regarded as a highly reliable witness by the Government then. Why should his reliability be open to question now? Or why shouldn't Budenz be telling the truth? First of all, he has proved himself to be an authority on Communist activities and a trustworthy witness. Secondly, he has nothing to gain by failing to tell the truth.

Senator MCCARTHY has named Lattimore, a one-time State Department employee, a Communist agent. Budenz, in turn, backed

up the Senator's charge by stating Lattimore had been the member of a Communist cell. That should be as worthy of belief as Budenz' testimony in the trials of convicted Communists. But no. Other witnesses are brought in and they contradict Budenz. Consequently the public is confused. The truth doesn't have a chance.

[From the Witness, Dubuque, Iowa, May 4, 1950]

THE NOTE BOOK—QUOTATIONS AND COMMENT

(By Father William H. Rowan)

THE LATTIMORE-M'CARTHY CASE

To hear and read your ordinary columnist and broadcaster, one would imagine that Senator JOSEPH MCCARTHY was the villain of the piece; the scoundrel and traitor that had betrayed 500,000,000 Chinese (who control Asia where most of the human race reside) into Soviet slavery; that had destroyed the great traditional American policy of a strong and independent China and brought the country thereby into dire peril; that had betrayed American interests and security and liberty and the world's; that had betrayed freedom and civilization and Christianity to their sworn and mortal enemy, the accursed antifreedom, anticivilization, and anti-God Soviet.

To listen and read the unprincipled partisans, concealed Communists, fellow travelers, one would think that Senator MCCARTHY were on trial instead of the guilty wretches and Benedict Arnolds and Judas Iscariots who have betrayed civilization and liberty, God and country to the vile Soviet.

To the foregoing nefarious line there are honorable exceptions like the Hearst chain and the Chicago Tribune among publications and Sokolsky among the columnists.

We are leaving to the Senate investigation the establishment of Lattimore's connection—if any—with the Kremlin.

Truth of the matter is that Senator MCCARTHY has undertaken a job that needed to be done and should have been done long ago.

So doing, as that excellent columnist Sokolsky, who is a real Chinese expert, remarks, MCCARTHY has already rendered signal public service by flushing out many a foul bird, and Sokolsky recites a long list of the services of MCCARTHY in this connection. He forced out, for example, the existence of a foul moral perversion in the State Department.

Only MCCARTHY had the courage to face the inevitable smearing, abuse, blackguarding, consequent on all that.

The impressive Budenz testimony cannot be sneered off nor smeared off nor laughed off.

Fact of the matter is that the Soviet propaganda and line to the effect namely; that the Chinese Soviet agents were agrarian reformers, then nationalists and patriots, now Titoists ready to break with Stalin was sold to the State Department; and that line has lost us China and bids fair to lose us all Asia; that that line coincided with the Snow-Lattimore line; that Lattimore was quoted constantly and gleefully by Pravda and Isvestia, as Dallin shows in his book on the Soviet advance in Asia; that Lattimore was most influential in urging that line (a book of his to effect was observed on the President's table); that nowhere in his multitudinous books and articles—(he had access to publicity of widest circulation) on China is there aught hurtful to the Soviet advance in China until it was lost to the Soviet.

"You would not be far wrong in saying that a 'stable' of left wing, pro-Communist writers exists to which the editors of the book review sections can turn for the particular job at hand," asserted one writer on the wide prevalence of the Soviet line in the American press.

Another writer said on examination of the review sections in recent years shows what amounts to a sort of interlocking directorate among reviewers of books on China.

"Go back through the reviews and you will find that Edgar Snow reviewed a book by Owen Lattimore and that Lattimore got the assignment to review a book by Snow," he continued. They do a good job of back scratching.

"John Fairbank, a Harvard history teacher, who reviewed Chiang Kai-shek's book with notes and comment by Philip Jaffe, made no mention of Jaffe's known bias against Nationalist China. Nor did he mention that Jaffe pleaded guilty to a charge of conspiracy to steal State Department documents and paid a $2,500 fine." That was the Amerasia Communist spying case that was hushed up.

Recall in this connection: China's Mao Tse-tung who is currently being sold to the United States as the Tito of Asia by Authors Edgar Snow, Owen Lattimore, and others who until recently used to peddle the disastrous line that China's Communists were mainly "agrarian reformers." Time: April 18, 1949; page 29. [So this column for years.]

"That review [Fairbank's] apparently qualified Fairbank to review the book 'Thunder Out of China,' by Theodore White and Annalee Jacoby, and Mrs. Jacoby, no lover to Nationalist China, was assigned to review the late John Powell's 'My Twenty-five Years in China.' Mrs. Jacoby took Powell to task for calling Chinese Communists 'bandits' and seeing a Red menace in their activities."

Colossal impudence on her part in connection with Powell, a great Chinese and Far Eastern expert unlike the salesmen and saleslaadies who sold the catastrophic party, Soviet, Stalin line for which they were handsomely paid in publications (mostly on the Eastern seaboard) of vast circulation, wide influence, potent prestige; while real Far Eastern experts were excluded from their pages and the facts and the books written by genuine Far Eastern authorities were sneered, smeared, ignored. Snow is still an editor of the Saturday Evening Post. Lattimore only recently had an article in the Atlantic in which there was nothing really hurtful to the Soviet line. Atlantic used to be our leading quality publication.

Here is a sane comment on the whole catastrophic affair:

As for Lattimore and his alleged connection with the Kremlin, we must necessarily wait for the proper legal decision. But it can be said now that his activities, shown by his published documents, have consistently followed a line that has cost us tremendous defeat in China. He is the so-called architect of the doctrine that the Chinese Communists were not really Kremlin stooges at all, but "democratic agrarian reformers." That false doctrine apparently had compelling influence on our conduct of foreign affairs in China. He should have been discredited long ago—not as a spy—but as an "authority" on foreign policy in China. Editorial in the Telegraph-Herald, Dubuque, Iowa, April 23, 1950.

[From the Washington Times-Herald of May 5, 1950]

AMERICANS SHOWER MCCARTHY WITH PRAISE FOR COMMIE FIGHT—50,000 MESSAGES OF ENCOURAGEMENT POUR IN FROM ALL SECTIONS OF NATION

(By John Fisher)

From all walks of life, from all sections of the Nation, the people are standing solidly behind Senator MCCARTHY, Republican, of Wisconsin, in his demand for exposure of Communists in the State Department.

A random examination of the estimated 50,000 letters, cards, and telegrams received by MCCARTHY since he made his charges of Communists in the Department reveals a spontaneous upsurge of public sentiment in his behalf.

Most of the writers had no other wish than to give MCCARTHY encouragement in facing tremendous odds. They told of praying for him. They inquired if there is anything ordinary citizens can do to help.

MANY CONTRIBUTE MONEY

Many, hearing that MCCARTHY was hardpressed to finance his part of the investigation, and forced to cut his investigating staff, contributed money. The donations aren't large, usually a dollar or 2, sometimes 10. They said they gave what they could afford to help him carry on the fight.

MCCARTHY has acknowledged spending about $7,500 of his personal funds to date on expenses incurred in connection with his search for evidence to be furnished the Senate investigating committee, which has a staff and $25,000 for probing MCCARTHY'S charges.

Although MCCARTHY has made no appeal for help, he has accepted the donations in the spirit in which they were given.

Following are some of the explanations given by the people who contributed.

DISABLED VET HELPS

A disabled veteran of World War I, described himself as a pauper, sent a money order for $1 from Liberty, Mo., saying "the Democrats are leading us to war," and he would have sent MCCARTHY more money if not so poor.

From Mount Vernon, N. Y.: "I'm a Democrat but I'm for you 100 percent in this effort. The present Democratic leaders don't seem to realize that what's bad for the country is bad for the party. Enclosed please find check for $10 to help in defraying the expense of this very urgent patriotic effort."

From a Chicago couple describing themselves as "Mr. and Mrs. Democrat" came $10 with the wish, "hope you have a million more converts to your cause."

Enclosed in a United Nations envelope, McCarthy received $2 with the explanation: "This is the best I can do at this time; will repeat again in 2 weeks."

"YANKEE GREEN BUCK"

"Here is a Yankee green buck to lick a Communist Red buck," declared a donor from Aberdeen, Md.

A Government employee in Washington sent a dollar with an unsigned letter, saying, "If my name were signed, and through any reason it would become known, my means of making a living would be abruptly terminated." But the letter said: "In my opinion you and the few on your side of the aisle who have the guts to assist you are performing one of the greatest services to the country ever performed. Keep at it! It is way past time for America to wake up, so keep the alarm ringing."

Twenty-three other persons signed a joint letter, enclosing 23 crumpled dollar bills, "which we hasten to send today, realizing that under Truman's profligacy they may be worth less tomorrow." The letter continued:

"The undersigned, realizing the pressure under which you as a loyal, patriotic American, are laboring to bring to light the subversive activities of traitors and spies on our Government pay rolls, consider it a privilege to be able to make this small contribution to help you carry on the fight."

TOKEN OF APPRECIATION

One of the most unusual letters came from Chicago, and read:

"I am sending you herewith $5 for your personal use—some good cigars, a box of candy, or anything your pleasure desires. No acknowledgment is necessary.

"I am a poor man, 65 years old today, and since my social-security benefits start today, I feel I can afford this little token of appreciation of your splendid service to our country. Your unseen friend."

"I heard last night on the radio program that you are having financial trouble after all the good you have done this country," said another letter from "working family of three. I therefore pledge $1 to help fight the elements that threaten this country and hope that more of my fellow countrymen shall do the same."

ACHESON CRITICIZED

A Connecticut man sent a dollar in behalf of his grandson, saying: "Sent in the hope that what you are attempting to do will succeed, and that my grandson may grow up in the same sort of a country that I grew up in. A man that will stick by Alger Hiss and permit a convicted Russian spy to return to Russia should not be Secretary of State; we need someone about whom there is not the slightest doubt of his loyalty and love of this country."

A terse pencilled note on white wrapping paper said: "A humble contribution for expense connected with your excellent effort." It was unsigned and enclosed a dollar.

"Kindly accept this small contribution of $3 that you can use to help pay the private investigators on your pay roll," said a man from Staten Island, N. Y. "I wish it could be more," he added. "God bless you and keep you in good health. Please keep on fighting for what you believe is worth while."

DISTRICT OF COLUMBIA WOMAN CONTRIBUTES

A Washington woman sent $10 "as a slight token of appreciation of what you are undergoing in your patriotic, courageous efforts in behalf of our beloved country. If the Reds win, it will mean not only we of this generation, but our children's children's grandchildren will be under the Soviet yoke."

Another group of five local citizens sent $35, saying: "We wish to express to you our congratulations and deep appreciation for your courageous efforts in behalf of all real American citizens." A Wisconsin couple said "Hurrah for McCARTHY. The people of Wisconsin sure must be proud of you. Keep up the good work." They enclosed a dollar.

Separation of White and Colored Passengers on Southern Railway Dining Cars

---

EXTENSION OF REMARKS

OF

HON. HARRY J. DAVENPORT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 5, 1950

Mr. DAVENPORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following argument by Hon. J. Howard McGrath, Attorney General of the United States, before the Supreme Court of the United States, in the case of Elmer W. Henderson against United States of America, Interstate Commerce Commission, and Southern Railway Co., No. 25, October term, 1949, on Monday, April 3, 1950:

The issue on this appeal is the validity of regulations of the Southern Railway providing for separation of white and colored passengers in the railroad's dining cars, and of an order of the Interstate Commerce Commission upholding such regulations, to be equitable and reasonable division of dining car space between the races.

The Solicitor General and I are appearing on behalf of the United States because the case raises basic questions as to the validity of racial segregation. This is a matter of great national importance, affecting the interests and well-being of millions of Americans.

The underlying question in this case is the true nature, purpose and effect of legally-enforced separation of the white and colored races. The position of the United States on this question is that such segregation, in and of itself, is a form of inequality and discrimination condemned by the Constitution and the Interstate Commerce Act.

The pertinent facts can be briefly stated. The railroad reserved one table in its dining cars exclusively for colored passengers and all other tables exclusively for white passengers. The Jim Crow table is at the kitchen end of the car and is separated from the next table by a curtain or a 5-foot-high partition extending from the side of the car to the aisle.

The applicable statute (section 3 of the Interstate Commerce Act) makes it unlawful for a railroad to subject any person to any undue or unreasonable prejudice or disadvantage in any respect whatsoever. In *Mitchell* v. *United States* (313 U. S. 80, 94), this court held that the sweeping prohibition of the statute extend to acts of discrimination which, if done by a State, would violate the equal protection clause of the fourteenth amendment. In other words, the case appears to lay down a test of legality under the statute which is identical with that applicable to State action under the fourteenth amendment and, presumably, to Federal action under the fifth amendment.

The decision of this Court as to the proper interpretation and application of the Interstate Commerce Act to the circumstances of this case may, therefore, carry with it serious implications as to the scope of these amendments. In particular, this case may furnish an appropriate occasion for the Court to re-examine the so-called separate but equal doctrine of *Plessy* v. *Ferguson* (163 U. S. 537). In that case, decided in 1896, almost three decades after the fourteenth amendment became part of the Constitution, there was for the first time read into the amendment an implied limitation, namely, that compulsory racial segregation in the use of public facilities is not a denial of equal protection of the laws, so long as the separate facilities are equal. In our brief we have set forth at length the reasons why the Government is convinced that "separate but equal" is a contradiction in terms, a consitutional anachronism which a half-century of history and experience has shown to be an unwarranted departure from the basic constitutional principle that all Americans, regardless of their race or color or religion or national origin, stand equal and alike in the sight of the law.

We need look only at the facts in this record to realize that facilities segregated on the basis of race or color are not, and never can be equal in any full sense of the word.

It is not disputed that the railroad divides its passengers into two classes. It is not disputed that the rights and privileges accorded white passengers differ from those accorded colored passengers. What is disputed is whether singling out of the colored race for separation from the other members of the community is discriminatory.

Legally enforced separation of people, whoever they may be, on a basis of race, necessarily implies that all the members of that race are inferior to all the members of other races. Negroes understand only too well the meaning and effect of segregation. Students of our social institutions are in unanimous agreement. Segregation signifies, and is intended to signify, that each and every member of the colored race is not the equal of any member of the white race.

The barrier in the dining car is important, not only as a physical barrier, but as a symbol. It is a ceremonial separation, symbolizing the legally enforced caste status of those segregated.[1]

Few things can be more invidious, more humiliating, than thus to be tagged as unfit to associate with others. Individual distinction, achievement, character, count for nothing. A trace, a taint, of Negro ancestry is all that is necessary to put one beyond the pale.

Segregation in railroad dining cars forms part of a larger pattern of segregation which at every turn marks the Negro as ostracized from his fellow citizens. Such setting apart is a token of his inferiority. It gravely affects his whole personality and behavior. Many students and writers on this subject attest to the deep-seated effect of the feelings of resentment and frustration which are thus aroused and how seriously such segregation affects the social and economic development of members of the segregated race. Dining-car segregation or any other segregation sanctioned by law and approved by this court is bound to have a special impact on persons segregated.

If the order of the Interstate Commerce Commission authorizing such segregation is upheld in this case, then I believe that a serious blow will have been struck at the free institutions which our democracy so proudly proclaims before the world and last hope will have vanished that under our constitutional system all men can expect to be treated with equality based upon their human dignity and personality.

Persons who are given service in a dining car only upon the accepted condition that they will allow themselves to be held up to public view as members of an ostracized race cannot possibly be said to be receiving equality of treatment. Unless the law deals only with the trappings of equality and not with its substance, unless we are prepared to say that the requirements of equality are to be measured solely in terms of knives, forks, food, and table linen, then this court should strike down the provisions of the Interstate Commerce Commission holding. Only if the law is to have this narrow scope would the phrase "separate but equal" have any validity. When separation is for the very purpose of express inequality and thus in itself creates inequality, there is no other conclusion to be drawn than that such separation in and of itself is discrimination.

Mr. Justice Brandeis in a great dissent once said: "If we would guide by the light of reason, we must let our minds be bold."[2] Here, if we would guide by the light of reason, we must let our minds be free. We must free our minds of notions which have no validity other than the powerful pull of the familiar and the accustomed. If we can do this, we can see that persons who are subjected to the humiliation of being set apart from their fellows, simply because their skin is of a different color, are denied equality of treatment, and deeply wronged.

Whichever way the decision in this case goes, the rule declared will stand as a rule authorized and enforced by the Federal Government. The case does not present a mere question of private rights. The United States regulates the practices of the railroad which are here involved. Under the statute imposing general and inclusive prohibition against discrimination in service by an interstate railroad, the question for decision is whether it was nevertheless the policy of Congress to authorize racial segregation which bespeaks by force of its own viciousness the inferiority of those segregated, nor could it have any other purpose or effect.

---

[1] Appropriate illustration: If this court would insist on segregation of lawyers before its bar.

[2] *New State Ice Co.* v. *Liebmann* (285 U. S. 262, 311).

Many in this country sincerely believe that segregation is in the public interest. They believe that segregation and practices allied to it serve to diminish racial prejudice and racial friction. Many others believe the contrary. They believe that such practices promote prejudice and friction between the races, and tend to create a disaffected body of citizens.

Obviously no act of Congress, no decision by this Court can eradicate the evil of racial prejudice. But ways of thinking and behavior are at least partly shaped by the rules of conduct prescribed by law as interpreted by this Court. Your decision can and may give rigidity and respectability to barriers which have their roots in prejudice, and thereby solidify these barriers, or your wisdom may to a large degree undermine these barriers and bring them into disrepute.

I submit to the court that racial segregation enforced by law is not permitted under the Constitution nor the Interstate Commerce Act. The judgment by a majority of the three-judge district court which approved the legality of the regulation involved in this case should be reversed.

Teach What Is Right

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. HARRISON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Nelson County Times, Amherst, Va., entitled "Teach What Is Right in America":

TEACH WHAT IS RIGHT IN AMERICA

In one of his Newsweek columns, Raymond Moley dealt with the people who have been convicted of serving communism as espionage agents. Two of them, he observed, "were educated in institutions provided by the profits of the very economic system that communism is determined to destroy."

Then he said this: "Let us be slow in condemning our educational system for these failures. These people were exceptional. But it may well be considered by those who direct higher education in America whether there is not a need to reexamine their responsibilities and the way they are carried out. The danger is not that there is too much taught about what is right in communism, but that there is too little taught about what is right in America."

We all prize academic freedom. But that freedom, like others, involves grave responsibilities. Education much cleanse itself from within. There can be no question but that a certain amount of teaching has been Communist inspired. Some has come from fellow travelers who religiously attempt to follow the tortuous turnings of the Soviet line. And much of it seems more concerned with searching for what may be bad in our form of government and our economic system than in describing what is good.

The young men and women who are attending our universities of today will decide what this country is to be like a generation from now. Unless they know "about what is right in America," education will have proved itself a ghastly failure—and academic freedom itself will die of a disease of its own creation.

An Old Hoax Revived

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 5, 1950

Mr. VAN ZANDT. Mr. Speaker, that old hoax, the St. Lawrence seaway and power project is haunting the American taxpayer again.

Here is what the New York Journal-American had to say about the old hoax on June 15, 1949:

AN OLD HOAX REVIVED

With little hope of success, political advocates of the St. Lawrence seaway have again brought up their visionary project in Congress.

The hoary St. Lawrence scheme has become a part of the New Deal's plan of dividing the Nation into regional Federal satrapies by developing separately the great river basins along the lines of the Tennessee Valley Authority.

Of severals bills in Congress, one would take over the Columbia River and its tributaries in several States.

Another would put one-fourth of the country under Federal tutelage in the Missouri Valley.

The St. Lawrence project differs from the others in that it has an international aspect, since most of the river is in Canada: And that, while it was originated as a supposed navigational facility, it has since acquired a hydroelectric-power element, and is now definitely a part of the movement to socialize the United States through Federal domination of the electrical industry.

The objections to the St. Lawrence project are numerous.

As a source of hydroelectric power, it would be unreliable.

Canadian experience proves that droughts would reduce its output.

The project would therefore require "auxiliary" steam plants to stabilize its capacity: And there are already several privately-operated steam plants in the State of New York each one of which produces more power than could be obtained from the whole St. Lawrence River.

If New York and New England need more electricity, therefore, the apparent solution is more steam plants—and private enterprise can and will construct them when they are desirable.

Secondly, as a seaway the St. Lawrence is a childish chimera.

The river would be ice-locked, and hence unnavigable, during half of each year.

Its proposed dredged channel would be useless without costly local port construction in the Great Lakes.

Leading American shipping companies have informed Congress that they would not use the artificial route, and if they were to do so, American railroads would be bankrupted by the loss of heavy freight in the warm months of the year.

Congress is thus being "pressured" again to dump a billion dollars or more into a hazardous project which would serve only to benefit small ocean-going vessels, mostly of the "tramp" type, under alien flags and to the incurable injury of American industry and commerce.

Likewise, emotional assertions that the St. Lawrence seaway is desirable for the national defense are spurious, inasmuch as a single bomb exploded in one of its locks or narrow channels would obstruct it completely.

The same sound reasons that have impelled Congress wisely to reject the St. Lawrence seaway scheme in the past should prevail again.

The Day of Final Appeal

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES
Friday, May 5 (legislative day of Wednesday, March 29), 1950

Mr. BREWSTER. Mr. President, I ask unanimous consent to insert in the RECORD an editorial from the Journal of Commerce, of New York, entitled "The Day of Final Appeal," written by Edward P. Tastrom.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE SHIPPING OUTLOOK

(By Edward P. Tastrom)

THE DAY OF FINAL APPEAL

The Senate Committee on Expenditures has a thoroughly logical basis for adopting the resolution offered by Senator BREWSTER, of Maine, this week which would postpone the shift of the Maritime Commission to the Department of Commerce, now scheduled to take place in about 10 days.

The argument, as we see it, that industry interests can advance at the committee hearings scheduled for next Monday is both a logical one and, as the Chinese say, "face saving" all around. It is simply that this is not the proper time to uproot the Maritime Commission and tuck it away into a Commerce Department division since we are right in the middle of proposing legislation changes in our basic shipping law—the Maritime Act of 1936.

Hearings have been going on in Washington for months, during which period interested industry leaders have given much of their time for testimony designed to formulate a long-range shipping policy. We are close to legislative recommendations, based on the facts that have been brought out at these sessions.

The way things shape up at the moment, Congress will be confronted with an entirely different administrative and regulatory functioning body to carry out new legislation than that which existed when most of this testimony, that presumably is to form the basis of our new maritime policy, was offered.

This may seem to be a fine point and those given to arguing the thickness of a hair could say that Congress still would be in a position to fit legislation into the new administrative arrangements. However, isn't that something like laying out plans for a new model car and then finding that it must be built in a carriage factory instead of on an assembly line?

Assuming there are defects in the present arrangement under which the Maritime Commission functions, the timing involved in putting reorganization of the agency into effect is akin to prescribing for the patient before determining exactly what his ills consist of.

It is for these reasons that we say the Senate is perfectly justified in approving postponement of Reorganization Plan 21 until

such time as we determine our new shipping legislation. If it is considered advisable at that time to include this executive change in the new legislative enactments, it can properly be integrated with the other revisions that may be made in the law. This is only fair to the shipping industry and for that matter, it is something that the Commerce Department should approve since we are assuming that Commerce is desirous of getting as workable an arrangement as possible.

Also Democratic Senators who feel they should not go against the administration wishes, and Republicans who feel they should not be on record against the Hoover Commission proposals would, in effect, simply be postponing action on this shift until such time as its desirability can be studied in connection with other and broader problems affecting the shipping industry.

The situation with respect to Reorganization Plan 21 thus is quite different than that which exists in connection with other Hoover Commission proposals where Congress has been asked to voice disapproval:

The major considerations advanced for the transfer of the Maritime Commission have been that its efficiency would be improved by segregation of administrative and regulatory functions and secondly, that it would result in actual economies. Neither contention has been adequately documented thus far.

There is, without doubt, room for improvement in both these respects. This also is the case, for that matter with a great many other Government bureaus. However, there is no assurance that we will attain either of these objectives by putting into effect Reorganization Plan 21. In fact, strong arguments, which hardly need repeating here, can be advanced to indicate the new maritime board set-up would be not more, but rather less, efficient than has been the case in the past.

Finally, if we are to strive for efficiency and economy, it should be tied in with our new maritime policy, if it is to be effective, and be written in, chapter and verse, as a part of the changes made in the Maritime Act of 1936.

This is the sort of case that might well be presented to the Senate Committee on Expenditures in the Executive Departments next Monday—the court of final appeal.

Sale of Surplus Navy Frigates to Egypt

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, May 5 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, two articles have appeared on successive days in the New York Herald Tribune by Carl Levin concerning the sale of two surplus United States Navy frigates to Egypt.

It is clear from these two articles, and from facts I have personally ascertained, that although it was claimed that the ships were to be used for passenger service, they have no passenger capacity except for crowded quarters for the crews, and that the superstructures of the ships show a number of gun mounts and ammunition bins and depth-charge racks. The ships were reconditioned at an estimated cost of $75,000.

It should be remembered that these ships are destined for the Middle East, where the Arab league is still restive, and where a peace between the Arab States and Israel has not yet been written. I ask unanimous consent to insert these articles in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

UNITED STATES HALTS SALE OF TWO ARMED SHIPS TO EGYPT—STATE DEPARTMENT TO INVESTIGATE THAT NATION'S FAILURE TO DISARM NAVY FRIGATES

(By Carl Levin)

WASHINGTON, May 3.—The State Department issued a hold order and started an investigation today of two surplus Navy frigates which were scheduled to sail momentarily for Egypt, ostensibly for passenger service under the Egyptian flag.

The Department previously had authorized the transfer of the 303-foot World War II vessels, despite a ban on sale of warships to countries in the Middle East, upon certification that they were to be demilitarized.

Today's action, it was learned, followed receipt of information that although $75,000 had been spent to recondition the two ships at the Bethlehem shipyards in Baltimore, not a single gun mount or ammunition bin has been removed.

Frigate is a Navy designation for a ship similar in size and purpose to a destroyer escort. The two in question—the *Papua* and *Tobago*—were built in 1944 and saw service during the war under lease to the British. Each carried three 3-inch guns, two 42-millimeter, and several 20-millimeter antiaircraft guns and depth charges.

The embargo, preventing departure of the ships pending investigation, was issued by the Munitions Division of the State Department to the collector of customs in Baltimore, after agents for the Egyptian buyers had refused to permit a reporter to view the frigates. The same official, John Krell, Baltimore representative of the Stockard Steamship Co., agents for the Egyptians, sent word to the shipyard that "no pictures of the ships are to be taken under any circumstances," thus defeating efforts of a news photographer to take pictures of the vessels. This was a short time before the embargo was ordered.

Despite Mr. Krell's orders, however, a reporter viewed the frigates at the Bethlehem Shipyards on Key Highway, Baltimore. He found all the gun mounts and ammunition bins intact. Only the guns had been removed. No reconversion to commercial uses had been effected. And British captains and middle-eastern crews were already on board, ready to take the ships out.

A State Department official charged with enforcement of the munitions-export ban said the hold order was issued because the Department's understanding in approving the sale was that the ships were to be demilitarized here. That, he said, implies more than simply removal of guns, which could be easily replaced.

"NEEDS LOOKING INTO"

"It certainly looks as though this needs further looking into," he said. "We wouldn't think of approving a warship for that area."

The incident developed as the State Department said it still has under consideration an application by the State of Israel for permission to buy heavy arms here to defend itself against any possible resumption of the Palestine war, in which Israel was arrayed against Egypt and the other Arab nations.

Egypt is receiving modern tanks, jet-propelled military planes, and other heavy military equipment from Great Britain pursuant to treaty arrangements. Trans-Jordan similarly is being armed by the British.

While Secretary of State Dean Acheson has said that there is no likelihood of a resumption of Arab-Jewish hostilities, the State Department has retained the ban on export of heavy arms, including warships, to that area.

DECISION ON ISRAEL DENIED

Mr. Acheson denied today a report that the State Department has decided to reject the Israeli request for assistance in buying modern arms here. He said consideration has to be given item by item, and specific requests have to be considered against the available supply, and defense requirements in the Middle East.

A spokesman for the Israeli Embassy expressed "grave concern." He said that during the 3 months since Israel approached the United States on this matter, "Arab rearmament has been moving ahead at a very rapid pace."

The two frigates, built exclusively for war purposes, were declared surplus after they were returned by the British in 1946. Subsequently they were sold to the Boston Metals Co. in Baltimore. This company asked authorization last year to sell the frigates to the Khedivial Mail Line, of Alexandria, Egypt. It certified that they were to be demilitarized and used exclusively for passenger service between the Red Sea and Indian Ocean ports, particularly for holy year pilgrims.

The Navy approved the sale, and the State Department issued the export license, after the Maritime Commission notified Assistant Secretary of the Navy John T. Koehler that the Commission had no objection.

Inquiry today revealed that the Maritime Commission vote was 4 to 1 to interpose no objection. The one dissenter, it was learned, was Commissioner Raymond S. McKeogh. He explained at the time that he saw no sense in sending a potential war vessel to the Middle East and that he also, in event that the ship actually was to be used commercially, was against transferring any vessels to foreigners to compete with the American merchant fleet.

Mr. Koehler was in Europe today and not available for comment. A naval officer assigned to control of surplus warships laughed and commented, "It looks fishy," when told today that after $75,000 worth of repairs, the frigates still have all their gun mounts and ammunition bins.

After further inquiry, however, he reported that all the disarming required by the Navy has been done. This, he said, included removal of the guns and any radio and electronic equipment not cleared for export.

NAVY SAYS SHIPS SOLD TO EGYPT ARE DISARMED—STATE DEPARTMENT RECEIVES ASSURANCE STANDARDS ON DEMILITARIZING ARE MET

WASHINGTON, May 4.—The State Department announced today that it has been assured by the Navy that two surplus 303-foot World War frigates which have been sold to an Egyptian company have been disarmed sufficiently to meet the demilitarization standards of the Navy.

The ships, preparing to sail from the Bethlehem Shipyards in Baltimore, however, were today still under the embargo which the State Department ordered yesterday on information that the frigates' gun mounts and ammunition bins are still in place after a $75,000 reconditioning of the ships.

Michael J. McDermott, State Department spokesman, said that before the frigates are permitted to sail for Egypt, where they ostensibly are to be used for commercial purposes, further steps will be taken "to ascertain whether there is material aboard these vessels which can be classified as arms, ammunition, or implements of war from the standpoint of export controls."

DISARMING RULES SET

The State Department, which has been asked by the State of Israel for aid in pur-

chasing defense arms against a possible resumption of the Arab-Israeli war, has a ban against the transfer of warships of any kind to Middle Eastern countries.

However, Navy-State Department regulations provide that a warship is demilitarized once its guns and secret electronic equipment have been removed. This much, the State Department was assured today, was done before the ships were sold to their Egyptian purchaser, the Khedivial Mail Line, of Alexandria, Egypt.

Fifty-one House Members—30 Democrats and 21 Republicans—asked Secretary of State Dean Acheson today to use his influence to stop the shipment of British arms to the Arab states.

In a letter to Mr. Acheson, the group urged him to confer with British authorities during the forthcoming Foreign Ministers' meeting in London to obtain these objectives: 1. Stop British shipment of arms until peace treaties have been made between Israel and the Arab states. 2. Joint efforts by the United States and Britain to promote such peace treaties.

CRITICISM BY ARAB LEAGUE

CAIRO, EGYPT, May 4.—Secretary General Abdel Rahman Azzam Pasha of the Arab League denounced today the proposal of 51 Members of the United States House to make aid to Arab nations conditional on peace with Israel. Arabs are "not going to be intimidated by United States Congressmen into a humiliating and unjust peace with Israel," said the secretary of the seven-nation league.

Rearming of the Arab States

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 5, 1950

Mr. TAURIELLO. Mr. Speaker, our Secretary of State, the Honorable Dean Acheson, is about to depart for Europe for the purpose of conferring with the Foreign Ministers of the nations of the North Atlantic Pact, including Mr. Bevin.

There is no doubt that the agenda for discussion will include, among other things, the problems of peace and security in the Middle East as well as the rearmament of the Arab states by Great Britain.

I think it is fitting and proper that Mr. Acheson should know what I believe to be the sentiment of a great number of the Members of the House relative to some of the problems.

It is no secret, in fact it is admitted by all concerned, that England is rearming the Arab states and particularly Egypt on an unprecedented scale, supplying them with jet planes, cannons, Sherman tanks, and battleships.

The little State of Israel, surrounded as it is by the hostile Arab countries, is naturally disturbed and is in fear for its security. It is maintained by the Department of State that there is no reason for Israel's apprehension and that all is quiet in the Middle East. However, in the light of the frank declarations of the Arab leaders that they intend to embark on a "second round" in a "war of revenge" against Israel, one finds it difficult to reconcile the complacency of Mr. Acheson with the existing reality in the Near East. The recent proceedings at the meeting of the Council of the Arab League in Cairo are cruelly in conflict with the optimistic view of the Department of State in denying arms to Israel for the defense of its borders against a possible attack. The establishment of an economic and military pact by the Arab League, the granting of an official voice to the ex-Mufti of Jerusalem—the former collaborator of Hitler—and the prevention of peace negotiations with Israel by any member of the league contradict the confidence of Mr. Acheson.

It is said that England is delivering arms to the Arabs by virtue of treaty obligations. It may well be pointed out that Great Britain is shipping military planes to Lebanon, which country is not included in those treaties.

It is not in vain that Egypt has increased its military budget from £5,000,000 last year to £50,000,000 this year.

No one can predict with absolute certainty that the threats of the Egyptian leaders will not be carried out. Certainly no one can absolutely exclude the possibility of an attack on Israel as threatened by the heads of the Arab countries. Should the conflagration of war break out against Israel it may be too late to stop it; it may even spread to other parts of the world.

The United States of America, which was the first country to give, 2 years ago, recognition to the establishment of the State of Israel, owes a moral duty to the million inhabitants of Israel and certainly to the 400,000 displaced persons who came to Israel with the encouragement and financial support of the United States, not to expose them again to slaughter; they suffered enough already.

We in the United States are engaged in military preparedness against a possible war between the West and the East, and properly so. It is the sacred duty of a nation to be completely prepared for the defense of its security and its ideals, even against possible violence from without. By the same process of reasoning why is not Israel entitled to the opportunity of complete military preparedness against a possible assault by the Arab countries in view of their constant threats.

The fair-minded people of the United States will never acquiesce, Mr. Speaker, in a policy of discrimination against the infant State of Israel relative to arms; they will not condone the pursuit of Mr. Bevin's anti-Israel policies by placing the people of Israel at the mercy of fanatical Arab leaders.

The rearming of the Arabs and the denial of arms to Israel is not the way which will lead to peace.

It is alleged that the rearmament of the Arabs is dictated by the concept of security of the Middle East against a possible attack by a third power. If that be so, why should not Israel be included in that program?

On the basis of past experience and by virtue of Israel's military record, it is not unreasonable to regard Israel as a strong ally in case of hostilities, even much more than the Arab states.

Israel is an outpost of democracy in the Middle East. It is guided by the American democratic ideals of freedom, equality, justice, and liberty for all, regardless of race or creed. Israel is a robust democracy which has left the world in no doubt as to its identity of principles with those of ours. Israel aspires to friendship with all peace-loving nations and seeks no quarrel with any country near or far. Israel derives its true democratic ideals from the ancient prophets who implanted them so deeply in the Jewish nation that they have maintained their power and freshness to this day.

Israel desires to be a good neighbor. Israel needs peace for the next 50 years to be able to absorb and rehabilitate the hundreds of thousands of the remnant of the Jewish people who are marching to its shores in search of security. Israel needs peace to develop and to consolidate its industry, agriculture, and its economic resources.

I am persuaded that if granted the opportunity Israel will serve as an example and as an inspiration to its Arab neighbors in the direction of social justice, human dignity, and brotherhood.

It is in this spirit that I address myself to our Secretary of State, the Honorable Dean Acheson, and appeal to him to beware of the anti-Israel Bevin psychosis, and not to encourage the warlike Arab leaders in their intention to push the Jews of Israel into the Mediterranean Sea. Only a militarily prepared Israel is a guaranty of peace.

Oil-Import Policy Neglects United States Safety

EXTENSION OF REMARKS
OF
HON. OMAR BURLESON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 5, 1950

Mr. BURLESON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Fort Worth Star-Telegram of April 9, 1950:

OIL IMPORT POLICY NEGLECTS UNITED STATES SAFETY

Assistant Secretary of State Thorp's testimony on oil imports before a Senate Interstate Commerce Subcommittee is cause for alarm not so much for what he said as for the official attitude it indicates. As a representative of the State Department, Mr. Thorp previously has expressed opposition to curbing imports of foreign oil into the United States, though never before in such plain and unequivocal language. And never before has it been made so plain that continuation of this flood of foreign oil will have the backing of the State Department as a matter of official policy, regardless of the harmful effects it may have upon the petroleum industry in this country and upon the vital interests of the Nation itself.

Mr. Thorp's statement in this regard is that the concerns which are pouring oil into the United States from abroad deserve and should receive the strong support of the Government. His further statement indicates that the State Department will continue its incredible attitude, in the face of conclusive evidence to the contrary, of denying that the

domestic industry is suffering any damage from having its markets taken away by these foreign-oil imports. Mr. Thorp professes to be unable, after 8 months of study, to find where the domestic industry has been injured or to see where it is threatened with serious injury in the future.

By leaving out logic and the facts of life in the oil industry and relying solely upon statistical tables of past performances, a superficially plausible case can be made out for the contention that oil imports have not caused appreciable curtailment of domestic drilling and exploratory activities. Through the end of last year the figures show no diminution in such operations. But that is due to the fact that commitments already had been made before the high tide of imports was reached, and these commitments had to be carried out. Producing companies had made their drilling appropriations, assembled acreages, and completed exploratory work, and were bound by contract and economics to proceed during that period with virtually full-scale operations.

But that is not to say that continued shutting in of domestic production as it is supplanted by foreign oil will have no effect in discouraging new drilling and exploratory operations. Obviously and inescapably, it will. There is no incentive to developing new sources of oil when upward of a million barrels of present daily oil production already has been displaced by oil from overseas. And there can be no argument that the loss of half a billion dollars a year by the domestic industry if the import rate is sustained will not impair the financial ability of producing companies to drill new wells and uncover new petroleum reserves.

Those reserves are the invaluable stock pile of a material indispensable to the Nation in case of emergency and essential to the military strength needed to deter attack upon us by an aggressor nation. Without adequate and constantly expanding reserves of oil within its own borders, the Nation would stand in deadly peril. To realize this one has only to think back to the last war, when enemy submarines cut off all supplies of oil from abroad and ranged close enough to our coast line to pinch down shipments by tanker from Gulf points to the Northeastern States.

If the absurd policy supported by Mr. Thorp had been in effect before World War I or World War II, we could have won neither of those wars. And if it remains long in effect, we not only will be inviting world war III but will be putting ourselves in a position where we certainly will lose it. One of Stalin's first moves, in launching an attack on the United States, would be to grab its sources of oil in the Middle East. With all due respect to Mr. Thorp, he is simply talking through his hat when he says that developing oil fields under the shadow of Russia's might is more in the national interest than developing our own.

The taxpayer, particularly in Texas, is likely to feel he is being entirely overlooked when Mr. Thorp asserts that the climbing rate of oil imports has caused no hurt and threatens no hurt to anyone. The Federal Government is losing hundreds of millions of dollars a year in lost profits from oil not produced—a loss which can not help but increase the burden of other taxpayers or add to the mountainous public debt. Texas, which has borne the brunt of production cut-backs necessitated by the inflow of foreign oil, now is losing petroleum tax revenues at the rate of more than $25,000,000 a year. More than Mr. Thorp's bland assurance will be required to convince the taxpayers and the numerous Texans who depend directly or indirectly upon oil for a living that a forced decline in the State's petroleum production threatens them with no damage.

Because the producers and importers of foreign oil are chiefly American companies, Mr. Thorp places the welfare of these few concerns above the welfare of the many dependent upon the domestic petroleum industry and allied businesses. To curtail the activities of these few companies, he avers, could seriously harm the national interest. This is to shut his eyes to the fact that crippling the oil industry at home can and certainly will be harmful and highly dangerous to the national interest and to national security. Mr. Thorp and his State Department colleagues who foster this hurtful and hazardous policy exemplify the saying that "there's none so blind as they who will not see."

United States Travel Industry Faces Losses Through Threats to Employee Leave

EXTENSION OF REMARKS
OF
HON. THURMAN C. CROOK
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 5, 1950

Mr. CROOK. Mr. Speaker, under unanimous consent to extend my own remarks in the RECORD, I include herewith the following news article, highlighting the threat to annual-leave revenue of every State in the Union, appearing in the current issue of the Government Standard, national weekly newspaper for Federal employees, published by the American Federation of Government Employees, and edited by Hal. J. Miller, Washington (D. C.) newspaperman, who is a member of the National Association of Travel Officials:

UNITED STATES TRAVEL INDUSTRY FACES LOSSES THROUGH THREATS TO EMPLOYEE LEAVE

The American travel industry, which is an important source of revenue to every State in the Union, is seriously concerned about threatened losses of income through the proposals to reduce Federal employee sick and annual leave.

The subject is coming up for discussion at a meeting of officers of the National Association of Travel Officials to be held this month in Chicago.

Travel authorities and writers, aware of the opposition of the many segments of the industry, such as hotels, holiday resorts, transportation facilities, tourist motels, to proposals that will imperil their sources of revenue, indicated to the Government Standard that they will want their views to be presented to Congress when leave reductions are considered.

ECONOMIC THREAT

The threat to American travel of such proposals as the bills by Senator DOUGLAS to reduce annual and sick leave was described by a prominent travel writer, Anthony F. Merrill, of 1707 Twenty-ninth Street SE., Washington 20, D. C., husband of a Federal employee, who said:

"It's going to hit every gas station, every dining spot, and every hotel in every resort area and resort route in America at $5 to $10 a lost transaction for each potential Government tourist removed from the American travel scene."

Mr. Merrill said that "the losses could run into millions in this penny-wise-pound-foolish idea."

He cited the example of a secretary who is flying to Rome for a long-deserved holiday and commented: "TWA won't welcome having her leave cut."

The detrimental effect on travel income, which is an important part of State and community revenue, follows through every phase of the travel picture.

Another example: The Virginia Skyline Corp. could hardly be expected to cheer if the leave time of the 105,000 District of Columbia, Virginia, and Maryland people who visited Shenandoah National Park last year, were to be cut.

Travel people believe that once the menace to the industry is made known that this will be communicated to Members of the Senate and House of Representatives.

SUBJECT OF STUDY

Lee J. Bossemeyer, eminent former head of the United States Travel Bureau, and currently the Washington representative of the National Association of Travel Officials, said the matter would be a subject of serious study by his organization at the Chicago conference, when Clyde Edmonson, NATO legislative chairman, will be present.

Other travel groups will be asked to make known their attitude toward reduction in American travel income by unjustified invasions of United States worker leave rights.

Mr. Merrill conveyed the views of many eminent American travel authorities when he declared that "the Douglas proposal is a backward step because the whole American trend is toward longer holidays and shorter hours."

AFGE has contended that the Federal employee leave rights are an ideal toward which all American employers are striving as technological and scientific advances reduce working hours. Uncle Sam, as the country's largest employer, has an obligation to set adequate standards of leave.

Recreation authorities contend that as the machine takes over more and more of the work of man, his working hours must of necessity be shortened in order to spread the work.

Recreation has thus grown in importance in this foremost world democracy, in order, as one authority states it, "that we should not have millions of workers dangerously killing time in complete idleness."

ADEQUATE VACATIONS

Because of their steady income the regularly employed Government worker has been able, along with similarly situated people in private industry, to enjoy adequate vacations.

This is an objective toward which all American working people justifiably strive.

We are grateful to Tony Merrill for his helpful comments on the menace to the travel industry of any reduction in Federal leave. He is the author of the popular Whittlesey House publication, Our Eastern Playgrounds, a guide to all of the State and National park and forest recreational areas in the East. He has just completed another book for the Crowell Publishing Co., The Golf Course Guide, which will accent the vacationing golfer's needs.

Tariff Rates on Imported Leather

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting circular distributed to the workers in the leather industry which is self-explanatory. I know that this information will

be of assistance to every Member of Congress who is interested in retaining full employment in our domestic industries.

YOUR STAKE IN A FAIR TARIFF DEAL: JOBS, WAGES, LIVING STANDARDS

You and 50,000 other tannery workers have a vital stake in a fair tariff deal for leather. United States tariff rates are already the lowest in the world, but they might be cut further if we do not protest vigorously. Another slash in our weak tariff and a flood of leather imports from low-wage countries with subsidized industries will threaten your job and your security, your wages, and your living standards. This is to tell you what is happening and how to protect your industry and your job.

HERE IS THE STORY OF HOW TARIFF RATES AND LEATHER IMPORTS AFFECT YOUR JOB

United States tariff rates on imported leather have been cut again and again in recent years. They are now lower than the leather tariffs of any important country.

Cheap labor in foreign countries makes it impossible for American leather to compete with foreign leather. We need tariffs to prevent low labor costs abroad from flooding our markets with low-cost leather, destroying our industry and wage levels. We need a fair tariff to give us a chance at fair competition with cheap labor in foreign countries. But, that isn't all. Tanning industries in many foreign nations have other great advantages besides far cheaper wages.

They get financial subsidies from their governments.

They have benefited from United States economic assistance.

They are protected against competition by import restrictions.

Their governments discriminate against United States tanners by raising obstacles against the export of raw hides and skins.

Does this sound one-sided and unjust? It is exactly that. Our present low tariff on leather should be raised, not lowered, as the minimum protection against unfair competition from abroad.

Present United States duties on foreign leather are the lowest of any leather-producing country in the world. They have already been cut in some cases as much as 60 percent below 1930 levels.

	Tariff act of 1930	Present rate	Tariff already cut by—
	Pct.	*Pct.*	*Pct.*
Sole, belting, and harness leathers	12½	10	20
Side upper leather (including linings)	15	12½	16⅔
Split leather	15	12½	16⅔
Calf leather	15	12½	16⅔
Cattle and calf garment leathers	20	15	25
Bar, strap, and collar leathers	20	10	50
Patent leather	15	7½	50
Pigskin fancy leather	30	15	50
Cattle and calf fancy leather	30	15	50
Chamois leather	25	15	40
Goat and kid glove and garment leather	25	10	60
Sheep and lamb glove and garment leather	25	15	40
Horse and deer glove and garment leather	25	15	40
Horse shoe leathers	10	7½	25
Goat, kid, reptile, and sheep for shoe purposes	10	10	----

WHAT'S UP NOW?

In September 1950, the United States will start tariff conferences with 17 other nations. One of the purposes of these negotiations is to make it easier for foreign countries to earn dollars by selling more in the United States. Our Government has announced the list of goods on which it may consider further tariff cuts, and every kind of leather is on that list.

If United States tariffs on leather are cut again the results will be swift and deadly because:

Shipments of leather to the United States have already been steadily increasing from countries where cheap labor, subsidies, and other Government assistance make for unfair competition.

Shipments of leather from the United States have been steadily declining. Many foreign nations have outright restrictions against the import of United States leather and they have tariff rates far higher than ours.

During the war years when the United States had restrictions and shortages, certain countries not in the war encouraged new tanneries. Plants mushroomed up in South America, India, South Africa, and elsewhere. Labor costs in these industries are a fraction of ours and the standard of living is far lower. Such new plants are trying to profit by exports and another cut in the United States tariff would be the green light for a rush of leather to this market.

In European countries, Government policies and financial assistance make it highly profitable to export to the United States. Producers have the advantage of labor costs one-third or one-fourth of the rates paid in the United States.

If the weak United States tariff protection now in effect is stripped away, there could be only one result—a tremendous increase in foreign-leather shipments to the United States. How could the United States tanning industry compete against the unfair advantages of foreign tanners and continue to pay United States wages?

AN ESSENTIAL INDUSTRY DESERVES A FAIR TARIFF DEAL

The tanning industry is essential in time of peace and of war.

It is an efficient industry; its employees know their jobs and make the best leather in the world. Without noise and publicity, the tanning industry did an outstanding job in the war. It did not get and does not now receive any Government assistance or subsidies.

This industry is not afraid of fair competition from any quarter but it cannot compete against wages that are as much as 90 percent lower, against foreign subsidies, against government monopolies and cartels abroad.

If the flood of imported leather keeps up, leather made in tanneries supported or run by foreign governments with cheap labor, what is going to happen to your job and your pay? The answer is that many Americans won't have jobs and won't be getting any pay in the tanning industry. They will be squeezed out by unfair competition and cheap foreign leather, unless you do something about it.

WHAT DOES THE TANNING INDUSTRY ASK?

This industry asks for a fair tariff deal.

United States tariff rates on leather should not be cut again when they already are lower than the tariffs of every other leather-producing country.

The time has come for other countries to start cutting tariffs and to begin matching the sacrifices we have made.

Let other countries begin to act in good faith by putting an end to trade discrimination, subsidies, embargoes, and other Government assistance to their tanning industries.

Why in the face of commercial funny-business abroad should the United States cut tariffs again to sacrifice the jobs and living standards of United States tannery employees?

If you want specific facts, take a look at the table which shows how much our tariff rates have been cut and remember how little other countries have done to match us.

Who wants foreign leather made by cheap labor to take your job away from you?

You don't, do you?

Then be sure to act at once.

YOU CAN DO THE FOLLOWING

1. You or your representatives can state the facts at the open hearings which start in Washington May 24. Write or wire, before May 10, to the Committee for Reciprocity Information, Tariff Commission Building, Washington, D. C., asking to be heard.

2. You and your fellow workers can file a statement in protest against further tariff cuts. This must be filed by May 17 with the Committee for Reciprocity Information. Ten copies are needed.

3. You can petition your Senators and Congressmen to state the facts on your behalf, to protect your job and your security.

4. You can ask your relatives and friends to help by writing to Congress so that something will be done to help you hold your job and your pay.

Biggest Story

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 5, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the appendix of the RECORD, I include the eleventh article by Mr. Frank Waldrop on the infiltration of communism in our country:

BIGGEST STORY

(By Frank C. Waldrop)

Russia in 1900 was just teetering on the edge of good times, better than it had ever known before or seen since.

Napoleon had captured Moscow in 1812 only to be defeated by General Winter, that same frost-bitten campaigner who also stopped Hitler within a camera's-eye view of the same city in 1941, early enough for the United States of America to avoid Pearl Harbor, if that had only been the will of the men in office.

But if Napoleon had been destroyed by the same vastness that made Russia so hard for Moscow itself to maintain a solid government, at least he cut open the dark curtains between Russia and the West.

In the years that followed, Russian music, art, literature, science, and industry began to sprint in pursuit of the Western World.

The natural tendency of the Russian Empire to come apart had its influence on the writers of the age, so that almost without exception they reflected notions of anarchy and "down with government." But they were great artists just the same. So were the musicians.

Russian medicine, scientific research and invention, and Russian art were all blooming.

And as the new century dawned, Russia's ancient cities began to see the rise even of a vigorous merchant and manufacturing class. These wanted no part of the dreary, endless struggles between the tribes on the steppes and the handful of aristocracy in St. Petersburg and Moscow who were still trying to weld a government under the czars.

So along with the arrival of 1900 came a series of jolting revolts against the throne and a relentless demand for parliamentary government.

The least significant and unimportant of all those scrambling to grab the powers falling from the hands of the czars were the citified believers in scientific socialism as drawn up by the crazy German, Karl Marx, and ignored by the working classes and everybody else in western Europe.

To understand how Stalin ever got control of the empire of the czars, you must always keep in mind that aside from these excited Marxists above-mentioned there were literally dozens of other revolutions cooking all the time.

There were the drives of the merchants and traders to westernize the government on legal lines. The philosophical radicals, influenced by the literature of Tolstoy, Bakunin, and others, wanted anarchy, no government at all.

The Socialists themselves were split up between those who, as today in England, thought they could get the public to vote the government into owning everything, and the Marxists, who preached that civilization itself must be devastated and a new society built on a foundation of corpses.

To this last belonged Vladimir Ilyich Ulyanov, the Lenin of this story, and to the other class of Socialists belonged his fellow townsman from Simbirsk, Alexander Kerensky.

The czar's government was badly shaken by defeat in the war with Japan (1904–05), into which it had been drawn by overextension into Asia and further agitated by the perpetual headaches of past overextension into Europe.

All very familiar, isn't it? Just like new times.

The intrigues and the commitments grew and the extensions of the never-too-understanding or efficient government finally dragged the last czar, Nicholas II, into the 1914 war that was his end.

An obscure, unheard-of Serbian named Gavril Princip pulled the trigger that started the horror. His name comes into this story again.

But on June 28, 1914, Princip was just a crazy student who shot the Austrian archduke, Francis Ferdinand, who had come down to Belgrade in Serbia, now Yugoslavia.

Three years later, every important nation of the world was deep in the blood-letting and the czar's government was so rattled by defeat and disorganization that it just quit.

Alexander Kerensky, from Simbirsk, was head of the timid wing of the Socialist movement in Russia. It was timid, but it was the biggest of all the Socialist factions.

So in typical fashion the hard-nosed Marxist element declared themselves the Bolsheviks, Russian for "the big party."

The real majority they labeled "Menshevik," for little.

To follow this international murder mystery on, you have to keep all these odd labels straight. And so remember that wherever you read here or elsewhere the words "Bolsheviks," "Marxists," and "Communists," they all mean the same people.

Anarchists are people who want to destroy all government by force and violence so the world can run itself—by what?—and at the opposite end are the Marxists, who want to destroy all other governments by force and violence so they can run the world, with remorseless and brutal discipline. In between are all shades and forms of government.

British Policy in Palestine

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 5, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Dr. Frank Kingdon from the New York Post of May 2, 1950:

TO BE FRANK
(By Dr. Frank Kingdon)

The ways of the British Foreign Office are always a wonder to watch in much the same was as it is fascinating to see a wily real-estate operator acquire extra lots by the use of dummies to conceal his own interest. Fascinating, but not endearing.

The dummy in the present case is called Abdullah, an intriguing little chieftain who managed to get control of a country containing about 350,000 wandering Bedouins which the kindly Foreign Office equipped with a well-trained fighting force called the Arab Legion. The pashas commanding this army were British, on the British Army pay roll, up to and including the onomatopoetic Glubb Pasha. In the books of the Foreign Office, the Bedouins were nothing, Glubb was a desert expert, the Arab Legion was a valuable frontier force, and Abdullah was a king and no people know better than the British how useful a king can be, provided he takes guidance with docility.

The real estate for which the Foreign Office had a hankering was called Palestine. The obstacle was an obstinate people who refused to hand over the deed. Instead, they drove out the British bailiffs and then beat back the neighbors the British set on them. The only force in the neighborhood left in shape to make life uncomfortable for the people who would not surrender was the Arab Legion.

It moved across the Jordan and possessed some of the land, including the Old City of Jerusalem. The Foreign Office still had the idea it might drive the embattled defenders of their farms and cities into the Mediterranean. When this dream was exploded, Abdullah, under orders, called for an armistice. His idea was to draw a long breath and recuperate for the final drive to the sea.

His only difficulty turned out to be that the people of the land got their breath first, and when he renewed his attack, they struck with such force that he knew he could not even hold the Old City. Seeing his peril, the Foreign Office jumped to his aid with a pious appeal to the United Nations to intervene, and fighting stopped with the little chieftain still holding both sides of the Jordan and still in Jerusalem.

The Foreign Office now was in a quandary. It clung to the idea of controlling Palestine, but in the glare of the United Nations it could not be quite crass enough to tell Abdullah to announce that he would at once annex what he had occupied by force. So it instructed him to be patient, until the sagacity of Whitehall had figured a more seemingly respectable procedure. They finally evolved the impeccable device of a referendum which, strange to relate, resulted in the people of the land watched by his army asking to be included in his kingdom. With this vote to support him, he annexed the land he occupied.

This done, the Foreign Office approved his action and accorded him full recognition as king, undoubtedly by the grace of God. At the same time, having their puppet well established on the borders of Israel and in possession of the Old City, they extended full recognition to the Government of Israel also.

The net outcome is that the Foreign Office is back in Palestine with an army it controls on Israel's most exposed border and dedicated to assuring that Israel shall not enlarge its territory. Not having been able to prevent Israel from coming to birth, the Foreign Office has compromised by keeping it within range of its guns.

Archie E. McCrea, 1880-1950

EXTENSION OF REMARKS
OF
HON. ALBERT J. ENGEL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, May 5, 1950

Mr. ENGEL of Michigan. Mr. Speaker, I received a copy of the Muskegon (Mich.) Chronicle yesterday. On the front page was a large picture of an old friend of mine I had known, loved, and respected for many years. At the bottom of the picture were these lines, "Archie E. McCrea, 1880–1950." That is all. Just the name of an old friend and two dates. I was shocked. I had a feeling of loss and sorrow, a feeling that can come only to one who had lost a very dear friend, an old friend who has meant much to him. I looked at that picture again and at the dates, 1880–1950, nearly 70 years, 40 years of which were spent editing a newspaper, the Muskegon Chronicle, a paper which he had built up with the help of those associated with him, from a small daily into one of the finest and best newspapers in the State and Nation. I thought of those many years of service, the good he had done, and the place he had filled in his community, State, and Nation. I thought of the great contribution he had made to his country as a citizen and to his God and his church as a great churchman. I had seen him just 2 weeks ago, a strong, powerful man lying there weak and helpless and I knew that the end was near. I knew that he would meet his Maker whom he had served all his life unafraid and with that confidence that comes after a life of Christian service. He had lived his life and he knew that he would soon hear the words, "Well done thou good and faithful servant, enter thou into the joy of thy Lord." As I talked to him for the last time, his wife stood by his side as she had stood through 43 years of married life. "Until death do us part" meant something to this couple who were reaching the end of a long and happy life. The memory of those years will help her bear her burden and I extend to her and her family my heartfelt sympathy in their loss.

Mr. Speaker, under unanimous consent to extend my remarks, I include therein an article from the Muskegon Chronicle of which he was editor for 40 years, written by those who worked with him and loved him:

Archie Elbert McCrea, beloved editor of the Chronicle for 40 years, and known throughout the Nation as a leading layman of the Methodist Church, died at his home, 2471 Lake Shore Drive, at 8:45 a. m. today. He was 69 years old.

One of Michigan's foremost newspaper editors, and a towering personality in this community, Mr. McCrea had been seriously ill since early December. At that time he suffered from virus pneumonia and entered Hackley Hospital. He returned to his home just before Christmas only to suffer a serious heart involvement. His condition has been critical since, and the end came today within

a few minutes after he suffered a second coronary attack. Mrs. McCrea was at his side.

Tears flowed at the Chronicle office as news of his death was received, especially from those who had been associated with Mr. McCrea for years. The flag at the Chronicle was placed at half staff.

Bruce McCrea had visited his father yesterday and returned to Lansing last evening. Ralph S. McCrea, a brother, is in the South. He was notified of the death and is returning immediately.

No other personality had a greater influence on the growth and development of Greater Muskegon than Mr. McCrea during his more than 45 years of service with the Chronicle, 40 of them as managing editor and editor. He had served in the latter capacity for the last 14 years.

His intense interest and keen insight into the fields of government, education, youth, church, and charitable activities have left deep imprints on Greater Muskegon's civic and cultural life.

No man in Greater Muskegon ever gave more freely of his time and effort to his community than Mr. McCrea. Several years ago Mr. McCrea suffered a heart attack. Doctors warned that he must give up his outside activities. He agreed to resign from all but two—the presidency of the Hackley Hospital board of trustees and the teaching of his Sunday school class at the Lakeside Methodist Church.

He did so, but only briefly. During the last 2 years he took on even more duties than before. The load proved too great for him, as his family and friends repeatedly warned. But that is the way Mr. McCrea wanted it.

Almost until the minute of his death today he had looked forward to returning to his duties at the Chronicle. After all, the Muskegon Chronicle had been Mr. McCrea's life. He had seen it grow from a small daily to one of Michigan's leading newspapers.

Mr. McCrea was a native of Newaygo and until his death he retained membership in the Fremont Chamber of Commerce. A graduate of the Fremont High School in 1901, he taught in rural schools for 2 years before coming to Muskegon, where he took graduate work at the Muskegon High School and Hackley Manual Training from 1902 to 1904.

On the completion of his schooling he began his long career with the Chronicle, a career which led to his being considered one of this community's outstanding citizens. The newspapers of 1904—there were three in Muskegon at that time—were far removed from the papers of today. The city itself was only a fraction of its present size. It was in a humble position that Mr. McCrea started to work for the Chronicle. He was a solicitor of rural subscriptions and his tasks required that he travel the county's roads and lanes on his bicycle. But before he could even start in the newspaper business he was forced to borrow 50 cents from E. B. Dana, then publisher of the Chronicle, when he arrived for work the first time, July 6, 1904. He needed the money for repairs to his bicycle.

Mr. McCrea had known for some time that newspaper work was to be his chosen field, but he had never thought his start was to be as a subscription solicitor. He had hoped for something more where he would be able to report the day's happenings and their influences on the lives of residents of this area.

The rural subscription duties did not continue long. By the time the first snows came in December 1904 he was called into the office for the start of a succession of advances in the newspaper profession, attaining after 32 years the position of editor of the Chronicle. As Mr. McCrea continued his rise in the business of presenting the day's news and interpreting it, greater Muskegon was growing. The conversion of Muskegon to an industrial center after the decline of the lumber business and later its development as the arsenal of democracy in World War II left a deep impression on the editor of the Chronicle.

"On the life of no other single individual, I presume, has the life of the Greater Muskegon community impacted itself more persistently than on my own," he once said.

What he did not add was that his influence and foresight made a strong impact on the community.

His first job in the office was as a proofreader, but it was only a short time until there was a vacancy on the staff and, in 1905, Mr. McCrea became a reporter. After being the local reporter—covering the city hall, county building, social and fraternal functions and even football—he was named city editor in 1908.

He had only an inexperienced staff at this time, but he managed to produce a highly satisfactory paper. Reporters came and went, some going to larger cities where they made enviable reputations. Others were highly successful in other fields. Among his former reporters were John C. Beaukema, secretary-manager of the chamber of commerce, the late Harris E. Galpin and William G. Turner, both of whom became outstanding attorneys.

In 1911 Mr. McCrea was named managing editor, a post he held for 25 years. He was named editor in 1936. Twice during his years of directing policies of the Chronicle, Mr. McCrea saw this Nation weather perilous times in the World Wars.

During World War I he won the acclaim of fellow American journalists for his editorials. In 1918 he was given a certificate for special excellence by Editor and Publisher, trade paper of the journalistic world, for his editorial Back Them Up in support of the Fourth Liberty Bond drive.

Shortly after World War I there was a crisis in Muskegon municipal government and the city seemed headed for bankruptcy. Mr. McCrea was chosen as a member of the charter commission which in 1920 presented the proposal for the commission-manager form of government to replace the old ward system, which was one of the main reasons for Muskegon's distressed position. His background of municipal affairs made him a valuable member of the committee which outlined a new form of government adopted by the voters in 1919 and which has led to great improvements in governmental administration.

Mr. McCrea served on the Muskegon Board of Education from 1928 to 1930.

His experience and background in municipal and school affairs made him a valued member of the Muskegon County Tax Study Committee, which reported its recommendations last year after more than a year's study of all branches of Government.

One of the pioneers in YMCA work here, Mr. McCrea served as one of its directors since its organization in 1916. He was president from 1918 to 1928 and was a member of the national council since 1926. He was chairman of the committee on public affairs from 1936 to 1945 and a member of the international board.

His interest in journalism extended beyond his newspaper work, which for the last 14 years consisted chiefly of editorial writing and directing of editorial policy. He was a member of the advisory board of the University of Michigan journalism school, a contributor to the Michigan Christian Advocate, and a member of the board of publications of the Methodist Church. He was also a member of the American Society of Newspaper Editors.

He was active in West Michigan Tourist and Resort Association, having served as a director from 1925 to 1944 and as a vice president from 1926 to 1944. He was a member of the board of trustees of Hackley Hospital and served as its president. He also was a member of the Kiwanis Club, honored by its "Flowers for the Living" tribute in 1948.

Mr. McCrea in 1944 was named to the original recreation board in Muskegon, and McCrea Field is named in his honor. He was appointed in 1947 to the board of directors of the United Health and Welfare Fund of Michigan. In 1940 he was named vice president of the chamber of commerce and was appointed to the committee on national defense. It was that year he was first mentioned in Who's Who and has remained listed since.

His life and interests left a distinctive good effect on Muskegon's civic and cultural life, but he always expressed gratitude for all that the community had given him.

He married Eudora Hope Wells here September 3, 1907. He leaves, in addition to Mrs. McCrea, two sons, Malcolm R., a member of the staff of the Saginaw News; Bruce D., of the Lansing State Journal staff; a daughter, Mrs. E. E. Cowles, of Burr Oak; four brothers, Ray, Ralph S., and Frank, of Muskegon, and Fred, of Grand Haven; a sister, Effie McCrea, of Muskegon; and five grandchildren.

NATIONAL RECOGNITION AWARDED MR. MCCREA FOR OUTSTANDING METHODIST CHURCH WORK

No Methodist layman in Michigan has done more for his parish church or his denomination than Archie E. McCrea.

Born into a Seventh-Day Adventist family near Fremont, he became a Methodist more than 40 years ago when he joined the Lakeside Methodist Church and started on a career of active Christian service.

This career has taken him from his home church into district, State, and National service, not only for the church but also for the Young Men's Christian Association and for Albion College, a Methodist institution.

Paralleling an outstanding succession of more than four decades of service in his profession and to his community, has been his record in Christian action.

He served his own church as Sunday school superintendent for 25 years, and through all the years as a teacher and leader of young people's classes and youth groups until illness prevented.

Since 1907 his name and that of Lakeside Methodist Church have been synonymous. Most of these years he was a member of its official board, a leader of its brotherhood and its official lay delegate to annual Michigan conferences.

Five years after he joined the church, Mr. McCrea's influence in church circles began to spread through the County Sunday School Association, now the educational division of the County Council of Churches.

From Lakeside church lay leader, he became Michigan conference lay leader, a member of the general board of lay activities and Michigan conference lay delegate to three quadrennial general conferences of the Methodist Church in 1940, 1944, and 1948. He was a member of the committee on episcopacy which recommended the appointment of new bishops at the 1948 general conference, and on other committees.

He was a trustee of the Michigan Methodist Foundation, chairman of the Michigan Conference Commission on World Service and Finance and, in 1949, on the social-action committee of the Michigan Council of Churches. He also was on the conference policy committee.

The latest, and one of the outstanding tasks Mr. McCrea shouldered for the church was the Michigan conference chairmanship of the Albion College advancement program. His goal was to lead the drive to raise $400,000 from western Michigan churches for the college in the fall of 1949 toward a $5,000,000 endowment fund.

In June 1941, Albion College conferred upon Mr. McCrea the honorary degree of L. L. D., Doctor of Learned Laws. His three children are graduates of Albion, but one of the few regrets of his life had been that he did not have the opportunity to attend Albion.

Soon after his zeal for church work carried him into wider and wider fields, he became identified with the Greater Muskegon Young Men's Christian Association. He was a charter signer of its constitution in November 1916, was elected to its first board of directors and served continuously since.

Reelected to the board for another 3-year term in December 1949, his name appeared on every ballot cast.

He was president of the local YM board for 11 years from 1919 to 1930, during which time he led the board through its $425,000 campaign for a building fund in 1925. In 1920 Mr. McCrea, almost single-handedly, kept the association alive when financial difficulties threatened its existence.

He was a member of the executive committee of the building campaign and of the building committee. He has served as chairman of almost every local Y committee.

As in his church work, his greatest interest outside his home and profession in recent years has been in national and world services.

For 30 years he was a member of the Michigan State Y committee, and recently was chairman of its World Youth Fund and world service committees.

He was a member of the national council of the Y for 25 years, chairman of the national committee on public affairs for 10 years, and 4 years chairman of its committee on membership, and a national vice president in 1946.

When honored by the Lakeside Church in 1941, he said:

'This church owes me nothing; it has been my inspiration and I owe everything to the church."

This expressed his sincere conviction on his relationship to the church and the YMCA as an expression of Christianity in action.

What To Do in a Cold War

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 4, 1950

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at the twentieth annual dinner of the Railway Business Women's Association, Cleveland chapter, held at the Hotel Cleveland, Cleveland, April 29, 1950:

The rift between the Communist world and the free world grows wider day by day. The tensions are increasing alarmingly. As the Soviets move from one provocative act to another, there is no blinking the fact that our relations with Russia are being strained toward the breaking point. My colleague, Congressman MCCORMACK, of Massachusetts, went so far, after our plane was shot down over the Baltic Sea, as to demand that we break off diplomatic relations.

Secretary of State Acheson expressed his belief in a press conference on April 21 that the world situation was serious and tense. He did not believe, however, that it is heading into an armed conflict at this time. Whether or not it does depends, of course, almost entirely upon the Russians. As President Truman said in his address to the American Society of Newspaper Editors April 20, "You and I know that the United States is wholly dedicated to the cause of peace. We have no purpose of going to war except in defense of freedom." The Russians, on the other hand, will resort to war whenever they deem it necessary to further their imperialistic ambitions. Direct aggression does not seem necessary at the present moment, since they are succeeding so well with indirect aggression. Witness Czechoslovakia and China.

How then shall we explain their growing recklessness? Not only have they shot down one of our unarmed planes, they are behind the threatened May march on western Berlin; they have demanded withdrawal of our troops from Trieste; they have demanded that Turkey take them into the control of the Dardanelles; they have inspired the attempt to prevent shipments of arms from reaching western European nations. I incline to the belief that these are simply more moves in the cold war—the period, as John Foster Dulles calls it in his new book, War or Peace, of no war, no peace—not preliminaries to a hot war. I believe these harassments are intended to soften us up, preliminary, perhaps, to a diplomatic move for new negotiations in which the Soviets might expect concessions from a frightened Western World.

This very uncertainty about the meaning of Russian moves is one of the chief objectives of the Kremlin's cold-war strategy. All the political prophets agree that we must expect more and more provocative moves, more saber rattling, and that we will need strong nerves and clear heads to avoid hasty and ill-considered action.

Which brings me to the question I should like to discuss with you tonight: "What To Do in a Cold War."

Secretary of State Acheson touched upon that question in his address to the American Society of Newspaper Editors on April 22. It was understood in Washington that his address was considered by the Department of State to be one of his most important efforts. Mr. Acheson did not minimize the seriousness of the crisis confronting us. "Make no mistake about it," he said, "we are faced with a challenge and a threat to the very basis of our civilization and to the very safety of the free world, the only kind of world in which that civilization can exist."

Among the six lines of action he proposed to meet that challenge and that threat he properly placed first "the demonstration that our own faith in freedom is a burning and a fighting faith. If we are clear about this," he continued, "if we are full of passion about this, then we have in our hearts and minds the most dynamic and revolutionary concept in human history, and one which properly strikes terror to every dictator, to every tyrant who would attempt to regiment and depress men anywhere."

What is this freedom, in which we must have a burning and a fighting faith? I must confess that it seems to me that Mr. Acheson too much restricts the concept of freedom. He seems to limit it to "freedom of the mind and spirit"; in another place he speaks of the "exercise of the freedom of the human mind." In another address, delivered on March 16 at the University of California, Mr. Acheson gave indications that he understands freedom in a fuller sense. Discussing the philosophy of a free society he said, "The free society values the individual as an end in himself. We can see no moral compromise with the contrary thesis of international communism. That the dignity of the human individual is of no importance as against the interest of the state." Here the Secretary touches upon something that is more fundamental than freedom to our way of life, the dignity and rights of the individual as a person. It is because he possesses that dignity that a man has a right to freedom. Over against the free society based on the inalienable rights of the human person, among which is freedom, Mr. Acheson rightly places the "police state with all that that implies: a regimentation of the worker that is hardly distinguishable from slave labor; a loss to society of those things which appear to us to make life worth living; a denial of the fundamental truths embodied in all the great religions of the world." Mr. Acheson recognizes that "there is a moral issue of the clearest nature." It is only when we understand clearly that a moral issue lies at the bottom of today's crisis that we can hope to summon up the power to confront and conquer our adversaries.

We need also to interpret and to explore the full meaning of that freedom which according to Mr. Acheson, should inspire us. Although it is only one aspect of democracy, freedom is often used to stand for democracy as we Americans know it. Both Secretary Acheson and President Truman frequently do so. It would be better, I think, to speak of the free state as opposed to the police state. No one has expressed the essence of the free state better than did General Marshall when he was Secretary of State. At the meeting of the Council of Foreign Ministers at Moscow he declared: "We believe that human beings have certain inalienable rights—that is, rights which may not be given or taken away. They include the right of every individual to develop his mind and his soul in the ways of his own choice, free of fear and coercion—provided only that he does not interfere with the rights of others. To us a society is not democratic if men who respect the rights of their fellow men are not free to express their own beliefs and convictions without fear that they may be snatched away from their home or family."

Several years ago, the Federal Council of Churches, in a public statement, deplored the fact that there was not at the time any impressive and decisive alinement of the moral and spiritual forces of the world against communism. Neither is there any today. The council urged that our Nation "stand plainly for something so simple that all men can understand, and so clearly right that all men of good will must agree." That goal, the council said, "is a world of free societies wherein all men as children of God are recognized to have certain basic rights including liberty to hold and change beliefs and practices according to reason and conscience, freedom to differ even from their own government, and immunity from persecution or coercion on account of personal, spiritual, and intellectual beliefs."

This, of course, is the traditional political doctrine of American democracy, and it is that in which I presume Mr. Acheson wants us to have a burning and a fighting faith. It is even more important, it seems to me, that we have a living faith—a faith in these precious principles by which we live each day of our lives. In what I consider the most impressive and practical passage of his April 22 address, Mr. Acheson declared: "Today we all represent the United States. Everything that happens in this country can be flashed in a second to the uttermost reaches of the world. Today, in a very real sense, the United States represents itself to the world. The world hears speeches which are made in the Congress. The world hears what is said over our radio. The world reads what is said in our press. If there are acts or words of violence, discrimination, and irresponsibility, the world sees and hears them. Everything we do or say enters into the picture of America which is seen abroad."

There is much talk of enlarging the operations of the Voice of America. But already, as the Secretary says, "America speaks with a thousand voices," and often our deeds

speak louder than our words. And it is our deeds at home which do much to defeat the words which we beam abroad. We profess to be the leaders of the free world, but we give the impression to foreigners that by freedom we mean license. Some years ago, a Canadian observer thus expressed the foreigner's reaction to our conduct:

"Assuming that the United States will use its leadership for the benefit of the world, there still remains the question of American morality. This will overshadow every other question, because the paramount issue of humanity in our time is a moral, not a political or economic one. When the Republic was founded it stood, over and above all purely economic and selfish ambitions, for the freedom of the individual under God. The principles of American democracy, as it began were inseparable from a deep religious conviction, and from an individual life of virtue. The most dangerous thing that has happened to American life in the last several generations, and probably the most profound thing, is the attack on these original ideals. The paramount question is not whether the American people can solve the political and economic problems of the world, but whether they can solve the problems of their own life."

No one would deny that our private and public morality has declined even further since that was written. Juvenile delinquency is on the increase, family life is threatened, organized crime is rampant, public entertainment becomes daily more licentious, and our public entertainers live public lives of immorality; religious feuding grows in bitterness; intolerance mounts rapidly.

President Truman said to the newspaper editors: "We must make ourselves known as we really are—not as Communist propaganda pictures us." I think we would all admit that if we took him literally, we would hardly be 100 percent examples of the democratic ideal. By our conduct we must give no color of truth to the Communist charge that we are decadent. Let us try to make ourselves what we should be. Then the Voice of America will carry conviction to all the peoples of the earth.

In that task, if I may make bold to say so, the women of America have an important, even decisive part to play. You can clean up Hollywood and its sordid productions; you can demand that the unholy alliance between criminals and politicians be dissolved; you can fight the intolerance that belies our professions of democratic equality; you can demand that the religious groups who say they work for world peace first make peace among themselves.

So many people ask: What can I as an individual do in the cold war? Here is the answer: Help make democracy work at home so that it will win all over the world.

Electricity and the Public Interest

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Friday, May 5 (legislative day of Wednesday, March 29), 1950

Mr. KEFAUVER. Mr. President, it is a pleasure to me to offer a splendid address by Hon. Gordon Clapp to be included in the RECORD. Mr. Clapp, as Chairman of the Board of the Tennessee Valley Authority, delivered this speech before the annual meeting of the National Rural Electric Cooperative Association in Chicago in March 1950. The fine comments made by Mr. Clapp on public benefits from electric power plants are certainly worthy of being called to the attention of the general public.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ELECTRICITY AND THE PUBLIC INTEREST

(Address by Gordon R. Clapp, Chairman of the Board, Tennessee Valley Authority, annual meeting of the National Rural Electric Cooperative Association, Chicago, Ill., March 7, 1950)

Private corporations generate and sell four-fifths—80 percent—of all the electric power used in the United States. The other one-fifth is supplied by public plants and systems owned by the Federal and local governments and private consumer-cooperative corporations.

The electricity business, whoever owns and operates it, is a public business. And it has been so regarded by Americans for many, many years. This idea is not new, foreign, or alien; it is as native to this land as corn bread; it is a more ancient American tradition than the ice-cream cone. The same can be said for public ownership of electric plants. It has been a part of the American pattern from the beginning of the industry. By the end of 1882, the more or less accepted date of birth of the industry, there were four publicly owned electric systems. From that time on publicly and privately owned systems have been a characteristic feature of the American economy.

Private corporations engaged in the electric business enjoy privileges granted by the public. They use the public streets and roads as right-of-way for poles, lines, and underground circuits; they are permitted to exercise the sovereign right of eminent domain to secure land and right-of-way for their plants and facilities; because of the nature of their function they occupy the position of veritable monopolies in the areas they serve; laws are passed to assure them a reasonable level of earnings. Now, of course, none of these privileges or prerogatives is granted by the public to electric corporations as a mark of favor. They are granted in order that the companies as a vehicle for prudent investment may do an efficient job of public service.

The operation of an electric system is a managerial job. The managers can be either private or public managers, as the public elects. But whether managers are hired by a public agency or a private corporation, the public has a right to expect them to perform a true public function.

If the private utilities satisfy the public objectives of providing low-cost electricity in abundance, they have a good chance of staying in the business. But if they fail the public—consumers generally, and especially the farmers—then the private managers should not be surprised if they are fired by the consumers and replaced by public managers. When private utilities do a good job, as many of them do, there is little public demand for dismissing the private companies as the public's agent.

The public character of electric service is dictated by the very nature and function of electricity. Electricity is not just another commercial product, to be placed on the commodity market at the highest price it will bring. Electricity is energy, a basic necessity of community and national life, an absolute requirement for minimum national strength and security. Every community is entitled to an adequate supply at reasonable rates. It is one of the important requirements for industrial development. I do not need to tell this audience how important it is for the rural life of the Nation, both as an essential of modern, comfortable living and as a tireless "hired hand" to perform farm tasks more easily and more profitably.

These facts are elementary. But a persistent segment of the privately owned power industry is attempting to make the American public forget the history and purpose of the electric business. There are spokesmen for private power interests who seem to have hypnotized themselves into thinking they are engaged in a business as private as selling automobiles, groceries, or shoes. So every time the public concerns itself with the control or expansion or ownership of electric facilities, we have outcries of "socialism," or "communism," or "totalitarianism." This noisy campaign is led by hired mouthpieces of that part of the private-utility industry that wants to hold its place of special privilege by a battle of words instead of by a record of progressive public service.

Some of these spokesmen try to be very subtle. For example, you have probably heard this one: "The electric industry is now in the front-line trenches fighting the battle of free enterprise." By this stale metaphor they hope to scare the businessman on Main Street into the belief that the private utility and real private enterprise people are partners in a big fight. Ask your business friends on Main Street how many of them are guaranteed a protected market and permitted to exercise the right of eminent domain.

What happens to the ownership of the utility industry has very little to do with the real free enterprise of this country. But the quality of management and the policies and practices utility management pursues have a lot to do with real free enterprise. The availability of more and more electricity at lower and lower rates has everything to do with the growth and greater freedom of American enterprise in thousands of rural communities, towns, and cities.

Then there is the less subtle and more transparent device used by one of the highest paid utility lobbyists in the business. In a fancy hand-out attacking the TVA's proposed to build another steam plant, this man said:

"If the Federal Government can assume the obligation to meet the full needs of population for one commercial product—note well the words 'commercial product'—then it can assume a similar obligation for other products. Thus, the way would be opened for state socialism."

Electricity as a commodity—a "commercial product"—that seems like a quaint idea to me. When you press the button in your dairy barn to operate the milking machine or the separator the operation is quite different from purchasing nylons for your wife or daughter across the counter of the store of your choice. If the nylons cost more than you want to pay you will probably buy something cheaper or go to another store or go without. Electricity is energy and service—and the owner of the electric facilities that supply the energy to your milking machine, as a practical matter, controls the only counter you can go to. And you can't let your cows wait while you bargain about the electricity.

* * * * *

In the development of the river, TVA was directed by the TVA Act to control its flow primarily for the purposes of promoting navigation and controlling floods and to produce, transmit, and sell power so far as may be consistent with such purposes. It was this and other power provisions of the act which were most violently debated in the 1920's and early thirties as the principles finally incorporated in the act were hammered out. There were the usual contentions on the part of private utility spokesmen. First, they contended that the Government should not build projects which would generate power, claiming that this would simply add an unsalable surplus of

electricity in a region already adequately supplied. (The facts I shall come to in a moment make that claim look ridiculous today.) Second, they contended that if the Government did build generating plants, it should not build transmission lines; instead, they said, the private utilities could be persuaded to purchase the power at the bus bar for distribution over their lines—and at their existing high rates.

This offer did not impress the people of the Tennessee Valley; they already had a demonstration of the idea of selling at the bus bar. At Wilson Dam, built by the Government at Muscle Shoals under the National Defense Act of 1916, the power had been sold at the bus bar for several years to a private utility. The power generated at Wilson Dam was seasonal, interruptible power, dependent upon the ups and downs of an uncontrolled stream flow. The Government had no outlet for the power except to the adjacent private company. So the power was sold for what the company was willing to pay—an average of only 2 mills a kilowatt-hour. A few miles from the bus bar the customers of this utility paid several cents a kilowatt-hour.

The people, the Congress, and the President were not persuaded that this pattern of sale at the bus bar should be applied to the whole Tennessee Valley. They went ahead and incorporated provisions in the TVA Act which spelled out in detail the public character of electric service. The act authorized the construction of transmission lines, thereby opening the way to widespread marketing of power rather than reliance upon one or two large monopoly transmitters and distributors. It provided, further, that the power facilities as distinguished from the flood-control and navigation facilities, were to be self-supporting and self-liquidating. And I can add right here that they are that, and more.

But the Congress did not stop there; it went on to recognize the vital role which power could play in the general economic development of the region. It provided that "the projects herein shall be considered primarily as for the benefit of the people of the section as a whole and particularly the domestic and rural consumers to whom power can economically be made available." It authorized and directed TVA to "make studies, experiments, and determinations to promote the wider and better use of electric power for agricultural and domestic use, or for small or local industries." It declared TVA "may cooperate with State governments, or their subdivisions or agencies, with educational or research institutions, and with cooperatives and other organizations, in the application of electric power to the fuller and better-balanced development of the resources of the region."

And finally, it made certain that the power developed by public investment on public streams should get into the hands of the people themselves. It directed that TVA in its sales of power should "give preference to States, counties, municipalities, and cooperative organizations of citizens and farmers, not organized or doing business for profit, but primarily for the purpose of supplying electricity to its own citizens or members." (Today, 61 percent of TVA's electricity goes to these preferred customers, including other Federal agencies, such as the Atomic Energy Commission.)

• • • • •

The people of the valley region today use in their homes more than four and one-half times as much electricity as they did in 1933—an average of 2,873 kilowatt-hours per residential consumer in 1949—and about 70 percent more than the average residential consumer in the United States. At the same time, they paid a little over 1.5 cents per kilowatt-hour, or just a little over half as much as the average cost for electric se. in the homes of the United States.

• • • • •

Since the end of the war rural el trification has been able to hit its full stride. At the end of 1949, there were more than 461,000 rural consumers served in the Tennessee Valley region. The number of farms served was more than 320,000, or more than 70 percent of all farms in the region; compare this with the 15,000 farms which had electric service in 1933.

Last year alone, electric service was made available to 75,000 farms through the construction by cooperative and municipal systems of 17,000 miles of rural line.

The farms in the area used 445,000,000 kilowatt-hours of electricity last year, as compared with 112,000,000 kilowatt-hours in 1945. In 1933, before TVA, they used only 9,000,000 kilowatt-hours.

More than two-thirds of the farms served have received initial service since June 30, 1945.

Cooperative associations distributed TVA power to about 363,000 consumers.

Naturally, the Tennessee Valley is proud of this record of progress in putting electricity to work. Credit for this result goes beyond the TVA—it goes to the hard-headed businessmen who head the operations of the municipal and cooperative systems and the consumers who elect them. A major share of the credit must go to those Senators and Congressmen, led by George Norris of Nebraska, and inspired by the vision and leadership of President Roosevelt, who wrote into the TVA Act the provisions which governed the production, sale, and distribution of power. And, above all, Congress and the President have consistently added to the growing and profitable public investment in the system which puts these policies into practice for the benefit of the region and for the strength and security of the Nation.

There are several features in the experience of the Tennessee Valley which may deserve to be examined by people in other parts of the country who face generally similar problems.

One of these is the division of responsibility between TVA, which generates and transmits power and sells it wholesale at the city or cooperative gate (and to other Federal projects, several large industrial plants, and to utilities), and the municipal and cooperative electric systems, which buy the power under wholesale power contracts with TVA and distribute it to the ultimate consumer.

TVA carries on the part of the business in which efficiency and economy can be promoted by a large-scale integrated operation. Operation of the TVA system must meet the primary purposes of navigation and flood control as well as power. This part of the job requires engineering skill and knowledge of the complexities of relating hydro generation to a multipurpose water-control system and large auxiliary steam plants. TVA produces power in an integrated system of 28 dams, reservoirs, and powerhouses, and several large steam-electric generating stations (425,000 kilowatts of steam capacity in the total of more than 2,700,000 kilowatts; 375,000 kilowatts of additional steam power is under construction at the New Johnsonville steam plant). Generation of power from this large network is the part of the job with which the ultimate consumer has least direct contact.

But the distribution of electricity, where it directly touches the lives of the people who use it, is a direct concern of the consumers. In the Tennessee Valley this part of the job is in the hands of the locally owned and operated systems. Their officials set the policies and make the decisions within the framework of their agreement with the TVA. Shall surplus revenues be used to pay off indebtedness, for expansion of the system, or a reduction in rates? Down which highway will the next new rural lines go? What steps shall be taken to build, load, or acquaint new rural consumers with the multiple uses of electricity on the farm? These are questions that are decided, not by some remote higher up in a Federal office or a private utility headquarters, but by local power boards and system managers who are in daily contact with the people they serve and for whom they work.

This clear divorcement between wholesale generation and transmission operations and retail distribution performs another valuable function. It shows very clearly where the hopes for low electricity rates must be realized. For the first time on a large scale, the experience in the Tennessee Valley has revealed facts about the relationship between the cost of producing and transmitting power and the price paid by the farmer or the householder at the end of the line. Here the separate costs are clearly set forth. The TVA sells power at wholesale rates that compare favorably with, but are not much lower than, wholesale rates of some utilities; they are within the range of the costs of generating power in modern plants of private utilities. In 1949, the average rate paid by the 145 municipal and cooperative systems, that is, the wholesale rate, was 4.29 mills; the average for the 50 cooperatives was 5.15 mills. These rates paid to the TVA produce ample revenues to cover all the costs of producing and transmitting the power, and more besides. In the last fiscal year, TVA's net operating revenues of $21,500,000 represented a 5-percent return on its average power investment of $430,000,000.

The municipal and cooperative systems distribute TVA power at resale rates among the lowest in the Nation. They too are successful financially. In the last fiscal year, with revenues of $70,000,000, they had earnings of $14,000,000. They could have paid TVA 2 mills more per kilowatt-hour for wholesale power and still have cleared more than a million dollars—after all costs, including depreciation, and after interest on long-term debt.

Now these figures mean one thing above everything else. They mean that the low rates in the TVA region are not due primarily to low generating and transmitting costs for power, important though low wholesale rates may be financially to a municipal or cooperative system. No difference of 1 or 2 mills per kilowatt-hour in the cost of wholesale power, or even of several mills, can account for the fact that in the Tennessee Valley region, in 1933, people paid about 6 cents per kilowatt-hour; today they pay only about one-fourth of that—a drop of more than 4 cents per kilowatt-hour—for electricity used in their homes.

This reduction in rates cannot be explained by the difference between TVA's wholesale rates and the private utility cost of generating and transmitting power in the Tennessee Valley before TVA. A difference of a few mills at the bus bar cannot cause a difference of 4 cents in the home. The basic reason for low rates in the valley today is that they were set low in the first place, in the firm conviction that such a policy of pricing electricity, coupled with proper electrical-development promotion and education, would bring about a great increase in power consumption thus reducing the cost per unit while producing sufficient revenues to cover these costs.

This experience in the valley is worth examining in connection with the offer now sometimes made by private utilities, or advocated by their propaganda satellites, namely, that the private utilities should be allowed to purchase power produced by Federal projects at the bus bar. This, they say,

would avoid construction of duplicate transmission lines, while the savings from the purchase of Government power would be passed along to consumers.

Both these propositions need to be examined with great care when made in specific instances. Transmission lines may need to be duplicated. As many a farm wife in the Tennessee Valley could have told you a few years ago, in the prerural electrification days, if you need two buckets of water it sometimes pays to carry two buckets. And second, the promise to pass along the savings, a difference of a mill or two per kilowatt-hour at wholesale—may or may not mean a thing by the time the electricity reaches your home. It may be that in some instances the public interest—that is, the consumers, as well as the taxpayer-investors—can be served by selling power at the bus bar to private utilities; certainly the American people are a practical lot, willing to look over every proposition on its merits. But in examining any proposal, it should be remembered that whoever controls the power between the generating plant and your home will govern the price of electricity to the consumer. Consumers should keep their eye on the ball and see to it that the sale of power at the bus bar is guarded by adequate controls, and that those who buy it, whether public or private agencies, not only believe in, but practice the policy of low rates and abundant use.

Today the demand for electric power in the TVA area has reached a point where TVA is hard put to keep up with it. Expansion of facilities is being carried on at a fast pace, but TVA will have no surplus for export or to serve an expanded area. Last year, in order to meet the normal demands of the region, TVA commenced the construction of a large steam plant, the New Johnsonville steam plant, on the shores of Kentucky Lake, in west Tennessee; in more recent months, a second steam plant has been proposed, as well as expansion of the plant now under construction, largely to meet the increased requirements of the Government at the Oak Ridge atomic energy plant.

Sales to private utilities outside the TVA area are being reduced or cut off, except for interchange and stand-by agreements to protect service of TVA and utility systems and for economical operation. TVA's inability and reluctance to expand its service area is a disappointment to many neighboring rural cooperatives and cities whose power supply is inadequate and whose rates seem too high. New neighbors are springing up—federations of REA cooperatives outside the TVA service area but adjacent to it, mostly north of the TVA system. In some cases they are finding it difficult to obtain an adequate supply of power from private utilities in their areas, or to secure contracts for wholesale power at reasonable rates without restrictions as to industrial loads or urban areas which may be served. No such restrictions obtain in the TVA area, of course; cooperative associations can, and do, serve the industrial loads in their areas of operations and pay no premium for power delivered to such customers. Many of the 50 cooperatives serve some urban, as well as rural, areas; in fact, more than a fifth of all the cooperative customers live in towns and villages.

With some of these new neighbors, who are considering the construction of their own generating plants, TVA has discussed interchange arrangements similar to those we have with private utility neighbors. Such arrangements, if they can be worked out, we are sure will prove mutually beneficial. But the TVA is not able to supply these new agencies on a firm power basis. TVA has its hands full keeping up with the growth in the area it now serves.

Many cooperatives outside the TVA area now find themselves forced to build or acquire generating plants and transmission lines to assure their members of an adequate supply of power, without load restrictions and at a reasonable cost. This growing trend is a general index of the attitude of some of the private companies on whom consumers depend for power. Companies intent upon serving a broad public interest will help you accomplish your purposes: To supply your members abundant electricity at the lowest possible cost. Private companies, which regard your members solely as a market for their commodity and thus place their interest above yours, their convenience above your necessity, are inviting, yes, forcing you to take the electric service business back into your own hands. The best way for the private companies to remain private is to show more enterprise.

For of this you may be sure: The direction of power policy is not going to be determined by impassioned debates over socialism, statism, and private enterprise. The status of electric service as a public function is too well established in the American pattern to be decided by a battle about abstract doctrine. The final decision as to who provides electric service is going to be decided by the people themselves on a practical basis, case by case. And it will be decided on the basis of how electricity—the lifeblood of a modern economy—may be made available more and more abundantly, through reliable services and at the lowest possible cost to the consumer.

Partition of Ireland

EXTENSION OF REMARKS
OF
HON. HARRY J. DAVENPORT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 5, 1950

Mr. DAVENPORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by Brig. Gen. Eric Dorman O'Gowan, British Army, retired, at a mass meeting honoring the heroes of the Easter uprising in Ireland calling for the end of the partition of Ireland on Easter Monday, April 10, 1950:

As you have heard, I have come direct from my home in Ulster to speak to you tonight. I'd like you to note that when I say Ulster, I do not mean Northern Ireland; I refer to that part of Ulster which is already free, for my home is County Cavan. I speak as a private person and as an Ulsterman. My stock in purely Celtic, a race which was in Ulster before the British came there and will be in Ulster long after the last Briton has left it. As an Ulsterman I naturally deplore the division of my historic province into two parts by a border laid down in the interest of Great Britain and supported by British bayonet; a border which did not exist when I was a boy and which I trust soon to see abolished.

It has been said that this border is put there with the consent of three governments—the Irish, the British, and the Northern Ireland Government. I wish to make it clear that we in Ireland do not and dare not recognize as final any interim agreement which may have been made in the past 25 years, because history demonstrates beyond refute that the border was imposed on my country against the expressed will of 85 percent of the population of Ireland by threat of force and by a trick of the British Cabinet. Let no one therefore mislead you into believing that the border is something final and irrevocable.

It cannot be emphasized too strongly that this matter of the unification of the territory of Ireland under an Irish Government is not an internal domestic issue. It is an issue on an international level between two sovereign states: Ireland and the United Kingdom of Great Britain. That the issue exists at all is the responsibility of the British Government which Government short-sightedly believes that a divided Ireland better serves its purpose so strategically and economically.

Thus, at the present time, there are six counties out of the province to which I belong which remain an integral part of the United Kingdom, sending representatives to the Westminster Parliament; and, therefore, the abuses to which I am going to refer must ultimately be laid at Britain's door.

It does not suit the book of the British Government that this should be widely known; much trouble is taken to make it appear that the local administration set up in Northern Ireland, the British bridgehead in Ireland, is the responsible autonomous authority for all that occurs in their area. This cannot be true because in fact the London government retains strict control over defense, taxation, and foreign relations, but it leaves to their chosen agents in Northern Ireland the task of maintaining law and order, administering justice, and taxing for local needs.

Who then are their chosen agents? We know well that they are drawn from the ranks of the British colonials planted in Ulster during the seventeenth and eighteenth centuries for this very purpose. We also know that the border has been drawn through Ulster so as to exclude the greatest number of the native Irish, and thus insure the colonial element of perpetual majority in the Northern Ireland Parliament.

Thus by a simple process of drawing a border where no division had ever been before, a minority in Ireland has been turned into the controlling majority in Northern Ireland. In Northern Ireland, therefore, politics is a matter of flags—"the majority" supports the Union Jack; the Irish minority supports the flag of Ireland. Politics is, therefore, a matter of repression; the dominant regime is expected by the British Government to insure perpetually British control in their area, and so long as British control exists, colonial predominance in government is automatically perpetuated.

It is impossible, therefore, that there should be in Northern Ireland any but the facade of democracy; the regime is a dictatorship, and within his limitations the Prime Minister of Northern Ireland is the most complete puppet dictator this side of the iron curtain.

This undemocratic institution is supported not only by the full military backing of the United Kingdom, but also by a private army comprising 3,000 regular armed constables, backed by trained reserve of 1,200 armed special constables—all hand-picked for their political adherence to the Northern Ireland colonial Tory regime.

Nowhere else in the British Isles is there an armed police force. The significance of an armed police force in the British bridgehead of Northern Ireland derives from the fact that the Northern Ireland Government is determined to have its own army available even should British forces be withdrawn.

This private army of the Ulster-British is required, of course, not to protect its frontiers from external attack, but to insure the docility of the native Irish population which remains in the six county areas in the proportion of 5 to 8, a resentful and suppressed minority, which refuses absolutely to accept the constitutional position. This minority is heavily taxed for the privilege of main-

taining a government abhorrent to it which it is totally unable to remove by any democratic process. Note that the tour now taking place in America by the Tory Premier of Northern Ireland is paid for by public moneys and approximately 1 pound in every 3 comes from the pockets of this resentful Irish minority. That is taxation without representation in its most modern form.

In order to support their authority by legal means the Northern Ireland Government employs an iniquitous instrument known as the Civil Authorities (Special Powers) Act. That act permits the officials of the Government to confine population in any area to its houses, to search banking accounts for funds which might be directed against it, and to confiscate those funds if found, to impose the death sentence for the mere carrying of a firearm without authority, to search any house or building or motor vehicle, to arrest without warrant, and to imprison without trial, and to ban any meeting which it does not wish to be held, and to prevent under pain of arrest the display of the Irish flag anywhere north of the border.

I cannot believe that any fair-minded American brought up in a democratic atmosphere could read the document on which the powers of the Northern Ireland Government are based without revulsion

Recently after vigorous representations by the Irish Government in the Council of Europe, a number of sections of this obnoxious act was suspended until publicity given to them at Strasbourg had died down. On the 5th of April of this year these suspended regulations have been reimposed. The Irish in Northern Ireland have had the cat-and-mouse experience of freedom granted and then withdrawn.

It is difficult for you here to imagine any element of a self-respecting population being compelled to live perpetually under such a regime and to maintain its loyalty to the Irish nation in the knowledge that they have only to line up with their Tory masters to receive the benefits and privileges which are considerable and are now reserved for the supporters of the Northern Ireland Government and the connection with Britain.

Let me give you a few concrete examples: Last St. Patrick's Day the King in London presented shamrocks to the Irish guards; a memorial was unveiled in Armagh City to the Irish Fusiliers, but throughout Northern Ireland all national demonstrations were banned and the truncheon was used by armed police against meetings displaying the Irish flag. Again, recently also in Armagh a British ex-soldier was arrested for carrying an Irish flag in a procession. At his trial, he stated that he had been taught in the British Army to fight for the freedom of small nations. He was going on fighting for the freedom of one small nation. It was admitted at that trial by the police that though there was no objection to the banner of Communist Russia being paraded anywhere in Northern Ireland, the Irish flag was taboo.

I absolutely refuse to believe that any American would accept the situation in Northern Ireland as a reasonable way of life for the Irish population there. You will understand, therefore, why we in Free Ireland utterly refuse to cooperate with the regime which treats the people of our race so abnormally.

Now I would like to come to the wider issue: Ireland is vetoed by Russia from participation in the United Nations and her northern counties are incorporated in Great Britain. She is thus debarred from any activity in the defense of western Europe or the Atlantic Pact. You Americans are expending vast sums of money in coordinating defense of the western Atlantic coast line, yet you appear to ignore the strategical gap created by the fact that Ireland has got to be left out of your deliberations. Generals will plan anything, however ridiculous, but citizens have to pay for the ridiculous behavior of generals. How can you pretend that Ireland is just a hole in the map on which you plan Atlantic defense?

Should the early stages of world war III go wrong in western Europe and the early stages of a war always go wrong for the British, then you will have the Russians on the shores of the Channel and southern Britain a war zone. In such circumstances the cooperation of Ireland will be vital to the survival of Britain. If, however, this has not been prearranged, the urgency of the situation may make it impossible to rectify the omission of Ireland from prewar Atlantic strategical planning. We Irish desire above all things to support the defense of western Christendom, but it is useless to ask us to do so in an impractical manner. We cannot coordinate the defense of Ireland except on an all-island basis.

With the utmost seriousness, I suggest to you that the partitioning of Ireland and the persistence of British occupation in our six northern counties has proved to be a costly, dangerous, and short-sighted expedient. For reasons of prestige, Britain is reluctant to undo her mistake and reunite the island under an Irish government. So Ireland remains sullen, sterile, neutral instead of active and cooperative.

For moral and material reasons, this is a most dangerous situation. Freedom is indivisible. World war III will be the supreme war for human freedom, if it happens.

I have tried to tell you that moral considerations and material factors urgently require the ending of this unnatural and abnormal state of affairs. The Irish people fear that the denial of freedom in the British area in Ireland may one day, indeed quite soon, provoke an explosion, with the most dangerous consequences; alternatively world war III may begin before this international problem is resolved. In either case the fact that the civilized peoples of the West have failed to persuade Great Britain to undertake the final act of liberation in her imperial record, may well prove to be the end of Western civilization.

This is where the Irish question has got to today.

Arming of the Arab States

EXTENSION OF REMARKS
OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 5, 1950

Mr. TAURIELLO. Mr. Speaker, the following letter, protesting British arms shipments to the Near East Arab states, and handed to the Honorable Dean Acheson, Secretary of State, on Thursday, May 4, was signed by 30 Democrats and 21 Republicans, Members of the House of Representatives:

HON. DEAN ACHESON,
Secretary of State, Washington, D. C.

DEAR MR. SECRETARY: Following your recent conversation with a group of Members of the House with respect to the Near East armaments situation and the indication that you would in due course discuss the situation with the Secretary of State for the United Kingdom, Mr. Bevin, we thought that it would be advantageous to you if we listed the objectives which we believe you should seek in these conversations and the questions, the answers to which we are convinced would enable you to attain those objectives.

The objectives as we see them are:

1. Cessation of the shipment of arms to the Arab states by Great Britain until peace treaties have been consummated with Israel.

2. Use of their good offices by the United States and the United Kingdom to bring about peace treaties between the Arab states and Israel.

The questions the answers to which we believe will support you in attaining these objectives are:

(a) To what extent is Great Britain actually shipping or permitting the shipment of military aircraft, gunboats, and tanks under treaty arrangements with Iraq, Jordan, and Egypt, or otherwise to any of the Arab states; how such shipments have been paid for; what supervision is being maintained over the disposition and use of such armament; and whether the supplying of such armaments is directly or indirectly facilitated by the settlement of Great Britain's United States lend-lease account, the mutual defense assistance program, or ECA aid?

(b) What assurances, if any, have been given by the Arab states that they are not preparing for a renewal of Arab-Israeli hostilities?

(c) What assurance, if any, has been given by the Arab states of their intention or capability to protect the security of the Near East from a Communist advance?

We believe, too, that it would be most helpful if the United States declared its policy to be opposed to a Near East arms race or a renewal of Arab-Israeli hostilities, and that technical assistance under point 4 projects could only be made available to Arab states which were at peace. We recall your recent statement that a recurrence of the Arab-Israeli war would be "a tragic development which the world community must bend every effort to prevent."

We sincerely trust that before you leave you will be able to assure us that you agree with us as to the objectives set forth above, and will endeavor to attain them in your conversations with Mr. Bevin.

Sincerely,

HUGH J. ADDONIZIO, Democrat, New Jersey; JAMES C. AUCHINCLOSS, Republican, New Jersey; WILLIAM A. BARRETT, Democrat, Pennsylvania; J. CALEB BOGGS, Republican, Delaware; EDWARD BREEN, Democrat, Ohio; EMANUEL CELLER, Democrat, New York; CHESTER A. CHESNEY, Democrat, Illinois; EARL CHUDOFF, Democrat, Pennsylvania; L. GARY CLEMENTE, Democrat, New York; ROBERT J. CORBETT, Republican, Pennsylvania; HARRY J. DAVENPORT, Democrat, Pennsylvania; JAMES J. DELANEY, Democrat, New York; ISIDORE DOLLINGER, Democrat, New York; HAROLD D. DONOHUE, Democrat, Massachusetts; HERMAN P. EBERHARTER, Democrat, Pennsylvania; ALBERT J. ENGEL, Republican, Michigan; JAMES G. FULTON, Republican, Pennsylvania; EDWARD A. GARMATZ, Democrat, Maryland; WILLIAM T. GRANAHAN, Democrat, Pennsylvania; EDWIN ARTHUR HALL, Republican, New York; T. MILLET HAND, Republican, New Jersey; LOUIS B. HELLER, Democrat, New York; CHRISTIAN A. HERTER, Republican, Massachusetts; DONALD L. JACKSON, Republican, California; JACOB K. JAVITS, Republican-Liberal, New York; EDGAR A. JONAS, Republican, Illinois; RAYMOND W. KARST, Democrat, Missouri; ROBERT K. KEAN, Republican, New Jersey; KENNETH B. KEATING, Republican, New York; EDNA F. KELLY, Democrat, New York; ARTHUR G. KLEIN, Democrat, New York; HENRY J. LATHAM, Re-

publican, New York; JOHN DAVIS LODGE, Republican, Connecticut; JOHN W. MCCORMACK, Democrat, Massachusetts; CHRISTOPHER C. MCGRATH, Democrat, New York; THRUSTON B. MORTON, Republican, Kentucky; ABRAHAM J. MULTER, Democrat, New York; BARRATT O'HARA, Democrat, Illinois; DONALD O'TOOLE, Democrat, New York; WILLIAM L. PFEIFFER, Republican, New York; A. A. RIBICOFF, Democrat, Connecticut; R. WALTER RIEHLMAN, Republican, New York; PETER W. RODINO, Jr., Democrat, New Jersey; JOHN J. ROONEY, Democrat, New York; ADOLPH J. SABATH, Democrat, Illinois; JOHN P. SAYLOR, Republican, Pennsylvania; HUGH D. SCOTT, Jr., Republican, Pennsylvania; JOHN F. SHELLEY, Democrat, California; ANTHONY F. TAURIELLO, Democrat, New York; THOR C. TOLLEFSON, Republican, Washington; SIDNEY R. YATES, Democrat, Illinois.

Mr. Speaker, on March 28, 32 Members of the House of Representatives had a conference with the Secretary of State on this subject and this letter is a sequel to that conference.

Some Water Problems of the Pacific Southwest

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. McDONOUGH. Mr. Speaker, water sources and water development have controlled and shaped the progress of our great Pacific Southwest, a semiarid region which covers about half a million square miles, or one-sixth of the area of the United States. Today industrial growth, agriculture expansion, and metropolitan extension in this area all depend upon a consistent adequate supply of water.

Mr. Raymond Matthew, chief engineer of the Colorado River Board of California, at the fortieth convention of the National Rivers and Harbors Conference held in Washington, D. C., on March 25, 1950, delivered the following factual and informative address on some of the water problems of the Pacific Southwest, and I urge the Members of the House to give serious consideration to Mr. Matthew's discussion of our water problems:

SOME WATER PROBLEMS OF THE PACIFIC SOUTHWEST

(By Raymond Matthew, chief engineer, Colorado River Board of California)

(A contribution to panel discussion on Water—Our Most Precious Natural Resource, Fortieth Convention National Rivers and Harbors Conference, Washington, D. C., March 25, 1950)

The subject of this panel discussion applies with particular force to the Pacific Southwest. For water is the very lifeblood of this semiarid region which may be considered to cover about half a million square miles—one-sixth of the area of the United States—including all the States of California, Nevada, and Arizona. Not only is water a vital necessity for domestic, municipal, and industrial purposes as in other sections of the country, but also, in common with other sections of the West, water for irrigation is essential to the successful production of farm crops in most of the region.

Indeed, the history of this region is replete with accounts of violence and bloodshed and of frequent and prolonged litigation in State and Federal courts in conflicts over the ownership and control of water—so all-important and precious is this resource because of its relative scarcity.

The Pacific Southwest is a region of sharp contrasts; in terrain, from the nation's highest mountains to desert valleys below sea level; in climate, marked by wide variation in temperature, rainfalls ranging from about 100 inches to 5 inches or less annually, and growing seasons ranging from a few months in the high plateaus to all year round in the low valleys and along the coast; and in character and extent of development varying from the sparsely settled areas of forest and desert to the fertile valleys of highly developed irrigated agriculture and the densely populated metropolitan and industrial centers of Los Angeles and San Francisco.

Although numerous other factors are involved, the availability of water and the feasibility of building works for its conservation and use have played a predominant role in the developments that have occurred, and will continue to limit and control future development.

Most of the precipitation in the Southwest occurs in three or four winter months with little if any in the late spring, summer, and fall. There are some exceptions to this generality in parts of Arizona and high mountain areas where some summer rains occur, but the bulk of the water supply comes in winter rains and snows.

In California, the average annual rainfall ranges from 100 inches along the extreme northwest coast to almost nothing in the southeast desert region. Relatively heavy precipitation occurs in the Coast Range and Sierra Nevada Mountains, largely in the form of snow in the higher reaches, and it is these mountain areas from which most of the water supply is derived.

In the central and coastal valleys, which are largely devoted to farming, the average annual rainfall varies from 15 to 25 inches in the northerly valleys to 5 to 15 inches in the southerly valleys. In the south Coastal Plain of California it ranges from 10 to 25 inches. Hence, the rainfall is insufficient to grow most crops, even if all or most of it came in the growing season. Thus, irrigation is essential.

In southeastern California, also in much of Nevada and Arizona, average annual precipitation is only 5 to 15 inches. In fact, most of the Colorado River Basin is a semiarid area. Greater precipitation occurs in the relatively limited mountain areas of Utah, Wyoming, Colorado, and Arizona, and these areas are the source of most of the water of the Colorado River.

The rainfall in the Southwest is characterized by wide cyclic variations. The precipitation at Los Angeles is typical. The 75-year record extended back to 180 years by correlation with crop records of the Mission Fathers shows seven wet periods of 9 to 13 years in length, averaging 122 percent of normal, and six alternating dry periods of 11 to 28 years in length, averaging 84 percent of normal. Studies of tree rings and other historical information indicate even greater cyclic variation and more severe droughts in the past. Currently, southern California is experiencing its sixth successive year of subnormal rainfall. Rainfall from year to year ranges from 25 to over 200 percent of the average.

The scarcity of water in the Southwest is further revealed by data on run-off. In California as a whole, which has an area of 156,000 square miles, the average annual depth of run-off in rivers and stream flow is about 8½ inches; but in southern California it is less than 3 inches. For the Colorado River Basin as a whole the average depth of run-off in river flow is only about 1½ inches. As compared to these, the average depth of run-off of Atlantic coast streams ranges from 15 to 20 inches.

The stream flow in the Southwest varies widely from month to month and from year to year. Most of the run-off occurs in the rainy season. The flow of rivers and streams fed by melting snows often continues into the summer and fall, and a few streams fed by springs have a continuous base flow. But for several months of the summer and fall stream flow is greatly reduced and it is not unusual for streams and rivers to dry up completely. On the other hand, the rivers and streams of the Southwest are subject to violent and destructive floods, which result from rainstorms of high intensity or rapidly melting snow or a combination of both.

In addition to seasonal and cyclic variations, the water resources are not distributed geographically in consonance with the demand. For example, in California, about 75 percent of the water supply is in the northern half of the State, whereas two-thirds of the demand for water is in the lower half. The discrepancy is even greater in southern California which has only about 5 percent of the water and 25 percent of the demand. All these figures are exclusive of the Colorado River which is also used in California.

Because of these wide discrepancies between water supply and demands, the conservation, regulation, and distribution of the available water resources to obtain the maximum practicable and efficient utilization of water for all needs and purposes involve the solution of many problems and the construction of major engineering works. It calls for storage and other works to control floods, large cyclic storage reservoirs to conserve and regulate the extremely erratic flows, and, in many cases, long canals and aqueducts to convey water from areas of surplus to areas of scarcity.

Fortunately, underground reservoirs are available in several areas where large quantities of water are or can be stored, and drawn upon by pumping from wells. For example, in California, the ground water reservoirs have a capacity of over 20,000,000 acre-feet in the San Joaquin Valley, about 5,000,000 acre-feet in the Sacramento Valley, and about 7,000,000 acre-feet in the south coastal basin. Important groundwater basins occur in other valleys also. In central Arizona, the ground-water basin has a capacity of about 35,000,000 acre-feet.

The use of ground water was started early in California, and has become widespread and of major importance not only in California but also in Arizona and Nevada. According to estimates of the United States Geological Survey, about 10,000,000 acre-feet annually or half of the water now used in California is pumped from underground; in Arizona, about 3,000,000 acre-feet or 60 percent of the water used is pumped from underground; and, in Nevada, about 250,000 acre-feet or 15 percent.

The storage of water in underground reservoirs and the use of ground waters will continue to be of increasing importance in the Southwest. It is an essential element in any plan and program of development.

Water developments in California have been marked by many outstanding projects. The large cities, San Francisco, Oakland, and Los Angeles, have augmented their local supplies by bringing in water from the Sierra Nevadas through aqueducts 200 to 300 miles long. California's 6,000,000 acres of irrigated lands are served by a multitude of reservoirs and canal systems developing and

using local water supplies and built by private initiative and financing.

The Central Valley project is now being built by the Bureau of Reclamation to augment irrigation supplies in the Sacramento and San Joaquin Valleys. One of the main objectives is to transfer surplus water from the Sacramento Valley southerly to meet water shortage in the San Joaquin Valley. Other dams are being built by the Army engineers to provide for much-needed flood control and some conservation.

In southern California, in the metropolitan coastal plain region, local water supplies, both surface and underground, have long since been fully developed and utilized for irrigation, domestic, and industrial purposes. In fact, the supplies are already overdrawn. These were augmented in 1913 by the city of Los Angeles bringing in a supply of 400 second feet by a 250-mile aqueduct from the Sierra Nevada. The supply was further augmented in 1942 by Colorado River water. The 300-mile Colorado River aqueduct involving a pumping lift of 1,600 feet was completed in 1942 with a capacity of 1,500 second feet. It was built by the Metropolitan Water District of Southern California, now comprising municipal districts and 28 cities including Los Angeles and San Diego. It is designed to serve domestic and industrial water needs in the entire coastal plain region in general which has a present population of over 4,000,000. All future needs of this area are dependent on Colorado River water, which it is planned to use ultimately in the amount of 1,212,000 acre-feet annually. With all local and imported supplies combined, it is expected that sufficient water will be availabe for a popuation of about 8,000,000.

In the desert area of southern California, the Colorado River is practically the only source of water supply. Use of Colorado River water for irrigation in the Palo Verde, Imperial, and Coachella Valleys was started over 50 years ago and has since grown until there is now about 600,000 acres under irrigation out of about 1,000,000 acres ultimately to be irrigated. Thus, southern California is vitally dependent upon the Colorado River for irrigation and domestic and industrial water supplies. It is planned to use for these purposes about 5,500,000 acre-feet per year and works have been built and are in operation on this expectation.

There has also been substantial use of Colorado River water in Arizona for irrigation including the Parker, Yuma, and Gila projects, which constitute those projects in Arizona which could be feasibly irrigated from the main Colorado River because of the adverse terrain. However, in addition, some 600,000 acres of lands in central Arizona have been brought under irrigation by developments on the Gila and Salt Rivers.

The most outstanding project on the Colorado River that has been built to date is the Boulder Canyon project. This project was authorized as a Federal Reclamation undertaking in 1928. It includes Hoover Dam to conserve and regulate the waters of the Colorado River, provide much needed flood control and silt control and furnish regulated water supplies for irrigation, domestic and industrial uses, and a hydroelectric power plant of about 1,325,000-kilowatt capacity. The project also includes the All-American Canal of 10,000 second-feet capacity designed to irrigate lands in the Imperial and Coachella Valleys.

Hoover Dam, rising 600 feet above streambed, creates Lake Mead with a storage capacity of 32,000,000 acre-feet. This dam, completed in 1936, provides practically complete regulation of the river at this point. It is designed to assure adequate water supplies for all downstream projects. Most of these projects that can or will be served, such as those in California, are already built and in operation or are authorized and under construction.

Other major dams have been built or are underway in the lower Colorado River. Parker Dam was completed in 1940 for the purpose of diverting water into the Colorado River aqueduct and incidental hydroelectric-power production. Davis Dam, designed to re-regulate releases from Hoover Dam, serve the needs of the Mexican Water Treaty, and generate hydroelectric power, is now nearly completed.

Only about half the waters of the Colorado River and its tributaries is utilized at present, mostly because the States in the upper basin are using less than one-third the amount of water reserved for them by the Colorado River compact. Many storage reservoirs and other major works, chiefly in the upper basin, will be needed to fully conserve and utilize the waters. Unfortunately, even under full practicable development, the water supply that can be made available will be far from sufficient to meet present and potential requirements including the guaranteed delivery to Mexico under the Mexican Water Treaty.

In the face of such a scarcity in water supply, it is obvious that every effort must be made to design and operate works which will secure the maximum possible conservation and the most efficient and beneficial use of the available water.

The needs of existing projects having established rights to the use of water should be fully met before additional new projects are undertaken. Further development should be restricted to a selective choosing of projects within the water supply that can be assured and on the basis of comparative need and justification, thus obtaining the greatest benefits at the least cost from the standpoint of the region and the Nation as a whole.

Rent Control

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. SABATH. Mr. Speaker, it is regrettable the extent to which selfish and avaricious influences, not only individuals but even certain groups and associations, will go, and the large sums of money they have expended, to gain their nefarious aims. Especially is this true as to those who are trying to defeat the proposal to extend rent control, notwithstanding the fact that it may deprive thousands upon thousands of families, including many ex-servicemen and their loved ones, of roofs over their heads by being evicted from their homes, unable to pay the increased rents these very men admit and concede will come about if rent control is not extended.

I have in my hand, and now ask unanimous consent to place in the RECORD, a list of the organizations behind this inhuman activity. They stop at nothing. They have now, and for several years past, gone beyond any decency in their efforts to kill the Rent Control Act. The people behind this movement—behind these organizations and special interests, such as the National Association of Real Estate Boards, Mortgage Bankers Association of America, Associated General Contractors of America, and the others listed below—are, in most instances, the owners of the large apartments, apartment hotels, and hotels in the metropolitan areas of the United States which they secured control of after the crash of the 1930's at 10 to 25 cents on the dollar, and upon which they desire income based upon the original cost of construction. It has been estimated that this group has expended over $3,000,000 on lobbying and publicity against housing and rent control.

Mr. Speaker, they fail to realize that if rent control is not extended, hardship will descend upon thousands of families, unable to pay the increases the owners will levy upon these unfortunate people. I regret to predict that a great deal of trouble is bound to ensue. Therefore, I hope that the monies being spent from these ill-gotten gains will not result in misleading Members of the House, but that the Members will realize the conditions that now exist and will vote to extend rent control for another year.

[From the League Reporter, Labor's League for Political Education, May 1, 1950]

NINETEEN GROUPS FROM REAL-ESTATE LOBBY

The real-estate lobby consists of 19 organizations. They include realtors, bankers, builders, contractors, and building-supply manufacturers.

Secretary Calvin K. Snyder, of the Realtors' Washington Committee of the National Association of Real Estate Boards, lists these 19 groups as making up the group known as the real-estate lobby:

American Bankers' Association.
American Institute of Architects.
Associated General Contractors of America, Inc.
Institute of Electrical Contractors.
Mortgage Bankers' Association of America.
National Apartment Owners' Association.
National Association of Home Builders.
National Association of Manufacturers.
National Association of Real Estate Boards.
National Electrical Contractors' Association.
National Home and Property Owners' Foundation.
National Lumber Manufacturers' Association.
National Retail Lumber Dealers' Association.
National Savings and Loan League.
Prefabricated Home Manufacturers' Institute.
Property Owners' Association of America.
Structural Clay Products' Institute.
United States Chamber of Commerce.
United States Savings Loan League.

HOW TO PUT THE PRESSURE ON CONGRESS—NAREB OFFICIAL TELLS HOW LOBBY WORKS WITH NAM, READER'S DIGEST, CHAMBER OF COMMERCE, RADIO CHAINS

Let's take a good look at the real-estate lobby. Let's see how it cooperates with big business, the press, radio stations, and its congressional pals.

Officials of the National Association of Real Estate Boards (NAREB) have testified at hearings of the House Select Committe on Lobby Activities. The committee says NAREB is a typical lobby. It's the cornerstone of the real-estate pressure group.

Here are some of the facts about NAREB brought out by testimony at the hearings and investigation by the lobby committee's staff:

1. NAREB often gets information from friendly Congressmen and Senators about secret sessions of House and Senate committees. On at least one occasion a Representative let Calvin K. Snyder, secretary of

the Realtors' Washington Committee, part of NAREB, copy parts of a secret report of a Senate-House committee.

2. NAREB was instrumental in having the Reader's Digest publish an anti-rent-control article in 1948. In reply to a suggestion by a Boston realtor that NAREB "plant" a rent-control article in the Saturday Evening Post, Herbert U. Nelson, executive vice president of NAREB, wrote: "We have helped to secure a write-up of what is happening in France (concerning rent control) * * * in the Reader's Digest." Five hundred thousand copies of reprints of that Digest article were distributed by NAREB in its 1948 campaign against rent control.

3. In 1949 Nelson wrote in a letter to T. K. Maenner of Omaha, a past president of NAREB and a political adviser to Republican Senators KENNETH WHERRY and HUGH BUTLER, of Nebraska, "My personal contacts with the radio chains have become of great value." Nelson did not elaborate much on those contacts.

4. In the same letter to Maenner, Nelson speaks of "some of the favors we have had from NAM." In testimony before the committee Nelson was vague in answering questions concerning favors the NAM had done for NAREB.

5. Nelson's and Snyder's testimony also brought out the close cooperation between the real-estate lobby and the United States Chamber of Commerce.

6. Nelson admitted that NAREB used to get delegations of small property owners to testify at rent-control hearings. Such delegations leave the impression that everyone who owns apartments is having a tough time. In a letter replying to a suggestion by a Detroit banker that the real-estate lobby use this stunt, Nelson said, "We used to try this sort of thing in order to dramatize our situation * * * but it wasn't too successful."

7. Senators and Representatives who speak at national and State meetings of the real-estate lobby are paid travel expenses and lecture fees by the realtors.

8. NAREB often advises Federal agencies on the drafting of legislation for Congress and the administration of laws like rent control and public housing.

9. NAREB used to keep a card file on every Congressman, indicating realtors who are friendly with them, how they voted on housing legislation and other information that was helpful in trying to sway them to the real-estate lobby way of thinking.

10. Speeches and radio talks are often prepared by NAREB for friendly Members of Congress.

BIG BUSINESS

The real-estate lobby is big business. From July 1, 1946, through December 31, 1949—a period of 3½ years—the National Association of Real Estate Boards alone spent $440,360 for lobbying.

The Dawn Is Breaking

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 5, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, over the years the Detroit Free Press, like the Irishman's flea, has been "on again, off again, Finnegan" in its support of, opposition to, the New Deal and those who, from its inception, have vigorously and persistently fought the fallacies of the New Deal.

In its issue of May 5 is an editorial which indicates that the Detroit Free Press is beginning to see the light.

That editorial, with certain omissions made in order that its reprinting may comply with the rules of the House, reads as follows:

REAL INVESTIGATION OF CRIME BY SENATE HAS BEEN BLOCKED BY TRUMAN ADMINISTRATION

The radio and newspaper headlines shriek that "The Senate has voted for a crime investigation."

"That's good," say the headline readers and those who listen with their ears instead of their minds.

But is it good?

As far as the Detroit Free Press can see, the Truman administration has blocked any such investigation.

Since the latest political murders in Kansas City there has been an ever-growing demand for investigation of crime conditions, a nonpolitical inquiry into the reign of criminal terrorists which is destroying American liberties by taking over city and State governments and in Washington is crowding close to the heart of our Republic itself.

By the dirtiest kind of alley fighting behind the scenes and by every known trick of forensic sophistry before the people, the Truman administration has sought to prevent any such exposures.

Let us look at the record.

A splendid young man from Tennessee introduced a resolution last January calling for an investigation of the national menace of organized gambling, narcotics traffic, prostitution, and all the other vices by which the Pendergast gang in Kansas City corrupted governments and grafted millions from the taxpayers.

Crime, it is now shown, is a Nation-wide business in the same sense that we have chain groceries and other chain merchandising stores.

Charlie Binaggio, a graduate of the Pendergast school of crime, was the Kansas City agent for this syndicate which merchandizes not only gambling, dope, and prostitution but blackmail, extortion and murder to its favored clientele.

Normally, and naturally, the resolution of Senator KEFAUVER said the investigation should be conducted by the Judiciary Committee, of which he is a member.

But so are a man of Michigan and others trained in the investigation of crime.

That would never do.

When Charlie Binaggio, a professional murderer, was slaughtered the Nation stood shocked because of connotative tangencies with the White House.

The Truman-controlled Democratic policy committee moved fast.

Butcher Charlie, now himself butchered, was on the executive committee which made the arrangements for the big testimonial banquet given to Bill Boyle, another Pendergast henchman, who had just been made chairman of the Democratic National Committee by order of Truman.

President Truman attended and made that sacrilegious speech to the effect that his political philosophy was based on the Sermon on the Mount.

Gunman Charlie was there to shake hands with the President and to pose for pictures with his old friend Bill Boyle—their arms around each other.

No.

There must be no legitimate, thorough, and honest investigation.

It was decided then to create a new committee of just five men to do the investigating.

The Truman group fought so hard to get this nefarious device put over as an escape mechanism that they got a tie vote, 35 to 35.

The Truman forces won the fight by this narrow squeak.

The administration will now conduct an investigation of itself.

By this trick they have barred some who know all about too many things to have them around asking questions.

In the criminal world it does not pay to have people around who know too much.

They might talk.

That is the logical reason for the murder of Gunman Charlie Binaggio.

He had pushed Jim Pendergast out of power.

As Tom was the Napoleon of the underworld of Kansas City, Nephew Jim was the weak and befuddled Napoleon III. He was a pushover for tougher, smarter disciples of Boss Tom—and Butcher Charlie did the pushing.

Jim appealed to his friend Truman. A Federal grand jury was called in Kansas City to investigate, what we do not know. The chief witness before that body was Binaggio.

He went to Key West to see Truman and Boyle and to plead for peace.

The story is that Truman refused to see him, but that National Chairman Boyle did. No dice.

According to the carefully accurate Newsweek, Boyle, a former Kansas City cop, told Binaggio to "run along back to Kansas City and to make his peace with Jim Pendergast."

Now it stands to reason that the boss of a machine that (again quoting Newsweek) "contained some of the most notorious murderers, bank robbers, arsonists, thieves, and hoodlums ever collected in one place—and, moreover, the head of the Kansas City branch of the Chicago Capone Crime Syndicate," could not go back to Kansas City and plead with Jim Pendergast for mercy.

The power and the glory of precinct puissance was to go back to pal Jim.

How then could Binaggio function even if he had elected the governor and had taken over control of the Kansas City police department?

The Federal grand jury moved remorselessly.

The professional murderer knew that a bell was tolling for him.

He announced that he was going to "get out of the racket" and retire to a farm.

That was his death knell.

Nobody is allowed to retire from the crime syndicate.

He might talk.

A death decree was issued for Boss Binaggio by the underworld rulers of the United States.

To the residents of Kansas City this is not startling.

Since the rise of the first Emperor Pendergast, who made the hideously Himmlerian, Johnny Lazia, a fabulous figure as king of the narcotic and prostitution rackets in Kansas City, murder has been considered a minor incident.

Lazia himself was machine gunned to death by rival gangsters.

Binaggio took over the business.

When Pendergast and 230 of his lieutenants were sent to the penitentiary by the fighting, crusading District Attorney Maurice Milligan, Jim Pendergast assumed the throne but he so loved his bourbon that Binaggio stole from him the royal diadem of iniquity.

That reach for power cost the killer his own life.

As far as this newspaper can ascertain the Federal grand jury heat was on Binaggio alone.

In this there is the inexorability of a Greek tragedy.

For it was the daring Binaggio who came to the rescue of President Truman when he ordered Congressman Rodger Slaughter purged from the House for daring to disagree with him.

It was Binaggio and his most notorious murderers, bank robbers, arsonists, and thieves who stole the election from Slaughter by fraudulent ballots.

The Kansas City Star exposed this theft of an election.

The evidence was so overwhelming and the public demand for action so vociferous that something had to be done.

Some of Binaggio's best safe crackers were ordered to blow up the county vaults and to steal the evidence.

Ironically, when this was being done, Mr. Truman was peacefully sleeping in the Presidential suite at the Muehlbach Hotel, just five blocks away.

Of course, with the evidence stolen, most naturally—and assuredly—nothing could be done about it.

Attorney General Tom Clark, who now graces the United States Supreme Court was most plausible about it.

But there is a journalistic conscience in Missouri, not only in Kansas City with the Star, but in St. Louis with the courageous, fighting liberalism of Joseph Pulitizer, worthy son of a great sire, in the never ending fight to protect the people's rights.

So, now, every day on the editorial page of the St. Louis Post-Dispatch is this note in black-face type:

"THIRTY DAYS

"On the night of May 27–28, 1947, a safe in the Kansas City Election Commissioners' office was blasted and vital evidence in the 1946 Democratic primary vote frauds was stolen. From that day to this, no agency of the law, not even the celebrated FBI, has brought about the arrest of the guilty person or persons. Since the statute of limitation takes effect after 3 years, the FBI has 30 days to solve this outrageous crime against the cornerstone of America democracy—free and honest elections."

Each edition the days grow less—the only change made: 30 days, 29 days, 28 days, 22 days.

President Truman as Chief Executive, is the ultimate power, the only absolute authority to order such an investigation of a crime in which he was a beneficiary. Slaughter was purged.

And so the fight against a real investigation rages in Washington.

The statute of limitations!

What a refuge!

Five days, four days, three days——

One sample of practical politics is well evidenced by another job of shadow boxing in a pretended pursuit of crime.

With a great fanfare of publicity a conference of law enforcers was called at Washington by the Attorney General's office. Mr. Truman spoke briefly saying that he was against sin and that something ought to be done about it. Mr. McGrath was even more emphatic.

Committees were appointed by the group to make studies of what could be done. They are still studying.

But what very few noticed was that the conference had very few career men in the war against crime. They were not invited, not the police experts who have to face the bullets.

Most of those who came were Democratic prosecutors from Democratic counties and attorney generals from Democratic States.

And by a happy coincidence they arrived just in time at Washington to pay $100 apiece for tickets to the Jackson Day dinner. The counties and the State paid their expenses while—we hope—they paid the $100 tribute gouged from them out of their own pockets.

And that was the end of that investigation.

Attorney General McGrath suggested to the Senate that perhaps a law barring slot machines from being sent across the State lines and preventing interstate wire services from sending out gambling information might be a good thing.

With perfect solemnity the lads agreed to make an investigation into these matters and call witnesses.

So Frankie Costello and other nationally known gamblers were called in to tell the poor, dear innocent little Senators that there is no way of stopping gambling, that it is something inherent in the human breast—and all that sort of rot.

The underworld bosses had a good time for themselves and their mouthpiece columnists and press agents dwelling on the utter futility of law enforcement. Fun, no end.

But the issue, as every criminologist knows, is not gambling in and of itself.

As a representative of the United States told the committee:

"If sports can be embargoed from interstate commerce on the grounds that it is used for gambling, then other categories of news, such as stock-market quotations and even election returns, conceivably could be embargoed on the same grounds."

No news could be transmitted at all under such a law as those who desire to bet will bet on anything.

This is the reductio ad absurdum that artful politicians and legal loophole seekers love to find and dwell upon to make any efforts at reform appear ridiculous.

The crime is not gambling per se.

The crime is the bribery and the corruption of our police, our law-enforcing bodies, and our courts which make necessary the fraudulent elections.

Without this unholy alliance between government and criminals, professional gambling cannot flourish.

That is something that any rookie cop knows.

That is why political gangs are organized in our metropolitan areas.

To sell out their communities to the gamblers.

Once they have sold out, there is no halfway stop.

The other vices move in and the city or State bosses exact their graft from prostitution, dope, blackmail, kidnaping, extortion, and, when necessary, cold murder. Murder becomes king.

The Pendergast gang went the limit in all these things until Kansas City became a stench in the nostrils of the Nation as the wickedest city on the North American continent.

And Harry Truman never smelled a thing.

As the underworld czars take over complete domination of the police and the courts, they are not content. They move into legitimate businesses, force out the real proprietors and reap the illegal profits because people must buy from them—or else.

Thus it was that Tom Pendergast amassed millions by having an absolute monopoly in cement.

And throughout prohibition no liquors could be sold by the blind pigs of Kansas City—and they thrived as in no other community—without first paying Tom Pendergast a fee of so much a case.

When the heroic and personally innocent General Grant, as President, found himself surrounded by corruption, he touched the hearts of all Americans when he said as calmly as he fought at Shiloh:

"Let no guilty man escape."

Mr. Truman quotes, instead, the Beatitudes and reaffirms his faith in the Ten Commandments.

As Mr. Truman's ghost writers can quote Scripture for a purpose, it might be well for them to avoid the seventh chapter from St. Matthew, wherein it is written:

"Ye shall know them by their fruits. Do men gather grapes of thorns or figs of thistles? * * * Every good tree bringith forth good fruit; but a corrupt tree bringeth forth evil fruit. * * * A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit. * * *

"Wherefore by their fruits ye shall know them."

Rent Control

EXTENSION OF REMARKS
OF
HON. GEORGE D. O'BRIEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Saturday, May 6, 1950

Mr. O'BRIEN of Michigan. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Washington Evening Star of May 5, 1950:

FUTURE OF RENT CONTROL

If national rent control is extended once again after June 30, the extension is apt to follow the lines of a compromise suggested by Representative SPENCE, of Kentucky. Under his plan, Federal rent control would automatically end after 1950—except for those communities that in the meantime took the positive step of asking that it be continued.

The compromise seems reasonable and carries a persuasive appeal. That Federal rent control is still very much in the picture is shown by current estimates that some 29,000,000 people, living in nearly 4,000 incorporated cities, towns, and villages, including 63 out of the 92 cities of 100,000 population, are still protected by Federal rent control. Only four States and a relatively small number of towns and cities have chosen to end rent control. Two States have adopted rent control laws of their own, which are superseding Federal law. But if failure throughout the country to end rent control indicates anything, it would seem to be that control is still needed in many localities. That control, under the Spence plan, could be retained by any city or town that asked for it.

The District law, of course, is entirely separate from the national rent-control law. If Congress ended national rent control by failure to extend it, the same thing might be expected to happen with the local law. But the wiser way of reaching a decision on extending or ending local rent control is to rest that decision on what the facts may show. It would be well if hearings were begun soon on pending House legislation to extend local rent control and every effort made to obtain through testimony an accurate picture of things as they are.

Few cities of the country, if one includes metropolitan areas, have exceeded Washington in the amount of new construction in relation to population. Last year alone 16,989 new units were completed here. Rentals in this new construction are far above those in controlled buildings. Those who favor it argue that control for another year will tend to bring down the rents in new construction; those who want to end control, argue precisely to the contrary, claiming that only when rents in new construction are subject to competition from rents released from control will the level of new construction rentals begin to fall. Nothing is proved one way or the other by such opinions and a congressional hearing could at least obtain pertinent facts on the need for continued control.

The United Nations

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. SABATH. Mr. Speaker, I wish to congratulate the President upon his statement this week wherein he said that there is less danger of war today than any time in the past year.

At the same time, I want to congratulate the Republican adviser to Secretary of State Acheson, Mr. Dulles, on recanting his former views, as expressed by Mr. Herbert Hoover. The former President, as you know, is urging that the United Nations should be reorganized and thereby weakened. Mr. Hoover and his Republican leaders are following the same unfortunate tactics that they advocated in bringing about the defeat of our entry into the League of Nations, which, if our country had entered, and students and men of affairs generally agree, would have precluded our entry into World War II and the curse of Hitlerism would not have been possible.

I wish to take this opportunity of congratulating the Chicago Sun-Times and its editor for the clear position they have taken in an editorial printed on April 30, 1950. I suggest that the entire membership avail themselves of this logical reasoning, which I insert herein.

At the same time, I observed an article in the Chicago Sun-Times under date of April 29, 1950, wherein the League of Women Voters at their national convention, held a few days ago at Atlantic City, N. J., went on record and pledged themselves to devote their energies in bringing about the strengthening of the United Nations in the hope of ultimate world peace. It is very worthy of insertion into the RECORD.

The editorial and article follow:

[From the Chicago Sun-Times of April 30, 1950]

HOOVER AGAINST DULLES

Two Republicans have come out with plans for revising the United Nations. But aside from party affiliation, John Foster Dulles and Herbert Hoover have little in common.

Mr. Dulles, Republican adviser to Secretary of State Dean Acheson, wants the Soviet Government and its satellites to stay in the United Nations.

Mr. Hoover thinks "the United Nations should be reorganized without the Communist nations in it."

Although Mr. Hoover doesn't desire another military alliance, and says he wants "to redeem the concept of the United Nations to the high purpose for which it was created," we think he's misguided. Nevertheless, it is quite likely that a great many Americans will think that Mr. Hoover has a good idea.

This newspaper feels, on the contrary, that the United Nations still is the best place to work at peaceful solutions of international conflicts. If one side is excluded from the organization it inevitably will become a meeting place only of allies. It certainly will develop into an alliance against the excluded Communist states.

In what way could the United Nations then serve the high purpose for which it was created?

Mr. Dulles thinks the United Nations could serve this purpose better if all the governments in the world were members. He advocates the admission of all effective governments, including Communist China.

He admits this would give Moscow more votes, and even "might end a preponderant voting superiority of the United States." But he believes that unless the UN becomes a world organization its decisions cannot reflect reality.

"If we want to have a world organization," states Mr. Dulles, "then it should be representative of the world as it is."

Mr. Dulles wants a general conference under article 109 to review the UN Charter, to agree on universal membership in UN, on limiting the veto power, and on increasing the authority of the General Assembly. He advocates adding weighted voting in the Assembly, while removing Moscow's present three separate delegations.

Mr. Dulles believes:

"The present is, by common consent, a time of crisis. The world is perilously poised on the brink of disaster. Under that circumstance there is no reason against, but every reason for, holding a world conference at which the concern of all peoples, particularly the small peoples, can be made manifest. * * *

"There is much to hope for, and little to fear, from another great world conference called primarily to modernize the United Nations in the light of its 5 years' experience, and to review broadly its basic objectives of peace, justice, human liberty, and regulation of armament."

It is with these things in mind that UN Secretary-General Trygve Lie is planning to visit the Kremlin. He probably won't get very far. There is no need yet to assume that his mission will fail entirely. There is no need to assume that all of Mr. Dulles' (and the administration's) plans to improve the UN are hopeless.

Yet these seem to be the assumptions of Herbert Hoover. Much as Mr. Hoover desires peace, his plan to break up the United Nations would make the cold war less cold than it is—possibly even hot.

[From the Chicago Sun-Times of April 29, 1950]

WOMEN VOTERS ADOPT WORLD PEACE PROGRAM

ATLANTIC CITY.—The League of Women Voters Friday elected Mrs. John G. Lee, of Farmington, Conn., as its first married president in 30 years. It also adopted a three-point program for world peace.

Mrs. Lee succeeds Anna Lord Strauss, of Washington. The elections followed the organization's adoption of a resolution affirming its traditional position as champion of civil rights.

Others elected unopposed at the closing session of the 5-day national convention here are: Mrs. Bradford L. Patton, 5532 South Shore, former president of the Cook County League of Women Voters, treasurer; Mrs. Robert F. Leonard, Washington, first vice president; Mrs. Malcolm E. Cummings, Pittsburgh, second vice president; and Mrs. Walter Neale, New York, secretary.

OUTLINE PROGRAM

The league's program for world peace—on which it will work during the next 2 years—pledged support of these points:

1. Expansion of world trade and international economic development with maximum use of United Nations agencies.

2. A continued analysis of the Federal budget in relation to a stable and expanding domestic economy, and support of such fiscal measures as make for a stable and expanding economy.

3. Reorganization measures to improve administrative efficiency in the development and use of natural resources.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include a resolution adopted by the town of Bloomfield, N. J., which is a part of the congressional district which I represent, protesting the recent directive issued by the Postmaster General curtailing the postal service:

Whereas the United States Post Office Department has announced a curtailment of mail service and deliveries to residences, industries, and commercial establishments in the United States which action, in the opinion of the town council of Bloomfield, N. J., seriously affects the convenience and welfare of the Nation; and

Whereas the town council of Bloomfield, N. J., is of the opinion that a survey of costs, charges to the public, and operating expenses of the United States Post Office Department should disclose ways and means to continue the present service and schedule of deliveries o' mail to the residences, industries, and commercial establishments throughout the Nation: Now, therefore, be it

Resolved, That the town council of the town of Bloomfield record its protest to the curtailment of mail service and delivery by the United States Post Office and direct the town clerk to send a copy of this resolution to the United States Senators of New Jersey and to the United States Representative of the Tenth Congressional District, and request each one to record the protest of the town of Bloomfield to such proposed action; and be it further

Resolved, That our Senators and Representatives be requested to initiate such study or survey as shall seem desirable as expedient to forestall such proposed curtailment of postal service and deliveries.

I hereby certify the foregoing to be a true and correct copy of resolution adopted by the Bloomfield town council at its meeting held May 1, 1950.

J. CORY JOHNSON,
Town Clerk.

Save the Merchant Marine Academy

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith a letter from my dear friend from Charleston, S. C., the Honorable Edward I. Condon, an alumnus of the Merchant Marine Academy at King's Point, N. Y. Mr. Condon is qualified to speak for the great advantages afforded the youth of our country as well as the security to the Nation the training at Kings Point affords Americans.

In addition, I also include a letter under date of April 25 addressed to my secretary, Mr. Shuman, on the same subject

from Mr. Wheatley N. Hemmick, Jr., executive vice president of the Alumni Association of the United States Merchant Marine Cadet Corps.

I am thoroughly in accord with what these gentlemen have to say about the Merchant Marine Academy. Once America's merchant marine is swept from the seas, she will never regain it.

Mr. Speaker, it is later than we think.

The letters follow:

JAS F. CONDON & SONS DEPARTMENT STORE,
Charleston, S. C., March 31, 1950.

Hon. L. MENDEL RIVERS,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN RIVERS: On receiving news from my Alumni Association of the United States Merchant Marine Academy, I am informed that you people in Washington are gradually closing up the Academy at King's Point, N. Y., by cutting appropriations ever so often.

Losing our National Academy means a step down in our present-day merchant marine, and life line of defense.

The city of Charleston should thrive on our merchant marine, and is gradually working toward that point, but if the Academy is closed, it will hurt Charleston.

I am asking you to vote to amend H. R. 7786, to read "that funds be specifically earmarked for the purpose of covering the incidental expenses of the cadet-midshipmen, and that the cadet-midshipmen at the United States Merchant Marine Academy be given an allotment equivalent to that given cadets and midshipmen at the other Federal Academies."

With kind regards, I remain,

Yours truly,

EDWARD I. CONDON.

ALUMNI ASSOCIATION OF THE UNITED
MERCHANT MARINE CADET CORPS,
New York, N. Y., April 25, 1950.

Mr. DELACY SHUMAN,
Secretary, Committee on Armed Services,
House Office Building,
Washington, D. C.

DEAR MR. SHUMAN: I have been informed by Mr. Edward Condon of Charleston, S. C., that in reply to correspondence relative to the appropriations for the United States Merchant Marine Academy, you were advised by the Appropriations Committee and Admiral Knight, chief, Bureau of Maritime Services that, although the $65 monthly allotment is being discontinued the allotment of $200 which is to provide in kind for uniforms and textbooks, will be substituted and that everything else is provided for. This is not true. I would refer to the bulletin enclosed in which we outlined the actual expenses of the cadet-midshipmen and in which it is evident that either of these items listed will have to be eliminated or will have to be met by the families of the cadet-midshipmen.

Also I would like to point out that the percentage of graduates who received appointments in the merchant marine is, I feel, rather good. Of the last graduating class, June 1949, 80 percent were actually aboard American-flag vessels by October of 1949. The steamship companies in a recent survey by Professor Seward of Yale University indicated a need for 235 graduates in the United States Merchant Marine Academy in the present year 1950. This June the academy will graduate 232 cadet-midshipmen.

I believe that Admiral Knight has been forced into a position where he must accept the Bureau of the Budget's recommendation concerning the allowances for the cadet-midshipmen and that he has attempted to support this recommendation as far as possible.

With regard to the advice given you that the difference in pay for the merchant marine cadets and the cadets at West Point and Annapolis is due to the fact that merchant marine cadets are not required to enter Government service upon the completion of their training while the cadets from Annapolis and West Point must enter a period of active service upon completion of their schooling, I would like to bring your attention to the notarized statement which each cadet-midshipman must sign before admittance to the Academy in which he swears to serve in the United States Navy if so desired for a period of at least 2 years after graduation. The latter part of this week I will be in Washington and would like to further discuss this matter with you and Congressman RIVERS.

I believe that if the appropriation act is passed in the House as it now stands it will ultimately mean the defeat of the entire concept of maritime training and the eventual closing of the United States Merchant Marine Academy.

Sincerely yours,

WHEATLEY M. HEMMICK, Jr.,
Executive Vice President.

Our China Policy—What Went Wrong?

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. JACKSON of Washington. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD an article by Mr. W. K. Kelsey that appeared recently in the Detroit News, entitled "Our China Policy—What Went Wrong?"

The record of what went on in China in the confused postwar years is a long and complex one. I think that this article serves as a very useful, brief review of that record. It follows:

OUR CHINA POLICY—WHAT WENT WRONG?

(By W. K. Kelsey)

Undoubtedly mainland China is in the hands of the Chinese Communists.

Therefore, say many Americans, we have been defeated in China.

The question then arises, where did our Chinese policy begin to go wrong?

What should the Government have done that it failed to do?

What did it do to help bring about the Communist triumph?

A study of the history of China from the defeat of Japan to the present time has yielded this writer little light on these matters. Some Senator may know the answers; if so, it would be good to have his analysis.

At the end of the war, China's economy was pretty well ruined. Industry was at a standstill; the currency had gone to pot; large sections of the people were without food. Relief and reconstruction were urgently indicated, and were undertaken by both the United Nations and the United States.

Our political policy at that time was to try to achieve the unity of China. Gen. Patrick J. Hurley worked to bring it about, but he said his attempts were being sabotaged by the State Department.

In December 1945 President Truman announced that our policy was to bring about a cessation of hostilities between the Nationalist troops and the Communists, who had skillfully fought the Japanese in the north, and to arrange for a national conference of representatives of all major political elements in China to seek unification.

For these purposes the President sent Gen. George C. Marshall to China. Our marines remained in the country to look to the disarmament and evacuation of Japanese.

Anything wrong, so far?

GENERAL MARSHALL IN CHINA

General Marshall went to China after a conference of representatives of Britain, Russia, and the United States in Moscow had agreed on the need for a united and democratic China under the National Government, for broad participation by democratic elements in all branches of the National Government, and for a cessation of civil strife. Such was the program General Marshall tried to implement. He remained in China a year, and got nowhere.

There were innumerable conferences with Gen. Chiang Kai-shek's Kuomintang, with the Communists, and with both parties together. But much of General Marshall's time was spent in trying to bring about a truce between Nationalist and Communist armies, between whom fights broke out in many sectors, on various grounds. The fact seems to be that neither side was willing to give up any territory which it occupied until a political settlement had been reached. But it was impossible to secure a political settlement as long as the armies were disputing.

The Communists persisted in demanding that there be no merger of the two armies under a single government until a political compromise had determined the nature of the government. The Nationalists held that until the armies had come under a single command, it was useless to talk about formation of a national government.

Meanwhile the Communists were protesting against the presence of our marines in China, insisting that they were aiding the Nationalists side in protecting the movement of Nationalist occupying troops into Manchuria and seeing that, as the Russians moved out, Nationalist soldiers replaced them even in territory claimed by the Communists.

In November 1946, we signed a treaty of friendship and commerce with the Nationalist government. In December, President Truman reiterated American policy to aid the Chinese people in achieving peace and economic recovery under the Nationalist regime.

Anything wrong so far?

In November 1946, a national assembly convened at Nanking to work out a constitution for China. The Communists boycotted it. On December 25, the assembly adopted the constitution. The Communists refused to recognize it.

On January 8, 1947, General Marshall packed his bags and started home, after asserting that the salvation of China "would be the assumption of leadership by the liberals in the Government and in the minority parties," and blaming extremists in both camps for thwarting his efforts to restore peace.

By summer the war had been resumed on a wide scale, Nationalist troops winning some important victories.

In July, President Truman sent Gen. Albert C. Wedemeyer to China to study the situation. After a month's stay he reported the need of drastic, far-reaching political and economic reforms in the Government.

It was announced that from VJ-day to July 15, 1947, China had received $561,000,000 in delivered aid from the United States. This did not include the $20,000,000 in cultural aid voted by Congress that year, nor the 22 naval vessels handed over as gifts, in 1948. And in that year Congress provided for an additional $463,000,000 for Chinese aid, and it was estimated that $63,000,000 worth of fighting equipment had been given the Nationalist armies.

Nevertheless, throughout 1948 the Nationalists continued to lose battles and cities, and whenever an army or a city surrendered, the Communists availed themselves of captured arms—including American weapons.

Anything wrong with our Chinese policy so far?

WHERE DID OUR POLICY FAIL?

It may be charged that in the civil war which was resumed after General Marshall had washed his hands of China, we might have given Chiang Kai-shek more military aid. But it is doubtful if Congress would have been willing.

At the end of the war with Japan, China had a large army trained by American officers and provided with American arms to fight the Japs. What became of it? What became of the arms and supplies furnished out of surplus war stores? Some of them certainly fell into Communist hands.

By the end of 1948 our choice lay apparently between spending more hundreds of millions for aid to the incompetent leaders of Chiang's armies, or sending armies of our own into China to carry on effective war against the Communists. Such intervention could not be seriously considered.

It would have been a provocation to Russia to intervene on the other side, and it might thus have been the cause of another general war.

There was not in that year, and there has not been since, any showing of public opinion in this country in favor of either vast expenditures to bolster the Nationalists, or armed intervention in their behalf.

Where, then, did our Chinese policy go wrong? At what stage should it have been changed, and how? It seems to this writer that the critics of our policy, to be consistent, must make a showing on these points.

Agriculture Yearbooks

EXTENSION OF REMARKS
OF
HON. W. R. POAGE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. POAGE. Mr. Speaker, the following information about the Yearbook of Agriculture is provided by the yearbook editor in response to requests from Members of the Congress.

In accordance with Public Law 146, Eighty-first Congress, no yearbook will be published in 1950. That law—an act making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1950, and for other purposes—provided:

For reprinting [in 1950] the 1948 Department of Agriculture Yearbook, Grass, for the use of the Senate and the House of Representatives, respectively, in the ratio of 110,000 to 360,000 copies (of which not to exceed $156,674 shall be available for the yearbook reprint for such use).

Thus, 179,667 copies of Grass were reprinted in April 1950 for congressional distribution—425 copies for each Member of the Senate and 312 copies for each Member of the House. No copies were provided for the Department of Agriculture.

During the 1949 hearings, before the subcommittee of the Committee on Appropriations, House of Representatives—part I, pages 255–258—the following were some of the points brought out:

Members of the Congress do not have enough copies of the yearbook to get them into the hands of the farmers they should reach. Rising printing costs—in 1949—necessitated last-minute changes in number of pages and material just before publication. A decrease in the 1948 appropriation necessitated a reduction in the yearbook staff, which now comprises the editor and a typist. It is not expected that a new yearbook can now be put out every 12 months. Every effort is made by the editor to make the yearbooks readable and understandable by the layman and the average practical farmer.

Work is in progress on the next yearbook. Most of the manuscript should be ready for the Government Printing Office by July and, based on previous experience, 8 to 10 months would be required for printing and binding.

That volume will be devoted to the utilization, processing, new uses, byproducts, residues, and marketing of farm products, notably those in oversupply. Nearly all farm crops are discussed—among them fruits, vegetables, corn, oats, wheat, peanuts, wood, cotton, tobacco, sugarcane, sugar beets, starch, potatoes, sweetpotatoes, citrus, honey, maple, rice, soybeans, rubber, sorghum, wool, feathers, fats and oils, cottonseed, eggs, meat, milk, and other dairy products, hides, naval stores.

Among the processes considered are antibiotics, enzymes, fermentation acids, alcohol, waste byproducts, freezing and dehydration, locker plants, handling of fibers, and many more. Numerous examples are drawn from the work at State experiment stations, industrial laboratories, the four regional research laboratories, and other Government agencies. The tools of research—biology, chemistry, physics, and other techniques—are explained, to exemplify the possibilities of further food and nonfood uses of the products of American farms. The volume is written for the nonscientific reader.

The goal is to produce a volume of practical use and interest to a large segment of United States citizens—farmers, who have an interest in what happens to their products after leaving the farm and who will use the information for planning future operations; industrialists, who will find many details on the processing techniques and gain information on laboratory discoveries that bear on their fields; housewives, who will get information on such subjects as bread, nutritive values of foods, detergents and soaps, natural and synthetic fibers, preservation of food; high school and college students; and the general citizen, for whom is given a survey of important scientific developments that touch his life in many ways.

Great interest has been shown in the recent yearbooks, as shown in sales figures of the Superintendent of Documents—which are in addition to approximately 234,000 copies distributed by Members of the Congress:

1943–47, Science in Farming	23,000
1948, Grass	23,473
1949, Trees	25,007

In addition, the Superintendent of Documents has contracted recently for the additional printing, for sale, of 10,000 copies of Science in Farming and 20,000 copies of Trees. Four thousand of those copies of Trees have been ordered and paid for and are included in the sales figure above.

For comparison, 8,946 copies, 10,852 copies, and 15,028 copies were sold of the 1936, 1938, and 1941 yearbooks, respectively.

Several factors determine the selection of a yearbook subject—evidences of interest and need on the part of farmers, Congressmen, and the general public; the amount of printed matter available elsewhere on the subject; and the availability of writers and material in the scheduled time.

The yearbook is a congressional document, issued under an organic law of 1894.

Because of the time needed to plan, write, organize, edit, and print the yearbook, three volumes are in the mill at one time—one is in active production, one is in the stage of writing, and one is in the preliminary stage of discussion and outlining.

Rent Control

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. RODINO. Mr. Speaker, indicative of the need for continued Federal rent control and orderly decontrol is a survey released by the Bureau of Labor Statistics. It has been found, according to the figures from the Bureau, that premature decontrol in six large cities resulted in soaring rents and greater hardship on renters. While every city has had the right to end controls since April 1, 1949, of 90 cities having a 1940 population of 100,000, only 8 had exercised that right.

My colleague from New Jersey, Congressman HUGH J. ADDONIZIO, a member of the Banking and Currency Committee and well informed on the subject of rent control, has stated: "That I am convinced of the need for continuing a law which provides for orderly decontrol at the right time," citing the housing shortage in his district as a basis for the need. Congressman ADDONIZIO's district, which takes in a good portion of Newark, adjoins the district which I represent. I concur with my able colleague in urging that immediate consideration be given this very pressing problem. A gradual and orderly process of decontrol which will not work hardship on veterans and others who have already suffered hardship from the housing shortage is undoubtedly the most equitable, the fairest, and the most prudent course to pursue.

Under leave to extend my remarks in the RECORD, I wish to include herein the following pertinent editorial which

appeared in the Newark Evening News of Sunday, April 30, 1950:

ASKED AND OFFERED

Mayors of seven of New Jersey's largest cities, including Newark's Ralph Villani, have appealed to the Senate Banking and Currency Committee to release a bill which would extend Federal rent controls beyond June 30, which is the date the present law dies. Mayor Villani said housing conditions in Newark are acute.

Representative ADDONIZIO agrees and says the shortage in his district, New Jersey's eleventh, is most serious for tenants who cannot afford to pay more than $75 a month. He's for continued rent ceilings until controls can be lifted without widespread hardship.

Real estate spokesmen maintain there is plenty of rental housing. Let's take a look at the classified columns of the Newark News, an accurate mirror of real estate conditions in New Jersey. Take Wednesday night. There were 58 advertisements of vacancies in Newark and vicinity. Of these, 49 offered only one apartment each. In those which advertised more than one, the offerings included two to 4½ rooms at $57 to $105, 2 and 3½ from $75, 2 rooms at $70, 3 rooms at $88 and $92. In those which advertised only 1 apartment, rents included $100 for 4 rooms, $92 for 3½, $125 for 4, $150 for 5, $100 for 5, $90 for 4.

Now we come to apartments wanted. There were 61 advertisements. Of those advertisers who mentioned rent, 11 wanted 4 or 5 rooms and 12 wanted 3 or 4 rooms. Of those who want a minimum of 4 rooms, the average offered rental was $68, or $17 a room. Of those who need a minimum of 3 rooms, the average offered rental was $57.50, or $19 a room.

But the available vacancies averaged $96.40 for 4-room apartments, or $24.10 a room. Three-room apartments averaged $92.75, or $30 a room. Thus there is a gap of $28.40 between offered and asking price for 4-room apartments and a gap of $35.25 between offered and asking price for 3-room apartments.

These figures, of course, are not conclusive, but they are indicative. They prove that the shortage is in shelter for those able to pay not more than $75. And they suggest what would happen if rents generally were decontrolled. There would be a precipitate rise throughout this area. The scarcity of vacancies in the desired rent range means that thousands of tenants would have no alternative but to pay whatever was demanded.

Past Comments on National Health Insurance

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. O'SULLIVAN. Mr. Speaker, I wish to call attention to the following safe-and-sane editorial which appeared in the Lincoln Journal, of Lincoln, Nebr., under date of Wednesday, May 11, 1949, as it seems to be so very much to the point that I feel it should have far wider circulation than it has hitherto received:

EDITORIAL COMMENT AND OPINION

SLOGANS AS MEDICAL PRACTICE

If the publicity campaign of the American Medical Association against national health insurance, as outlined in a recent issue of Everyday magazine, is correctly described by the St. Louis Post-Dispatch, then it is an odd sort of thing indeed for which a million dollars has already been raised by a head tax of $25 on doctors. Its philosophy is epitomized in a Post-Dispatch editorial by this adage, long associated with the profession of public relations:

"You don't have to make a thing better if you can sell it to enough people as it is."

The campaign laid out by the counseling firm of Whitaker & Baxter is based on that philosophy almost wholly, writes the editor. "It intends to put slogans in the mouths of doctors, to dose PTA meetings and the like with propaganda pills lusciously sugar-coated. Unless people are prone to believe what they are told in preference to what they can see with their own eyes, and we don't think they are, the AMA campaign is largely going to consist of the medical profession talking to itself.

"The head of a family swamped with a $500 surgical and hospital bill for which he has saved no money whatever—the person who struggles along in discomfort for years because he can't afford to pay the exorbitant prices the dental cartel charges for plates—are not going to form their opinions on the basis of anybody's slick slogans.

"Public approval will wait on improvement in the services themselves, and when it comes no slogans or high pressure campaign will be required to convince anyone it's here."

There also appeared in the October 8, 1949, issue of Capital Comment, published by the Democratic National Committee at Washington, D. C., the following about the present attitude of the American Medical Association:

Syndicated Columnist Peter Edson, whose objective reporting has won him national awards, recently summed up the AMA's position on a health program, as put forth by the AMA publicity staff, as follows:

"Clem Whitaker, director of the AMA-educational campaign, says medical care of the indigent isn't the doctors' problem. That is said to be the problem of the local community in which he lives. The man may be sick only because he also needs food, clothing, or housing.

"None of the AMA spokesmen will take a position on whether there should be Federal aid for housing or feeding the undernourished. They do believe that there should be Federal aid for hospital construction, Federal aid for medical education, Federal aid for research.

"But they are against bills providing medical care for all school children. That would be socialized medicine. They are against laws for national-health insurance. That would be socialized medicine.

"In summary, Federal subsidies for the doctors seem to be all right, but Federal aid for their patients is all wrong."

My position in reference to socialized medicine and compulsory national health insurance has been so grossly misrepresented in the past that I wish once again to make my legislative stand on these matters clear. I have always been of the thought that socialized medicine should never find a place in our Government set-up. But socialized medicine and national health insurance are two different things, as the slightest investigation will disclose.

It seems to me that the medical profession has been grossly deceived by some interests or some sources and have refused to investigate or learn the difference between socialized medicine and national health insurance.

There are at least three national health-insurance bills pending in the Congress now which are compulsory in nature. Having had some disastrous life-insurance experience personally, as far as loading up on insurance was concerned, I can see the danger of compulsory health insurance to many well-meaning persons.

I think that we need some sort of national health insurance, if private insurance companies cannot do the job, but any such insurance should be voluntary and by that I mean that the individual should be accorded the right to say whether he wants the insurance or not and to choose his doctor and the doctor should have the right to accept or reject the patient.

There are many people who would not want national health insurance such as persons who already have adequate insurance of their own choosing with private insurance concerns, persons who work for railroads and other large business institutions, as well as certain public and quasi-public businesses and, of course, all veterans have a hospital, medical, and dental plan already and it would be of no use to compel these veterans who are employed to take out national health insurance. In other words, I do not believe in loading up people who do not need it with health or accident insurance whether it be Government insurance or private insurance.

It is my most earnest hope that when the fog of misrepresentation has cleared away that some voluntary plan of national health insurance will be evolved which will be safe, sane, and workable.

Curtailment of Postal Services

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. ADDONIZIO. Mr. Speaker, as sponsor of H. R. 8205, to rescind the order of the Postmaster General curtailing certain postal services, I was pleased to receive the following resolution of the city of Newark, N. J.:

Whereas Postmaster General Donaldson has recently issued a directive curtailing mail deliveries and other services generally, and particularly mail deliveries in residential districts, from two trips a day to one trip a day therein; with resulting inconvenient and unsatisfactory delivery service, all of which is a departure from long-established practice and a retardation of mail service, to the disadvantage of business as well as residents of the city of Newark; and

Whereas the curtailment of the services aforesaid will result in reduction of employment in the postal service, will add to present unemployment, and will be productive of hardship unreasonably imposed upon our people; and

Whereas it is the duty of the Federal Government to sustain present essential Government activities and employment and to avoid creating unemployment when in fact any economy effected will result in imposing a burden upon State and municipality which may arise therefrom: Now, therefore, be it

Resolved by the Board of Commissioners of the City of Newark, That we, for and in be-

half of the citizens of our city, do hereby address ourselves to the President of the United States and to the Postmaster General, and respectfully request that the aforesaid directive curtailing postal-delivery service be and the same shall be withdrawn, on the following grounds:

1. Curtailment of services will work a hardship on our citizens;

2. Will result in increased unemployment and possible strain on relief load;

3. Any economy which might be effected would not warrant this drastic action; and be it further

Resolved, That the city clerk shall forward copies of this resolution to President Truman and to Postmaster General Donaldson; and to the United States Senators from New Jersey, and the Congressmen of the Tenth, Eleventh, and Twelfth Districts.

RALPH A. VILLANI,
LEO P. CARLIN,
STEPHEN J. MORAN,
J. B. KEENAN,
M. ELLENSTEIN,
Board of Commissioners of the City of Newark, N. J.

The Secretary and Treasurer of the American Federation of Labor, Hon. George Meany, Predicts Doctors Will Eventually Hail Health Insurance as a Boon to Their Patients and Themselves

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. O'SULLIVAN. Mr. Speaker, there appeared on April 18, 1950, in the American Federation of Labor Weekly News Service, a very timely and enlightening article entitled "Meany Predicts Doctors Will Hail Health Insurance," which article is well worth reading and giving serious consideration. It is as follows:

NEW YORK.—A. F. of L. Secretary-Treasurer George Meany predicted that the American Medical Association "will be forced to admit—after it is enacted" that health insurance is "the best break the doctors of this country ever got—to say nothing of their patients."

In a speech which summed up A. F. of L. philosophy and reasons for choosing a liberal Congress in the 1950 elections, Mr. Meany said the American people are not asking handouts from their Government but "are paying our own way."

"I am convinced that the American people are willing to pay still higher taxes for more adequate protection against economic disasters and for new programs such as health insurance," he said.

Mr. Meany spoke in presenting a citation for public service from the League for Industrial Democracy to Senator HERBERT H. LEHMAN. Mr. LEHMAN said in acceptance that critics of the welfare state spend their time hunting Communists while opposing measures that would weaken communism.

Mr. Meany said:

"Permit me to preface my remarks on freedom and the welfare state by admitting that I believe in both. More than that, I believe that both freedom and a state of welfare can and should be enjoyed by the American people at the same time.

"So, I am sure, does our special guest—Governor LEHMAN—because his whole public career has been aimed at the achievement of those goals. That is one of the chief reasons why the labor movement has always regarded him so highly.

"Of course, there is no such thing as a welfare state, neither here in America nor anywhere else in the world. To liberals, the welfare state is an ideal worth working for and fighting for. To the reactionary politicians who pounced upon the phrase for propaganda purposes, the welfare state was merely something to frighten people into voting against their own interests.

"Fortunately, the great majority of the American people do not get panicked that easily. They have more common sense.

"A free government, like ours, was established in the first place not to rule the people, but to serve them.

"The Government does not deprive us of any liberties by such services as workmen's compensation, bank deposit insurance, crop insurance and social security. The only compulsion in any of these programs is the payment of taxes for the insurance provided, and taxes always have been and always will be with us.

"I am convinced that the American people are willing to pay still higher taxes for more adequate protection against economic disasters and for new programs, such as health insurance.

"When the welfare state slogan fell flat, the reactionaries hunted around for a new phrase and came up with the hand-out state. All of us who pay taxes for the extremely meager economic and social insurance which our Government, as yet, affords us realize quite clearly that we are not getting any hand-outs but are paying our own way.

"But, speaking of hand-outs, it is somewhat surprising to me that our reactionary friends never do refer to the very considerable hand-outs which our Government has generously awarded to big business in the past and the heavy subsidies which it is still pouring out.

"Was it a 'hand-out state' when the Government spent millions to help the railroads build transcontinental transportation networks?

"Was it a 'hand-out state' when the Government paid heavy subsidies to American shipping, so that an adequate merchant marine could be maintained against foreign competition?

"Is it a 'hand-out state' when the Government subsidizes the airlines through higher air-mail payments than are economically justified?

"Is it a 'hand-out state' when the Government deliberately takes a loss on second-class mail in order to help publications circulate more widely? Do you ever hear the newspapers and their friends in Congress complain about Government largess when big business is the direct beneficiary?

"The American Federation of Labor is, and has consistently been, a firm defender of our free-enterprise system. As a general policy, we do not believe it wise or prudent for the Government to invade the field of private business, wherever private enterprise is serving the public well. If any of the social-justice programs undertaken by the New Deal or Fair Deal were actually damaging to private business, we would be among the first to object. But, has private business really suffered under the New Deal and the Fair Deal?

"I am sure we can all remember back as far as 1933 when Franklin Roosevelt took office. Our financial structure on the brink of complete disaster; agriculture prostrate, and the buying power of our people at the lowest point in 40 years; small business failures at an all-time high.

"We didn't hear any arguments about statism or socialism from the great leaders of industry in those days. No—on the contrary they flocked to Washington by the thousands with all sorts of proposals by which they hoped the new administration would save them from disaster. That they were saved by the prompt actions of that administration is a matter of history.

"And how have the great captains of industry, who were the architects of our ruin back in the twenties, made out under the Fair Deal which they now so viciously condemn through their spokesmen? * * *

"I am not going to bore you with any long-winded analysis of the present position of big business. Let me simply quote from a report, just out, by the United States News, which is edited by David Lawrence. This special report appeared in the March 24 issue of that publication. Here is the quotation:

" 'American corporations, as a group, are rolling in money. In four postwar years they have invested $60,000,000,000 in new plant and equipment; they have increased other assets by $11,000,000,000; they have added $21,000,000,000 to reserves for depreciation, and they still have $40,000,000,000 in cash and Government bonds on hand.

" 'Never before was the financial position of United States business so strong.'

"I think those figures tell the story. Today, the insurance companies, who so bitterly fought us every step of the way to prevent workmen's compensation and social security are making more money than they know what to do with. Today, the utility interests which tried every fair and foul means of blocking the rural electrification program are silently splitting up huge dividends from increased sales of electric power and electric appliances.

"In the same way, I venture to predict, the American Medical Association, which is so frantically campaigning against health insurance, will be forced to admit, after it is enacted, that it was the best break the doctors of this country ever got, to say nothing of their patients.

"This controversy over the policies of the New Deal and the Fair Deal is nothing new. It goes back to our very beginning as a nation. Simply stated, it is: Shall our political and economic policy be what the people want? Or shall it be what some superior guiding group may think is best for the people?

"The present-day Bourbons of our country talk about statism, socialism, and the welfare state. To me labels, with the exception of the union label, are more or less without meaning. I am for the greater welfare and security of all the people of this Nation. I believe that it is a proper function of a democratic government to strive for a better life for all its people, including those who work for wages. Put any label you desire on this effort for a better day—statism, New Deal, socialism, Fair Deal, or welfare state—I am still for it.

"In your time and in mine, I am confident that the American people, by their own decision in free elections, will be able to achieve a greater degree of human welfare and security and will discover that their freedoms have been broadened, rather than curtailed, in the process."

World Without God

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. DONOHUE. Mr. Speaker, I should like to call attention to an excellent editorial comment on communism, which appeared in the May 2, 1950,

issue of the News-Tribune, Waltham, Mass. Here is summed up, in a few poignant paragraphs, a precise description of what human existence would be in a Communist world and it is well worth reading. The article follows:

WORLD WITHOUT GOD

When communism takes over, all the things men have held dear throughout history are taken away. Communist rule is an insidious thing, affecting one liberty at a time until all are gone.

What goes on behind the iron curtain in Russia is more or less a matter of conjecture, but it is known there is little personal freedom, and the Russian people are virtual slaves of the government. A clearer picture of Communist rule is found in the Russian zone of Germany.

Latest move there is an attack on religion. The young are being taught there is no God, and that Christ never lived at all. Forcible attempts are being made to replace the Christian faith with dialectical materialism, especially in the schools. Appeals to the government by distressed parents have been ignored.

Police force is back of the movement to drive religion out of the lives of the people. Unless the children say the things they are told to say, and take part in activities arbitrarily imposed, they face punishment. Parents are told they will be deprived of what little freedom remains, their jobs and their bread, if they do not join in the move to make eastern Germany a pagan land.

Here is communism in its ultimate development, a world without a God and without hope.

A Splendid Editorial Comment on President Harry S. Truman's Veto of H. R. 1758, the So-Called Kerr Natural-Gas Bill

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. O'SULLIVAN. Mr. Speaker, since our great President, Harry S. Truman, so wisely vetoed H. R. 1758, the so-called Kerr natural-gas bill, wails, editorially and otherwise, have poured forth through the media of money-locked newspapers and other publications throughout the land, which sheets are engaged always in doing disservice to the natural-gas buying and natural-gas using public. A number of insertions from these sources have been made in the CONGRESSIONAL RECORD, and they, too, have bewailed the fact that this allegedly dicta-overruling and legal-clarifying measure got the knockout punch from our splendid people-elected and people-serving President.

I dare say more financial tears have been shed over the inglorious demise of this dollar-catching bill than has ever heretofore poured forth from avaricious, greedy, and selfish eyes.

It is most heartening indeed to find that many newspapers in our land which have not degenerated to the sordid level of "kept" news-dispensing journalism have spoken out fearlessly and in a most appreciative way about the wisdom and courage displayed by our Chief Executive in turning thumbs down on this legislative wolf in sheep's clothing.

I now shall place in the CONGRESSIONAL RECORD at this point an outstanding editorial which appeared in the May 17, 1950, issue of the Lincoln Star, a daily Democratic newspaper, published at Lincoln, Nebr., which was authored by its distinguished editor, the Honorable J. E. Lawrence.

This editorial is as follows:

TRUMAN VETO

President Truman's veto of the Kerr natural-gas bill was a vindication of the faith which millions of Americans placed in the Chief Executive.

If Washington observers of the stature of Drew Pearson, Mark Childs, Tom Stokes, and Bob Allen are correct, the bill which the President vetoed was an uncalled for, unbridled grab by powerful interests. In practical effect, it was a move by the so-called independent natural-gas producers to get out from under rate regulation by the Federal Power Commission. It has been said that the bill would take between $100,000,000 or double that amount from the pockets of the consumers of natural gas. Right here in Lincoln, and in other Nebraska communities, there is an illustration of its possible results in the application of the Northern Natural Gas Co. to raise its rates. While that action is based upon a ruling by the Kansas Utility Commission granting the company an increase, it was a striking parallel that the step was planned at the time the Kerr bill was up for passage and notice came almost simultaneously with final congressional action.

It wasn't an easy decision for the little man. The amazing thing is that Mr. Truman, when the chips are down and issues of great consequence to the American people are to be determined, comes to the front with a magnificent display of courage. I mean courage. That veto of his required him to turn thumbs down on Democrat BOB KERR, a man in the gas business himself, who has spent most of his time greasing the path for congressional approval of his bill. It meant that the President had to soak the Speaker of the House, another Democrat, and a powerful Democrat, SAM RAYBURN, also with a veto. It meant that Mr. Truman deliberately invited the retaliation of a majority of the Democratic Members of the Senate. In the field of politics, that is the kind of courage the American people admire.

At no time has this bill made sense to the consuming American public. Its sponsors have claimed that in removing them from the regulation of the Federal Power Commission, there would be no increased costs for natural gas, but on the contrary, competition in the system of free enterprise would take care of all that and the consumer might even benefit. How their hearts bled for the consumer. What kind of sense does that make? In his veto message, Mr. Truman pointed out that the natural factors relating to the production and distribution of natural gas limited the competition of free enterprise, which is a matter of common knowledge. Even more, it is difficult to believe that the people behind this bill were busy turning heaven and earth in order to open up a hot competitive fight in the natural-gas field.

Well, the people won a victory, thanks to Mr. Truman. They could well think soberly upon this great fight now in progress in Washington. There are other bills of equal interest to the American people still pending. They relate very directly to the future of America. In all the chorus of today, part of the time, a thundering denunciation of communism to detract public attention; part of the time a "sweet song of free enterprise" to lull the people to sleep and to arouse a recognized devotion to the system of capitalism. Who is there in this country that wants to tear capitalism apart? Who is there in this country that doesn't recognize that regulation of a sensible character is the strongest safeguard to capitalism that exists? Mr. Truman met this challenge and met it nobly.

Report of Chicago Community Fund Stresses Housing Shortage—A Factual Picture From an Authoritative Source

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. O'HARA of Illinois. Mr. Speaker, on Monday the Banking and Currency Committee starts the public hearings on the Spence bill for the extension of rent control. As far as Chicago is concerned, the termination of rent control on June 30 of this year would result in a situation of extreme distress which none of the Members from that city would wish to contemplate.

I on several occasions have called the attention of the House to the continuing lack of housing in Chicago within the means of a large segment of our population and of the certain tragedy which was certain to befall our people if the controls ceased before the present housing shortage had been eased. I have sought to present the matter factually, and without any exaggeration, which I think will be shown by the following news article from the conservative Chicago Daily News of April 28, 1950, appearing under a four-column headline, "95,000 families doubled up here—144,000 living in houses unfit for human beings":

NINETY-FIVE THOUSAND FAMILIES DOUBLED UP—144,000 FAMILIES IN HOUSES UNFIT FOR HUMAN BEINGS TO LIVE IN

This description of Chicago's need for housing is given by the Welfare Council of Metropolitan Chicago in its annual report on unmet needs, submitted to the community fund.

The lack of adequate housing is the primary problem in the divisions of education and recreation, and family and child welfare.

"In almost every statement housing appears as the foremost community problem affecting the work of family and children's agencies," the report says.

"Lack of housing, hazardous housing, wholesale evictions, and exorbitant rentals for poor dwellings were all listed under the general subject of housing."

American Opportunity

EXTENSION OF REMARKS
OF
HON. ALBERT THOMAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. THOMAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech made by Glenn McCarthy to the combined

service clubs of Gainesville, Tex., April 19, 1950:

It is an honor to be invited here today to participate in the opening of the Gainesville community circus. My good friend Virgil Shepherd, of course, gave me no alternative. He called me and told me I was coming. I'm glad he did.

The Gainesville circus is one of the finest demonstrations of the meaning of American opportunity and initiative in our country today. I have heard how your citizens from all walks of life join together for the purpose of building a community tradition; how opportunity is afforded young performers to get their first experience, and how boys and girls get their first training in business. All of this is done in what has become known as the Gainesville spirit, to building a community better than it would be otherwise, and to aid in worth-while charitable undertakings.

No man could be less than proud to be selected for a part in these festivities, particularly an outsider. To be with people like you is honor enough, and I appreciate the invitation you gave me.

I was asked to make a talk on a subject of my own choosing. That leaves a man with quite a responsibility. I want to talk about American opportunity, what some of our outstanding Texans have done, and a policy which is today threatening to stifle opportunity.

Before the Lucas gusher spouted forth a hundred thousand barrels of oil a day, the petroleum industry was merely an illumination and lubrication business. That historic morning of January 10, 1901, not only gave birth to the automotive and air age; it made such an age necessary. That morning Capt. Anthony Lucas, the wildcatter, boosted America out of the horse-and-buggy era. He pointed the way for men of guts and will to build Texas into the empire it is today. He made it possible for America to become the first power among nations.

The first independent oil man of modern vintage opened the avenue that led men of determination and vision into every section of the Southwest in search for oil. The salt domes of the gulf coast, the Rangers, the Burkburnetts, the Desdemonias, the Glenn Pools, the El Dorados, and others followed. Then oil came to west Texas, east Texas, and Panhandle fields. From there came other prospectors and the quest is still on. It will never end unless initiative is completely killed, and that is certainly possible.

Men have made fortunes—great fortunes. In fact almost every major oil company in the world was born in Texas, most of them at Spindle Top. But for every fortune that has been made, a thousand prospectors have gone broke trying. Those men had a right to search for fortunes here. Our forefathers gave them that right to search for fortunes here. Our forefathers gave them that right and until some tyrant takes it away, they will continue to exercise it.

Men have come to find oil where science has said it could not exist. That is still happening. Lucas was called a fool. Dad Joiner was laughed to scorn. Burkburnett came out of "Fowler's folly." Oil is where you find it—not where someone says it is. But it takes an indomitable spirit, a will to gamble, and hard work, to find it. That spirit and that will are typically American. But there must be an incentive. That incentive is the chance for wealth or financial independence, as well as the incentive of doing good for your fellowman. An independent oil man can make a fortune or go broke—it is his own business. That's why independents find most of the oil. They can follow their own dictates—take their own chances.

They are individuals, responsible only to themselves. They usually listen to no board of directors, limited in their decisions by a group of stockholders. That's why they find the oil, and will continue to do so as long as independent oil men have an incentive to operate.

To a far greater extent than most people imagine, the oil industry is responsible for our world leadership. Try to imagine what the world would be like without oil or try to imagine what America would be like if England or Russia or Germany had America's supremacy in petroleum. When you get through thinking about that, I believe you will thank God for Captain Lucas' discovery and the system of government that made the early development of this industry possible.

Today Texas enjoys a position in the Nation as the leading oil-producing State. You can't give that credit to any major oil company. You must give it to an army of independents, thousands of whom neither you nor I ever heard of because they lost everything they had drilling dry holes.

Gainesville is located in the center of the greatest oil producing area in the world. You gentlemen know what the oil business has done for you. You know what your business, your industry, or your profession owes to oil. And the men who work for you should know, too.

But as an industry, oil owes its greatest debt to the independent. Without him there would have been no oil industry, now or in the future. Without the independent the oil industry would become a monopoly upon which the people must depend, especially after the fittest has survived the battle of the majors which would follow the disappearance of the last independent.

I think it is unimportant what an independent does for himself or to himself; whether he becomes wealthy or goes broke. That's unimportant. What is important is his contribution to national, State, and community prosperity. Who can match the oil man's contribution to progress and prosperity, here or anywhere else? He has created wealth where poverty has existed. He has built industry and business where none existed. He has given an abundance to our way of life that no man in other fields can equal.

Yet at this very hour the independent oil man, as such, faces extinction. His life, as an oil man, is in a balance, and with it, so is yours in whatever field you are engaged in.

Let me explain your part. Just a few weeks ago your governor was forced to call a tax session of the legislature and increase your taxes. In spite of that, old age pension payments are down. In spite of that, farm roads are not being built. Unemployment is growing in Texas—and elsewhere. Businesses are closing their doors in some areas. There is a trend in Texas that may lead us a long way down the road away from the progress and prosperity we have known.

You should and probably do know why every one of these things is true. It is because of the importation of almost a million barrels of foreign crude into this country every day. Every time a barrel of foreign oil comes into America, a barrel less is produced in Texas. Texas is taking most of the licking but the rest of the country will eventually, feel it. Your State revenues were off $20,000,000 from oil taxes alone last year. But that's just State revenue. How much is it off in oil payrolls, oil investments, oil explorations, lease buying, drilling? The figure would stagger all of us.

Texas bears the burden of these imports because it is the only State with a conservation and regulatory body controlling the oil industry both honestly and efficiently. You might think the railroad commission should take another course. If it did, the price of oil would drop, and business, taxes, and industry would suffer even more. We are on the horns of a dilemma. We can choose one of two ways of going over the deep end. We can cut production and make room for imports. Or we can keep production up and permit the bottom to drop out of the conservation of a vital natural resource.

We must take steps to stop or at least retard oil imports. We must at least equalize imports with exports. I say this because we cannot compete with foreign imports.

Our economy is healthy because oil wealth is spread to the greatest possible extent. The oil industry pays handsome wages to labor. It pays landowners well for leases and rentals. It pays investors good dividends and royalties. It pays a great share of State, county, and Federal taxes. It builds communities, businesses, industry, and generally brings prosperity and progress.

American industry is forced to compete with foreign oil. This oil is produced with slave labor. It is produced without regulation, and without limit. Where we produce a hundred barrels a day, a well in Arabia or Venezuela is producing ten and twenty thousand barrels a day and there are no taxes, although good chunks of cash must be handed out to foreign politicians and potentates and because of the volume of production per well a barrel of foreign oil can be sold in New York Harbor for approximately $1 per barrel in competition with domestic crude at $2.65 per barrel.

I'm not blaming the importers. They have found the oil and they are coming to the only oil market. The people must be told what this is doing to American industry. This is a message that must be carried to the people. Our Texas Congressmen understand it. Your Congressman, ED GOSSETT, probably understands it better than any man in Congress. But neither ED GOSSETT nor the other Texas Congressmen can sway the rest of Congress. Something must be done to make our Government leaders realize—not wait to find out before it is too late—what this oil-import business is doing to the economy of our Nation. It is destroying the initiative of men in the oil business. I see good men dropping out of the oil business every day. Every time one drops out, the industry suffers. It seems that even the majors who do the most importing could see this.

I believe we should keep this know-how in the oil industry. I respect the college-trained engineers, geologists, geophysicists, and executives. They have a vital place in the oil industry. But they are going to be in a pretty bad way when the last independent moves out of the field. It takes something different to drill for oil with your own dollars.

I'm afraid that when the independents are stopped in America they will go into foreign fields. I don't believe we have found half the oil in America that remains to be found. And I don't believe the other half will be found if the independent is forced out of the field. I give the majors a great deal of credit for developing oil properties after they are found, but I believe that they will admit that they are not so hot at finding new reserves. Yet new reserves in America are necessary.

It seems foolish to develop oil properties in foreign areas, particularly the Middle East, at the expense of domestic production. All that Russia is doing is waiting for American dollars and American know-how to drill the wells, build the pipe lines, and the refineries. Then they will have the advantage we have—all at our expense. Even to the point of breaking down our economy in the process. Certainly without American capital and know-how the Russians won't get far. They have done a pretty poor job with a great oil reserve of their own during the past 50 years.

War with Russia is inevitable. All Russia needs is petroleum for tanks and planes. War will come when Russia has that petroleum. If we know the production Russia now has, plus the length of time it will take

our own major oil companies to develop the Arabian area production to the point where that production would give them sufficient oil, added to their own, to fight a full-scale war, we could predict within 90 days the actual date of the outbreak of war.

So if we do as the uninformed Members of Congress and the poorly informed State Department officials advocate, we will be cutting our heads off with both sides of a double-bladed ax. We will kill our own industry; chase out the independent who makes it go the American way; destroy initiative, and hamstring domestic development with one blade. With the other blade we encourage foreign development and give our potential enemy the weapon with which to crush us militarily.

Gentlemen, I hope I have made myself clear. If I have given even a few of you a clearer impression of a threat to all of us—you as well as me—I have accomplished what I set out to accomplish.

In this homeland of initiative and opportunity, I thought the message appropriate.

Thank you.

Address of Harvey G. Ellerd

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. MASON. Mr. Speaker, mutual respect, mutual confidence, and real team work between Members of Congress and the businessmen of their districts are very necessary if this Nation is to be saved. Because I feel so keenly about this matter I was deeply impressed by the address of welcome given the Illinois congressional delegation at a dinner in the Statler Hotel, Tuesday evening, May 2, 1950. Under leave to extend my remarks, therefore, I include the address of welcome of Harvey G. Ellerd, president, the Chicago Association of Commerce and Industry:

Members of the Illinois delegation and the Eighty-first Congress, ladies and gentlemen, this annual gathering with our Illinois lawmakers is a very pleasant event. It gives us, the folks from back home, an opportunity to renew our contact with the men we read about in the newspapers and to greet them on an entirely personal basis. Usually, when we meet our legislators they are out trying to get votes, or we, as businessmen, are trying to influence their judgment on pending matters.

It is likewise a pleasure to meet the congressional wives. More than that, it is an educational privilege to meet these ladies whose influence on our elected representatives is so substantial and, may I say, beneficial. I doubt whether any of the members of the Illinois delegation will belittle the high place that congressional wives hold in the scheme of things. If any of the gentlemen does contend that he is not influenced by his wife, I think it is important that his constituents know that too, because there is a widespread opinion that a man who claims to be boss in his own house will also lie about other things.

All of the members of the three great Illinois business organizations represented here tonight regard themselves as a substantial and important part of your constituency. I am supposed to tell you about the interest of these business organizations in good government. But who is not interested in good government? Certainly every citizen who aspires to any degree of respectability will insist that good government is one of his primary interests.

There may be a wide difference of opinion among these partisans of good government, however, as to what government is good and what is the right way to improve it. And, since we are all a part of government in this Republic, each of us has a right to an opinion.

In our attempts to make and keep good government we believe it to be our responsibility as businessmen to furnish you lawmakers with the facts upon which laws are based and to forecast for you the effects and the results which we believe will develop if certain proposed legislation is passed.

I, personally, have great respect for a Member of Congress because he has corralled enough votes to get elected. If I were to run for Congress they would not even need a tally sheet to count my votes.

Developing a following in politics, and so conducting one's self as to inspire the continued confidence of the people, is an achievement which requires a great deal of professional skill and knowledge.

The people are fickle and they switch their allegiance suddenly and too often on an emotional basis. I have often been impressed with the insecurity of a career in public service. Some businessmen are inclined to believe they could do a better job of running the Government than the men who have made politics a life work. When businessmen, professional men or military men are elected to office, however, they seldom distinguish themselves and some of them wind up as failures. I believe very strongly that the men whose business is Government should be entrusted with the conduct of Government. Just as in business, there is no substitute for experience.

Just as businessmen sometimes develop delusions, however, regarding their ability to administer a public office better than the men who make public office a career, so some public office holders become imbued with the idea at times that they could operate business much more satisfactorily than the men who meet the pay rolls. As a rule they cannot. As a rule they fail just as significantly as the businessmen fail in their efforts to conduct a public office.

All of this is a very roundabout and probably a tiresome way of saying "shoemaker stick to your last." I believe, however, that it is something which needs restating from time to time. If businessmen and our representatives in the Government will each remember their own limitations and each respect the abilities of the other group, I think we will accomplish more for the general good.

As far as the businessmen are concerned, I think you will find most of us fair minded and constructive. There was a time when many businessmen were like a ball team I played on a few years. Our motto was "Win, tie, or fight—never lose."

We should, and largely do, give each other credit for honest motives in seeking good Government. An occasion such as this, which enables us to get acquainted informally, does much toward that end.

I have had the pleasure of being closely connected with the Chicago Association of Commerce and Industry for nearly 20 years, and have been its president for the last year and a half. I have also participated in the activities of the Illinois Manufacturers Association and the Illinois State Chamber of Commerce. As a result of these experiences I say to you ladies and gentlemen with all sincerity, that these organizations are not motivated by any selfish interest but rather by a desire that they be a factor in producing the greatest good for the greatest number of people.

Jobs are one of the most important items of our economic necessities and the membership of these three great organizations represents a tremendous number of jobs. We know that you, as lawmakers, are for those things which will make for permanency in jobs and which will create more jobs. Both of these results depend upon the success with which business is able to operate. When we feel that laws will place a handicap on our ability to maintain and create jobs, you will hear from us, and we believe that your response will depend upon our ability to convince you of the correctness of our position.

I really had not intended to say these rather serious things on this occasion but I could not let the opportunity go by.

The English have a song which goes, "The more we are together, the happier we'll be," and that is the theme upon which I should like to close. The better we know each other, the better the results of our efforts as businessmen and of yours as lawmakers, the happier we'll all be.

Antihistamines

EXTENSION OF REMARKS
OF
HON. FRANK B. KEEFE
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. KEEFE. Mr. Speaker, some time ago I addressed the House on the subject of antihistamines. I did so in an attempt to prevent a huge fraud being perpetrated upon the American people that might have a very deleterious effect on public health. I pointed out at that time that the Food and Drug Administration had never made any findings as to the efficacy of these new pills. It is interesting to note that the blatant advertising on the radio has ceased and that the full-page ads in the newspapers have likewise subsided. Evidently the cream has already been skimmed from the public purse.

It is also interesting to note that the Federal Trade Commission has instituted proceedings designed to obtain cease-and-desist orders against the manufacturers of certain of these pills for the reason that the advertising claims are false and misleading.

It is also interesting to note that a news item appearing in last evening's Washington Star indicates that an armed forces medical board, after a 6 months' investigation made by the armed forces epidemiology board reports that "no benefits from the standpoint of either prevention, reduction of symptoms, or shortening of duration of colds was shown." The Army revealed at the same time that it would not use the drugs for cold treatment and that other armed services are expected to follow suit. The article referred to follows:

ANTIHISTAMINES FAIL ON COLDS, ARMED FORCES TESTS SHOW

An Armed Forces Medical Board today announced that an investigation had produced no valid evidence that antihistamine drugs are beneficial in treating colds.

The Army revealed at the same time that it would not use the drugs for cold treatment. The other armed services are expected to follow suit, a board spokesman said.

The Navy is conducting independent tests of the antihistamine drugs at its Great

Lakes Naval Training Station, and a spokesman said its stand on the drugs probably would not be settled until completion of these tests.

The report, based on 6 months of tests, was made by the Armed Forces Epidemiology Board meeting today at the Army Medical Center here. The Board is a joint advisory agency of the Army, Navy, and Air Force, consisting mainly of civilian doctors.

Tests were conducted on both civilians and military personnel, mostly in Cleveland, by the Board's Commission on Acute Respiratory Diseases, headed by Dr. John Dingle, of Western Reserve University.

They showed no benefits, from the standpoint of either prevention, reduction of symptoms, or shortening of duration of colds, the Board said.

Effect of the durgs on allergies such as hay fever was not studied. Persons suffering from such allergies were specifically excluded, Col. William F. Stone, Board member and commandant of the Army's Medical Research and Graduate School, explained.

Persons participating in the tests were given either antihistamine tablets or tablets of plain sugar, Colonel Stone said.

"No significant difference was noticed," he said.

National Children's Day

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. BRYSON. Mr. Speaker, the Judiciary Committee has jurisdiction over, amongst many other matters, legislation establishing holidays and commemoration days for national observance. I have the honor of being chairman of the particular subcommittee of the Judiciary Committee to which has been assigned initial responsibility for considering bills of this nature.

On May 3, 1950, my subcommittee conducted a public hearing on House Joint Resolution 227, introduced by the gentleman from California, my esteemed colleague [Mr. DOYLE], and many companion bills, which have for their purpose the establishment of a National Children's Day on the first Sunday in May of each year. These bills, which are noble and meritorious in their intent, are sponsored by the Kiwanis, and certainly I could take no exception to their constructive purposes.

Mr. DOYLE and several other Members of the Congress appeared before the subcommittee and delivered very effective and inspiring statements on behalf of the worthy cause. I commend the gentlemen on their lofty, unselfish thoughts.

At the same time, however, there also appeared before the subcommittee a Mr. George J. Hecht, chairman of the Children's Day National Council and publisher of Parents magazine. Mr. Hecht in his presentation revealed with shocking poor taste the purely commercial motives with which he viewed the establishment of National Children's Day. So apparent was his avidity for extracting the last ounce of profit from the measure that he proposed the day be set for some time in October instead of June on the grounds that the time of the year would lend itself better to commercial exploitation. His misplaced emphasis on the importance of gifts as a means of cementing a child's love for his parents comes as a revolting thought to those of us who have always felt that the bonds between children and their parents are fostered not by sordid thoughts of gain but by the love and tenderness which God in His great wisdom has planted in the breasts of all men. It needs and should need no artificial stimulants. To Mr. DOYLE's great credit may I say that he offered to withdraw his resolution rather than have it fall into the hands of those whose interests are entirely selfish and commercial.

Let me say here that so long as I may have any influence with reference to holiday and commemoration-day resolutions I shall consider a commercial motive as a bar to my consideration of any such legislation.

Biggest Story

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the twelfth article by Mr. Frank Waldrop on the infiltration of communism in our country:

BIGGEST STORY
(By Frank C. Waldrop)

There is in New York today a man who once held the power of Russia in the palm of his hand. But he lacked the killer instinct that lives in all who were born to rule.

So as he fluttered and doubted a fellow townsman from his birthplace of Simbirsk kicked him downstairs and started a train of explosions, the end of which is not yet.

The man who had power and lost it was Alexander Kerensky, who still lives. The one who took power was Vladimir Ulyanov, alias Lenin, who died before he had a chance to enjoy it.

These two adventurers from Simbirsk, now renamed for Lenin, collided as the last of the Romanov czars, Nicholas II, gave up his throne.

It was a time of staggering upheaval. Millions of Russian troops were being slaughtered by the machine-like precision of Kaiser Wilhelm's Germans.

The Czar went to the front to take personal command, and while he was away a weird magician from Tobolsk in the Russian back country came to prominence in St. Petersburg. The magician was a ruined monk named Gregory Rasputin.

Rasputin from Tobolsk was a bad man, but a powerful magician. He got into the palace politics through claims that he could cure the heir-apparent to the throne of fits. And before anybody knew what he was about he had become the most influential man in town.

Lest you think that is exclusively the nature of things in a weak and disintegrating monarchy and that no other form of government suffers such ills, just remember Washington these 20 years past.

And to parallel that, some murderous palace politics of the Communist regime in Russia. Chapters on both lie ahead in this series.

The truth is that no matter what the form of a government, none is ever any better than the men in office.

The main thing to be said about forms of government is that for safety's sake the men in office should be put there by the people and taken out on schedule, so that power of government cannot ever harden in any one group's hands.

Rasputin became such a power over the royal household in 1916–17 and his influence was so disruptive of the efforts of a few to swing Russia toward orderly government, that a handful of aristocrats under the leadership of Prince Felix Yussupov poisoned, stabbed and finally took him out and threw him in the river.

He was hard to kill.

But as soon as he was dead, riots, strikes and mutinies broke out all over. Parliament ignored the royal household and set up a temporary government on its own, with Alexander Kerensky as minister of justice, representing the Socialists.

While all this was going on, in the period from September 1916–March 1917, a gigantic war was roaring in northern France and along the edge of Russia.

Far over the sea in Washington a United States President named Wilson itched and edged toward the edge of the volcano. He had run for reelection in 1916 with the slogan "He kept us out of the war." And now that he was safely elected, the slogan became "Freedom of the seas."

That, with other help, got the United States of America into the war against Germany on April 6, 1917.

And while all that was happening the man who called h'mself Lenin was hiding in Zurich, Switzerland, with a handful of other exiles from Russia, futilely and hopelessly watching the world turn upside down.

But suddenly Lenin found himself on a railroad train in a sealed car with a handful of fellow conspirators on the way home. The German general staff had been struck with the bright idea that if the United States of America was coming in against them on one side they had better do what they could to knock Russia loose from the other.

They classed Lenin as a poisonous flea who, if they could only get him in the Russian ear, might be able to do some damage. So they sent him into St. Petersburg with, so some historians say, $10,000,000 in gold and a nod and wink.

In the meantime, Kerensky had risen to the head of the government and as Prime Minister was trying to wage war abroad and build socialism at home.

Lenin arrived in St. Petersburg, by then renamed Petrograd, April 16, 1917. By November, with German help, he had bounced Kerensky, stopped the foreign war with an armistice that was put into a treaty of peace by March 3, 1918, and had started a monumental civil war at home.

Not for one moment in all that did he or his gang ever hold a popular majority of votes, where there were any.

Indeed, Lenin had nothing but contempt for what he called parliamentary feebleness and he openly said so.

Hoover Answers 10 Questions on the FBI

EXTENSION OF REMARKS
OF
HON. GEORGE H. WILSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. WILSON of Oklahoma. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD

the very enlightening article published in the New York Times magazine for April 16, 1950, entitled "Hoover Answers 10 Questions on the FBI."

I am certain that all good American citizens are deeply concerned over national security and are vitally interested in the increasing importance and scope of the activities of the FBI. I noted with great interest the timely questions by the New York Times magazine as put to Mr. J. Edgar Hoover, Director of the FBI, and his very cogent answers to these 10 questions about this great Federal law-enforcement agency's role. The questions and Mr. Hoover's answers are presented in full. They follow:

HOOVER ANSWERS 10 QUESTIONS ON THE FBI

(By J. Edgar Hoover)

(The increasing importance and scope of the activities of the Federal Bureau of Investigation have been underlined by concern over national security and the safeguarding of atomic secrets. On the one hand, Director J. Edgar Hoover has asked that the FBI staff be expanded to meet duties imposed by America's atomic-hydrogen bomb program; on the other hand the FBI and its methods have been criticized as a threat to individual freedom. For these reasons the New York Times magazine put to Mr. Hoover 10 questions about the Federal law-enforcement agency's role. The questions and Mr. Hoover's answers are presented here.)

1. What is the chief job facing the FBI today?

The chief job facing the FBI today is to afford the maximum protection to the American people. This obligation, of course, varies from day to day. The FBI by congressional enactments and Presidential directives, is responsible for investigating violations of specifically assigned Federal laws; the collection of evidence in cases in which the United States is or may be a party in interest and performing other duties imposed by law.

These duties, naturally, place heavy and continuous responsibilities upon the FBI. The work of the FBI, in general terms, is twofold: protecting the Nation against the violation of Federal laws and the subversive agent. In the early years of the FBI, in fact up until about 1939, the chief focus of the Bureau was directed against the criminal—the vicious hoodlum, the John Dillinger, the Alvin Karpis, who was intent upon advancing his own predatory interests at the expense of the innocent citizen.

However, by 1939–40, a new national menace began to manifest itself—the danger of fifth column intrigue. Since that time, the FBI has directed increasing attention to internal security problems, until today a large proportion of our staff is assigned to security work. The nature of the menace has changed from nazism to communism, but the danger to America's welfare remains the same.

2. Whom does the FBI investigate? On what basis does it determine who shall be investigated? Is a letter of accusation enough to cause an investigation? Is the accuser investigated too?

Since I assumed the directorship of the FBI in 1924, the basic principle has been followed that the FBI will investigate only upon the presentation of a complaint or information which, if true, constitutes a violation of Federal law coming within our primary jurisdiction, or a matter assigned us by higher authority.

Obviously, we must be on the alert for those acts for which we are responsible. At no time, however, will we investigate unless there is a factual basis or unless we are directed to do so by higher authority. For example, we have the responsibility of investigating alleged violations of the antitrust laws when the Antitrust Division of the Department of Justice so requests; violations of civil rights when so directed by the Civil Rights Section of the Department's Criminal Division; accidents involving possible Federal liability under the Torts Claims Act when so requested by the United States attorney; and fraudulent claims against the Government when so requested by the Claims Division of the Department, along with scores of other matters the general public seldom considers.

As a public-service organization, our doors are open to any citizen or person in the United States who wishes either to make a complaint or furnish information. A letter, signed or anonymous, if it sets forth information which, if true, comes within our jurisdiction, receives consideration. Action to be taken must be decided on the basis of the facts in each case.

In one instance one of our field offices received an anonymous letter alleging that a certain individual had transported stolen cars interstate. We investigated. The results: Sixty stolen automobiles recovered in three States, the thief identified, evidence collected, and eventually the culprit convicted in Federal court. An anonymous letter started the entire investigation.

In another case a police department advised the FBI that a certain Federal employee had signed a Communist nominating petition. We investigated under the provisions of the Federal employee loyalty program. An FBI laboratory technician compared specimens of the employee's handwriting with the signature on the Communist nominating petition. The Government employee's name was there, but he was not the signer. Subsequent investigation conclusively established his loyalty to our Government.

The facts in each case must determine how much credence should be given the individual who makes the accusation. If, for example, we received word from John Doe that another named person was a spy we would want to know the basis for John Doe's accusation. Was he in a position to possess the facts he related? What was his motive? Did it result from malice or a grudge, or was he fulfilling the responsibilities of citizenship? The facts in each case must determine whether he would or would not be investigated.

3. What facts does the FBI seek in the way of information about a man's political, social, and economic beliefs?

The facts vary in each case. The first step is to establish the truth or falsity of the complaint. If true, then there are certain basic facts which are necessary under rules of evidence to sustain a charge in court. With the tremendous volume of work, our investigations are limited to fundamentals. An automobile theft case is one thing, while an espionage ring is another. In the latter we want to know everything the spy does, who his contacts are, where he gets his information, how he transmits it; in fact, we would be derelict if we did not know everything he did from the time he was identified until the investigation was concluded. The responsibility of the FBI is to secure the facts. We do not make decisions as to prosecutive action or recommendations as to whether an individual is suitable or unsuitable for Federal employment.

The FBI is concerned with acts and deeds, not thoughts or beliefs. A man is entitled to think and to believe what he desires. If, in the course of the investigation, however, a witness states that an individual advocates the overthrow of our Government by force and violence, the FBI will want to know what he has done to carry out his threats of force and violence. Whether he is a Republican, Democrat, or Progressive is none of our concern.

In one case, we received a report that a Federal employee had been a card-carrying member of the Communist Party. The investigation established the accuracy of the original allegation. In fact, we even secured the number of his party card. He was not only known but active as a Communist. The investigation, however, revealed additional data. The Federal employee once had been active in a union. With an associate he had joined the Communist Party for the primary purpose of worming his way inside the party clique—to obtain the information which eventually rid the union of Communist domination. The investigation revealed, clearly and vividly, the true loyalty of the Federal employee.

Either through design or misunderstanding, there are those who say that the FBI is invading the realm of thought. Each time this charge has been raised we have endeavored to secure the facts. Invariably the accuser, when asked for specific details, answers in neubulous and vague terms. He is unable to produce the proof to substantiate his charges. Recently one reviewer wrote—attesting fiction as fact—that FBI agents has asked him if a person under investigation read a certain publication. When asked for the name of the agent, the writer replied the incident had occurred so long ago he could not recall the name.

Another individual berated the FBI because of the manner in which we had investigated him. The fact of the matter was he had never been investigated by the FBI. We would gladly have told him if he had been sufficiently interested in the truth to have inquired.

The FBI is interested in actions, not thoughts; in deeds, not beliefs; what a man does, not what he thinks.

4. What is your attitude about the disclosure of FBI files in court or before congressional committees?

The public record clearly proves that the FBI, because it does maintain confidences, has been able to develop valuable sources of information which have a direct bearing on the internal security of the Nation.

The disclosure of the contents of the files by the FBI would reveal confidential procedures and techniques. If this material were spread upon the record, criminals, foreign agents, subversives, and others would be forewarned and would seek methods to carry out their activities by avoiding detection and thus defeat the very purpose for which the FBI was created. Each exception undermines this principle, establishes a precedent, and would inevitably result in a complete collapse of a traditional policy which has proven its soundness.

A disclosure of FBI reports would reveal the identity of confidential sources of information and, if it did not place the lives of such persons in actual jeopardy, it would certainly ruin their future value for effectiveness.

I would not want to be a party in any action which would smear innocent individuals for the rest of their lives.

5. What do the FBI investigative files consist of? To whom are they available?

An FBI investigative file consists of communications pertaining to the investigation, instructions issued by both the Department of Justice and the headquarters of the FBI to its field offices, the reports of its agents, and any other data pertinent to the investigation.

FBI files are confidential by ruling of the Attorney General of the United States. Data contained in the files are for official use, which has been defined by higher executive authority. Investigative reports are furnished other Government agencies when the investigation pertains to these agencies, without recommendation or evaluation. By virtue of Presidential directives charging the FBI with the responsibility of coordinating information pertaining to the internal secu-

rity of the United States, information of interest to other Government agencies is furnished them. The FBI also has the duty of answering requests for information from other agencies.

The FBI fingerprint files contain the fingerprint records forwarded to us by local law-enforcement agencies, the Civil Service Commission, and other Government agencies. The technical files contain only the best set of fingerprint impressions, all other fingerprint cards and resulting correspondence pertaining to identification matters are kept in folders. Data are placed in the fingerprint files only when they relate to identification by fingerprints, such as dispositions following arrests, wanted notices, missing-person notices, and dispositions from the Civil Service Commission and other Government agencies.

6. Are there files on Members of Congress?

No. Investigative files are not maintained on anyone, in or out of Congress, unless there has been a complaint coming within the purview of our investigative responsibilities. The FBI does not maintain files on individuals or organizations, irrespective of position, unless in connection with the discharge of our responsibilities imposed by law or administrative direction. Of course, we have correspondence files, as does any other organization.

7. If a person accused of disloyalty has been cleared, does the FBI destroy the file?

The FBI does not destroy files unless they are obsolete and then only with the permission of the Archivist of the United States. So-called housekeeping records as defined by the Archivist are destroyed after they have served their usefulness. Once an investigation has been made, even though the complaint was found to be untrue, it would be improper and illegal to destroy the file. The innocent person should have the protection of a record of the facts which established his innocence. Should a future similar complaint arise, we would have the benefit of previous information secured, which would make a further investigation unnecessary. As a matter of fact, we receive information daily which on the surface would require investigation but a check of the files reveals previously received data which provide a logical explanation.

In one case, a question arose concerning the loyalty of a Federal employee. Our files revealed that in 1942 he had been investigated as a result of disclosures by a congressional committee. That file contained not only the employee's complete explanation but a verification of the facts. We saw no need for further investigation.

The fact that a man has been proved innocent of charges is even more important in the interest of decency and fair play. Should old charges be revived in the future, the Government employee should be protected by a retention of the file. The question of maintaining a newspaper morgue might very well have been asked. In fast-breaking stories the over-all facts and conclusions frequently are changed through further verification, yet I have never heard it argued that a newspaper should destroy its morgue.

8. To whom is the FBI responsible? Who reviews its work?

The FBI is primarily responsible to the Attorney General and through him to the President. It is also responsible to Congress and, in fact, annually must justify its activities before appropriations committees when the Congress considers its appropriations needs. In addition, the Bureau of the Budget, representing the President, periodically checks our fiscal operations.

The FBI is not a policy-making organization and it does not make recommendations as to action to be taken. It reports facts. In criminal and civil cases, investigative reports are submitted to the United States attorneys and to the appropriate officials of the Department of Justice. When these cases go into court, the activities of the FBI come under the scrutiny of the courts as well as defense counsel.

In connection with loyalty investigations, its reports go to the various agency loyalty hearing boards and are subject to later review by the Civil Service Loyalty Review Board. The work of few Federal bureaus is subjected to as much review as that of the FBI.

9. Does the FBI employ the use of wire tapping? If so, what is its justification?

The FBI does utilize wire tapping as an investigative technique, pursuant to policies established by the highest executive authorities in the land, but only under strictest control and supervision. In each instance, the express authority of the Attorney General is received in writing.

Wire tapping is employed only in matters involving internal security or when human lives might be in jeopardy. Information secured as a result of wire tapping is not used as evidence and is not divulged publicly by the FBI except under force of judicial compunction, over the objection of the Government.

The late President Franklin D. Roosevelt, in a widely publicized letter dated February 26, 1941, said:

"I do not believe it should be used to prevent domestic crimes, with possibly one exception—kidnaping and extortion in the Federal sense. I have no compunction in saying that wire-tapping should be used against those persons, not citizens of the United States, and those few citizens who are traitors to their country, who today are engaged in espionage or sabotage against the United States."

A long line of Attorneys General, including Supreme Court Justices Robert H. Jackson and Tom C. Clark, along with former Attorney General Francis Biddle, has consistently approved the use of wire-tapping for the purpose for which it is employed by the FBI. Former Attorney General Clark observed in a public statement on March 31, 1949: "The statutes and decisions of the courts, including the Supreme Court, concerning wire-tapping do not prohibit the tapping of wires, but rather the divulging or publishing of information and use of it as evidence when obtained by wire-tapping."

10. What answer do you make to the charge that the FBI has too much power in our democracy; that recent developments, in which innocent persons have been accused on the basis of FBI information, are dangerous to civil liberty?

The FBI is the investigative arm of the Department of Justice. As a fact-finding agency, it investigates violations of Federal laws and presents its findings to the Attorney General, his assistants, and the United States attorneys. The FBI cannot file a complaint against a person without first presenting the facts to a United States attorney. In the event prosecution is authorized, then a judge or a jury passes upon the guilt or innocence of the accused.

Prosecution is not a matter within the jurisdiction of the FBI. As a matter of fact, the rules of the FBI require that FBI agents shall not recommend prosecution or urge that prosecution be dropped.

In the case of arrest and seizure of evidence, the FBI operates within the framework of law. Otherwise, an appeal may be made to the courts.

Our governmental system is one of checks and balances. To this end, the instruments of government, including the FBI, are zealously watched by the executive, the judicial, and legislative branches in order to insure that they will not go beyond the well-defined limits of their existence. As previously pointed out, the FBI must justify its every activity to the Attorney General, his assistants, the President, the Congress, and the American people.

One of the greatest protectors of our democratic way of life is the free press in America. The press certainly is alert, and justifiably so, to disclose an improper abuse of power by the FBI or any other Government agency.

The judiciary remains the protector of our way of life. If FBI activity were totalitarian in nature, the courts would be appealed to with dispatch. Prosecution of FBI cases takes place in the courts. During the 1949 fiscal year the total number of convictions in all FBI cases was 8,415. Of all persons brought to court in FBI cases, 97.2 percent were convicted; 93.9 percent of the convictions were based upon pleas of guilty.

One of the best guaranties that the FBI will continue to function within a framework of law stems from the character of FBI men and the training they receive. They would do everything in their power to prevent the FBI from becoming a totalitarian, power-drenched organization. The typical FBI man is, in turn, a typical American. He is just as anxious to see to it that American principles are preserved, either in FBI investigative activity or in any other phase of daily life, as he is to continue to enjoy the freedom incident to democratic living.

The FBI is a servant of the people. A law-enforcement agency becomes too powerful when it is the master of the people. This condition does not exist in the United States.

The FBI makes no accusations. In posing this question the author undoubtedly had in mind the recent case in Washington where, upon the motion of defense counsel, a Federal judge ordered certain FBI reports introduced into evidence. The record demonstrates clearly that the prosecutive officials bitterly opposed the introduction of these reports. An investigative report of the FBI is like a newspaper reporter's notebook. In the course of covering a story, the well-trained reporter secures much information; some true, other portions rumor, gossip, or hearsay. In writing his story he uses only the material which is verified.

In many files the number of reports runs into the hundreds and any one report will not give the complete truth. In fact, all the data in that report, furnished by some person interviewed, may later be proved untrue.

As one very fair and astute Washington columnist stated: "The press has something to answer for in this connection, it seems to me. The raw material of the FBI reports was translated into sensational headlines with little indication for the guidance of the reader that these were not conclusions reached by the FBI but merely the stuff to be ground through the security mill. More responsibility all around would be helpful."

The record of the FBI is well known. We are a human organization functioning in a field where the possibility of error is high, where temperament is sensitive and the security of the individual is paramount. We have sought to discharge our responsibilities with impartiality, fairness, and regard for nothing but the truth. The men of the FBI are taught that it is even more important to establish innocence than guilt.

The FBI is an organization built upon merit and personal integrity. In the final analysis, the character of the special agents of the FBI and their record is the guaranty that the innocent have no basis for fear. They come from every section of the country and are products of the Nation's colleges and universities. The FBI stands today as a service institution, dedicated to the protection of the welfare and security of the American people. The magnitude and vital importance of our tasks lend us strength, courage, and conviction to do ever a better job.

Additional Beds for Veterans' Hospitals

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. DAVIS of Wisconsin. Mr. Speaker, in amplification of my statement on the floor of the House on April 25, when H. R. 5965, directing the President to provide space for 16,000 additional hospital beds in veterans' hospitals was before us, I set forth here an enlightening article which appeared in the Washington Evening Star on April 28:

MEDICAL CHIEF SAYS VA CAN'T USE MORE BEDS

(By Martin S. Hayden)

The angry medical boss of the Veterans' Administration wishes that more Congressmen, chamber of commerce heads, and American Legion commanders knew what a hospital is.

Dr. Paul B. Magnuson says that, if they did, he would not be asked to seek doctors to work in Dublin, Ga., and Battle Creek, Mich., and there would not be talk of giving him 16,000 more veteran beds that he could not operate, if he had them.

In a blunt interview, the one-time Northwestern University surgery head, now VA Medical Chief, had his say about "pouring taxpayers' money down drains under the guise of helping veterans." Specifically, he slapped the election-year alacrity with which the House Monday pushed through Representative RANKIN'S $237,000,000 bill to reinstate the 16,000 beds pruned by President Truman from the VA hospital-construction program.

"I couldn't use 16,000 more beds if they gave them to me tomorrow," Dr. Magnuson protested. "Some folks have the idea that all you do is spend $15,000 to provide one hospital bed and everything is fine. They forget that, after the buildings are open, it takes $12 a day per patient to fill the bed; that would be $192,000 a day, or $70,000,000 a year for 16,000 beds.

"And then," says the doctor, "there is the matter of hiring doctors, nurses, and technicians.

"Do they want 16,000 boarding-house beds, or hosptals?" he asks, "If they want hospitals, it might be well to remember that it takes 1½ people in a hospital to take care of each patient, year in and year out. We have nearly 4,000 of our present beds empty for lack of staff."

That gets the doctor around to Dublin, Battle Creek, and other small communities where, he says, "Chambers of commerce and Legion posts raise hell till they get a veterans' hospital."

Dublin, in the home district of Chairman VINSON, of the Armed Servces Commttee, now has its hospital: A modern 1,000-bed unit built by the Navy, 53 miles from Macon, the nearest city, and presented after the war to the VA.

"We authorize use of 500 of the beds," Dr. Magnuson says. "We've never been able to get enough staff to open more than 300. Dublin is a nice place, but we just can't find hospital technicians, nurses, and doctors willing to move there. I took the bull by the horns and ordered 15 of our doctors down there and 8 promptly resigned."

In Battle Creek, Dr. Magnuson is criticized for not grabbing up the 1,200-bed, $30,000,000 Percy Jones Hospital, which the Army is about to close.

"Another nice town," Dr. Magnuson comments. "But look at its census of doctors: No specialists in anesthesia, skin, or plastics; one each in neuropsychiatry, urology, and orthopedic surgery; three each in internal medicine, pathology, and nose-throat-ear; and five each in surgery and X-ray.

"If we asked those doctors for a guaranty of hours to help us, they would be too busy to give us a total of 10 hours a week. That would mean we would have to bring in a whole new staff and you just can't get them."

At the opposite, and good, extreme, Dr. Magnuson points to the situation in San Francisco where the VA has a staff of only eight full-time doctors in a 430-bed hospital. The bulk of the work is handled by the Stanford and University of California medical school staffs. He would like more beds in such cities.

"They are less expensive," he says, "and the patients have readily available the finest specialized talent that science can produce."

Dr. Magnuson snorts at some of the things said by impassioned House Members during the Monday debate.

Representative EDITH NOURSE ROGERS, Republican, of Massachusetts declared: "It is a cruel thing to prevent men who have fought for us and who were injured from receiving hospitalization."

"There is no such veteran," answers Dr. Magnuson. "Any man disabled in the service can have a bed immediately and get the best medical treatment in the world. The only exception is when he insists on going to a specific hospital and refuses to let us send him where there is space available."

There is a 26,000-veteran waiting list for free VA beds, Dr. Magnuson admits, but all are veterans whose illness is in no way traceable to their service.

Under old law, the VA may give notification for non-service-connected disability, provided there is space available. The records show that, ever since Congress passed the law, it has poured out money to make space available and, of the 99,311 veterans actually hospitalized as of last February 28, two-thirds were for nonservice disabilities.

Another objected-to congressional complaint was this, from Representative DAYTON PHILLIPS, Democrat, of Tennessee:

"Seriously ill veterans are being moved out of hospitals, many of them sent home to die."

"Bunk," says Dr. Magnuson. "There has never been a sick man put out of a veterans' hospital. Some have died after they went home. But death was started by Adam and has been going on pretty consistently ever since. We can fight it, but, but we can't stop it."

What You Haven't Been Told About China

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include the following article from the American Legion, written by Mr. and Mrs. Arthur Hart Burling, who were for years distinguished members of the American diplomatic corps with long service in China:

WHAT YOU HAVEN'T BEEN TOLD ABOUT CHINA

(By Judith and Arthur Hart Burling)

Should the United States recognize Communist China? Those who are pressing for recognition claim that it is essential for us to have a listening post. How effective can a listening post be in any Communist-dominated country? Even before the war foreign correspondents in China concentrated in the large centers—Shanghai, Peking, Tientsin, and Canton—and rarely ventured into the rural areas. Does anyone really believe that now, under Communist rule, Americans will be permitted to travel and talk freely to the Chinese farmers?

It is chiefly due to the absence of first-hand information about the interior of China that the Reds have had such overwhelming success with their all-out propaganda attack of the last 10 years. Masters of double talk, the Communists (and their fellow travelers and stooges) have made use of words like agrarian reform, liberation, democracy, people's government—words which fall pleasantly on American ears—to mask what has been nothing but the brutal drive for power of a ruthless minority.

One successful propaganda line has been that this is a spontaneous revolution of the people. But the people who joined the Communists were chiefly students, intellectuals, and groups of factory workers in the cities—many of them fired by ambition to become the commissars of the new order. These represent a very small percentage of population, since from 80 to 90 percent of the Chinese are farmers, and not more than 10 percent live in cities and large towns.

Many of those we call farmers would be termed peasants in Europe, or other parts of the world, but that word has no meaning in China, because the Chinese have not lived under a feudal system in the last 2,000 years. The Chinese farmer has not been a serf, but has owned his own piece of land. Small and poor his holding may have been, but it was his own. He has been a freeman. More than half of the Chinese farmers were owners, less than one-third part owners, and only about 17 percent tenants.

Another successful propaganda line has been that the Communists are dividing up the large holdings. The main flaw in this picture is that there have been very few large holdings. The average farm size is about 4 acres (compared with an average of 157 acres in the United States), and this figure includes the 7 percent of what are called very large farms, of which the average size is only 13 acres.

The farmers comprise the vast bulk of the people of China, and their response to communism has been demonstrated by the millions of refugees who abandoned their farms and fled before the advancing Communists into the Nationalist areas. There has never been any instance of Chinese fleeing from the Nationalist areas into the sections controlled by the Reds. At one time it was estimated that there were more than 38,000,000 of these refugees who had taken to the roads. Many were middle-class people, landowners, and home owners, who had reduced themselves to beggary because they had heard what happened to other villages when the Communists took over. The only reason why there are no longer these pitiful floods of homeless refugees on the roads, is simply that now there is nowhere for them to go. They are trapped.

What has life been like for those who live in the rural areas since the Communists seized power?

This is the way in which the Reds are carrying out their much-publicized program of agrarian reform:

In each district (hsien), they appoint five or seven Communist directors. These are chosen from the large groups of plain-clothes Communists who accompany the Red army, and who are known as politicals or political organizers. Their task is to completely terrorize and subdue the villagers. At least half of the directors must come from provinces other than those in which they operate to insure that no partiality is shown.

These directors go into every village, however small, and select one or two young men as their representatives. Those chosen must have no profession, trade, or steady work. Nor must they own a farm or property of any kind. In other words, they must be the men whom the farmers have looked upon as ne'er-do-wells. Their main qualification is that they be maladjusted, violent men who bear a grudge against society. These young men are then told just how many people (50, 100, 200, or more, according to the size of the population) must be liquidated as an example to the rest of the village.

They make up this list of victims, in consultation with their cronies, and this gives all who have a quarrel with, or are jealous of a neighbor, a fine chance to avenge themselves. When completed the list is handed to the Communist directors for approval.

Then a village meeting is called, usually in the night. The word "meeting" strikes terror into the heart of every man, woman, and child. Everyone must be present, and nobody knows when or whether his will be the name that turns up in this gruesome lottery.

The Chinese Communists have no legal code of any kind. The victims are not told beforehand what they are accused of, or even that they are accused. There is no defense and no appeal. Sentence is passed and carried out on the spot.

When the whole village is assembled, the village representative takes the chair, with the Communist director sitting beside him to tell him what to do, and to read the confession. This has been prepared before the accused has even been told what the charge against him is.

The village representative then stands up, calls out the name of the victim, and waits for the director to read the long recital of all the misdeeds of which the man is accused.

The conclusion is always a statement that this wrongdoer must be punished, followed by the decision as to whether he is to be shot or beaten to death. Shootings are few, because the reds are told to save their bullets for fighting, and also because they know the Chinese now say: "A man is lucky if he is shot to death."

The sentence usually runs: "This guilty man is condemned to be beaten to death. Any objection?" Nobody dares to speak. The village representative then announces: "Everybody is in agreement."

The real reasons why the victims are selected include being a little more prosperout and successful than others, knowing how to read and write, having a knowledge of the history of China, or knowing about the outside world, being too popular with the villagers, or having their confidence. Such men, it is feared, might be able to influence the minds of the villagers against the Reds.

The trumped-up charges against the condemned men are fantastic, and are apparently not even intended to be taken seriously. A typical accusation is the following: "Fifty years ago such and such a family was the tenant of your father (or grandfather or great-grandfather). For the new year festival, this family gave your ancestor a gift of a couple of chickens, or a dozen eggs. Now let us reckon up and see how much wealth the family of the tenant have lost by this transaction."

The director fixes a value for the gift, takes the highest known rate of interest, compounds it, and then states: "By now I find you have cheated this family of such and such a sum." Care is taken to arrive at a figure far greater than all that the man and his family possess.

Then comes the judgment: "You must give up all your family lands, all your money, everything you own, to repay part of this debt. As a punishment you will be beaten to death."

Then sentence is carried out immediately, and the whole family is forced to be present, but forbidden to weep or make any sound. Afterward the man's wife and children are turned out to beg.

It is a universal custom for the Chinese to exchange gifts at the new year. If a tenant gave a farmer a gift, he would, as a matter of course, give the tenant, in return, something like a box of tea, or a piece of cotton cloth, or a dish of sweet cakes. This fact is, of course, not mentioned.

Both logic and justice are completely outside the range of these people's courts.

In one village in Honan a young man who was extremely popular with everyone was sentenced for some imaginary crime. But, because the people murmured angrily at the decision, the court decided to hang him up by the thumbs overnight, as a lesson that the judgment of the Communists must not be questioned. Execution was to be deferred until the next day.

Somehow, during the night, the young man managed to loosen the bonds and climb down. At the risk of their lives the villagers hid him and helped him to escape. When the Communists found that the young man had got away, they avenged themselves by having his mother and sister beaten to death.

In one village in northern Kiangsu two old women grumbled to each other as they walked together: "Why must such things happen?" Both were seized by soldiers, and ordered to be beaten to death in front of the whole village as an example. While the execution was being carried out, the Communists cried: "You are beating these women too hard. You must be in sympathy with them, and want them to have a quick death. Work more slowly, or you will be the next ones to be liquidated."

In spite of all this terrorism, there have been many rural uprisings. Whole villages, and the populations of whole areas, have been wiped out. The Red leaders publicly state that it does not matter how many millions are killed as long as all resistance is stamped out.

Much has been made in certain quarters of the fact that the Nationalist soldiers had to take food from the farmers, whereas the Red armies do not take anything. The truth is that they do not need to, because food is requisitioned from the farmers by the aforementioned politicals. So much is taken from them that many young men in the villages joined the Red army as the only alternative to starvation.

On the other hand, the people in the rural areas, feeling that everything will eventually be taken away from them, eat up whatever they have—killing their pigs, chickens, and even their buffalo. This is bound to result in widespread famine in the near future.

The Communists claim that they have divided up the land more equally. Actually they have taken land away from some farmers, and given it to others, frequently less competent people. Far from bringing about any agrarian reform the results are already disastrous.

The farmers now figure out that the best they can hope for this year is 50 percent of the usual crop. There are many reasons for this, including the redistribution of land, the lack of buffalo, and the fact that too many women are left without husbands or grown sons. This last is due to the fact that vast numbers of men have been forced into the Red army, and also because so many villagers, about four to each combat soldier, have been compelled to accompany the Red troops and do their work for them.

Then there is the lack of fertilizer, and of food for such animals as civilians still retain. One of the main necessities of the farmer is a supply of soya beans. These are used as food and as oil. The soya bean cake, after the oil is squeezed out, provides fodder for the cattle and pigs, and it is essential as fertilizer to supplement the droppings of the animals. Now the bulk of the whole soya bean crop is being sent away to Soviet Russia, causing incalculable loss to Chinese agriculture.

In addition every farmer now has to give one-third of his crop in kind (not in money) to the government, plus another one-third as a voluntary contribution to the Red army. On top of all this they have to provide food for the soldiers, who are always well fed, especially for several days before they leave for the front, when they are stuffed up like prize turkeys.

Above all there is the psychological factor. Everything now belongs to the government. Nobody in China has the right to buy or sell land. For the first time in their long history no man now owns his own piece of the "good earth." There were never any robber barons in China. Even those few who had holdings of 10 or more acres did not steal them, or acquire them by conquest, but through hard labor and thrift of their ancestors. Now everyone feels that he has been robbed. Even those who had nothing before take no pride in their newly acquired little holding. They know it is not their own, and can be taken away at any moment. Thus the farmers no longer have the incentive to wrest all they can from the soil. Anyway, they say, they are too tired to work hard during the day when they have to attend meetings almost every night. These meetings are not only for trials but for political harangues as well. Attendance is compulsory.

Bitterly resented by all the farmers is the ruling that, in order to go from one village to another, they must obtain a road passport (lu t'iao), bearing their name, where they come from, and their destination. Since these are issued by the village representative, who can seldom read, villagers have in some cases written false names and destinations on their passes and thus managed to escape from their district. Some of our informants have escaped from Communist China by this device.

Before the Communists began to have military successes, they promised the farmers such improvements that some of them, weary of their sufferings during 18 years of war and its aftermath, were inclined to welcome the Reds' arrival. They now say: "These people promised us a better life, but as soon as they got control they took the masks off their faces and we saw that they were devils."

Now the people in the rural areas know what communism means, and they say: "All we want is to be left alone without meetings, and without beatings, without passports, and without requisitions. We want to live peaceably and look after our own little farms."

Never before has a whole population so quickly turned against a new regime. In the rural areas practically all of the people are filled with hatred for the Reds. In one village after another, men whisper to their friends: "I live only for the day when some internal or external trouble will give me a chance to kill a couple of them myself, with my hoe or sickle, or even with a big stone."

The people feel that their whole life is now poisoned. Even stronger than the need for livelihood and security, ingrained in the Chinese mind for centuries, is the importance of an ethical code, or correct personal relationships, of respect for their ancient civilization. All these the Reds are trying to destroy. They have changed all the textbooks, and teach the children an entirely false version of Chinese history and philosophy. As to foreign relations, they teach that America has always been the enemy of

China, that it was the United States that presented the infamous Twenty-one Demands to the Chinese in 1915, and that America refused to fight the Japanese, so that Soviet Russia had to deliver them from the Japanese invaders.

The firmest foundation of Chinese life has been the family, the respect of children for their parents. Now the Reds constantly preach that older people do not count, and that it is best for them to die or be killed off. Children are being trained from infancy to hate their parents, and to spy on them, as in all totalitarian countries.

Of course a whole civilization cannot be wiped out in a day. The Chinese farmers are skeptical of propaganda, and many still have influence over their children. They tell them: "Now we are told that the Americans are our enemies. A few years ago we were told that America was our best friend, that we had to risk our lives to protect any of their airmen who fell down amongst us. How can they expect us to believe that things change so quickly?" But as a new generation grows up, as the older people become more and more afraid to express their thoughts, the situation will inevitably deteriorate. The idea of freedom will fade away.

Even in the cities, and that is where the Communists have tried to make the best showing, there is no attempt to build up industry or improved standards of living. Factories are being dismantled in Shanghai, as they were in Manchuria. There is widespread unemployment, and the people are told to go back to the land. Those who follow this advice find themselves faced with starvation.

The students welcomed the Communists with much rejoicing, but now most of them are completely disillusioned. It is estimated that at least 70 percent have become anti-Red. A common saying among the students is that, as far as fulfilling their grandiose promises is concerned, the Communists have turned out to be only a paper tiger. "You put in your finger and make a hole, and inside there is nothing but air."

As regards the factory workers, they are completely baffled. Forbidden to strike, and forced to work 2 or 3 hours a day longer than before without any additional pay, they ask what benefits the Communists have brought them. "Of course you cannot strike, and you must be glad to produce as much and as cheaply as possible, because the factories now belong to you" is the stock answer. "The factories may belong to us," the men grumble, "but we would prefer to have enough food to eat."

The Communist Party in China numbers no more than 3,000,000—considerably less than 1 percent of the total population of 450,000,000. Few of the soldiers of the army are party members, although a Red political adviser is allotted to each 10 to 15 soldiers. Perhaps as much as four-fifths of the Red Army now consists of Nationalist soldiers who changed sides because they had no weapons or food, or because they were handed over wholesale when generals and governors of provinces sold them out. They have no reason to love the Communists.

It is true that they are better fed than before, but they realize that the reds have no intention of demobilizing the arm even when the whole country is in their hands. They know that they are expected to fight for Russia, and they do not want to spend all the best part of their lives as soldiers under the rigid Commie discipline. They want to be freemen again, to go home, to marry, to have a little piece of land that they can cultivate without interference. They would change sides again even more quickly than before if there were another party with efficient leadership.

Throughout the whole country there is a strong third force of men arising who want to institute reforms and modernize the country, but who also want China to be a land where men can live in peace and dignity. This third party includes all the better elements among the Nationalists, but is chiefly made up of men who have not been associated with any political group. Many of them were highly critical of the former government but are now even more bitterly opposed to the Communists. They say they looked for something better, not for something far worse.

These people are all looking for efficient leadership, for moral as well as for material support. But without arms or some free centers of resistance they are helpless. It is not even possible to carry on guerrilla warfare as it was during the Japanese occupation. The Communists with their highly disciplined organization have infiltrated every part of the country. Unlike the Japanese, who concentrated on the large centers and the areas bordering the railroads, the Reds have a vise-like grip on even the smallest and remotest village.

The Chinese all realize that they have been betrayed by the Communists with their high-sounding slogans. They see that the Reds are able to destroy and tear down and exterminate, but unable to build up the economy. The people now know that their leaders take their orders from Moscow, and that they would be thrown out and replaced by other puppets, if they did not do exactly what they are told.

China, to the Communist leaders, is not a land of human beings with souls and hearts and aspirations toward a better life, but simply a prize pawn. The destiny of China, as they see it, is merely to provide a vast reservoir of soldiers, and of slave laborers to be used, together with all China's vast wealth of raw materials—coal, iron, tungsten, etc.—to enlarge and strengthen the war potential of the Soviet Union in its attack upon the rest of the world.

If we recognize Red China, and to the Chinese recognition signifies approval, we shall deal a body blow at the tens of millions who comprise this third force, and who are yearning to throw off the Red yoke and stand up again as freemen. The Chinese will then feel that they have no longer a friend or a hope in the world. And a whole continent will be delivered over to darkness.

Excise Taxes Hurt You and Hurt Business, Too!

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. HAND. Mr. Speaker, once again I demand repeal of the wartime excise taxes. They are completely unfair. They are an intolerable burden on the backs of the people who are forced to pay them and on the people employed in businesses hurt by them. At a time when business should be encouraged, the excise taxes are depressing trade and costing thousands of jobs. They help no one. They hurt everyone.

These unbearable taxes were enacted during the war under the guise of being luxury taxes. Actually, they are nothing of the sort. They are a sales tax that hits the average American almost every time he turns around.

Think of it—a 20-percent sales tax on baby oil, light bulbs, handbags, luggage, and even wedding rings. Since when have such items been luxuries? The list of taxed items goes on and on—telephone service, train and bus tickets, movie tickets, bowling alleys, billiard tables, club dues, beverages, night clubs, and many others.

The wartime excise taxes were due to end in 1948, but the President demanded that they be kept on. I was one of only 35 Members of the House who voted against continuing them. Here is what I said at that time:

> These taxes strike at the masses of Americans when they buy the daily necessities of our way of life. They are a nuisance tax on the purchases of the people. Despite the high taxes of the rich, it is our average families, that, in total, supply most of the billions.

Every word I said at that time has proved all too true, so I have continued my efforts to get rid of these taxes. On March 3, 1949, I introduced a bill to repeal the tax on transportation, in an effort to stimulate travel to resort areas and other places. Twelve days later I introduced a second bill, which would have repealed the other wartime excise taxes.

On July 27, and again on October 14, 1949, I took the floor of the House to denounce the excise taxes again and to demand their repeal.

I am gratified that more and more Members of Congress are in agreement that the wartime excise taxes must go. I hope we can bring about their repeal without further delay, for the disastrous effects of the taxes are all around us.

Only a few days ago the Commerce Department reported that 4,684,000 Americans are out of work—the highest since 1941. The head of the President's Council of Economic Advisers said there is a 50–50 chance that unemployment will rise between now and December. One million boys between 16 and 24 are looking for work, and there is talk of reviving the Civilian Conservation Corps of the last depression.

I am not contending that all of the unemployment is caused by excise taxes, but it is obvious that a good part of the business distress springs from them. I am told, for example, that the fur industry in many parts of the country has faced a tax-caused buyers' strike for many months and is now in desperate condition. Some firms have already laid off half of their workers and may have to lay off many more if the killing excise taxes are not lifted.

One of the worst aspects of the excise taxes is that we pay them in addition to the thousands of other taxes that are levied on our everyday living. There are 150 taxes on a woman's hat, 116 taxes on a man's suit of clothes, 100 taxes on a dozen eggs, and 151 taxes on a loaf of bread.

When you buy a new car in the medium-price bracket, you pay about $400 in taxes. Think of how many more people would be taking vacations if they had some part of that $400 to spend on them. On gasoline there is an average tax of 6½ cents a gallon. For most motorists, this comes to about $50 a year.

Think of what this money would mean to the average American.

The way to cut over-all taxes is to cut Government spending. The Hoover Commission estimates that three billion to five billion dollars a year can be saved merely through more efficient organization of the Government. In addition, huge sums can be saved by dropping unnecessary operations by the Government. These savings would show up where they are needed most—in the pocketbooks of our people, who are already handing over more than one-quarter of their earnings to the tax collectors.

The people are crying for tax relief. Congress must heed their pleas. I urge every taxpayer, every voter, every citizen to get behind the move to repeal the wartime excise taxes immediately. We should act promptly to help our people.

River and Harbor Act of 1950—Flood Control Act of 1950

EXTENSION OF REMARKS

OF

HON. WILLIAM M. WHITTINGTON

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 6, 1950

Mr. WHITTINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered at the fortieth annual convention, National Rivers and Harbors Congress, Washington, D. C., Friday, March 24, 1950, to wit:

RIVER AND HARBOR ACT OF 1950—FLOOD CONTROL ACT OF 1950

The rise and fall of civilizations through the centuries have been largely determined by the conservation and utilization of natural resources. The misuse of land is a warning that the bounties of nature are not inexhaustible, and that once exhausted, it is difficult to replace. The pioneers of America may have had both land and water to misuse and to waste, but their descendants are not so fortunate. The natural resources of the United States enhanced by science and invention are the foundation of the unprecedented production in World War II that made our country the most powerful in history.

Water gives life and must be conserved. Where it is scarce, it must not be wasted. Where it overflows, the overflows must be curbed. Planning is most important. The Spaniards came to the New World in search of gold, but they lost their empire. The Pilgrim fathers came to Plymouth Rock in search of freedom. They won their freedom and their descendants won their independence.

STREAMS AND LAKES

Nothing in nature is more interesting to me than streams and lakes. They appeal to poets. They are the inspiration of artists. They are useful to the historian. They are the delight of sportsmen. They invite lovers to stroll along their banks. They are attractive to the writers of fiction as well as of verse. They appeal to the engineer as he dreams of building and ministering unto man.

Above the streams and lakes are the sources of both; there are the brooks and there are the forests that have been aptly termed the cradles of rivers. Walking beside the still waters of lakes appeals to me, and nothing is more delightful than to roam through the green pastures of valleys. As I linger along rivers my thoughts, as I have dreamed for years, always turn to the improvement of rivers and to the protection of valleys. Nothing intrigues me more than: "The journey of the raindrop to the sea."

SOLID FOUNDATION

The Corps of Engineers have been constructing river and harbor works since 1824. Flood-control improvements had a small beginning with the organization of the Mississippi River Commission some 70 years ago. The Flood Control Act of 1928 declared that flood control is a national problem. The authorizations under that act were limited to the lower Mississippi River and to the Sacramento River. The act of 1936 implemented the declaration, and for the first time a national policy of flood control was proclaimed by the Congress applicable to all of the rivers of the country. The foundation of the policy is that in all improvements the benefits must exceed the costs.

The flood-control works and the river and harbor improvements of the United States surpass those of this or any other country. No nation has made more or comparable progress in flood control and river improvements than the United States.

RECLAMATION

Another national policy was adopted in 1902. Reclamation was authorized. Progress has been notable. The deserts have been reclaimed. Waters are being conserved. The program is sound.

COOPERATION AND COORDINATION

Under the guise of reorganization it is now asserted that there is not cooperation and coordination between the work of the Army Engineers and the Bureau of Reclamation. Let the record speak. A great flood is being safely carried down the Mississippi River today. To protect Cairo and southeast Missouri there was coordination between the TVA and the Corps of Engineers.

Cooperation obtains between the Corps of Engineers and the Bureau of Reclamation along the Missouri River. There is no occasion to supplant the work of the Corps of Engineers and the Bureau of Reclamation by the establishment of an administration along any river valley.

DISCRIMINATION IN LAWS

I am not saying that our flood-control and reclamation laws are perfect. I emphasize that they are both on a solid foundation. Much of the criticism that now obtains, however, can be eliminated by the Congress of the United States. The remedy is not to create administrations, but the forward step in legislation is for Congress to eliminate the differences in the laws with respect of flood control and reclamation. I believe that such legislation will do much to defeat the authorizations of expensive administrations.

Congress should amend existing laws to provide that in evaluating benefits the same rate of interest should obtain, the same charge for the disposal of power should be provided, and the same system of costs and benefits, with allowance for essential differences that may be involved, should obtain in both reclamation and flood control, and the discrimination in existing laws between flood control and reclamation, particularly with respect to amortizations and with respect to the disposal of power, should be abolished. The two agencies have grown older, and with age they have grown more sensible.

Dissension will be eliminated, expansion will be promoted, and new agencies will be defeated by the passage of Congress of laws that will prevent and eliminate the fundamental differences that now obtain between reclamation and flood-control authorizations and construction.

APPROPRIATIONS

Formerly appropriations for flood control and rivers and harbors were contained in the annual appropriations for military affairs. Some years ago separate bills were provided. The bill for river and harbor and flood-control appropriations is now called the Civil Functions Appropriations Act. During the current session, for the first time, the Committee on Appropriations in the House of Representatives has determined to submit one over-all appropriation bill for all of the agencies and the departments of the Government. That bill has been reported by the committee. It will be considered by the House within a few days. It is an experiment. A one-package bill should be of benefit with respect to balancing the budget. Departments can be more familiar with appropriations for other departments. I trust that the one-package bill will be successful. Such a policy obtains in the British Parliament. I emphasize, however, it is an experiment in the United States. I am apprehensive of delay. The members of this organization should be on guard. The bill as reported reduces materially the recommendations of the President of the United States for the next fiscal year. It is important that the members of this organization contact their Senators and Representatives and urge that while river and harbor and flood-control projects should share in any reductions essential to balancing the national budget, the budget should not be balanced at the expense of river and harbor and flood-control projects. All should share alike.

I must speak frankly. The report on the pending appropriation bill is critical of the Corps of Engineers. That criticism is not deserved. No funds for planning are provided. The Corps of Engineers are criticized for increasing the costs of projects. Such increases are not their fault. They result from the increasing costs of labor and of materials. Costs of construction have increased.

The preliminary examination is to determine whether or not a project is feasible. In the final plans for construction, in order to protect lives and property, to promote navigation, and to develop power in the public interest, changes are made, but they are made upon the request of Senators and of Representatives of all interested communities. The dams should be strong enough to withstand the waters stored behind them. The floodwalls and the levees should protect lives and property. The work should be permanent. Plans for adequate construction are imperative. The report, on the one hand, criticizes constructive planning and adequate building. On the other hand, it is proposed to deny additional funds for planning. The work of the Corps of Engineers will be hampered. Adequate appropriations for planning are essential. The members of this organization should not overlook contacting their Senators and Representatives to urge that funds for adequate planning be appropriated, and that solid and substantial works be constructed.

AUTHORIZATION ACT OF 1950

There is another matter that is of vital importance to the country. The House Committee on Public Works, after full hearings, reported probably the most constructive flood-control and river-and-harbor bill ever submitted to the Congress. It provides for increased authorizations in river basins. It promotes new projects for both flood control and rivers and harbors. All projects were carefully screened. The bill was passed by the House after full debate and after much opposition, on August 22, 1949, by the overwhelming vote of 202 to 1. It was a great victory, but the members of this organization and other sponsors for river and harbor and flood-control improvements must not rest upon their laurels. The bill has been pending in the Senate for months.

It was there before the last session adjourned. The advocates of river-and-harbor and flood-control authorizations have done their best to obtain consideration. I am glad to say that I understand the bill will be considered by the Senate in the next few days. I trust that it will be promptly passed, and approved by the President.

CORPS OF ENGINEERS

No agency of the Government has ever wrought better than the Corps of Engineers. George Washington, himself an engineer and a great administrator, provided for the construction of nonmilitary works by the Corps of Engineers 175 years ago. They are the servants of the Congress, the elected representatives of the people. They are selected and appointed to West Point by Senators and Representatives. The Corps is selected from the high men of the class. They take postgraduate courses after graduating from West Point. No engineers are better trained. They are prepared to meet the challenges of peace as well as of war. They are equipped for emergency and for disaster. They respond when there is an explosion such as occurred at Texas City. They are on the job when cities, States, and regions are snow-bound. They respond to rehabilitation from destruction by hurricanes and storms along the oceans and along the Gulf. They are ready wherever disaster strikes and wherever emergency calls. They serve the people of the United States in rain and in sunshine, in prosperity and in adversity. They should be encouraged. The civil functions of the Corps of Engineers must be preserved and strengthened. They should not be stripped of these functions. They should remain in the Department of the Army. It is an established agency. It is doing an outstanding job. It would be a national disaster if the Corps of Engineers were transferred from the Department of the Army, or if they were deprived of their civil functions.

The members of this organization should be on guard. They should take advantage of this annual meeting to contact their Senators and Representatives and urge that the planning and construction of river-and-harbor and flood-control works should continue to be under the supervision of the Corps of Engineers in the Department of the Army. They have a record that is untarnished and unexcelled. Their work should be continued. Their arm should be strengthened. There is no more important function of the Government than promoting the improvement of our rivers to protect the lives and property of the people of America.

Rent Control

EXTENSION OF REMARKS

OF

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 6, 1950

Mr. YATES. Mr. Speaker, yesterday, during the debate on the 1951 appropriation bill, I pointed out the fact that rent control still was vitally necessary in the metropolitan communities of our Nation and that the great Appropriations Committee should conduct hearings immediately upon the President's request for a deficiency appropriation for the Office of the Housing Expediter. It would be an appalling catastrophe if rent control was to be killed prior to June 30, when the present act expires, because of lack of funds.

The Congress has voted that rent controls continue until June 30, not until May 24, when the Housing Expediter's funds run out. The Appropriations Committee cannot do less than to carry out the will of the Congress and it must consider the necessity of allocating sufficient money for this purpose.

There seems to be a belief that need for rent control no longer exists; therefore, why grant additional funds?

That belief is not based on fact. The facts disclose that the housing market is still so tight that people in the large cities have not yet achieved a reasonable freedom of choice of a place to live. New construction has not yet broken the housing shortage.

Mr. Speaker, in order to present some facts relating to important aspects of this problem, I am appending to my remarks a recent study by Shirley Hillmer, entitled "The Cost of Purchase Housing and a Cue for Private Enterprise," which was published in the December issue of the Journal of Property Management. The article follows:

THE COST OF PURCHASE HOUSING AND A CUE FOR PRIVATE ENTERPRISE

(By Shirley Hillmer [1])

EDITOR'S NOTE.—The views in this article are those of the author and do not necessarily reflect those of the Chicago Housing Authority. The author is indebted to David Eddy of the Chicago regional office of the Federal Housing Administration for assistance in preparing data used in the article.

(In terms of the present economy—leveling off of wages, downward employment trend, etc.—bankers and purchasing families are growing more reluctant to open their wallets, Shirley Hillmer believes. But, hold, this assumed shyness of capital is a blessing in a sense. Under our present economy the Government will have to decrease interest and amortization costs, thus opening the housing field to private enterprise in construction of large-scale rental projects for middle-income families.)

The cost of buying a house is of interest to everyone today. In a market where there still is virtually no rental housing, the availability of housing is determined by the housing for sale. The factors that go into the buying of homes, such as the purchase price, the down payment, and the monthly payments, establish the market for available housing. Such information as to this market concerns not only the man who is buying the house, but also those who build it as well as the banker who is risking his capital. Such information is of particular interest to the managers of rental property who compete with this market.

It is generally assumed that houses are selling at relatively high prices and that because of the housing shortage some people are buying at prices they cannot afford. Little documented information has been offered, however, as to the incomes of purchasers, the relationship of income to purchase price, and the relationship of down payments and monthly payments to income. The figures presented in this paper bear upon Chicago's housing, but it is likely that the relationships indicated here are duplicated elsewhere in the country.

SEVERAL FINANCING STUDIES

The facts presented are based chiefly upon a survey of 80 percent of all single-family houses purchased in 1948 with mortgages insured by the Federal Housing Administration. While these homes may not be completely representative of all houses bought in Chicago, they are a good sample of the lower and medium priced homes meeting minimum requirements.

Two other studies supplemented the FHA survey. The first relates to all single-family houses on which title insurance was purchased from the Chicago Title & Trust Co. in March 1949. A study of the Chicago Title & Trust Co. files represents an excellent sample, since this company provides title insurance for virtually all home properties purchased.

The second study, made by the Real Estate Research Corp. at the request of the Chicago Housing Authority, is of typical houses built from April 1948 to April 1949. "De luxe custom-built types and shoddy fringe-type" housing are not included. This Research Corp. estimated costs of various typical houses.

A SUMMARY OF THE FACTS

The lowest-income families purchasing housing earned $3,000 per year. Fifty-five percent of home buyers earned between $3,000 and $5,000 per year.

The median purchase price of all new homes ranged from $12,400 to $12,800, and of existing houses from $11,000 to $11,800.

Nine percent of all families paid three and one-half or more times their annual income for the purchase of a house. Another 19 percent paid between three and three and one-half times their annual income.

The median down payment for the least expensive home, costing $8,000 to $10,000, was $1,920. For all homes the median down payment was $3,665.

The median monthly payment on debt service, insurance, and taxes for all families was $87. This excludes all maintenance and upkeep costs on the house and any payments on Veterans' Administration loans. The median monthly payment of families with incomes from $4,000 to $5,000 is $65 and for families with incomes of $5,000 to $6,000, $70.

PURCHASE PRICE OF HOUSING IN CHICAGO

The bulk of new housing, as shown in table I, sold between $10,000 and $14,000, with 6 to 9 percent selling for less than $10,000.

The study made by the Real Estate Research Corp., which covered new houses built from April 1948 to April 1949, corroborates these figures. The house most frequently constructed today, it was found, is the four-room dwelling. Typically, it is a one-story, one-family residence with 830 square feet of floor space. It is built of common brick, with plastered walls and partitions, and has a full basement. The unit is heated by a coal-fired gravity hot-air furnace, with the roof area insulated. This typical one-story home sells as a "package" to the consumer, including land and building. Completely decorated and with front and rear walks, it sells at $11,850. A large number of one and one-half story and two-story homes for one family are being built also. The typical 1½ story house built during the 12-month period consisted of five rooms containing 1,220 square feet, and it sold for $13,950. The typical two-story house had 5½ rooms, and was 1,244 square feet in area; it sold for $14,580.

The bulk of the existing housing sold between $8,000 and $14,000, with the median between $11,000 and $11,800. For existing housing, the distributions from the FHA study and study of Chicago Title & Trust Co. houses differ appreciably, since substandard houses are included in the title company's figures. FHA carefully eliminates housing it considers substandard, while the title company does not look into the physical condition of the homes in which the title is insured.

[1] Miss Hillmer is associated with the research section, development department, of the Chicago Housing Authority.

TABLE 1.—*Purchase price of single-family homes sold in Chicago, 1948, and March 1949*

[Percent distribution]

Purchase price	Newly built homes		Existing homes	
	Loans insured by FHA, 1948	With title insurance from Chicago Title & Trust, March 1949	Loans insured by FHA, 1948	With title insurance from Chicago Title & Trust, March 1949
Total	100	100	100	100
Under $8,000	0	3	3	24
$8,000 to $9,999	6	6	22	18
$10,000 to $11,999	39	28	29	17
$12,000 to $13,999	30	33	22	18
$14,000 to $15,999	12	13	11	11
$16,000 and over	13	17	13	12
Median	$12,800	$12,400	$11,800	$10,700

Source: Federal Housing Administration and Chicago Title & Trust Co.

NUMBER OF ROOMS

The large number of new houses selling for less than $12,000 is primarily the result of building economies at the expense of number and size of rooms. The number of rooms, which varies considerably with the purchase price, is one criterion for judging the suitability of a living unit. A home must not only be suitable in size and arrangement at the time it is bought, but flexible enough to adapt to changes in family composition or unforeseen family emergencies. Tenant families normally can adjust to changes by moving, but the owner-occupant has this option only at the risk of a substantial financial loss. A four-room, two-bedroom house could accommodate most three-person families, and some four-person families. Other four-person families and most five-person families would need three bedrooms to accommodate them comfortably and provide flexibility for a long period. A report on the New York City Housing Authority's new program made by the American Institute of Architects states that in planning housing for a four-person family with two children of opposite sex, a three-bedroom dwelling should be provided.

TABLE 2.—*Purchase price of new homes by number of rooms, Chicago, 1948*

Purchase price	Number of new houses	Percent distribution			
		Total	4-room	5-room	6-room
Total	581	100	38	35	27
Under $8,000					
$8,000 to $9,999	35	100	66	34	
$10,000 to $11,999	227	100	63	32	5
$12,000 to $13,999	173	100	27	41	32
$14,000 to $15,999	69	100	1	46	45
$16,000 and over	77	100	1	18	81

Source: Federal Housing Administration.

Almost two-thirds of the homes selling for less than $12,000 were four-room units, and there were no six-room units in this group. These four-room houses are a result of economy rather than desirability for living. This seems indicated by the fact that 81 percent of the families who bought $16,000 homes chose six-room dwellings, and none bought four-room dwellings.

FAMILY INCOME OF PURCHASER

A study of family incomes of home purchasers in relation to purchase prices should be of great interest to property managers and real-estate brokers by indicating what middle-income families are willing to spend for housing.

The fact that, as the table shows, practically no families with incomes under $3,000 ventured to buy a home immediately delimits the lower levels of the purchase housing field.

TABLE 3.—*Percent distribution of annual family income of families buying single-family homes with FHA-insured mortgages, Chicago 1948*

Annual family income:	Percent of families
Total	100
Under $3,000	3
$3,000 to $3,999	24
$4,000 to $4,999	28
$5,000 to $5,999	14
$6,000 to $6,999	14
$7,000 to $7,999	6
$8,000 to $8,999	4
$9,000 to $9,999	3
$10,000 and over	4

Source: Federal Housing Administration.

Three thousand dollars a year, or $60 a week, is equal to the average weekly wage of Chicago's manufacturing employees in 1948. This means a large proportion of families could not buy a home with the wages of the principal worker alone.

One "rule of thumb method" of measuring ability to buy housing is the ratio of selling price to income. Frederick H. Allen, a private housing consultant, in his article in The American City, assumes that for a sound investment, purchase price should not be more than double the annual income for persons in all income groups.[2] A two-to-one ratio is conservative, and many authorities suggest a ratio of two and one-half-to-one. In the past, the valuations of FHA-insured homes on a national average have been less than twice the purchasers' income. In any case, such a ratio can be only a rough guide, as questions of down payment and mortgage terms are so important.

As table 4 shows, current ratios of purchase price to income are considerably higher than in the past. In a number of cases, moreover, they are based on higher family incomes at the time of purchase than can reasonably be expected to continue over a period of years. FHA estimated, without reference to a possible depression, that 17 percent of the families would probably suffer decreased income in the future through loss of secondary wage earners, overtime, and other temporary sources of income.

An analysis of the ratio of purchase price to income shows that 89 percent of the families earning less than $4,000 annually paid two and one-half or more times their incomes for homes, while 63 percent of the families with incomes between $4,000 and $5,000 paid two and one-half or more times their income. The fact that families themselves do not want to pay these high ratios is partially indicated by the fact that at the $5,000-and-over level 70 to 85 percent of all families paid less than two and one-half times their incomes.

TABLE 4.—*Purchase price of single-family homes with FHA-insured mortgages in proportion to annual family income, Chicago, 1948*

[Percent]

Annual family income	Total	3.5 and over	3.0 to 3.4	2.5 to 2.9	2.0 to 2.4	Less than 2.0
All families	100	9	19	29	27	16
Under $4,000	100	23	39	27	9	2
$4,000 to $4,999	100	4	15	44	31	6
$5,000 to $5,999	100	2	6	22	45	25
$6,000 and over	100	0	4	11	31	54

FINANCING OF PURCHASE HOUSING

Financing terms play an increasingly important part in a family's ability to buy a house. The original down payment cannot exceed family savings, and the monthly payments must fit within the monthly family budget. If these two conditions can be met satisfactorily, the total price may be of lesser importance.

One of the explanations of the high purchase price-income ratio found in the FHA study was the sizable down payments that were made by these families. For example, a large proportion of families with as little as $4,000 annual income were able to raise $2,000 to $3,000 for the down payments, thus reducing the amount they would have to pay monthly, and enabling them to buy a house that under the accepted purchase price-income ratio would be completely beyond their means. One of the indications of the importance down payments play in home purchase is found in the current market, where in a number of cases sellers are making contracts for accepting them over a period of months.

For even the least expensive new house, about $2,000 was the usual down payment, and for the $16,000 houses around $5,000 was paid down. Down payments would have been higher than those indicated in the table above had not VA loans (which were made in 30 percent of the cases) ranging from $500 to $4,000 been obtained in addition to the FHA insured mortgage. Moreover, closing costs which may range up to several hundred dollars are not included in these down payment figures.

Because of the weight of the down payments, a family's savings determines whether the housing should be bought or rented. To estimate possible future sales, therefore, it is necessary to estimate savings. A Nationwide survey conducted early in 1948 to ascertain the savings of all "spending units," showed that only 25 percent of the families with annual incomes from $3,000 to $5,000 had total savings exceeding $2,000. These families constitute an important segment of the home-buying market. In Chicago, where prices are higher than elsewhere in the Nation, probably a smaller percent of the spending units had savings.

TABLE 5.—*Median down payment [1] of single-family FHA-insured homes by purchase price, both new-built and existing, Chicago, 1948*

Purchase pric	Median down payment			Median down payment as a percent of selling price
	Both	New	Existing	
Total	$3,630	$3,600	$3,650	
$8,000 to $9,999	1,920	(2)	2,150	20.0
$10,000 to $11,999	3,010	2,740	3,400	27.1
$12,000 to $13,999	4,150	4,000	4,370	31.4
$14,000 to $15,999	6,220	5,830	6,460	35.0

[1] Down payment was computed by subtracting FHA-insured loan and VA-insured loan from purchase price.
[2] Number of cases too small to compute median.

MONTHLY PAYMENTS

The continuous obligations assumed by a home-purchasing family are the monthly payments. These payments are inflexible for a long period of a family's existence and cannot be geared to short-run fluctuations of income, family size, or any other temporary family or national emergency. These are the payments which may be considered as rental.

Seventy percent of all families paid more than $60 a month. Forty-six percent of the families earning less than $4,000 a year paid more than $60 a month. The advisability of any large number of additional families in this income bracket undertaking similar burdens is open to some question. First, some incomes are likely to be reduced when secondary workers, overtime, and/or other temporary sources of income are eliminated. Second, the monthly mortgage payments of $60 do not include payments up to $20 a month on VA-insured loans, held by one-third of these families. Most important, the payments exclude costs of upkeep maintenance, such as heat, utilities, and repair. Repair and maintenance are flexible costs in the sense that they can be postponed. The postponement or elimination of this type of expense, however, takes serious toll in property values and leads to the creation of new slum areas.

Families with incomes of $5,000 and more per year were paying $70 to $90 in monthly payments. This is only 12 to 15 percent of their income, suggesting to those engaged in home building for either rent or purchase the limits to which these families are willing to go.

CONCLUSIONS

The implications of these facts for real-estate brokers, real-estate managers, and other members of the building fraternity are fairly clear. It is quite apparent that the purchase of housing under conditions similar to those detailed here will not continue. Family incomes are not showing signs of increasing, and bankers are showing an ever-growing reluctance to take much additional mortgage paper under these circumstances. Hence, as long as construction costs remain up, there is a good possibility that additional rental units if economically built can lure many of these would-be buyers away from the purchase market.

However, it should be clear to the group interested in building rental housing that even families with higher incomes can find purchase housing with monthly payments of $90 a month. Therefore, although renters may be willing to pay somewhat more than this amount because of the relative freedom that renting provides as opposed to home owning, the amount of the rental can probably not be far in excess of this figure.

There is little question, however, that the essence of the problem both for those interested in selling or in renting housing is the high construction costs. These costs can of course be lowered by a direct attack on material costs, building methods, or by introducing the economies of mass production and prefabrication. In the absence of such basic readjustments, governmental help, such as subsidies in the form of longer amortization or lower interest costs may prove to be another answer for meeting the housing need of these middle-income families.

Do We Want To Drive the Germans Back to Totalitarianism?

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 6, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include an article from the European supplement to Human Events, written by Marian Doenlioff, an anti-Nazi German who realizes that no people can live forever in a vacuum, and that unless the western victors treat with ordinary decency, justice, and encouragement, those who were anti-Nazi and humane, then we need not be surprised to find more and more Germans turning in desperation to their eastern victors.

The treatment of General von Falkenhausen is a blot upon the record of the western powers. Our own Government ought to take the lead in correcting the situation.

VON FALKENHAUSEN

Recently I met a young man with whom I often had very lively discussions during the war. He was, then, aide-de-camp to a rather objectionable Nazi general whom, partly because of stupidity, partly because of loyalty, he used to defend whenever I attacked the attitude of his chief and of the German military leadership as a whole. I remember quite well that during our last discussion, in the autumn of 1943, he indignantly exclaimed: "I do not know what you mean;. is there then no general whose attitude meets with your approval?" "Yes," I replied, "there is one who should be an example to all German officers: General Von Falkenhausen."

Obviously he, too, remembered that talk because his first question the other day was: "What has happened to your Falkenhausen?" Rather shamefacedly I had to tell him that Falkenhausen during the last few years has been in no fewer than 51 camps and prisons in 6 countries, and that for the last 2 years he has been imprisoned at Liége in Belgium—without any trial, even without any indictment. Whereupon my young friend replied, with a show of satisfaction: "My general, on the other hand, is doing extremely well." Due to his relatively good upbringing he did not go on to say: "Now you see what your obsolete ideals are worth."

Because it is typical that many Nazi officers are free, and because it is equally significant that many of the best and most decent Germans, who for years fought against the Nazis—such as, for instance, Weizsacker—are in prison, I want to sketch the story of Von Falkenhausen, whose case has come dramatically into the limelight during the last few weeks.

During the German occupation of Belgium, Falkenhausen was military governor and as a result of his high office was taken into custody in 1945 as a potential war criminal. The 5 years which have elapsed since the end of the war have obviously been insufficient to find out whether he will be tried individually as a war criminal. Many Belgians have unsuccessfully pleaded for Falkenhausen. They have stressed again and again that it was primarily due to him that Belgium came out of the war relatively unscathed and was the first European country to stage a spectacular recovery. A highly placed Belgian last week refused to accept a decoration, giving as his reason that he could not accept this honor so long as Falkenhausen, who had done very much more for Belgium than he himself, was in prison.

As early as 1930, when many Germans who later joined the resistance movement, and many foreign politicians also, had no clue to what the Nazis really wanted, Falkenhausen in public speeches warned against the new movement. In 1932 he endeavored to get Chancellor von Schleicher to ban the SA. In 1934, shortly before the 30th of June, when his brother was murdered by the Nazis, Falkenhausen went to China as private military adviser to Chiang Kai-shek, seeking a refuge there. After the conclusion of the German-Japanese treaty Ribbentrop forced him to return to Germany by threatening to take revenge on his family. Immediately after his return, in 1938, Falkenhausen joined the German resistance movement around General Beck and Burgomaster Goerdeler. I remember quite well that at the time, and also at the beginning of the war, a strong group pleaded for the appointment of Falkenhausen and not General Beck as head of the resistance movement.

In 1940 responsible persons took steps to get him appointed to the post of Military Governor of Belgium in order to counteract the influence of the Nazi Party in that occupied country. This task he fulfilled splendidly in constant struggles with the Gestapo, police, and Führer's orders, as far as it was at all possible. Twice he tendered his resignation but it was twice brusquely refused. When, finally, in 1944, he refused to conscript Belgian youths of 19 for work in Germany, he was dismissed by Hitler and sent to a concentration camp "for constantly favoring the enemy." He was liberated by the Americans only to be incarcerated by them later as a potential war criminal. His successor in Brussels, the Nazi Gauleiter Grohé, was freed by the Belgians a long time ago.

Since 1944 Falkenhausen has been dragged from one European concentration camp or prison to another. Now he has reached the age of 71, yet is still the prototype of the knight without fear or reproach. But he has become a lone old man still more lonely since his wife died on March 4 of this year. She lay dying of cancer in a hospital in Hesse, and because he had not seen her for 10 years, people after a great struggle succeeded in getting him so-called leave of absence. A certificate of the German doctor, an application by his counsel, and the recommendation of the Bonn government were not enough to obtain the leave. Only after two doctors came from Belgium to X-ray the very weak, old lady, who fainted repeatedly during the procedure, was leave finally granted. Escorted by two Belgians he was allowed to visit the hospital which for his reception had been specially occupied by 25 American military police, and he could

only see his wife in the presence of another military policeman.

Shortly before the vital operation he had to return to Belgium, and when his wife soon afterward died he was transported back again to Germany by the same procedure. On special orders from Brussels he was not allowed to attend the burial, but had to stay in the hospital under a strong guard. He was forced to spend the night with three rowdy GI's in a barracks room, because allegedly there was no privacy available.

General von Falkenhausen is nearing the end of his life. All these afflictions can no longer injure him. He is beyond resentment and complaint, and looks into a better world. But we who want to rebuild this world are questioning whether this can be done unless justice and kindness find some place in the foundations.

Threat From Within

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. HAND. Mr. Speaker, perhaps the chief threat to our American democracy is the failure of many millions of Americans to take a strong interest in our Government. The Atlantic City Tribune on April 18, 1950, published an editorial entitled "A Threat From Within," which is worthy of the attention of all of us.

The editorial follows:

THE THREAT FROM WITHIN

As is usually the case, voters in the primary election today probably will be conspicuous by their absence.

It is a strange trait of Americana, more evident on primary election day, that the ordinary voter doesn't "bother to take the time," especially since there is little in the way of interesting political contests on the primary ballot.

This trait, which has become more pronounced with the passing years and which hit a new low in the last Presidential election when barely more than half the country's registered voters trooped to the polls, is feared by many officials as a weakness which could lead eventually to disintegration of the democratic system of government simply through lack of popular interest.

"How much more difference can my vote make?" has been a familiar refrain by many voters, a refrain which is dangerous.

"Besides," some voters say, "I don't have any say in picking the candidates, so why should I bother with a primary?"

That is true to a great extent, but it is also true that the system itself can be kept in line only through popular evidence of voting strength. The laggards in the registration books can be spotlighted only through a general resurgence of faith in the voting system, a resurgence that can be brought about only by a willingness to "take the trouble to vote."

There have been many moves in the past to introduce legislation which would make it mandatory for every registered voter to exercise his franchise, but they were defeated chiefly because many politicians are aware their success lies in a limited vote.

This threat from within our borders is just as dangerous to our security as any from without. Let's tackle this apathy today as a starter.

The Veterans' Preference Act Goes Too Far In Discrimination in Certain Circumstances Against Nonveteran Employees With Long and Efficient Service

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter recently received from a constituent. It portrays vividly, but without venom, the inequities and injustices created by certain provisions of the Veterans' Preference Act, which should be modified to correct them:

MINNEAPOLIS, MINN., *March 21, 1950.*
Hon. WALTER H. JUDD,
House of Representatives,
Washington, D. C.

DEAR MR. JUDD: I am a nonveteran Government employee writing in the hope that you will listen to the inequities and inequalities of the Veterans' Preference Act and pray that you will take the necessary action to repeal it.

At the present time I am employed at the Veterans' Administration Center, St. Paul 11, Minn., and have in my possession a letter from that center possibly terminating my services in 1950, due to personnel ceilings and reduction in force.

I have worked for the Federal Government going on 10 years and also have an excellent efficiency rating, but even with this service and efficiency rating I am either to be demoted or will be out of a job.

It is all so unfair, for as I look about me and see the various persons who have much less qualifications and service than I, who are permitted to stay, merely because they are veterans. Some have only a few months of military service behind them and only a couple or 3 years of Federal Government service.

All of the nonveteran employees that have served the Veterans' Administration since its origin have received these letters of reduction in force. Many of them came directly from high school and colleges into the Federal service to the Veterans' Administration expecting to find security and advancement. After serving as many as 30 years and even more in some cases, they now face disillusionment and despair for the very Government that they have given the best years of their lives to, is now telling them to move on.

Who wants them now? They are in their late forties and early fifties, which is an age too early for retirement, and yet no one will want to take them on. Where will they go? What will they do?

These nonveteran employees have knowledge and years of experience that is valuable to the United States Government, and they are to be replaced by new employees that will have to be trained, taking unnecessary time and money, at a time when economy is being stressed. I know this for a fact, for we are still training those employees that were put in our particular division from the last reduction in force which was a year ago. They still cannot handle the job, thus with still more new employees in these jobs, the efficiency of the Veterans' Administration will really suffer.

Give preference to the truly disabled veteran who cannot go out into private industry and make a living. By all means, give him preference and all the way, but for the good of the Government and actually for the good of the veteran himself, help to eliminate this out-and-out preference, for today and tomorrow the Government is losing some of its best people.

Very truly yours.

ANSWER TO THE LETTER ON VETERANS' PREFERENCE ACT

Thank you for your thoughtful and detailed letter regarding the inequities and inequalities of the Veterans' Preference Act with respect to Government employees who have long and efficient service and are displaced when a reduction in force goes into effect.

You may be sure I agree with the views you have expressed and believe there will have to be some changes in the act. There are bills now before Congress to amend the Veterans' Preference Act of 1944 and to preserve the equities of permanent classified civil-service employees. The House Post Office and Civil Service Committee expects to consider this matter soon and I shall press for some early action which will help in cases such as yours.

With best wishes.

Very sincerely yours,

WALTER H. JUDD.

Twelve O'Clock Noon

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Leland I. Doan, president of the Dow Chemical Co., at the annual meeting of the Midland Chamber of Commerce, Midland, Mich., January 18, 1950:

TWELVE O'CLOCK NOON

Nineteen fifty is a year to reckon with. Gentlemen, I pray we will reckon well.

A few days ago some of you people came down to see us about a sort of midcentury celebration for Midland and Midland County. It's probably a good idea. Anyway it set me thinking that there is—or at least can be—vastly more importance to such celebrations than we may realize.

All over the country communities and organizations of one sort or another are, or will be, planning some special observance of 1950. The number itself is psychological. It is a nice round number. It is the 12 o'clock noon of the twentieth century.

So all these communities and organizations are just naturally going to take time out to review the past. They're going to celebrate. They're going to pat each other on the back. And they're going to brag a bit.

Well, that's all well and good. The backpatting, the bragging, the celebrating are certainly well deserved. Even though we were to borrow all the adjectives in Hollywood, we would be at a loss to aptly describe the past 50 years. Never in history has there been a like period when the lives of so many people have been affected so often and so much by so many things. And we here in America have had ringside seats.

We have fought and won two wars, of course, although as yet we have failed to win the peace from either. We have seen the maps of the world redrawn, and we have seen them shrink to postage-stamp size because in these 50 years we have, among other things, conquered time and space. In 1900 you would not have expected to go from here to Mount Pleasant and return the same day. People commonly were born, grew up, raised families, and died without ever having traveled that far from their birthplace.

Today any one of you can step outside your house and into a device you call an automobile. In 15 minutes you can be at Tricity Airport, 10 miles away. And you can have dinner beside the Pacific Ocean or in Mexico City. The point, of course, is that not only are such things possible, they have become almost commonplace.

It has become commonplace also to transact business in Chicago or St. Louis in a few moments through an instrument on the corner of our desk, to hear music or a ball game being played in New York or California. If we want light, we flip a little lever on the wall, and if we want it warmer, we adjust another. Still another gives us instant heat to cook our dinner.

If you really want to know what has happened in the last 50 years, start in tomorrow morning when you get out of bed and analyze every move you make until you go to bed again. And with each move ask yourself, "How would I have done this 50 years ago? Or would this even have been possible?"

We walk the same, we talk the same, we see, hear, smell, taste, and feel. We know love and hate, joy and sorrow. But those bodily actions, senses, and emotions are about the only things in our lives that are like they were in 1900. And even those have all felt the influence of the things that have happened since that time.

Yes, countless intimate, physical things surrounding our lives have been created and improved. But there have been less obvious things, too.

Fifty years ago Midland was a little town of dirt streets, wooden sidewalks, a scattering of business places and some 2,000 souls. The boom of the lumbering days had passed. There was agriculture, but of limited area and extent. Salt, manufactured locally, had become a glut on the market. The old bromine industry had gone out with the salt. And down at the end of Main Street was an upstart chemical company that seemed to be gaining ground but could certainly not be reckoned to replace King Lumber.

Education, typical of the times, was elementary. Medical care was limited to what could be accomplished in the home or office of the local physician. Men who had jobs—and boys too—toiled 10, or more likely 12, hours a day to earn three squares, clothing, and shelter. And often they were paid, not in money, but in scrip.

I don't have to tell you men about Midland today. You are Midland. This organization represents a guiding force. It can steer Midland to the right or to the left, forward of backward. Today our educational facilities are among the best in the country. And we are even now building to make them better and larger. We have a modern, well-equipped hospital. Our men work 8—not 10 or 12—hours a day. And while we think prices are high, the money they earn in 8 hours buys more goods than ever before in history. Our homes stir admiration in the visitor, and as a friend of mine put it recently, we are so everlastingly widening, paving, sewer digging, and building that you never know what street to take to get through to where you want to go.

Yes, if ever people had cause for celebration, we have it—for our accomplishments as a nation of people, for our accomplishments as a community.

But for all this my mind keeps turning in another direction. In this noontime of the century we are still only half through the day, and there is always tomorrow. At lunch we are prone to remark to our companions, "This morning I wound up such-and-such a deal." And later we will probably say, "This afternoon I must look into this," or "Right after lunch I must take care of that."

There are some things we had better take care of, and right after lunch may hardly be soon enough.

I wonder how the future historian will sum up the first half of our century. I wonder what he will say of 1950.

I wonder, for example, if our grandchildren, taking a federally prescribed course of education, will one day read in their history books something like this:

"The year 1950, to all intents and purposes, saw the end of free capitalism in the United States. While another 10 years was consumed in bringing about complete national control of all business, the victory of the welfare state was essentially fact by the middle of the century. Clinging to their sentimental notions of private ownership and freedom of endeavor, the owners and managers of business and industry nonetheless failed to convince the people of the merit of what they called free enterprise and the elections of 1952 left no doubt that the American people favored the security of state planning and paternalism.

"The victory of the welfare state did not, of course, come about overnight. It was won by successive stages over several decades. The great depression of the thirties and the great war of the forties which followed hastened it by disturbing the normal operation of the old system. This gave early progressive planners an opportunity to educate the populace to accept controls over prices, wages, and the purchase of certain commodities, as well as intermittent direct control over certain industries. And with the high wages prevailing in the forties the people appeared quite willing to turn over much larger portions of their income to the Government to be used in providing welfare services, in stimulating food prices through farm subsidies."

Does such a prospect scare you? Or do you think it can't happen here?

I can remember when Hitler was a comic little man with a trick mustache. I can remember when we joked about Russia's "5-year plan." We didn't think it would last 5 years.

Only a few years ago Britain was the very symbol of stalwart stability among nations. The world virtually revolved on the pound sterling. Could it possibly be significant that the recent devaluation of the pound caused little more than a momentary flutter of speculation and anxiety on this side of the Atlantic? Today she is clinging by her fingernails from the top window ledge of her tower of socialism. And we here in America are helping her Socialist leaders in their frantic efforts to keep the tower itself from falling apart.

Well, these things scare me. I don't like to say "scare," but I'm afraid "disturb" would be quite an understatement. In any event, I'm not alone in my thinking. There's a recurrent question afloat these days. It's been the subject of some public debate, and a number of public speeches. It goes like this: "Are we slipping (or sneaking) into socialism?"

Some of our country's leaders have laughed at this question. But not the way you may think. They have said: "No, we aren't slipping into socialism. We are dashing headlong into it."

A few weeks ago Father Edward A. Kellar, director of the bureau of economic research of Notre Dame University, mentioned this in addressing a group of public relations people—people who in one way or another do much of the talking for American industry. And he made what is to me a horrifying statement. He said: "I am not going to tell you, 'It is later than you think.' I am telling you, you have 2 years at the most."

Unfortunately, there is evidence to support Father Kellar's statement. Consider just two current movements—the agitation for socialized medicine and the outbreak of antitrust actions which appear definitely to be aimed more at bigness in private business than at the conduct of the business.

These, certainly, are straws in the wind. But I wonder if they aren't much more than that. The first, it appears to me, is the most obviously socialistic scheme that has ever been openly proposed on a national scale. If the American people buy that scheme they will buy others. The second, while perhaps not ostensibly socialistic, appears to me as an unprecedented effort to exert peacetime governmental control over industry beyond the intent of our existing laws.

Our problem is not one of dealing with the admitted Communists and the admitted Socialists, but—far more difficult—of stemming the socialistic trends and ideas which have been infiltrating our traditional and presumably respectable institutions * * * our old line political parties, our educational institutions; yes, even some of our churches. Of course, they do not carry the labels of socialism, but rather travel under such appealing names of medical insurance, welfare economy, planned economy, and so on. We are not up against visible antagonists, but insidious ideas attractively packaged.

Nor are we up against some set "day of confiscation" of all private business, but against the gradual encroachment of Government control which will perhaps ultimately leave today's businessman with all his present responsibilities but without his present remunerations, incentives, and opportunities.

Britain's Socialist Government has by no means taken over all business—just credit, communications, civil aviation, transport, coal mines, electricity, gas, medical service. That's all. With those, of course, she can control any business * * * to any degree she sees fit. And her remaining private industry now has the responsibility of trying to make enough money to cover the operating losses sustained on those she has taken over.

Regrettably, her failures and dilemmas do not seem to be cooling even slightly the ardor of the planners who are working toward the same sort of system here. We are today in this country going through much the same sort of social and economic reforms Britain went through before her government became openly Socialist.

If you want to see the parallel between Britain and the United States you might read John T. Flynn's The Road Ahead. It is not conducive to pleasant dreams, however.

You know, sometimes I get the uncomfortable feeling that we have created so many toys for ourselves in the last 50 years that they're taking our attention away from the fundamentals of our existence. I'll wager a lot of people spend more time trying to figure out the week's mystery tune than they do the qualifications of the man who gets their vote for Congress.

Well, I wonder. Are we right, or are the planners right? Is this system of ours any good? This system that says a man may work according to his own choosing; that says a man is entitled to the rewards of his own toil; that says his savings are also entitled to profit if he wishes to risk them in the creation of new productive power; that says his opportunities for self-betterment are limited only by his own willingness and ability to serve others with his hands or his brains; that says that so long as men compete honestly and openly the public interest will be served, and the dishonest will, in the long run, engineer their own downfall?

It is not, never has been, perfect. Nor, for that matter, has anything which man has ever created been perfect. But I know one thing. The things we have accomplished in this country since 1900 have not resulted from any master plan set up in that or any other year. Nor have they resulted from any paternalistic promise of security.

No; they have resulted rather from men working to make their own security; from men, in competition with each other, trying to do a better job, to invent a better mousetrap, to open a new frontier in the knowledge that America rewards achievement—not subservience.

As a people we are, I think, generous, humane, and thoughtful of our fellow man. And we find joy in accomplishment for its own sake. But no one would claim that our successes have resulted entirely, or even largely, from altruistic motives. They have come from our individual attempts at self-betterment—which is just a part of the natural law of self-preservation.

The trouble, perhaps, is that because our motivating forces have been inherently selfish these motives are now being questioned without regard to the human benefits that spring from them. Our measuring stick is the dollar, rather than the product or the service.

Well, this year we are going to be looking at some of those human benefits. We are going to be comparing 1950 with 1900. And perhaps we will be saying, "Just look at all the wonderful things that have happened in 50 years."

But that isn't quite true, because they didn't just happen. They were created—by American hands and American brains—because our American system gave those hands and those brains the incentive to create. I wonder if as we celebrate our achievements we can somehow adequately tell the tremendous story that lies behind them.

You can see this story in hundreds of communities throughout the country. But you need not even travel outside of Midland. Herbert Dow, a young lad of 25, came here with an idea.

Why? He wanted to make some money—a perfectly simple human desire that's just as prevalent today as it was in 1890.

But he needed money to even get started, and he didn't have any. So he used someone else's. How could he do that? Why, because those people wanted to make some money too; and they thought maybe they could do it with his idea. Those men were capitalists.

Well, they did make some. And a lot of others have since. And today more than 19,000 capitalists are hoping, and are making some money by letting the company that Herbert Dow started use their savings.

Now you could complete the story, perhaps, by saying that today that company has an annual income of more than $200,000,000. And that it returns to these capitalists eight or ten million dollars a year in dividends.

But I wonder if that is the story? Is it of any possible human significance that 15,000 men and women today earn decent, respectable livings from jobs that are in existence because some "capitalists" wanted to make some money with their savings and lived under an economic system that permitted them to do so?

Is it of any possible human significance that in your daily lives you can scarcely touch a thing that has not been made possible or made better because of one or more of the six-hundred-odd products that have come from the business Herbert Dow and those capitalists started?

Is it of any significance to the people of Midland that the city they live in has, directly and indirectly, shared in the rewards that have come to that company because its goods and services have found favor in competition with those of other companies?

We have, in this economic system of ours, the best product the world has ever known. We're supposed to be the best salesmen in the world. We have the most intelligent all-around group of customers, and they've had a long and on the whole very satisfactory demonstration. It is possible that we can't keep that product sold to those people, that we're going to lose out to a piece of merchandise that has never offered anything but promises—and as yet has not made good on them in the countries that have bought it?

I don't think so. But it's going to take some selling—in every way we know how, in every place we can tell the story, in our schools, our clubs, our social gatherings; yes, right down to the level of street-corner conversation. For it is at that level that much of the antiprofit, anticapital, anti-big-business talk circulates.

Yes; it's going to take some selling—some telling. And you can talk on a national scale if you want. But you can find it all right here. You can take your customer around Midland and show him our homes, our good streets, our fine schools, our recreational facilities. You can take him up Main Street and around Ashman Circle, and show him our busy shops and stores. You can bring him down to the plant and tell him the story, the one we, ourselves, too often forget.

And then, late in the afternoon, you can take him up by the courthouse and let him look back down Main Street, through the stores, the traffic, the silver boulevard lights and the green elms. And way in the background the sun should be lighting up a river bank studded with red bricks, and green and red and yellow tanks and pipes.

And you can say to him in all sincerity: "That, Mister, is Main Street, U. S. A."

A Real Danger

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, May 5, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, let us hope that President Truman, when he stated recently that there were no Communists on the Federal payroll, knew what he was talking about.

If there are none there now, that is a most encouraging circumstance, for recent convictions of Communists who were on the Federal payroll, admissions by former Communists, proved beyond argument that communism is a real threat to our national security.

Unless there is imminent danger of a war with Russia, there is no excuse for the appropriation of the billions of dollars of the taxpayers' money for which Mr. Truman and the heads of his departments, especially the armed services, are asking.

In the May 1 issue of the Allegan Gazette, published in my home town of Allegan, Mich., there is a very brief editorial by Leo W. Hoffman, which points to Mr. Truman's error and which reads as follows:

TRUMAN REVEALS WEAKNESS OF HIS POSITION ON COMMUNISM

In a speech before the Federal Bar Association at Washington, Tuesday evening, President Truman stated there were no Communists on the United States payroll, and attempted to take the credit for the convictions of Communists that have been secured up to date.

He ignored the Alger Hiss case, his attempt to quash that investigation and the effect that Hiss may have had on United States security.

He ignored the Amerasia case and the fact that over 500 State documents had been stolen with no solution by the Justice Department.

He stated that there was no danger from communism within this country but the danger lay in Russia and communism taking over free countries abroad and thus increasing the threat to this country.

This last statement reveals the weakness of his position. We agree with him that the real danger lies in permitting Russia to expand but we add that there is a very grave danger within this country when our State Department not only does nothing to halt Russian expansion but aids and encourages the spread of communism in some parts of the world.

It is no secret that a certain group in the State Department was responsible for propaganda encouraging Chinese Communists and for preventing this country from giving aid to Nationalist China in its fight against the Communists. And just as Truman said, whenever and wherever communism takes over another country, that constitutes an additional menace to the security of the United States.

It is this group in the State Department that McCARTHY has attacked and the people are entitled to know just what happened. So far neither Truman, Acheson, Mrs. Roosevelt, or any other New Dealer has given the public any account of our failure in China.

By their silence on this subject they lend support to McCARTHY'S charges.

President Truman assumes that only he and his Justice Department have any right to investigate anyone. From the beginning he has used the office of Attorney General, not to impartially try known criminals but as a weapon against political enemies.

For instance, within this last month former Congressman Slaughter from Missouri, the man Truman purged (an investigation into that ended when certain ballot boxes were stolen) was tried before a Federal court on a charge of illegal lobbying. It didn't take a Federal court on a charge of illegal lobbying. It didn't take a Federal judge 5 minutes after the Government's case was in to dismiss the charge on grounds that Government had failed to make out a prima facie case. Why was this man, Truman's enemy, prosecuted in the first place?

Then too, why for so many years did Truman attempt to quash the investigations of the Un-American Committee?

Why did he halt a full and complete disclosure of the Amerasia case?

Why did he for so many years prevent a complete investigation of Alger Hiss?

Why did he ignore Patrick Hurley's accusations against certain men in our State Department, when Hurley resigned as special envoy to the Nationalist Government in China?

And why doesn't Mr. Truman answer these questions when he attempts to defend his actions and the policy of his State Department?

Our conclusion is that he hasn't any answer. He knows he is on the wrong side of the fence and he doesn't see any way out except to ignore any explanation and hope he can be reelected with the aid of his corrupt big city machines and by promising some of the people who are inclined toward socialism, more unearned benefits.

L. W. H.

Mr. Speaker, in the same issue of the same paper is another editorial entitled

"The Value of the McCarthy Probe." That editorial is as follows:

THE VALUE OF THE MCCARTHY PROBE

We listened to a short broadcast by Dr. Dunbar several nights ago and it was our impression that he was in favor of dropping the McCarthy investigation, which he assumes is only serving political purposes.

We believe that the American people will never be satisfied until there has been a complete and full investigation of Senator McCARTHY's charges.

The people of this country now realize that our State Department failed in China. They realize that Communist success in China constitutes a potential danger to the security of this country. Senator McCARTHY and other responsible persons, including Patrick Hurley, claim the reason for Communists taking over China is because the personnel of our State Department, to say the least, favored the Communists in China over the Nationalists.

If our failure in China was due to influence exerted in and on our State Department we are entitled to know it.

Truman has claimed the credit for what he calls our postwar prosperity; let him explain and take the responsibility of our postwar failure in China.

Dr. Dunbar cannot excuse this failure by saying that during the war Stalin was our friend and Russia our ally. Surely he is not so naive as to believe that even during the war responsible people in Government did not realize the threat of communism and the danger of becoming engaged in a war with Russia. No, we can't find it reasonable to say that our Government should be excused for its failure simply because during the last war we all were boosting for Russia to give Germany a licking.

Our State Department was supposed to cope with the postwar conditions in China. In order to prevent a third world war it was the policy of this country to check the spread of communism. Our Government failed miserably in China and now we want to know whether it was because of Red influence in high places or just plain dumbness.

It is true that Owen Lattimore was not an employee of our State Department. It is not true that our State Department did not follow Lattimore's advice in all particulars. At least our State Department favored the China Communists over the China Nationalists and now we want to know why. Was it because of Lattimore and others like him? Did our State Department permit Communists and Communist sympathizers to influence it? That is what we want to know.

Mr. Speaker, these two editorials show something of the thinking of the people of the smaller communities throughout the Midwest, for they are typical of the thought expressed in many letters which come to me from that area.

Whether there are at the moment Communists in the State Department and whether Senator McCARTHY has been reckless in his charges; whether the truth will ever be known, one thing is crystal clear, and that is this: Regardless of the intentions or of the loyalty of those who have been in charge of our postwar foreign policy, they have failed to prevent the spread of communism.

In spite of the expenditure of billions of dollars to aid other nations, it is extremely doubtful that, if war with Russia comes, any nation in the world will be able and willing to render us worthwhile help in that war.

Having made a mess of our foreign policy, created a situation where we are threatened with a third world war—and every student of history knows that suffering and disease follow in the wake of war—those responsible for that failure should not be permitted to either represent us abroad or direct our activities if war comes.

Men who have failed so miserably, no matter what their qualifications, should not have under their charge or direction the lives and destinies of the millions of young Americans who will be called to fight in any war which may come to us because of a lack of ability and foresight on the part of those who have been directing our foreign policy.

Reclamation in the Arid and Semiarid West

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Monday, May 8 (legislative day of Wednesday, March 29), 1950

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a splendid address entitled "Reclamation in the Arid and Semiarid West," delivered by William E. Welsh, secretary-manager of the National Reclamation Association, before the recent convention of the National Rivers and Harbors Congress.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

RECLAMATION IN THE ARID AND SEMIARID WEST

It is a pleasure to appear before this organization, an organization national in scope and now in its fortieth year, an organization that has had a great and beneficial influence upon the policies of this Nation with respect to the development of its water resources.

It is likewise a pleasure to appear on behalf of an association such as our National Reclamation Association, an association in its eight enth year and representing the western half of the United States.

Both organizations are interested primarily in fostering and promoting a sound and orderly program of water-resource development. Water is a basic resource. Its use affects the economy, happiness, and prosperity and the future welfare and security of all the people.

We have long recognized the importance of water to the western half of the United States. More recently such great cities as New York City, as well as other areas in the East have been brought face to face with the fact that they cannot continue to grow and expand, in fact they cannot survive without water.

Our National Reclamation Association, representing the arid and semiarid West, was organized primarily for the purpose of fostering and promoting reclamation development in that area. You who are here because of your interest in water realize, I am sure, that out in that desert country man cannot survive upon the use of water as it is delivered by nature—from melting snows and the winter precipitation. Water must be stored in reservoirs and held over for the dry summer season.

TOTAL IRRIGATED AREA

The total irrigated area of the entire West today amounts to 21,000,000 acres. Only 17,000,000 acres remain to be irrigated. To put it in a different way—all of the land remaining to be irrigated in the West and susceptible to irrigation amounts to only one-third of 1 percent of the total land under cultivation in the United States. Furthermore, with respect to agricultural surplus the Senate Committee on Interior and Insular Affairs on March 20—last Monday—in report No. 1351, pertaining to the Columbia Basin, said:

"The committee examined the effect, if any, of the agricultural production from all reclamation projects collectively upon so-called food surpluses and determined that with regard to items which are said to be in surplus supply, the effect is relatively insignificant."

RECLAMATION REQUIRES TIME

Reclamation, as you well realize, is a slow process. The problem of reclaiming the desert lands of the West and bringing them under irrigation is entirely different today than it was 50 or 75 years ago. The irrigation in the West was on a very small scale. The early day western pioneer who settled in the valleys and by the side of a stream, constructed his own irrigation canal and diversion works.

Today the situation is entirely different. Land to be irrigated and brought under cultivation is often many miles away from the point of diversion from the stream. Huge dams and reservoirs are required to catch the flash spring run-off and hold the water for use when needed later.

Today reclamation is a multi-purpose, basin-wide undertaking. It requires a long period of time to make all necessary surveys and investigations and it requires even more time to complete the plans and make the final determination as to how and where the waters of a river basin can best be utilized within that basin.

It requires years to build these great multi-purpose projects. Thus to complete the reclamation of the remaining 17,000,000 acres yet undeveloped and susceptible to irrigation will require many years—perhaps half a century, perhaps longer.

In the meantime, through erosion and soil depletion, we are losing approximately 500,000 acres of agricultural lands every year, while our population is increasing at the astounding rate of considerably more than 1,000,000 per year.

LONG-RANGE PROGRAM

The need for future reclamation development should not be determined upon the exigencies of today alone, but rather upon the ultimate, long-range requirements of our rapidly growing population and the necessity of maintaining our high standard of living, which is the envy of the entire world.

It would be folly to plan our reclamation program on a stop-and-go basis, determined by changing conditions from year to year. The program must be determined on the basis of the long-time needs and requirements of the country.

A reclamation project, once it is constructed, is wealth producing for generations to come. Reclamation, in addition to repayments by the water users and repayment through power revenues, also pays the Federal Government and the Nation in many ways. Farmers on reclamation projects and citizens and industries of the communities which are sustained by those projects pay in Federal income taxes in a few short years more than the cost of the entire project.

Reclamation conserves the natural resources of the West. It creates self-sustaining communities. It provides stabilized agriculture. It is a field in which private capital cannot, and will not, invest.

The reclamation projects of the West provide a ready market for the manufactured products of the East. The Senate Interior and Insular Affairs Committee in the report of March 20, just referred to, stated that the

total incoming freight shipments to the irrigated areas of the West from Central and Eastern States in the year 1948 was estimated at $1,366,000,000. In 1949 one valley of two counties in southwestern Idaho purchased $55,000,000 worth of merchandise, which was imported from six North Central States.

POPULATION MOVING WESTWARD

There has been during the past decade, and still is, a tremendous westward movement of our population. Five far-western States have increased in population since 1940 nearly 50 percent, while the Nation as a whole has increased only 7 percent. This is caused to a very large extent by the tremendous, and yet undeveloped, great natural resources of that area.

In that connection I would like to quote from a statement signed by seven northwestern Governors, or their representatives, at Pocatello, Idaho, March 24, 1949, as follows:

"These new citizens add materially to the urgency of providing new jobs, new industries and opportunities through the development and use of these resources. We are now far behind in our development and are faced with the urgency of expanding every effort in united endeavor to provide for these new citizens, and we are not unmindful of the material national benefits that will be secured. * * * Most important to the whole basin, we believe, will be the development and reclamation of lands through irrigation, accomplishing greater agricultural production, providing a balanced regional economy, vital in times of peace as in times of war."

FUNDAMENTAL PRINCIPLES

There are several principles which we of the West consider to be fundamental and which we believe should be strictly adhered to in any development program for the West:

1. Section 1 of the 1944 Flood Control Act should be maintained and the waters of the West which may ultimately be used for irrigation and reclamation and other consumptive purposes should be reserved and protected for those purposes.

In making that declaration I again call your attention to the fact that in the deserts of the West man cannot survive except by the artificial application of water to the land.

2. Throughout the arid West power should always remain incidental to irrigation and reclamation.

True, we should develop the full power potential that is feasible in connection with our multipurpose water-resources projects. However, power should not only remain incidental to reclamation, but power should be required to repay those costs of such basin-wide development as are beyond the ability of the water users to repay. Otherwise, there can be little, if any, further development of the West. The small projects, easy to construct, were completed many years ago.

3. In any basin-wide water-resources development all phases of such development, including reclamation, navigation, flood control, power, and all other phases should proceed concurrently.

In no other way can a balanced economy within the region be maintained.

4. The integrity of Western States' water laws should be forever protected and preserved.

The West has been developed and the water rights of the West have been established under these State laws. The economy of the West is dependent upon these State water laws. These rights should be protected against all hazards, including the threat of encroaching Federal controls.

All water-resource projects by the Federal Government in the West, whether to be constructed and operated by existing agencies, or by agencies hereafter created, should be developed, operated, and carried forward in full recognition of, conformity with, and adherence to the laws of the several States of the West.

The Federal Government in acquiring water rights for a contemplated project, should be required to file upon the water as provided for by State laws the same as any individual. The right to the use of the waters of the West under reclamation projects stems from State laws and not a contract with the Federal Government.

5. Valley authorities, such as MVA, CVA, and other proposals patterned after and similar to TVA should be opposed.

We of the West oppose valley authorities, not only because of the general objections which are valid throughout the entire Nation, but particularly because of their proposed interference with, and control over the waters of the region encompassed. If there is one possession concerning which a western farmer or rancher is zealous and will tolerate no interference, it is his water rights.

CVA would supersede and do away with existing agencies, tried and proven, such as the Bureau of Reclamation and the Corps of Engineers and establish in their places a board of three men—who they will be or where they will come from no one knows.

ASSOCIATION SPONSORS PROGRAM

Our association is now sponsoring the following program before the present Congress:

1. To encourage basin-wide development throughout the West by existing agencies, coordinated through interagency committees, and opposing valley authorities.

2. To liberalize and clarify the Federal reclamation laws, without abandoning the sound economic principles upon which reclamation was founded.

The first reclamation law was enacted in 1902 under Theodore Roosevelt. The last significant amendment was made in 1939. The law needs to be brought up to date.

3. To sponsor a small projects program, including a separate small projects division within the Bureau of Reclamation.

4. To expedite the construction program of the Bureau of Reclamation and the Corps of Engineers in the West.

5. To accelerate and encourage the Forest Service program of revegetation and range improvements, and soil and water conservation, as well as the conservation programs of other State and Federal agencies having jurisdiction within the watersheds of the West.

6. To continue the snow surveys program of the Soil Conservation Service.

7. To implement stream-flow measurements and ground-water studies of the United States Geological Survey.

8. To encourage an increase in credit and loans by Farmers Home Administration to settlers on reclamation projects, the majority of whom are veterans.

We believe there should be adequate funds available for our surveys and investigations in order to have available a shelf of projects. The employment situation is not too critical today, and, of course, we all hope that we never again in our lifetime see conditions as they were in the early thirties. But if such a situation should develop and it again becomes necessary for the Government to embark upon a public-works program in order to stimulate employment, then we believe that we should be prepared with a shelf of projects providing for water resource development which would add to the permanent wealth and prosperity of the country.

We have had our floods in the West, some of which have been most disastrous. We appreciate the part which your organization played in bringing about a general recognition of the fact that the control of the rivers and the prevention of floods is a national problem, which should be undertaken by our Federal Government.

The world today is confronted with a cold war. What the outcome will be no one can say. However, there is one situation which we all realize. America has emerged with the responsibility of leadership among the democracies of the world. In that leadership we cannot fail. To succeed we, as a nation, must remain strong. Our expanding economy must meet the needs of our increasing population. Our standard of living must be maintained. The development of our natural resources will create greater opportunities for our people, better living conditions, a more stabilized economy. It will strengthen us as a nation and give encouragement to our people.

With this in mind we congratulate your great organization, the National Rivers and Harbors Congress. We believe you are performing a patriotic service for our country in outlining and fostering a sound program for the orderly development of the water resources of the Nation. We believe, too, that reclamation has a proper place in that program. We consider it a privilege to work and cooperate with you in carrying forward such a worth-while program.

National Defense Week

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, May 8 (legislative day of Wednesday, March 29), 1950

Mr. WILEY. Mr. President, the week from May 13 to May 20 is being observed as National Defense Week. During this week our Nation will be reminded that it must be enternally vigilant to defend itself from the menace from without and the menace from within.

It has been a pleasure in previous years for me to help point up the need for vigilance. Thus, in February 1948 and in February 1949 I was glad to contribute articles for National Security Week observances to the distinguished magazine prepared by the Reserve Officers Association of the United States. In those articles, I pointed out the need particularly for Federal decentralization.

In the May 1950 issue of the Reserve Officer, I have been glad to contribute another article, this time on the subject of the strategy of the masters of the Kremlin in the cold war in which they are now engaged with us. It is my hope that this article will be of some value, however small, in pointing up the public-spirited goals of the Reserve Officers Association and other alert defense-minded groups in our country. The ROA is well represented in my own State of Wisconsin and throughout the Nation, and I know it will continue in the vanguard of United States defense.

I ask unanimous consent that the text of my article, which is entitled "If You Were Joe Stalin," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IF YOU WERE JOE STALIN

(By Hon. ALEXANDER WILEY, United States Senator from Wisconsin)

What would you do if you were "Uncle Joe" Stalin, the master of the Kremlin, controller of the destiny of 200,000,000 Russians?

No, that is not an idle question, friends. Think it over carefully. What actions would you take, assuming that you were the leader of the underground Communist conspiracy throughout the globe, assuming that you were the spearhead of the world-wide revolutionary movement aimed at overturning the capitalistic system?

What would you do, assuming that you were the man who had master-minded the conquest of 400,000,000 Chinese and of practically the entire Asiatic hemisphere?

Those indeed aren't just academic questions. It is up to you as readers of this magazine and to me to try to put ourselves in Joe Stalin's shoes, so to speak, to try to imagine what we would do in the event that we were moving the Russian chessmen in this master chess game in which we find ourselves. The security of our entire country depends on solid, constructive answers to the question as to what we would do if we were Joe Stalin.

No man can, of course, think accurately for another man. No man can predict accurately what is going on in another man's mind, particularly when we of the West attempt to do so with someone who has an almost Asiatic or Oriental approach in his nature. But we can assume that if you or I were Joe Stalin, we would be aiming at certain objectives, among which we might presume are the following:

A WEAK RESERVE

1. If you were Joe Stalin and if you wanted to conquer the globe, you would be trying with all your might to weaken the reserve forces of America. You would recognize that organizations like the ROA, designed to maintain a strong, vigilant reserve cadre in America, designed to maintain a strong force of minute men—that such organizations would have to be discredited. You would strive to discredit the idea of National Defense Week as unnecessary or a waste of time.

You would recognize that your propagandists would have to keep up a continuous drum-fire of hate messages against those civic-minded Americans who devote quite a bit of time from their normal businesses or other affairs in order to train in the Organized Reserve and in various affiliated units.

You would recognize that any step, whether it be a congressional appropriation slash or any other action which would weaken the Reserve forces of America—discourage them, ruin their morale—would be that much to your advantage.

CUT DEFENSE TO BONE

2. If you were Joe Stalin, you would not be content with simply weakening the Reserve forces, you would try to cut down on America's Army, Navy, and Air Forces themselves. You would constantly have your propagandists roar that America was becoming a militaristic nation, because it was appropriating too much money for the Armed Forces.

You would play upon the admitted need for economy here at home to bring about completely arbitrary slashes in Armed Forces appropriations, going far beyond the needs of economy and eating into the very bone and marrow of United States defense. (Not to miss a good bet, too, you would, on the other hand, seek to encourage wasteful use of funds by defense heads—wasteful use in obsolete weapons and programs for example.)

You would attempt to have your propagandists gloss over the fact that right now in our country we have less than three full combat divisions ready for armed warfare. (Why is America so weak? Because all of our combat strength is dispersed throughout the rest of the globe, and because the remainder of our personnel are in supply or other roles.)

NERVE WARFARE

3. If you were Joe Stalin, you would try to unsettle the nerves of the American people. You would use off-again on-again tactics designed to make the people jittery and to throw up their hands in disgust. You would open the land corridor to Berlin and then close it. You would put out peace feelers, then dash them to smithereens. You would agree to a discussion of atomic energy and then when the discussion actually started, you would completely destroy all possible basis for discussion. By this constant jabbing off balance, this constant reversal of action, you would hope to make the American people completely numb, completely disappointed and disenheartened in any possible constructive result.

These are some of the things you, substituting for Joe Stalin, might do. How about some others?

TORPEDOING ARMS AID

4. If you were Joe Stalin, you would do your best to torpedo the Marshall plan and the program of arms aid to western Europe. You would use every possible weapon in your arsenal (like (a) Red-controlled longshoremen strikes designed to prevent the landing of arms aid or (b) anti-European appropriations propaganda in America) in order to sabotage the arms-aid plan.

You would have Communists in western European countries scream that America is attempting to take over the armed forces of those countries and, too, that "America would fight to the last Frenchman," or "to the last Belgian," or "to the last Englishman." Meanwhile, on the other side of the ocean, you would be telling the American people that England would fight "to the last American," or then be telling us that "France would fight to the last American," etc. In other words, you would carry on what amounts to self-contradictory propaganda, assuming that the Americans and Englishmen would never compare notes about your self-refuting claims and would never appraise the fact that you were obviously trying to set them against the other.

ANTIFEDERATION EFFORT

5. If you were Joe Stalin, you would do all that was possible in order to prevent the program of European federation. You would play on age-old jealousies, fears, and hatreds in order to prevent the western democratic nations from integrating their economies. You would at the very minimum try to torpedo the efforts to make currencies interchangeable, the efforts to cut down tariff barriers. You would realize that a united Europe would inevitably present a strong anti-Communist front to resist Soviet aggression.

STRANGLE HOLD ON CONQUERED PEOPLES

6. If you were Joe Stalin, you would send out propaganda indicating that all the people behind the iron curtain are allegedly irretrievably lost to the western world, that their amalgamation within the Soviet Union is an accomplished fact. You would attempt to make the people of the world believe that devout Poland, that Latvia, Estonia, Lithuania, Czechoslovakia, Hungary, Bulgaria, and Rumania are all "lost forever" to the western cause, that no thought should be given whatsoever to their one day regaining their independence and their territorial integrity. You would attempt to make the people of the world believe that the self-determination of these various peoples is a closed book, that nothing can be done about it, that there is no use trying to propagandize these peoples, that their hope for liberty is lost forever.

CLASS WARFARE AGITATION

7. If you were Joe Stalin you would be active on the home front in America in attempting to set class against class, race against race, religion against religion, color against color. You would use your principal agents to infiltrate the labor unions of key industries, electric utilities, coal, railroads; heavy industries like steel and automobile, so that whenever the crucial occasion arises that you need to call these men out on a crippling strike, they would be able to respond like automatons. You would fight against legislation designed to prevent crippling national strikes. You would want to lay America open for ruinous industrial paralysis.

SMEARING OF FBI

8. If you were Joe Stalin you would make every effort to smear organizations working hardest on the problem of protecting America's internal security. You would give a king's ransom to any individual who could get courageous J. Edgard Hoover out as head of the Federal Bureau of Investigation. You would do everything you could in order to attempt to portray the FBI as a gestapo, in order to smear the FBI as allegedly violating the civil liberties of American citizens. You would similarly try to smear the Central Intelligence Agency, the House Un-American Activities Committee as well as individual Senators and Congressmen trying to clear disloyal individuals and groups from the Federal Government.

Above all, you would concentrate on combating permanent anti-Communist legislation now pending before the Senate which would really put a crimp on your subversive forces in this country.

These are some of the things you, as Joe Stalin, might do.

REALISTIC CHESS PLAY

I repeat: What my friends, do you as individual members of the ROA, think that Joe Stalin would do? And once you have thought of the actions that he would take in order to further his interests, the answer will come readily to your mind and mine on what we should do to foil his efforts. As you know, a good chess player always imagines not only his own moves many moves ahead, but the moves which his opponent will take. So, too, a good infantry commander, or naval commander, or air force commander always visualizes the actions which his opponent will take in order to prevent and checkmate those actions.

Let us accordingly mobilize our best thinking, not on a wild spree of loose, irresponsible imagination, but on a coldly realistic basis. Let us think and we will save America.

CONCLUSION

Let us have a stronger Reserve Officers Association than ever before. Let us have more universal dedication to national defense week than ever before. Let us have America's armed forces trained to a peak of efficiency with every dollar in the national defense budget and atom energy budgets being used for the soundest possible purpose.

Let us not be weary and disheartened by the nerve warfare continued by the Russians. Let us not allow any inconsequential factors to interfere with the Marshall plan, and with arms aid to Europe. At the same time, let us point out that the European nations must stand on their own feet and meet their domestic problems head-on, including, of course, the problem of ruinous strikes which peter out our aid. Let us urge the European nations to come closer together toward the goal of federation. Let us never give up hope that the brave people trapped behind the iron curtain will maintain their desire for freedom and independence.

Let us here in our country heal whatever wounds exist between classes, between groups, between religions, and between regions. Let us carry on the anti-subsersive fight and give our heartfelt support to the great organization which has already spearheaded that fight, the Federal Bureau of Investigation. These are some of the things

which you and I must do in our capacity as individual citizens and as legislators.

You can be sure that the individuals in the politiburo are thinking:

If we were Americans and we were trying to protect our peace and security, what would we do? In other words, the politburo will be trying to imagine actions which we would take in our self-interest. Let us show that we can think through our own needs clearly and that we can foresee to the greatest possible extent the thinking and actions of the Kremlin. This is a hard task, but it is an urgent one. Let us think, I repeat and we will save America.

Address by Governor Dewey at Annual New York State Republican Committee Dinner

---

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, May 8 (legislative day of Wednesday, March 29), 1950

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address by Gov. Thomas E. Dewey, of New York, delivered last Thursday evening, May 4, at the Waldorf-Astoria Hotel in New York City.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

You know the Democrats have sometimes accused the Republicans of saying "Me too, but we will do it better." Well, for once they are right. They did invent this idea of a fund-raising dinner. Now we have borrowed it and we have done it a whale of a lot better.

This is the biggest family dinner ever held by any political party in our State. I congratulate BILL PFEIFFER and every one of you on a wonderful job.

All three thousand of you here tonight have contributed to the cost of running the party. It shows that in New York State the Republicans do not depend upon any individual or group but have a base as broad as the American people themselves.

Today it is the Democrats who are the party of big money. Last year in the New York City and State campaigns they proved it by drenching the air with paid radio time and by full-page advertisements in the papers. They spent at least $3 for every $1 of Republican money that was spent.

The Democrats have, indeed, become the party of big money. But there are other differences even more important than their ability to tax union treasuries without the consent of the members and to shake down wealthy playboys for Government jobs.

One big difference is that we Republicans believe in keeping our political promises—and we keep them faithfully.

Another difference is that we really believe that spies and traitors belong in jail.

We also believe that sex offenders and the like should be in prisons or mental hospitals and not in any part of the Federal Government.

FOR HONEST ELECTIONS

We believe that State elections should be decided by vote of the people and not by stolen paper ballots or by the pistols of gunmen in Kansas City clubhouses.

We believe in honest government and I am happy to say that no associates in my office have been convicted of perjury.

We believe that in a free Republic the purpose of a political party is to serve the people and not just to hang on to public office by hook—or by crook.

We also believe that a political party ought to stand for something. In this State the Democrats don't stand for anything at all. In the legislature they vote as they are told by the CIO: they take their candidates from the misnamed Liberal Party and they take their orders from Washington.

And what do they do when a State campaign comes around? Do they have the guts to run as Democrats? Heaven forbid. No Democrat would dare run for governor or Senator on his own feet and hasn't done so in 14 years. They have to have at least two crutches, one labeled the Communist American Labor Party and the other labeled the Socialist Liberal Party.

And this year I forecast right now that, again, no Democrat will dare to run on his own hind legs. They will bend the knee again. They will pay the price and they will get the support of one or both of the splinter parties which would ruin the State and Nation if they ever got in control.

By contrast, the Republican Party in this State, standing by its principles and keeping its promises, attracts to its candidates the votes of thousands upon thousands of Democrats, Liberals, and Independents, men and women who vote their own convictions. We welcome them to our ranks in the never-ending effort to give good government.

We welcome them on the record of what has happened here during the eight legislative sessions in the almost 8 years of Republican administration. That brings up the final great difference between the Republicans and the Democrats in New York State. They talk—we act. They promise—and promise and promise. We perform. They talk about the welfare state. We provide social welfare.

Whoever runs for Governor on the Republican ticket has a record the Democrats can never equal.

Take housing, for example. In the 20 years the Democrats ran this State, from 1922 to 1942, just 7,200 subsidized or limited-dividend housing units were built.

We have had less than 5 years since the end of the war. How have we done with our limited dividend projects, cooperatives, slum clearance and low-rent housing, our new redevelopment companies law, and veterans' emergency housing? Compared with the Democrat 20-year record of 7,200 units, we can show you 36,900. In 5 years, under a Republican administration, five times as many housing units have been built as under the Democrats in 20 years.

The Democrats talked about houses, the Republicans have built them.

We will keep on building them until the housing shortage is met. Until then we need rent control. Back in 1946, when the Federal rent control lapsed, you will remember what happened; ours was the only State in the Union with a stand-by law to protect its tenants from gouging.

This year two inconsistent sets of rent control—city and Federal—operated in the biggest city in the United States. The Democrats in New York City and in Washington were busy fighting—each saying what a rotten job the other was doing on rent control.

For once they were both right. To bring an end to that farce and to protect the tenants, again we had to take rent control over. And who was against it? The Democrats, as always. And every last one of them in both Houses—with a single brave exception—voted against the only rent-control bill they knew would work. We have rent control in New York because the Republican administration brought it about.

Let me mention a few more high lights of the record.

The Democrats had 20 years to do something about discrimination in our State. It waited for the Republican Party to make New York the first State in the Union to pass a law carrying out the fundamental that people have a right to earn a living regardless of who their parents were. Since then we have also outlawed discrimination in education and publicly aided housing. The Democrats talk about fair play. We believe in it—in action.

PUBLIC POWER

Now, let's take a minute to look at that good old subject of public power. For 20 years the Democrats talked about water power, but it took a Republican administration to pass the laws declaring that the water power of this State belongs to the people.

This business of water power is now getting serious. We need that water power; we need to develop it; we need it right now. With every factor that goes into costs skyrocketing, what's going to happen to your electric-light bills? Even the efficiency of the power industry can't keep them down forever, unless we can get cheap hydroelectric power flowing in the veins of our power system.

We want to build those hydroelectric plants on the St. Lawrence River and on the Niagara River. Enormous amounts of cheap power are there waiting for the asking. New York State and the Province of Ontario are ready, able, eager, and willing to develop that power. It has been only Mr. Truman who says no, the people of New York may not develop their own power. We will tax them to death to build power in the Missouri Valley, in the TVA, in California, in Washington, Oregon, and Idaho, says Mr. Truman as he travels to Oregon to dedicate a Federal dam. But, he has refused to allow us to work with Canada to develop our own power at our own expense. And we can do it ourselves without a penny of new taxes, on a self-liquidating, self-sustaining basis and get cheap power to keep down the cost of living in the State of New York.

I see by the papers that Senator LEHMAN and "Junior" have just introduced a bill to permit diversion of water from the Niagara River for power purposes. I sincerely trust that their bill will not attempt to rob the State of all that enormous power; that it is not designed merely as a Federal power grab. I hope that it's not just another political maneuver in the old-fashioned Democrat faro game.

The Fair Deal is a faro deal for New York State. The people get trimmed every day. We have a right to that water power by solemn agreement and I propose that we fight for it.

HIGHWAY TRANSPORTATION

Take highway transportation: we inherited from the Democrats a crumbling and decrepit system. Since the war we have made great strides in improving it but a billion dollars wouldn't make our present winding, narrow highways serve modern needs. If we should continue to rely on them, New York State would wither away for lack of adequate modern transportation and from traffic congestion in the cities.

More than a century ago the Erie Canal opened New York to the West and made it the Empire State.

What the Erie Canal did for the nineteenth century must now be done for the twentieth century with the great new thruway—486 miles long, four to six lanes of concrete, running from New York City to Albany and west to Buffalo with a thousand feet of clear vision at every point, not a grade more than 3 percent, and not a stop light all the way.

The thruway will cut an average of $28 off the cost of every truckload of milk that reaches the city of New York. It will save

$100 on every shipment of heavy machinery between Buffalo and New York City. It will reduce the cost of living for every New Yorker and make his job more secure. It will double our $2,000,000,000 vacation industry from the Great Lakes to Broadway and from the Adirondacks to the Thousand Islands.

It will release funds for highways all over the State and for the $232,000,000 of new arterial routes in the Bronx, Brooklyn, Queens, and Manhattan. It will end the dreadful bumper-to-bumper congestion around the city of New York and in every other city all the way to Buffalo.

The Federal Government wants it urgently for national defense. Every expert who has studied it recommends it. The people of our State desperately need it. Mayor O'Dwyer, of the city of New York, is all out for it. And who is against it? Nobody but the poor old Democratic Party. They are so desperate for an issue they forgot something. They forgot that it was Governor LEHMAN who signed the first Republican bill for the thruway eight long years ago.

NOT ONE DIME OF TAX MONEY

They also forget or can't seem to understand that the thruway will not cost one single dime of tax money. It will be built by an independent authority and will be self-supporting and self-liquidating. It will pay for itself a hundred times over. It is the most important physical development of the century.

There is no need to go into the salt tears the Democrats are shedding as they call for hospital beds not roadbeds. We're building both. We have to because in the last year they occupied Albany, the Democrats had the mental hygiene department squeezed down to $41,000,000 against $107,000,000 we are now spending for the care of the mentally ill.

But money is not the only test. The quality of care has been revolutionized. Our mental hospitals are no longer custodial institutions. They are symbols of hope and cure. A great new staff of dietitians and additional funds have made the food good. In our new internship program, work therapy and brain surgery, we are leading the Nation. Meanwhile, today we have 60 mental hygiene projects under way involving $45,000,000 and during this year we will double our program of construction.

Under my Democratic predecessors the State of New York did more to cure tuberculosis in cattle than it did in human beings. Today we have the leading tuberculosis program of the world with free X-rays in process for all 14,000,000 people of the State and free hospital care until cured.

Where were the Democrats during all their 20 years? They were talking about welfare. We have been delivering welfare and preserving human freedom in the process.

We have made mighty contributions to a whole panorama of services in aid to the blind, in the reduction of the death rate of infants, in pioneering a cerebral palsy program, in blood bank services, in water pollution, by a 2,000 percent increase in cancer detection work, and in research in the Rh factor in the blood of infants and in the medical problems of the aged.

Under our social welfare programs, no citizens of the State of New York need go without adequate medical care whether he has the money to pay for it or not. And all of it is done, let me assure you, without the slightest tinge of Mr. Truman's socialized medicine which would wreck the standards of health of our people.

SICKNESS DISABILITY LAW

Our latest program is the new sickness disability law which will start paying benefits on July 1. At a cost of no more than 30 cents a week to employer and employee, 6,000,000 workers in our State will be protected during illness up to 13 weeks.

And let me remind you that when this program came to the floor of the legislature, every single Democrat in both Houses voted against it on direct orders from their CIO bosses—and I hope you will see to it that they are reminded of it every day from now on.

So it goes. The Democrats talked. We acted. We increased unemployment insurance from $18 to $26 a week and the coverage from 20 to 26 weeks. We extended minimum wage protection to 500,000 new workers. We guaranteed women equal pay for equal work. Through our youth commission we have established 700 youth centers in this State and we have reduced juvenile delinquency by 27 percent.

We have provided on-the-job and apprentice training for 110,000 veterans and homes for 28,180 others, with their families, in State-aided housing projects. Our veterans have made use of the counseling services of our division of veterans affairs no less than 4,760,000 times.

In addition, we have more than doubled the State aid to education, more than doubled minimum teachers' salaries, created a State university, five new institutes of applied arts and sciences and added two great medical centers for the training of much-needed doctors. The story could go on and on, but again in 8 years we have done much more than the Democrats did in 20 years in every branch of education.

The New York farmer also knows that at last he has a State administration that knows something about farming. Great new research programs in cattle and poultry diseases have brought real progress. Research in marketing and the mighty new program of farm-to-market roads approved by this year's legislature are the most important progress for our farmers in many a decade.

BUDGET BALANCED

Business has flourished because we have created and maintained here the atmosphere in which private enterprise expands. Today we have 580,000 individual firms doing business in this State. In the period since VJ-day, we have added 179,000 business establishments. For eight successive years we have led the country in harmonious labor-management relations, with the lowest proportion of man-days lost through strikes. This has meant uninterrupted production and steady, profitable jobs and operations.

And finally, what has happened to the taxpayer in New York? Well, our budget is balanced and the Federal Government is running a deficit of $6,000,000,000 a year.

Here in New York we have doubled our contributions for local assistance, our aid to education, our aid to welfare and still we have reserve funds for a rainy day.

As we made great social progress, we have actually reduced the tax rates. Right now, despite these vital increases in services and the payment of a $400,000,000 veterans' bonus in 10 years, our tax structure is 10 percent below what it was in 1941, the last prewar, peacetime year. We have saved the taxpayers of this State a billion dollars by good management. We have substituted good government for hot air.

In all this you who are here tonight have had a liberal share and I know the people of the State are grateful for what you have done. It has been a teamwork job by a great team of good citizens.

As we have given good government to our State, we have given our best to the welfare of the Nation in a troubled world. We have stoutly fought for a strong America in a peaceful world through a bipartisan foreign policy which we have supported all the time and not just when it was politically expedient.

As Americans we have put our country first and made our party an instrument of great service to all the people. May it ever be thus.

St. Lawrence Seaway and Power Project Fallacies

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. VAN ZANDT. Mr. Speaker, the longer the proponents of the St. Lawrence seaway project testify the more fallacies are uncovered.

The following article from the April 27, 1950, issue of the New York Journal-American reveals glaring inconsistencies in the testimony presented to date.

To those who are searching for the truth the following article tells the story:

SEAWAY FALLACIES

"Acheson favors seaway project," so runs a recent newspaper headline. Another is: "Sawyer indorses seaway project." We may expect that pretty soon Secretary of Agriculture Brannan will favor seaway project for the Brannan plan, and Mrs. Roosevelt will endorse seaway project on behalf of the world.

This St. Lawrence seaway scheme has been under more or less active consideration since 1933. By this time, all the facts and arguments should be known. I think I know them. I can say without qualification, that the scheme is without any economic or military merit. The endorsements and favors of these politicians are but proof of their incompetence or their servility to the little boss, Truman. (He never misses a chance to drag the seaway scheme into his messages.)

Briefly the facts are: (1) the seaway is an economically unsound and impractical scheme; (2) we can't afford the huge cost of it. It would never be self-supporting, and no competent or informed person has ever thought or said that it would be.

As to its economic merits: Probably the outstanding point is that the seaway would not be a seaway, because of the many insuperable difficulties it would present.

1. It would be closed by ice at least one-third of the time. Ice and fog would seriously hamper its use approximately one-half of the time.

It is as much an iceway as a seaway.

Look at lake navigation this year. It has hardly opened yet, and the total railway freight traffic has been much less than in some years because we can't get ore down from Lake Superior to Cleveland and Ashtabula by lake.

This is fresh water, you know. It freezes solid.

Maybe Acheson and Sawyer, as experts on such matters, plan to develop the electric power part of the project in order to use the current for keeping their precious seaway warm in winter.

2. It would not be used by seagoing vessels to any important extent. Not only is the fact of ice and fog enough to keep any regular liner service off, but also the length and the slowness of the trip are prohibitive. It is 2,200 miles from the Gulf of St. Lawrence to the head of the lakes. The locks and currents that would beset the course would greatly hamper traffic. A different type of vessel would be required. The number of turn arounds or trips per year would be so reduced, that nearly all steamship companies have stated that they would not use the seaway.

As the thing would cost about $2,000,000,000, the tolls required to make it pay would be prohibitive: either no traffic, or more taxes for you and me.

As to the military argument: I have yet to see a single unqualified approval by any Army or Navy authority. Here is what the thing would do:

1. It would be indefensible, inviting easy bomb attack on far-flung locks, canals, and shipping.

2. It would divert great war equipment and forces to attempt its defense.

3. If by any chance we came to rely upon it, it would be a serious hazard, as its easy stoppage might be a fatal blow.

Two added thoughts: If there is any power shortage, the electric power part of the scheme can be executed separately at half the cost. Is there a power shortage?

The scheme is no sounder than the Passamaquoddy Bay scheme. Where are the labor and money we sank in that silly project? Yet that, too, was endorsed by eminent political stooges. Remember, the Pharaohs made the Egyptians build the pyramids.

Importations of Fresh and Dried Eggs

EXTENSION OF REMARKS
OF
HON. JAMES I. DOLLIVER
OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1950

Mr. DOLLIVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

UNITED STATES DEPARTMENT OF AGRICULTURE,
PRODUCTION AND MARKETING ADMINISTRATION,
Washington, D. C., May 1, 1950.

Hon. JAMES I. DOLLIVER,
House of Representatives.

DEAR MR. DOLLIVER: This is in reply to your request of April 20 for information regarding the quantity of dried and fresh eggs imported into the United States in 1949.

According to census data the following quantity of eggs was imported in 1949:

Whole in shell (chicken) dozens	3,359,428
Whole in shell (other) (dozens)	234,753
Dried whole (pounds)	93,205
Frozen whole (pounds)	48,093
Yolks, dried (pounds)	1,811,400
Yolks, frozen (pounds)	283,088
Albumen, dried (pounds)	47,721

We hope that this information will be of service to you.

Sincerely yours,

RALPH S. TRIGG,
Administrator.

DEPARTMENT OF COMMERCE,
OFFICE OF INTERNATIONAL TRADE,
Washington, D. C., May 5, 1950.

The Honorable JAMES I. DOLLIVER,
House of Representatives,
Washington, D. C.

DEAR MR. DOLLIVER: This will acknowledge your letter of April 20, 1950, in which you request the amount of fresh and dried eggs imported into the United States during 1949.

United States imports of eggs, by country of origin, during the calendar year 1949 are as follows:

Imports of shell eggs, by country, 1949

[Dozens]

Country	Chicken eggs	Other
Canada	3,249,996	200
Mexico	1,050	----
Dominican Republic	102,480	----
United Kingdom	30	----
China	5,747	221,919
Hong Kong	125	12,634
Total	3,359,428	234,753

Imports of dried and frozen eggs and egg products, by country, 1949

[Pounds]

Product	Canada	China	Argentina	Japan	Total
Dried whole eggs	5	93,200	----	----	93,205
Whole eggs, frozen or prepared	45,228	2,865	----	----	48,093
Egg yolks, dried	----	1,766,526	40,874	4,000	1,811,400
Egg yolks, frozen or prepared	283,088	----	----	----	283,088
Egg albumen, dried	----	43,312	4,409	----	47,721

Source: Report No. FT 110, United States Imports of Merchandise for Consumption, 1949, Bureau of the Census.

The major markets for United States exports of eggs and egg products in 1949 are indicated in the following tabulations:

Exports of shell eggs, by country of destination, 1949

	Dozens
Mexico	1,514,501
Canal Zone	1,043,804
Cuba	2,985,901
Venezuela	9,160,196
Philippines, Republic of	1,234,730
Switzerland	596,228
Netherlands Antilles	550,974
Others (24 countries)	1,358,645
Total	18,444,979

Exports of dried eggs, by country of destination, 1949

	Pounds
United Kingdom	6,109,750
Germany	3,727,252
Austria	1,492,658
Switzerland	253,550
Indonesia	346,126
Others (41 countries)	417,548
Total	12,346,884

Exports of frozen eggs, by country of destination, 1949

	Pounds
Mexico	174,780
Canal Zone	104,088
Venezuela	265,426
United Kingdom	13,945,812
Belgium	637,866
Switzerland	263,070
Others (20 countries)	176,709
Total	15,567,251

Exports of other prepared or preserved eggs, by country of destination, 1949

	Pounds
Egypt	2,200
Colombia	1,000
Union of South Africa	1,000
Others (9 countries)	2,670
Total	6,870

Detailed information regarding exports by country of destination is published in Bureau of the Census Report FT 410, United States Exports of Domestic and Foreign Merchandise, 1949.

If we can be of further service, please call on us again.

Sincerely yours,

LORING K. MACY,
Deputy Director.

St. Lawrence Seaway Must Be Completed

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, May 8 (legislative day of Wednesday, March 29), 1950

Mr. WILEY. Mr. President, I send to the desk a statement on the St. Lawrence seaway, which I ask to have printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

CONGRESS MUST QUIT DAWDLING AND MUST PASS A SEAWAY BILL

On Wednesday, the House Public Works Committee will conclude hearings on the St. Lawrence seaway bill. According to reports, that committee will then put the seaway bill to sleep until and unless the Senate takes action.

Mr. President, our country is considerably surprised that hearings were held over on the House side without substantive committee action developing.

I personally deplore this "After you, my dear Alphonse"; "No, after you, my dear Gaston," act which has been played by what might be regarded as the suspiciously overpolite Senate and the House for many years on this issue.

SENATE SUBCOMMITTEE IS STACKED AGAINST SEAWAY

Since when must statesmen sit on their dignity and await actions of the other Chamber if they really feel that action is necessary and desirable? The House committee knows full well that the Senate Foreign Relations Subcommittee on the Seaway Bill (S. J. Res. 99) is stacked against the seaway 4 to 1, with my own vote being the only committed pro-seaway vote. Since July 29 last year, this subcommittee under the chairmanship of the distinguished Senator from Maryland [Mr. TYDINGS] has been sitting on the bill, in spite of my numerous appeals for action. Why, then, doesn't the House committee take this issue in its teeth and proceed to report it? Why cannot the House set a pattern for the Senate instead of allowing Senate inaction to serve as an excuse for a House serenade of lullaby and good night on this issue?

I am not excusing the obstruction of my colleagues in the Senate who feel contrary to the way I feel on this issue, nor am I condemning them as individuals. I deplore their stand, but I do respect them for the honesty of their mistaken convictions.

AMERICA IS SKEPTICAL ABOUT HOUSE HEARINGS

Let me say quite candidly that the people of this Nation were somewhat skeptical about the House hearings from the very beginning. The people felt that these hearings were (a) too long, (b) too late in the session, (c) played into the hands of the obstructionists who have sabotaged the seaway all along.

With all due respect to that able committee, let me point out that the sands are running out on this second session of the Eighty-first Congress. Based on the regular legislative schedule, presumably only the full months of June and July remain. The Members on the House side realize full well, I am sure, that the House has a tremendous number of issues which it must take care of during the next 90 or so days, and that the only hope for the seaway is for a prompt report to be made to the full House of Representatives, with floor time quickly cleared by the Rules Committee.

Mr. President, I am presenting these comments frankly, because America's 150,000,000

people are not interested in anything but frankness from their Congress on this or any other issue.

COMMITTEE PRINT PREPARED BY WILEY SUBCOMMITTEE

Mr. President, on March 2, 1949, as former subcommittee chairman during the Republican Eightieth Congress, I presented to the Senate Foreign Relations Committee a complete report of the latest opinions of Government agencies and outstanding private individuals and groups on the St. Lawrence seaway. This 76-page committee print indicated that this great self-liquidating project would involve expenditures of only $802,000,000 on the part of Canada and the United States, for completion of the 27-foot project. Of this sum, the United States share was $573,000,000 and Canada's share was $229,000,000. My aim in presenting the committee print was to show to the obstructionists that there was more than enough technical evidence already on hand to complete this seaway legislation once and for all without dawdling in further surveys. Unfortunately, however, this committee print, like so many previous studies has not been heeded by the majority.

ECA APPROVED BUT NOT SEAWAY

On Friday night, the Senate passed a $3,000,000,000 foreign-aid bill. I should like to point out, Mr. President, that it is an incredible contradiction that the Senate and House should approve with great speed a $3,000,000,000 measure for revitalizing European countries, while the Congress drags its feet on a project which has been pending before us for 30 years to vitalize the great Middle West and to help assure continuing economic health for the best neighbor that any other country ever had, namely, our good friend to the north, Canada.

Now, Mr. President, I do not mean to underestimate completely the value of the hearings held before the Public Works Committee. I know that no subject is ever so completely studied as not to benefit from some additional facts. But I, for one, feel that the necessity for action far outweighed the necessity for accumulating some minor additional facts on this issue.

WISCONSINITES HAVE TESTIFIED ON SEAWAY

I was glad to personally testify before the Public Works Committee and I am glad to say that numerous other Wisconsinites also testified including the following:

The energetic president of the Wisconsin State Federation of Labor, Mr. George Habermann.

One of the outstanding port experts in our Nation, the municipal port director of Milwaukee, Mr. Harry Brockel.

One of the stanchest battlers for the seaway down through these decades, Mr. Herman Ekern, chairman of the deep waterways commission of my State.

One of the ablest businessmen and industrialists of Wisconsin whose interest in the seaway has never flagged, Mr. Walter Olen, of Clintonville, as well as other able individuals.

SHEBOYGAN PRESS EDITORIAL

Now, Mr. President, in this connection I have in my hands an editorial entitled "Thank You, Governor," written by one of the greatest newspapermen of the Badger State, a renowned fraternal leader and civic-minded citizen, Mr. Charles E. Broughton, of Sheboygan. While Charley and I have not always seen eye to eye on some of the political issues of our times, I am glad to say that on the seaway as well as on many other themes there is virtually complete agreement between myself and this outstanding American.

STATEMENT BY GOVERNOR RENNEBOHM

I was particularly happy to see that Mr. Broughton drew attention to a splendid statement prepared by the esteemed Governor of our State, the Honorable Oscar Rennebohm. Our State's chief executive had intended to appear personally before the Public Works Committee, but due to an illness was unable to come to Washington. He was, however, well represented by his executive secretary, Mr. Phillip Drotning, who presented the governor's comment.

TUESDAY A. F. OF L. CONFERENCE IN CHICAGO

Now, Mr. President, tomorrow, Tuesday, May 9, there is going to be an important preliminary conference on the St. Lawrence seaway at the Stevens Hotel in Chicago, attended by A. F. of L. representatives throughout the Middle West. There is an interesting article on this conference in the May 1950 issue of the official bulletin of the Wisconsin State Federation of Labor, the Wisconsin Federationist. And so I ask unanimous consent that this article commenting upon this important meeting be printed at this point in the Appendix of the CONGRESSIONAL RECORD.

I should like to convey my warmest greetings to the convention and my sincerest hopes that out of its deliberations will come renewed and strengthened A. F. of L. leadership in this struggle to which we of labor, government, business, agriculture are mutually dedicated on a nonpartisan basis. Regardless of our differences on other issues, regardless of political party, let us join hands in continued battle for this great project.

Finally I present for reprinting also in the RECORD a terse, hard-hitting editorial from the April 28 Toronto (Canada) Daily Star entitled "United States Actions Speak the Louder."

[From the Sheboygan (Wis.) Press of May 5, 1950]

THANK YOU, GOVERNOR!

Twenty-three years ago, April 11, 1927, the Sheboygan Press editorially had this to say of the proposed St. Lawrence waterway:

"At last the United States has taken up the question of negotiating with Canada for the building of the St. Lawrence waterway, and we will now see these problems ironed out with more than a possibility that a treaty will be presented and ratified on the part of the United States and Canada. Present at the conference at Muskegon, Mich., this winter, we predicted that the deep waterway would be built and that ocean liners would 'make' western ports on Lake Michigan in 8 or 9 years. That is no idle dream.

"Canada will benefit as much as the United States by such a waterway, and where interests are identical, and when the cost of the building will eventually be met out of the receipts from created electric power, neither country can afford to pass up this opportunity."

Ever since that time selfish interests have been blocking a treaty with Canada which would make possible water transportation between the Great Lakes and the nations of the world. In other words, we would have ocean steamers plying the Great Lakes and making landlocked regions in this and Middle West areas open to the trade of the world. There are some who may argue that we would be brought into competition with the world, but that argument will come from isolationists rather than from broadminded citizens who realize that even in America you cannot live alone or have your doors barricaded.

Gov. Oscar Rennebohm Wednesday afternoon expressed his views through Phillip D. Drotning, executive secretary, who appeared at the hearing of the House Committee on Public Works with reference to House Joint Resolution 271 dealing with the St. Lawrence Seaway problem. We like the sentiments expressed in the statement of the governor when he said:

"The State of Wisconsin has been a leader in pushing this project. In the year 1919 the Legislature of Wisconsin created the Wisconsin Deep Waterways Commission, which was entrusted with the task of working for a deep-water route connecting the Middle West with the Atlantic Ocean via the St. Lawrence River. Since its creation the Wisconsin Deep Waterways Commission has worked unceasingly to attain this goal."

We might add, too, that our Wisconsin Senators and Congressmen over the years have worked untiringly in the interest of the St. Lawrence waterway and one of the outstanding figures has been Senator ALEXANDER WILEY. This is neither Republican nor Democratic legislation; it is legislation for the whole Nation.

Here is something, too, that is very important, and that is the development of water power, a necessity if we are to maintain lower costs. The railroads of the Nation cannot give us the service that we need, and they will profit even more in the tomorrow that is to follow by the increased shorter hauls to ports of embarkation.

The Governor has six points that he raises, and the second is one of the best, telling the story of the need for an ocean waterway into the Great Lakes. He says:

"The seaway will give the Middle West access to the newly discovered high-grade ore deposits in Canada which will offset the rapid depletion of the iron-ore deposits in the Lake Superior district. Inasmuch as three-fourths of the Nation's total production of steel is centered in the Great Lakes States, the importance of cheap water transportation to carry the Canadian ore to the Middle West cannot be overemphasized."

The Governor then calls attention to the St. Lawrence seaway as a necessity for our national defense and the military security of this Nation.

In the last war many of our large munitions plants were built on the seaboards. If another war is to come these will have to seek safer interior locations and likewise safer places for the storage of strategic materials and for the construction of naval and merchant vessels. The Great Lakes offer a rendezvous for just this kind of manufacture. Long before we were conscious or mindful of the advantages of the St. Lawrence waterway, Canada was interested in the subject. They were the first to urge a joint seaway project and we would have one today but for the fact that selfish interests have been able to keep Congress from voting on the subject. Canada has completed the Welland Canal which bypasses Niagara Falls and which will be a vital link in the ship channels from the Great Lakes to the Atlantic Ocean. We of Wisconsin have always been ocean-minded. There has never been a day when we thought that this Nation could live entirely on its own resources. We must give and take in this matter and when all is said and done we can back the words of Governor Rennebohm when he said:

"In the interests of the United States, and on behalf of the people of Wisconsin, I urge this committee to report out favorably House Joint Resolution No. 271, Eighty-first Congress, second session."

We do not ask this for Wisconsin; we ask it for the Middle West; Michigan, Minnesota, Indiana, and the great North and Middle West. We attended our first deep waterway conference at Muskegon, Mich., in 1927 and it was so heartening and the expressions of those in attendance so optimistic that we had every belief that it would be only a few years before jointly we would open the channels of water navigation from the ports on the Great Lakes to the markets of the world. By this time the railroads have found out that they need the deep waterway, the power interests have awakened to the grave situation if electricity is to be provided for the whole United States.

[From the Toronto Daily Star of April 26, 1950]

UNITED STATES ACTIONS SPEAK THE LOUDER

Canada is becoming tired of the favorable words uttered by United States public men about the St. Lawrence River improvement, tired because of the unfavorable actions of United States public bodies. Prime Minister St. Laurent reflected the attitude of this country when he said it had waited patiently, and recently not so patiently, for the neighboring Republic to let the work proceed.

The defense authorities of the United States say that the St. Lawrence improvement is desirable in the interest of the safety of Canada and the United States. The United States Secretary of Commerce told Congress on Monday that everyone who seeks the continued economic strength and expansion of the United States supports the project. Secretary of State Acheson said yesterday that the work was long overdue; that it would make the already happy relations with Canada still happier.

Perhaps Canadians should be pleased with such observations on the part of United States governmental authorities. But of what value are they when the party in power appoints hostile chairmen to committees dealing with the project who use their authority to prevent the matter going to a vote? That has happened not once but many times. Always some maneuver or specious argument is used to block progress.

This country has a feeling of frustration. It has to look on impotently while $60,000,000 of electric energy go to waste annually down the St. Lawrence Rapids—half of it Canada's—as it has been doing during the past 30 years that selfish interests across the line have been blocking the undertaking. And it has to pay transportation costs millions of dollars higher yearly than those that the deep St. Lawrence ship channel would provide.

The United States is much richer than Canada. But Congress acts as though it were appalled by the estimated cost of the combined power and navigation project. The Parliament of Canada knows, on the contrary, that the project would more than pay for itself, being, in effect, a rich and inexhaustible gold mine. This country is ready to go 50-50 in sharing the cost.

Surely it is time that the great United States of America stopped trifling with so important an international question and showed herself to be a partner worth having in the economic field as well as in the common defense of this continent.

[From the Wisconsin Federationist for May 1950]

ST. LAWRENCE PROJECT FINAL PLANS MADE; PROGRAM ANNOUNCED

Final plans have been made for the preliminary conference on the St. Lawrence seaway project, to be held at the Stevens Hotel, Chicago, on May 9. Invitations to participate in the planning phases have been sent to AFL representatives and State officers in Illinois, Indiana, Iowa, Michigan, Minnesota, Nebraska, Ohio, North and South Dakota, and Wisconsin.

In urging the State groups to attend WSFL President George Haberman writes: "With the growth of our industrial center and great amount of foreign exports from both agriculture and industry in the Midwest, and with conversion from coal to both gas and oil for heat and power, as well as new deposits of ore to replace the depleting supply of the Mesabi Range, the welfare of our industries stands in peril, not only in the way of expansion, but a continuity of production."

GOVERNMENT ASSIGNS DELEGATE

Haberman also announced the program of speakers in the invitation. The Government was assigning Col. William Fondren, of the Plans and Operations Division, United States Army, to address the delegates. It is unique for the Government to do this since this is a preliminary planning session and Army representatives rarely attend such conferences. Haberman also pointed out this was significant in that it stresses the national security aspect of the seaway project. Other speakers include:

Dr. N. R. Danielian, executive vice president, Great Lakes-St. Lawrence Association.

Daniel W. Hoan (former Milwaukee mayor), president, Great Lakes Harbor Association.

William Snow, Chief, Canadian Division, United States Department of State, and member of United States-Canada Joint Board of Defense.

Harry C. Brockel, municipal port director, city of Milwaukee.

Haberman is also attempting to get United States Senator PAUL H. DOUGLAS (Democrat, Illinois) to attend and discuss with the delegates the possibility of appropriations for the seaway project in the near future.

In planning the conference with Milwaukee Federated Trades Council representatives it was pointed out that the principal goal of the preliminary session was to convince the national AFL body of the economic and national defense justifications of the project. Its economic benefits claimed are low-cost water transportation and low-cost hydroelectric power. Defensewise it should be noted that shortly after World War II the Joint Chiefs of Staff advised the Congress that from their experience in World War II, the project is absolutely essential to the national security as a shipbuilding resource, as an additional transportation facility, and as a new source of power.

The sessions will begin at 10 a. m. on Tuesday, May 9.

Termination of Rent Control

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, May 8 (legislative day of Wednesday, March 29), 1950

Mr. CAIN. Mr. President, the junior Senator from Washington asks unanimous consent that there be printed in the Appendix to the RECORD six of the hundreds of letters, including an editorial from the Cleveland Plain Dealer, which come constantly to my office on the subject of Federal rent control.

Readers will note that the present communications, and others I have and will offer for the RECORD, are signed by citizens in every walk of life and who live in every region throughout the Nation. These citizens write to make their views known to the Congress, and I would urge the Congress to fully disprove the views expressed before permitting Federal rent control to be extended beyond June 30, 1950, its legislative termination date.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

Senator HARRY P. CAIN,
The Senate, Washington, D. C.

DEAR SENATOR CAIN: I am writing a letter of protest against the continuation of rent controls. Much has been said against this law which by common consent is agreed to be unfair, discriminatory, and unsound economically.

A great deal has been said both pro and con about the scarcity of rentals. It is true that we do not have 8 percent or 10 percent vacancies, but on the other hand, everyone is housed and housed better than ever was true in the history of this country. It is ridiculous to expect large percentage vacancies when the rest of the economy of the country is going full blast.

I might shed a little light on this question from my own experience. I happen to operate two medium-sized apartments totaling 75 suites. In the last 12 months I have had a turn-over of 25 suites out of the 75. This should more than indicate that suites are available and people are moving around, although rental quarters do not go begging.

I would also like to say that if there were any fair parts of the rent control law, the part permitting local option to determine the continuation or decontrol was such. However, the Ethiopian in the wood pile is the mandatory provision that the Governor must approve such decontrol after it is voted at the local level. This again immediately makes it a political football, and is true in the case of our own Governor. He has decontrolled a few minor towns and villages as a sop to his own conscience, and has failed to do so with the others regardless of their wishes.

I agree with all of the editorials that we have had by all the papers in this city against the further extension of rent controls. I believe that anyone who is interested in the good of the country and sound economy, should vote against it.

Sincerely,

HENRY DULAURENCE, Jr.

[From the Cleveland Plain Dealer of March 23, 1950]

RENTERS ARE GIVEN NOTICE

The occupants of rental housing have been given notice by Congress that it probably will decline to vote another extension of rent controls beyond the expiration date of June 30. Similar notice has been served on Housing Expediter Tighe Woods and his 4,000 or more employees.

No doubt a last ditch fight will be waged by the Socialist-labor coalition, which now controls both the Truman administration and the Democratic National Committee, to extend rent controls for another year, or at least until after the November election. Congressional committees are still to conduct hearings on this subject, but as of this date Congress has voted $2,600,000 to the Housing Administration which is to be used only to pay terminal leaves of employees when the agency is abolished. Moreover, Congress appropriated only $1,400,000 for operating expenses of the agency from now until June 30, although Woods had asked for $3,600,000. This was clearly a directive to Woods to begin now to curtail operations and to be ready to close up shop when the existing rent-control act expires.

This newspaper believes the termination of Government rent control is long overdue. The legal basis for this form of property confiscation is the fiction that the country is still at war and cannot spare the materials with which to build housing. But the political basis for it is even more indefensible. It rests on the assumption that one class of people, the owners of rental property, should subsidize part of the living expenses of their tenants because it would be politically unpopular if renters had to pay the full value of the premises they occupy.

It has been demonstrated time and again that there is no longer an actual housing shortage. What has happened is that the beneficiaries of cheap rent have been encouraged by rent controls to occupy more

space than they really need or than they would retain if they had to pay the going price for it. Another and even more evil effect of rent controls has been to drive rental property off the market. The owners of rental property have preferred to sell it to owner-occupants rather than to continue to rent it for an inadequate return or to take the risk of acquiring undesirable tenants who cannot be evicted except at great trouble and expense.

It is probably true that in some parts of the country there is a shortage of rental housing, but this is a situation which has been brought about by rent controls which cannot be overcome until they are abolished. Moreover, the situation will grow worse the longer rent controls are continued.

We believe, therefore, that Congress should allow rent controls to expire on June 30. It is probable that in many communities there would be a period of considerable confusion if landlords were free to charge what they could get for their properties. But out of this very confusion more rental property would emerge, as competition was restored and the law of supply and demand began to reassert itself.

In any event, renters have 3 months in which to prepare themselves mentally and financially for the probable expiration of rent controls. They should start thinking now about paying their own way and standing on their own feet, instead of basking in the comfortable illusion that someone else is going to pay part of their housing bills indefinitely.

SEATTLE, WASH., *April 19, 1950.*

Senator HARRY P. CAIN,
Senate Office Building,
Washington, D. C.

MY DEAR SENATOR CAIN: I take the liberty of writing you with reference to the continuation of rent controls in Seattle, Wash. I am sure that no good can come from continuing these controls, either to the tenants or the owners. At the present time it is practically impossible to rent a house in Seattle because the owners will not rent their property but insist on selling it while rent control continues. There are many, many tenants with children, or with more than two in a family, who cannot buy or at least it is not to their advantage to buy, but who should be in a home, which is not available. Hundreds of houses would be put on the market for rent if the controls were lifted and would relieve the entire situation, and at the same time eliminate the hundreds of places where people are forced to live where they are required to share the use of the bathrooms and the kitchens with other tenants and pay ridiculous rates for such accommodations. Controls were lifted in the city of Spokane this past year and it improved the condition generally for both tenant and landlord. The average increase in rent, I understand, was less than 15 percent. I am satisfied that the rates in Seattle would not be increased at an average of over 15 percent and possibly not over 10 percent to 12 percent.

We have built thousands of houses and apartments since the close of the war. The houses cannot be rented; the apartments are not filled. The condition is wrong and should be remedied. We urge you to vote that these controls be discontinued June 30, 1950.

Very truly yours,

D. B. MACKINTOSH.

ST. LOUIS, MO., *April 21, 1950.*

Hon. HARRY P. CAIN,
Senate Office Building,
Washington, D. C.

Hon. HARRY P. CAIN: I write this letter to ask for rent decontrol. I am an owner of rental property, and I believe that ever since the last war ended nearly 5 years ago the property owner, who belongs to a responsible and trustworthy part of our citizens, has been discriminated against.

Our country has been prosperous ever since the war ended, but the money has been spent on nonessentials in many cases, while our Government has decreed that a basic thing like shelter had to be provided by its owner at far below current prices. The rental owner has been browbeaten and intimidated at the rent office. Our State capital at Jefferson City, Mo., has imprinted above its stone pillars, "Property is the fruit of labor." I know that my property represents just that and also self-denial to have savings to invest that way.

The United States of America solved every problem of the last war with prompt efficiency, which won the war and our standing as a preeminent Nation. All such was done in less than 5 years, and so could the housing problem have been solved, but the Government has been willing to persecute one part of the population to attain popularity with the rest of it. The condition of older property has suffered or deteriorated more, too, due to the rise of the prices of labor and materials for upkeep. Surely now is the time to rectify this condition, which has the characteristics of old-world absolutism. I really meant to say like Russia.

Yours truly,

GLADYS C. STAMM.

SECURITY ABSTRACT CO.,
El Dorado, Ark., April 6, 1950.

Re Federal rent control.

Senator H. P. CAIN,
Senate Office Building,
Washington, D. C.

DEAR SENATOR: I wish to thank you for your vigorous opposition to continuance of Federal rent control as expressed in meeting of Town Hall last evening.

May I add my testimony to support your position? My husband was a victim of cancer, dying two days before Pearl Harbor. He left my daughter and me a small title business and a brick apartment house, into which all our savings had gone. Depression prices still were prevailing in this oil boom town on rental property, because of overbuilding in the 1920's and because the East Texas oil discovery had emptied our houses of the oil industry.

Our four room furnished apartments, water bills, garbage bills, and yard upkeep paid by owner, have been frozen at $38.25 per month (the dirctor let us raise to that sum).

One of the tenants stated to me that he made around $20,000 last year. One tenant, a widow, married a wealthy man and they now live in the apartment she originally rented. All of them have prospered to the point that I have had to reconstruct the driveway to the garage (a stall for each apartment) to accommodate the long low lines of their expensive new cars.

Aside from the monetary angle, I have been unable to have the use of my own property when I wanted to bring an abstracter here to work in the business, and have been unable to secure room for relatives when I should like to help them. The measure is no longer a war measure; it is high-handed bureaucratic usurpation of the rights of private citizens as guaranteed by the Constitution of the United States.

It is working a hardship on the lower income group; one of the typists working for me has to pay $50 for a small three-room apartment (basement, but new construction). The economic level should find an adjustment somewhere between these two levels and the general public should be able to shop for its rental facilities according to their likes and dislikes. There are vacancies listed in the paper now; many people would offer rental units if they could again manage them as they prefer.

The labor unions got behind the rent control man here and prevented the councilmen of the city from passing a measure to decontrol the town. We will never be able to decontrol through local petitions.

My plight can be multiplied many times over in this area, and those persons so affected join me in imploring you to see that the Federal rent-control measure is not renewed in June.

Thanking you for your patience in reading this, and trusting you will continue to represent all of the people of the Nation in the light of the Constitution by which we exist as a free people.

I am very truly yours,

Mrs. E. J. DRAKE.

DENVER, COLO., *April 26, 1950.*

Hon. HARRY P. CAIN,
Senate Office Building,
Washington, D. C.

HONORABLE SIR: As property owners, we are watching closely the hearings in Washington this week. We know your stand and are glad for people like you, and we think we are due for a break. We just finished paying $472 taxes on our remodeled houses located on six lots in the low-rent area. Our rents would go up very little in some cases and not at all in others. There are many many landlords in Denver who are sick and tired of waiting and fighting and have given up. They are converting to business, or selling out, so that rent control is not helping the housing situation. It helps some politicians, I guess. What we want is our freedom to run our own business.

Sincerely,

F. HANSON.

BELLINGHAM, WASH., *April 25, 1950.*

Senator HARRY P. CAIN,
Washington, D. C.

DEAR SIR: Please be advised that we sent the attached copy of letter to Senator WARREN G. MAGNUSON, Representative THOR C. TOLLEFSON, Representative HENRY M. JACKSON, and Representative HUGH MITCHELL. The reason we did not send it to you is because we know you are doing everything you can to eliminate rent control, and we appreciate your efforts, but thought it wise to advise you what we had done in this respect.

Very truly yours,

D. L. ABSHIRE.

APRIL 25, 1950.

DEAR SIR: 1. We have purposely held our correspondence to you to a minimum because we know you are busy and we try to carefully weigh what we convey as there are two sides to most issues, but we feel it is timely that we contact you regarding the termination of rent controls, which, we believe, are long overdue termination here. Please believe us, as we are really close to the issue here. We are probably this city's largest rental agency (not by choice, but because our customers ask that we give them this service) and we have had considerable contact with rent-control personnel here.

2. Locally, we feel, relations here with rent-control personnel has reached such a state of deterioration that an almost unworkable state of cooperation exists. Property owners are being put to needless expense of delay, loss of revenue, attorneys fees, etc., to evict undesirable tenants. Most tenants are very easy to get along with, but the exception that occasionally rears his head is a troublemaker from the beginning, and any thread of support he can solicit to further enjoy his trouble-making of course he does, and he does this through rent control, who for a lack of much else to do and to make their superiors think they are busy, rush to these isolated cases and build them up. This is typical in this area.

3. In this area a fear of excessive rents is foolish, as we have several places now that

are charging less then the authorized ceiling because we are more concerned with obtaining good steady renters, and in turn, we recommend to the owners that allowances be made accordingly in favor of good tenants.

4. May we further state that to our knowledge there is no other phase of industry who is so penalized by the Federal Government that the extrepreneur has to actually subsidize his own client without aid or relief from increasing costs. We are aware of certain courses of possible relief under rent control, but from a practical angle in actual practice here it's a lost cause.

5. We are of the opinion that rent control on a national level should be abolished, and should there be any justification for continued controls, then let each community involved take care of its own situation. We sincerely urge your support of termination of rent controls.

Thank you.

Very truly yours,

D. L. ABSHIRE.

Address by Hon. Harold E. Stassen Before Women's Auxiliary, New York Republican County Committee

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 8 (legislative day of Wednesday, March 29), 1950

Mr. THYE. Mr. President, in accordance with unanimous consent given me during the course of the debate today, I present for publication in the Appendix the address delivered by Hon. Harold E. Stassen, former Governor of Minnesota, now president of the University of Pennsylvania, before a women's Republican group on Tuesday, May 2, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PRESIDENT TRUMAN'S TRAVELS

I commend the Republican women of New York for their early and thorough preparations for their part in the crucial congressional elections of 1950. You can—you must—play a very important part in those elections.

The 1950 elections may well turn out to be the most important congressional elections ever held. If our Republican Party makes major gains, it will signalize a rebuilding which this time, I am confident, will not stop short of complete National Republican victory.

But we must neither underestimate the difficulty of this congressional campaign nor its importance. President Truman has already indicated that he will take an all-out personal part in the congressional elections. This should not be taken lightly.

President Truman is the cleverest politician ever to occupy the White House. And he is also the worst President ever to occupy the White House.

He is a postgraduate of the most effective political school in America—the Pendergast school of Kansas City, Mo. From that school he knows the methods of attacks on opposition, of claims for all improvement, of dodging blame for things that go wrong, and marshaling votes through organization.

He will demonstrate his political aptitude next week on the trip that he is taking across the country. With a carload of his political supporters, he will travel across the Nation in a special train, with his trip paid for out of the taxes of the people. He will go out to the Grand Coulee Dam; the plans for which were prepared under President Hoover; the construction of which was carried on by President Roosevelt; the payment for which was voted overwhelmingly by both Republicans and Democrats; and standing at the edge of that dam he will strike a pose and act as if he built it with his own little Missouri hands.

He will act as if he came to the State of Washington for a ceremony to start the generating of power at the dam, whereas in fact, he is going there to try to generate more political power behind his Democratic Senator of that State who is in trouble because of playing on the sands of Hollywood instead of working at his seat in the Capitol.

Going to and coming from the dam, he will just happen to stop in the congressional and senatorial districts where he hopes to salvage a troubled Democrat incumbent or weaken a present Republican Congressman or Senator. With the great advantage of naturally having the front page of every newspaper in America, and ample quantities of radio and television time, he will do a very, very clever and effective job of campaigning.

It is strange but it is true that the methods of the foreign economic Socialists and of the domestic political bosses are very similar. Both make extravagant, extreme, and rosy promises. Both collect heavy taxes from the people. Both give less than they promise. Both keep a lot of the people's money for themselves in the Government. Both thrive when citizens carelessly depend on politicians to take care of their worries. Socialism is as surely the result of giving too much power to the national Government as the Kansas City scandals are the result of political inertia in city wards.

The tragedy for America is that the same school which made Truman such a clever politician also made him such a bad President. This is true because it is a school whose graduates are lacking in a sense of idealism and who minimize the importance of honesty and integrity. This lack of the sense of the importance of idealism is what has made our postwar foreign policy so negative and weak, and has caused us to lose so much ground in the cold war with the Soviet Union. The idealism of this Nation is the most dynamic force in the world. But that idealism has not translated into an affirmative, hard-hitting, inspiring foreign policy under President Truman's administration. Thus it is, that with a policy of holding the line, of waiting for the dust to settle, of containment, the United States is in part responsible for the tremendous advance in the cruel and dictatorial domination by the rulers of Russia. In the brief space of 5 years this Kremlin clique has established dictatorships over 600,000,000 people in Poland, in Rumania, in Czechoslovakia, in Bulgaria, in eastern Germany, in Hungary, and in China.

The administration's lack of appreciation of the importance of honesty and integrity is shown in the flagrant association of the President in the White House with men like Ed Pauley, who made a million dollars in speculating as an insider upon the food of the Nation; and John Maragon, who accepted funds from a perfume company while officially representing and being paid by the United States Government in Greece. These are but small examples of a situation that exists and which tends to undermine the morality of the Nation and contribute toward the record high total of gambling and of illicit funds in America today.

In fact, one of the greatest difficulties which our Republican Party faces is the fact that the people of the country are reluctant to believe that the corruption and the communism are as bad under President Truman's administrative as they really are.

Furthermore, if we analyze the record of the Truman administration, we find that in those situations in which he had his own way our country is in a bad way. He had his own way at Potsdam without any Republican participation and without any congressional participation. The result has been very, very bad for the position of our country in Berlin, in Austria, and in the entire Balkans. It has been a part of the cause of losing the cold war.

He had his own way in Asiatic policy without any participation in the forming of the policy by the Republicans and without any participation by Congress. The result has been very, very bad, and our country has also lost much ground there in the cold war.

He wanted to keep control over all the housing materials in this country after the war. He wanted to keep control over all new building. But Congress overruled him and freed the builders, retaining only the loaning programs which had support by both parties. The result has been that the private builders and the building craftsmen of the country, aided by the suppliers and lumbermen, are now turning out a record total of houses, and we are on the way to real improvement in the housing supply in this country. It was the action of Congress in overruling President Truman that led to this progress. If President Truman had his way, the whole building industry would still be in a snarl. There would still be the necessity of knowing somebody who knew somebody who could call Harry Vaughan to get a permit approved for building material.

He tried to have the Government go into the steel business. Congress overruled him and left the steel industry in private ownership, and it is today producing more steel than ever before and is rapidly catching up with all the requirements for the country, with enough left over to help rearm western Europe.

He wanted to bring agriculture under the grip of his administration, but Congress at least partly overruled him, and the farmers have produced an abundant supply of food so that food prices are now coming down to the consumer, and we are able to supply needs throughout the world.

We Republicans can meet the 1950 situation brought about by the political cleverness of the President and by his use and misuse of the great power of his office, only in this threefold way.

First, by fighting back vigorously and hitting hard in the exposure of the conditions of his administration. Second, by bringing forward definite, sound, constructive measures to meet the problems of our country at home and abroad. Third, by organizing and working and voting with a thoroughness and a drive such as we have never shown before.

Of these three, I count as the most important the bringing forward of constructive solutions. We must think through and study carefully, and then with ingenuity and with forthrightness present definite, sound, and constructive measures for the improved health of the people, for an agricultural program, for more and more jobs at good wages, for streamlining the Government, for saving money and keeping down taxes, for winning the cold war with Russia, and for advancing the cause of freedom of men throughout the world.

Let me discuss in detail tonight just one of these issues. You all know of the Truman-Ewing proposal to have the Government take over the health system of America; to put all doctors and hospitals under the thumb of a five-man board appointed by the President; to bring politics into the relationships between patients and doctors, and patients and hospitals; and in general to copy the British and German systems of socializing medicine.

We know President Truman's proposal is bad. The majority of the people now know it is bad. The British experience is proving that what looks in theory like a grand scheme turns out to be a sad mistake which leads to more medical care of a lower quality for more people at a higher cost with more deaths and increased illness throughout the Nation.

But it is not enough to recognize the evil of President Truman's proposal. There are very real problems in health in America. Serious illness or accident to a member of a family in the working or middle income group is an economic catastrophe. There are not enough doctors today and not enough opportunities for young men to study medicine. Many of our hospitals are in financial difficulty. Many areas of the country are entirely without a doctor or a decent hospital. We have the best health record of all the major nations in the world, but it is not good enough for America.

These problems must be met without making the mistake of President Truman's socialized and political medical program. They should be met with the cooperation of the medical profession. They should be met by working with the doctors and the nurses and the hospital administrators. I believe our Republican Party might work out, with the professions involved, a program to meet the problems in a modern effective way without making the mistakes of the British or Truman programs. Something like this might be done. We could use the example of the very successful Federal Deposit Insurance Corporation, which Senator VANDENBERG initiated, and which has secured the bank deposits of America without having the Government take over the banks. We could establish a Federal Health Reinsurance Corporation to underwrite the various Blue Cross and other local voluntary insurance systems developed by farm cooperatives, unions, and local groups, so that these groups could offer comprehensive complete coverage for the people at moderate cost. This Federal Health Reinsurance Corporation would thereby have a relationship only with the local insurance associations and would not bring the Government in between the patient and the doctor or the patient and the hospital.

Contracts such as that recently entered into by Bethlehem Steel should then be encouraged through which the employees and the employer join in paying the health-insurance premium and under which splendid protection is given to the workers and their families. Careful expansion for insurance coverage for those who are self-employed or are not on social security could also be worked out through these voluntary local associations. In this method, within a brief space of time, with the expenditure of a fraction of the amount of money, we could have in operation a system giving better quality of medical care at lower cost with better results than any of the socialized schemes that have been advanced.

Steps should further be taken to assist in establishing doctors in those poor or remote areas of the country that cannot now support a doctor in private practice. These are the same territories that need the public health services of vaccination, immunization, examination of school children, inspectors for health and sanitation. Therefore a moderate, careful program of paying a small part-time salary to a young doctor to go into these territories to practice privately, but to give a part of his time to public health activities, would lead to an advance of health in these areas.

The further extension of the Hill-Burton Act, which is a sound bipartisan measure, to assist in the construction of local hospitals and local health centers should also be carried forward. Likewise some moderate assistance in the expanding of medical education should be given: Medical education is very expensive to administer because on the average, as our experience at the University of Pennsylvania where we are operating the oldest medical school in this country shows, it costs about $2,700 per student per year to give a good medical education. Since the tuition is just $700, there is a large difference to make up from other sources. That is the principal reason that medical education is so difficult to attain. Some steps should be taken to expand these opportunities, particularly in the South where the present chances to study medicine are entirely too limited.

This expansion likewise should be done without any discrimination as to race, or color, or creed. By measures such as these, and by increasing private support through philanthropy, through keeping inviolate the local control and the high independent professional standing, and by pushing on with health research, we can keep America in the very forefront in the health of the people of the world steadily improving in every respect. From steps such as this we should work out a Republican health program that will be sound for the people and will be recognized as such and will be supported by them. In a similar way we should develop programs on the other major problems.

Angry and petulant about Congress' refusal to obey his orders, the President is now taking to the stump to try to get a puppet Congress. He knows how to pull the political strings. But I believe that the American people want men and women who stand on their own feet in Congress, and they will refuse to send President Truman's personal puppets to Congress.

A Republican Party, ready to serve the people of this country and fighting hard against the weakness and deficits of the present administration, will become a victorious Republican Party.

Cut in Postal Service

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. GOODWIN. Mr. Speaker, evidence continues to accumulate that while the people want to see economy in the various departments of the Government, even if it means curtailment of services, they are not disposed to take kindly to the proposal of the Postmaster General to save money in his Department by a cut in the postal service through a reduction of mail deliveries unless they can be satisfied that the report of the Hoover Commission is wrong in pointing out other ways in which the desired economy may be effected. Under leave to extend my remarks, I add hereto the following editorial from the Malden (Mass.) Evening News:

CUT IN POSTAL SERVICE

Decision to reduce postal service in behalf of economy will not be accepted by the American people with good grace. While there is a universal cry for a reduction in Government expense it is hardly fitting to start with a branch so vital in the life of the people. A single mail delivery in residential and semibusiness sections will not be accepted without protest. Yet that is the first move inaugurated by the Department. Postmaster General Donaldson says this is necessary following the refusal of Congress to grant increases in postal rates which would net some $600,000,000. Just how reduction of deliveries will save money is hard to understand. If the Department has sufficient manpower now to make two deliveries what will become of the manpower released by cutting the service in half? Certainly it does not mean that any sizable number of employees will be laid off. Surely there are other places where millions could be saved without reducing a service so vital to the public. Then, too, there could be a bit of slick politics mixed up in Donaldson's scheme. If the people want economy, let's take it out of their hides, so to speak. Adequate mail service is extremely vital to the Nation. To go back to horse-and-buggy service will be a distinct harassment to every American. It might be a good thing for the Postmaster General and his advisers to take another peek at the Hoover Commission report that found that the Post Office could make greater use of mechanical devices for handling mail. In general, it was short of equipment of all kinds, and much of its equipment was obsolete. Average age of Post Office motor vehicles was over 15 years. The Commission recommended the modernizing and streamlining of the Post Office Department and that the Department should be taken out of politics by abolishing Senate confirmation of postmasters.

Boston Herald Comment on Address By Joseph A. Erickson

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, May 8 (legislative day of Wednesday, March 29), 1950

Mr. SALTONSTALL. Mr. President, last Thursday I asked unanimous consent to place in the Appendix of the RECORD an address entitled, "The New England Economy—1950 Model," delivered by Joseph A. Erickson, president of the Federal Reserve Bank of Boston, at the New England congressional dinner of 1950 held at the Hotel Mayflower in Washington on May 2, 1950. At the same time I asked unanimous consent to place an editorial entitled "New England Rallied," from the Boston Herald of May 3, 1950, commenting upon his address.

Mr. Erickson is a distinguished New England banker and a business analyst of great repute.

I now find that Representative LANE, of Massachusetts, had previously placed Mr. Erickson's address in the RECORD. As a result, my remarks requesting the insertion of Mr. Erickson's speech, under the rule, were not printed. I renew the request for unanimous consent to place in the RECORD the editorial from the Boston Herald.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEW ENGLAND RALLIED

The day is past when New England can shape her destiny within New England. The power wielded in Washington over the coun-

try's economy is too great now. Much as we may dislike sectionalism, the formation of blocs, and the horse trading of Congress, it's there, and we have got to play the game as it is played or drop out by default.

Joseph A. Erickson, president of the Federal Reserve Bank of Boston, spoke to a meeting of the New England delegation in Congress along these lines last night. These gatherings have been sponsored annually by the New England council and the chambers of commerce for some time, and they have produced potent argument for a unified nonpartisan approach by the Senators and Representatives of this section. But never before has the problem been put so bluntly. This was plain speaking by Mr. Erickson.

There is, for instance, the matter of a steel mill in New England. The United States Steel Corp. has chosen to ignore a New England site in favor of a plant on the Delaware River. That's the company's right. But will New England be required to pay its share of the dredging of the river so another section can have the steel mill?

The last year has shown an extensive conversion to oil as a fuel in New England. We are fortunately situated to get oil from foreign fields. Should our delegation in Congress be asked to support the program of domestic producers for higher tariffs and quotas on foreign oil?

The huge expenditures for power, navigation, flood control, and reclamation serve other sections that would invite industry away from us by the lure of cheap power. Exactly what do we get in return?

A united New England delegation would command enough votes for effective bargaining. It could say to the farm bloc which imposes an undue burden on New England by the huge cost of subsidies, "what can you give in return that will afford our section an advantage equivalent to yours?"

Mr. Erickson did not carry his exhortation to the precise point of intersectional bargaining, but it was clearly implicit in what he said. His was a rallying cry for a realistic defense of New England interests. Will the New England Senators and Representatives respond?

This Nation Under God

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, May 8 (legislative day of Wednesday, March 29), 1950

Mr. WILEY. Mr. President, a distinguished Member of the Senate, the senior Senator from Utah [Mr. THOMAS], recently wrote and published a book entitled "This Nation Under God." There appeared in the Washington Star of Sunday, in a column entitled "Spires of the Spirit," by Dr. Frederick Brown Harris, the Chaplain of the Senate, an editorial in which, among other things, Dr. Harris said:

Here is a book with truths timely and timeless, which will help to put our contemporary lenses in focus.

Mr. President, it was my privilege a few days ago to hear a discussion of the book written by the Senator from Utah, and I am happy to recommend it. I ask unanimous consent that the entire editorial by Dr. Harris be printed following my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THIS NATION

(By Frederick Brown Harris, pastor, Foundry Methodist Church; Chaplain, U. S. Senate)

This Nation is today the most significant factor in all the tangled and tragic skein of human affairs. This Nation holds in its hands the power to determine the destiny of this planet for generations to come—perhaps, forever—whether it shall be the blessing or the curse, life or death.

This Nation is today the greatest reservoir of material resources and spiritual idealism on the face of the earth. This Nation is the only serious challenge to the bid for world domination by a sinister slave system which already holds untold millions in the despotism of its iron grasp. This Nation in the providence of God has come to the kingdom for such a time as this.

All this means that, in an age—on ages telling—to be true to America at its best is to share an awe-inspiring role in the unfolding of the divine purpose. Rather than any American should sap his Nation's strength by his own moral treason; betray her by his treachery, or exploit her by his greed, it were better for him that a millstone be hanged about his neck and that he be drowned in the depths of the sea. No one can be a worthy partner in a democracy unless he helps sustain the moral and spiritual roots. If democracy withers it will never be destroyed by suspected Reds, but by neglected roots. The surest way to cause the fair flowers of freedom to fade is to cut the roots reaching into rich, ancestral soil in which they have been nourished, and from which, fed by springs of living water, has come their help and health. A cut flower is a doomed flower. Its beauty cannot endure because its roots have been severed. For a democracy which has fruits without roots the undertaker called Time is already at the door.

In this frightening day it is dawning upon America as with a fresh and startling revelation that only religious faith can undergird democracy, and that when this is withdrawn some form of coercive totalitarianism lifting an almighty state into God's throne comes in like a flood. An honored member of the United States Senate, a national leader with a rich working background in religious, labor, educational and international affairs, Senator ELBERT D. THOMAS of Utah, has recently published a volume tingling with intense conviction and shot through with prophetic insight. In scintillating chapters he writes the title, "This Nation Under God," in letters of fire across our national sky.

To this perplexed day, the distinguished Senator declares: "Everything for which democracy stands is based on religious faith. Neither enlightened self-interest nor practical ethics can make an effective substitute." In "This Nation Under God" is inspiringly portrayed the real manifest destiny of America. The author is no strutting Pharisee under the white dome of the National Temple, thanking God that we are not as other people. We are only a chosen people when we choose to be instruments of His will for all mankind.

Here is a book with truths timely and timeless, which will help to put our contemporary lenses in focus.

The Senator's credo is set down simply but profoundly, as he bears witness: "To me, the basic fact about our faith in God's power and our destiny is that He has blessed us with the opportunity to provide abundance for ourselves, all of us, and to share the abundance with the world—that our destiny is to hold high the flaming torch of liberty for all, and to rule over none. I believe in something wordless and wonderful about man and the universe. I believe in faith without proof, hope without reason, love above advantage, without which mankind will indeed perish."

In this volume there is impressively pictured the unanimous procession of the American Presidents as each in his own words witnesses to the spiritual roots of America. The ultimate truth about "This Nation Under God" has never been put more succinctly than by Woodrow Wilson, to whose "world" Senator THOMAS devotes a chapter. Significantly, Wilson's warning sentence is from his "The Road Away From Revolution." Hear it, O America!

"The sum of the whole matter is this, that our civilization cannot survive materially unless it is redeemed spiritually. Only thus can discontent be driven out and all the shadows lifted from the road ahead."

A fable tells of a spider that once slid down a single silky thread from the lofty rafter of a barn and set up an elaborate domain on a lower level. There he spread his acquisitive net, caught flies, grew slick and prospered. One day, wandering proudly about his opulent premises he saw the thread that stretched up into the unseen above him. What is the use of that? he cynically blurted, and snapped it. And his filmy palace collapsed.

God forbid that a collapsed silken web should be a portent of the fate of this Nation.

To Help Mr. Acheson

EXTENSION OF REMARKS
OF
HON. EDWARD L. LEAHY
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES

Monday, May 8 (legislative day of Wednesday, March 29), 1950

Mr. LEAHY. Mr. President, I ask unanimous consent to have inserted in the RECORD an editorial entitled "To Help Mr. Acheson," which appeared in the Providence Journal of May 3, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TO HELP MR. ACHESON

The sort of attack that has been leveled at Owen Lattimore invites retaliation in kind. It was probably inevitable, therefore, that the Far Eastern expert who has been called the top Soviet espionage agent in the United States should have included in his defense a violent personal attack on his accusers. From the viewpoint of the public, however, it must be said that Mr. Lattimore's latest diatribe on the morals and motives of Senator MCCARTHY and his principal witness, Louis Budenz, contributes nothing toward resolution of the controversy.

An end to this procedure of smearing and counter-smearing is certainly what the national interest demands. Secretary of State Acheson, who is the real target of the MCCARTHY campaign, is about to sail for London on a highly important diplomatic mission designed to extend cooperation among the Atlantic pact nations from the military sphere into the economic and political field. How much damage has already been done to his stature as a negotiator by these attacks on his competence and good faith remains to be seen.

It is obvious, however, that a continuation of this controversy during the forthcoming conferences will in some degree lessen Secretary Acheson's ability to speak with authority

for the United States. To that degree, any prolonging of the public debate touched off by the McCarthy charges will directly damage the security of this country, which depends so heavily on maintaining and expanding western unity.

The debate cannot simply be turned off, of course. If Senator McCarthy chooses to go on making public charges of Communist influence in the State Department, he cannot be stopped. If the individuals named by him want to continue dragging out the Senator's dirty linen in an effort to discredit his charges, they are free to do so. But it does seem to us, in view of the fact that these tactics cannot bring out the truth but can only do serious harm to our national interests at London, that the Senate investigating committee should do what it can to call a halt to such public exchanges.

Ideally, we would like to see the whole matter taken out of the hands of the Tydings group and turned over to some more responsible investigating body, such as Senator Lodge has suggested. If that is not practical—as it appears not to be—the Tydings committee might well wind up its own inquiry forthwith. Or if it is not ready to do that—and continuing reports of new developments again indicate that it probably is not—at least the Senators should be able to issue an interim report on their findings to date.

An official reminder to the world that Senator McCarthy's charges are still unproven, to say the least, would be some help to Secretary Acheson at London. Even if the report established conclusively nothing more than the indisputable fact that Mr. Lattimore was never a permanent or prominent employee of the State Department, it would do something to dissipate the cloud of confusion in which this country's spokesman is going forth to represent us before the bewildered peoples of the free world.

Federal Bureaucracy

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. GATHINGS. Mr. Speaker, the steadily growing Federal Government and what it would mean to the American people's welfare if a citizen's daily life is regimented is exemplified in a series of letters by Associate Editor A. A. Fredrickson in a recent edition of Blytheville (Ark.) Carrier News. These letters are purported to have been written in 1960. I am including as a part of my remarks the full text of Mr. Fredrickson's most unique article:

Once Over Lightly

(By A. A. Fredrickson)

Welfare, it's wonderful

March 28, 1960.

Office of the Director,
Payroll Division, Redistribution Bureau,
Washington, D. C.

Dear Sir: After submitting it for my endorsement, my employer as usual sent my pay check to Washington last week to cover my participation in the Federal-benefits program. But something must have happened to it.

Anyway, I haven't received my certificates of entitlement for this week. My wife needs an infected tooth pulled but cannot get an appointment with the United States dentistry office here without her certificate for this week. The Dry Gulch Valley Authority has threatened to shut off my electricity if I don't turn in my certificate showing I am a paid-up consumer.

Also, until I can show my entitlements for this week, my credit has been cut off at Brannan Memorial Delicatessen No. 82A, I can't get a pair of shoes my boy needs from the Federal Clothing Allotment Administration branch here, I can't make the next payment on my house to the Bureau of Low-Middle-Class Housing and I can't get credit for the second-quarter premium on my Government life insurance.

While I am writing you, I would like to take care of a couple of other matters. Since I have been authorized by the Bureau of Extra-Curricular Employment Assignment to raise a half-acre of black-eyed peas in my back yard, I would like to apply for the required 200 pounds of Government fertilizer.

Thornton P. Blivett.

Wet Rock, Ark.

Thornton P. Blivett,
Wet Rock, Ark.

Dear Mr. Blivett: Yours of the 28th instant received and noted.

However, you failed to submit your correspondence in octuplicate so as to provide copies for each of the organizations mentioned in your letter.

Kindly resubmit your letter thus in order that all items may be properly channeled.

Quagmire K. Graphit,
Director, Payroll Division,
Redistribution Bureau.

P. S.—You are cautioned to note closely the carbon-paper ration for your district for the current month and penalties for exceeding same.—Q. K. G.

Director, Payroll Division.

Dear Sir: It's been 2 weeks since I resubmitted. I'm now missing certificates for 3 weeks. My family is starving. My electricity has been shut off. My wife's jaw is infected, my insurance has been canceled and the Government is threatening to foreclose on my house. Can't you do something? And my name is not Thornwall T. Blivets.

Thornton P. Blivett.

Thornwall Z. Blivens,
Wet Rock, Ark.

Dear Mr. Blivens: In answer to your request of April 9, 1958, please find enclosed the Government manual on Sex Life of the Female Night Crawler in Lower Slobovia.

Oliver H. Ringworm,
Department of Animal Husbandry.

Director, Payroll Division.

Dear Sir: I'm now down to 103 pounds and barefoot. For goodness sake, do something! Even if it's only getting my name right.

Thornton P. Blivett.

Wet Rock, Ark.

Thornley E. Glivens,
Wet Rock, Ark.

Dear Mr. Glivens: As per your request, 103 pounds of fertilizer is being shipped to you express collect.

Cromwell C. Compost,
Department of Utter Fertility.

Director, Payroll Division.

Dear Sir: What's the matter with you people? A month has past since I wrote you. I'm now out of a job and living in a tent on the courthouse lawn. Can't even get unemployment compensation because you've got my records all tied up. I beg you, get this mess straightened out. * * *

Thornton P. Blivett.

Wet Rock, Ark.

Thorny C. Spivens,
Wet Rock, Ark.

Dear Mr. Spivens: After a thorough check of your records, we fail to understand your trouble.

According to our files, you died February 16 last year.

Such being the case, you will report immediately to the public embalming administration branch office nearest your home.

In your case, this office is located in Formaldehyde, Ariz.

We hope this takes care of your case. We have been happy to assist you, and assure you that any future business you may have with our department will be just as speedily consummated.

Clifton Q. Bungstarter,
Federal Benefits Administration.

River Valley Development

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, May 8 (legislative day of Wednesday, March 29), 1950

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a very able article on river valley development, by Willard R. Espey, appearing in the magazine section of the New York Times of Sunday, May 7, 1950.

This article constitutes an extensive study of the serious conditions of erosion, waste, and neglect in the various river valley areas of our country, and calls for the application of the successful TVA program to our whole river valley system. The program is opposed by a small clique of vested interests, backed by great wealth and desire to exploit the undeveloped resources of our country at the expense of the Nation. It is a challenge to the common sense of the American people. The future of our American economy will be determined by our action on this vitally important program.

There being no objection, the article was ordered to be printed in the Record, as follows:

More TVA's?—The Issues Weighed

(By Willard R. Espey)

The Senate recently passed a measure adding half a billion dollars' worth of navigation and flood-control projects to the billion-dollar rivers and harbors bill approved by the House. Both branches of Congress ignored alternative bills for TVA-like authorities which, their backers contend, would save the taxpayer hundreds of millions of dollars that are now going to waste through political logrolling and would provide controlled development of our great river valleys.

Not that these ignored projects would be cheap. Over the next half century they would cost in the neighborhood of $42,000,000,000. But valley authority proponents assert that the record of the present Congress, like that of most earlier Congresses, proves that $42,000,000,000 will only be the start if valley development remains a pork-barrel item. The true question is what do we get for our money.

The proposed authorities—many of them do not go by that name—would directly affect almost every corner of the country: A fourth

of the Nation's farmland in the Missouri Valley; 10 percent of our land area in the Pacific Northwest; a seventh of our population in the Ohio Valley; the entire heart land of the United States that would be served by the proposed St. Lawrence waterway.

These projects are as important as they are expensive because of what they can do for the country. If we spend the $42,000,000,000, says a recent Twentieth Century Fund survey, the United States would be enriched by hydroelectric plants with a combined generating capacity of 54,000,000 kilowatts—nearly the equivalent of our capacity from all sources at the end of the war. We would be freed forever from the danger of floods of the kind that turned a Columbia River city of 40,000 people into kindling wood in a half hour's time in 1948, or killed 137 persons and destroyed $400,000,000 worth of property along the Ohio and Mississippi Rivers in 1937.

The amount of western land under irrigation—21,000,000 acres now—would be doubled. Erosion would be halted on 300,000,000 acres of crop and range land, while 100,000,000 acres more would be made cultivable by draining and clearing. Cutting and replacement would be brought into balance on nearly half a billion acres of forest land.

If we do not adopt a program of control and development projects, the retarded areas of the United States must slide even farther backward. In great sections of the most advanced country in the world today, poverty, filth, ignorance and sickness are the order of the day. Topsoil is peeling off our earth like a rind off an orange, decreasing our wealth at a rate which has been estimated at $4,000,000,000 annually. Every year our flood losses alone run to more than $100,000,000. Stream pollution has turned the loveliest rivers known to man into currents of diluted sewage.

It is because of the growing realization of these conditions and the necessity of correcting them that demands, both in and out of Congress, for additional river-valley developments are increasing.

Allowing for regional differences and special problems, the proposals seek to apply in other areas the experience and techniques of the Tennessee Valley Authority, the American project which set the minds of men in every retarded region of the world afire with the dream of bettering their lot through grand-scale river-valley developments.

In the light of the expanding demand for development projects, why has Congress not passed legislation authorizing them? The answer is that it has been unable to agree on the answers to two fundamental questions: Can we afford, at a time of unparalleled commitments, with a deficit running at $5,000,000,000 and more a year, to spend still more money for large-scale TVA's? Does Government creation of additional power represent unfair competition with private enterprise?

Fortunately, both questions can be answered objectively out of our own experience and without regard to any special interests. But before presenting the answers it might be well to review briefly the need for and present status of our development projects. There are three reasons for this:

First, all intelligent discussion of river-valley developments must start with need, and the need for additional projects has been studied and well tabulated.

Second, the plans have been drawn up. Although Congress has yet to pass the necessary over-all enabling legislation, all projects have been worked out in detail, at least on paper.

Third, much more has already been done than many of us realize. While the Congress has debated, engineers have gone ahead and changed the face of America. On the Tennessee, the Missouri, the Columbia, the Snake, the Colorado—on all those rivers, and others, there have risen monuments so huge as to be visible from the moon. Sums so tremendous as to dwarf our national income of a generation ago are being expended each year on dams, levees, power plants, irrigation ditches. The argument as to whether or not we should encourage more TVA's is to some extent academic because most of the proposed developments are, in one way or another, already in work.

Here is a résumé of the major projects.

The Ohio Valley is increasingly menaced by floods and pollution. The valley drains waste from a population of 4,000,000 directly into the Ohio River; in some places a quarter of all the river flow has passed through a sewage system. Proposed projects would not only stabilize and cleanse the Ohio, but also provide a badly needed fresh-water connection between Lake Erie and tributaries of the upper Ohio, facilitating traffic in iron and coal. They would cost about $2,000,000,000.

The Arkansas Valley suffers from underemployment of 60 percent of its farmers. It has been proposed to retire 8,000,000 marginal acres from cultivation, putting the displaced farmers into new industries powered by abundant hydroelectricity. Cost of soil conservation, flood and pollution control, power, irrigation, and water-supply projects is estimated at $2,000,000,000.

The lower Mississippi has been the scene since 1927 of $500,000,000 worth of work on levees, reservoirs, spillways, and floodways. Another $500,000,000 remains to be expended on projects to provide for flood abatement and malaria control and to support a larger and healthier population.

In the Savannah Valley, an authority proposed jointly by the two Senators from Georgia would cost between $250,000,000 and $300,000,000. Besides navigation and flood control, it would include dams with an installed generating capacity of 761,200 kilowatts.

In the Connecticut and Merrimack River Basins of New England, the enactment of proposals for flood control, pollution abatement, and hydroelectric projects would cost $100,000,000, produce a billion kilowatt-hours of electricity a year. An effort is now being made to integrate the entire river-valley development of New England.

The Colorado Valley, third largest drainage basin in the United States, is being developed, not through a single regional authority but through an interstate compact. An international flavor is added to the undertaking by the involvement of Mexico in the lower river. In addition to Boulder Dam and the All-American Canal, projects are planned to control silting, establish an electrical generating capacity of 4,000,000 kilowatts, and irrigate 2,000,000 more acres. They will cost $2,500,000,000.

The Central Valley of California has 200,000 acres of land returning to desert. The State water plan will restore this land and bring an additional 7,000,000 acres under cultivation through water from 38 major dams. The cost has been estimated at between $1,000,000,000 and $2,000,000,000.

The Great Lakes-St. Lawrence waterway is the only project that still remains entirely on paper. Canadians and Americans for more than 50 years have agitated for a canal which would enable deep-draft ocean vessels to steam from the Atlantic to the Great Lakes. At a cost of $500,000,000 the 27-foot-deep ditch would create an electric-generating capacity of 1,640,000 kilowatts.

All the above proposals have aroused bitter controversy. The banks of the Colorado have provided a setting for disputes among Western States which for a while took on characteristics of civil war. But the developments which are bringing about the greatest exchange of name calling today are those which are already under way for the Missouri Valley and the Pacific Northwest. They are also the two best known and the two largest.

The Missouri: The Missouri River, twisting 2,640 miles and serving 29 percent of the total area of the United States, represents an economic and social problem of tremendous complexity. In its lower reaches—eastern Nebraska, Kansas, Iowa, and Mississippi—the crying need is for flood control. Farther toward the source, in the Great Plains, a parched countryside waits for irrigation.

The Army engineers, one of the two great Government bureaus at work on the Missouri, started from the assumption that the valley needed flood control and increased navigation. They began building dams for a few tremendous reservoirs.

The Bureau of Reclamation, on the other hand, decided that irrigation was the primary need and, accordingly, began building a large number of small reservoirs.

Both parties worked with a will—throwing up dams and levees, hydroelectric power plants, flood walls; boring tunnels, digging ditches, deepening canals.

Into this turmoil there was flung in 1944 a proposal for a unified Missouri Valley Authority. As fighting cats will forget their quarrel long enough to drive off an invading dog, the Army and the Bureau of Reclamation at once joined hands in a compromise, known as the Pick-Sloan plan.

The Hoover Commission, which looked over Pick-Sloan, reported in consternation: "The 'compromise' consisted for the most part in a division of projects, each agency agreeing to forego the privilege of criticizing projects assigned by the agreement to the other. The result is in no sense an integrated development plan for the basin, and there is serious reason to question whether agreement between the two agencies is not more costly than disagreement."

The proposed Missouri Valley Authority differs from Pick-Sloan in being a unified project, which would be preceded by a careful study of the entire valley area. According to its backers it would raise the Pick-Sloan sights on power production from 1,000,000 to 3,000,000 kilowatts—more than the entire capacity of the Union of Soviet Socialist Republics as recently as 1930.

The Columbia. In some ways similar, in others vastly different from the story of the Missouri, is that of the Columbia and Snake Valleys. Where the Missouri population is dwindling, that of the Northwest between 1940 and 1949 rose 36 percent. Where the Missouri lacks major industrial development, the Columbia is going through one of the great industrial bursts of American history. The economy of the Missouri is on dead center; that of the Columbia is hurtling forward.

The Columbia River is 1,214 miles long. Its hydroelectric potential is 30,000,000 kilowatts—more than a third the potential of all the United States, and more than our entire electric consumption in 1929.

Federal agencies working to develop the Columbia Valley are handicapped, as on the Missouri, by lack of over-all direction. In early 1949 President Truman had to give a public spanking to those same old Kilkenny cats, the Army engineers and the Bureau of Reclamation, for squabbling over who was to build what. A few weeks later, his administration's proposal for a Columbia Valley Administration reached Congress. It called also for an additional immediate outlay of $100,000,000 for hydroelectric and reclamation projects.

These, then, are our Nation's most urgent development needs, and what has been planned and is being done to meet them. There remain the two great policy questions: Can we afford to go all-out for valley developments at the present time? And are the projects compatible with the American tradition of free, private enterprise?

Answers to these questions can be found in the record of the one great valley development project that has had a chance to show its effectiveness—the TVA.

Today TVA produces 15,000,000,000 kilowatt-hours of energy a year. It watches 3,400,000 acres of test-demonstration farms. It is checking erosion and building soil on 7,000,000 acres. It is cooperating in developments of new mineral deposits and control of pollution.

In 1933, only 15,000 farms in the Tennessee Valley power-distribution area had electricity, today there are 300,000. During the first half of 1949 residents of the valley purchased $100,000,000 worth of electric appliances. Tennessee Valley farms in the same period used twenty times as much electricity as they had used in 1933, while the United States as a whole was using just three times as much. Within a decade the valley has developed 400 new industries, employing 100,000 workers.

In 1930 an acre in the Missouri Valley was worth $39.17—15 cents more than in the Tennessee. Fourteen years later an acre in the Tennessee Valley was worth $46.30, while in the Missouri Valley it was down to $25.82. Despite its scantiness of resources, the Tennessee Valley today supports 65 persons per square mile. If the Missouri Valley reached the same figure, its population would be up by more than 20 million.

It would be unrealistic to maintain that the faster gain in the Tennessee Valley was entirely due to TVA. Other parts of the South have also shown a more rapid improvement than the national average. Nonetheless, if the income of the Tennessee Valley had risen only in the same proportion as that of the rest of the country, its annual income—and the nation's—would total $1,240,000,000 less than it is today. This yearly difference is far more than the entire $762,000,000 cost of the Authority. Similarly rapid growth is likely in other valley authority areas. As the Twentieth Century Fund has remarked in analyzing the Arkansas Valley proposal, "The limit to such expansion cannot be estimated. But it would certainly be many times the initial outlay. * * *" The conclusion seems inescapable that we not only can afford such projects but also that we cannot afford to forego them.

Flood control, hydroelectric production, irrigation and reclamation have long constituted a pork barrel in which almost any Congressman could find a little money for his own constituency. The pork barrel in President Truman's latest budget amounts to $1,200,000,000, much of it for projects already under way. It is hardly to be expected that a vote-hungry Congress, however loud it cries for economy, will appreciably cut that figure.

But there is no pork for a hungry Congressman in a TVA. Valley authorities in such areas as the Missouri and Columbia Basins—set up either by Congress or by interstate agreement—are the only means on the horizon by which the waste, overlapping and log-rolling now taking place there are likely to be eliminated. On future undertakings of comparable magnitude valley authorities will be equally necessary—and for the same reason.

The principle of responsibility to Congress has been invoked against TVA's by some sincere and disinterested men. It has been invoked by some also, however, to cover an equally ardent interest in the principle of the pork barrel.

Valley authorities need not be a way to spend money. They can be, on the contrary, a way to get far more value for the money we are spending now.

Our experience in the Tennessee Valley also appears to answer the second major question negatively. Many critics contend that the regional development projects contradict the spirit of private business. On the basis of experience so far, however, it seems to me fair to say not only that valley authorities can act as a stimulus to free enterprise but that it is free enterprise alone which makes their full achievement possible.

In the Tennessee Valley the Government did not shut off a segment of the country from private investment; it opened a segment to private investment. It performed in twentieth-century terms the same function that it had performed a hundred and more years ago, when, by turning over tens of millions of acres of public land to homesteaders and railroads, it made possible the settlement of a continent nearly in the twinkling of an eye.

Today the Tennessee Valley is dotted with profit-making businesses—private businesses—which could not have existed there 20 years ago.

Conversely, the gigantic achievements of the Tennessee Valley Authority were possible only because private capital was available to turn the newly available power into machines, to hire for industry the men and women who were no longer tied to their farms, to create the goods and services which could make for a richer and fuller life. Without that capital and that grassroots incentive the network of dams could have produced but a fraction of its actual benefits.

There should be no stampede into new development projects. In each case the need should be clearly established, the remedy clearly effective. The timing and details will differ. Some projects are urgent; others can await the Nation's convenience. As each is launched, it will be the duty of every citizen to seek firm safeguards against Federal encroachment, to insist on a maximum of local control and a rate of expenditure which is not in excess of a reasonable public investment capacity. But that is far different from blind opposition. Now, as in the past, those who seek to oppose something with nothing are likely to find themselves wringing their hands in the ruck of history. For integrated river-development projects, properly administered, can enrich America and strengthen American democracy. The projects are feasible, they are desirable, and therefore they are inevitable.

Freedom and Government Hand-Outs

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1950

Mr. GOODWIN. Mr. Speaker, in recent meetings with various groups in my congressional district, at all of which I have given myself the benefit of a question period, I have become more and more convinced that the rank and file of our people are demanding that Government hand-outs to pressure minority groups be stopped. The First National Bank of Boston has just published something along this line in its regular New England Letter and I append it hereto under leave to extend my remarks as reprinted in the Wakefield (Mass.) Item:

FREEDOM AND GOVERNMENT HAND-OUTS

Throughout our history, freedom has ever been the rallying cry in our struggle upward as a nation, says the First National Bank of Boston in its current New England letter. Continuing, the bank says, it is our most precious heritage. So much has this ideal dominated our national life that America has become the symbol of freedom to liberty-loving people everywhere.

This freedom was dearly won. Every step in our forward march has been marked by risk-taking. As Vannevar Bush, president of Carnegie Institution of Washington, and former Director of the Office of Scientific Research and Development, has pointed out: "There is no such thing as absolute security. In this uncertain and complex world there is no workable security without the willingness and courage to take risks. We cannot protect ourselves by passing a law. We can hope to protect ourselves only if our people—our greatest resource—maintain and develop their imagination and initiative and are willing and able to take chances."

Our forefathers by overcoming starvation and the perils of the wilderness developed the capacity that enabled them to deal with stern reality, and through their energy, daring, and vision laid the foundation for the American system which rests primarily upon personal initiative and individual freedom. But this system is being jeopardized by the extension of the paternalistic spirit of government.

Every special favor asked of government, however, for protection against the risks of life imperils the liberties of the people. With government aid goes control, and unless checked, there grows up a Frankenstein bureaucracy that saps the vitality of the Nation.

But the American people in general are in a state of lethargy and do not realize that their liberties are in peril as they are being duped by sugar-coated slogans, honeyed words, and false promises.

While there are many manifestations of the shrinkage of freedom, it is most clearly revealed on the financial front. It finds reflection in the increasing proportion of the income syphoned by the Government from the American people. Taxes of all kinds—Federal, State, and local—now constitute about 25 percent of national income as against 13 percent in 1929 and 7 percent in 1900. All told, more than $60,000,000,000 is being spent through various governmental channels. This is equivalent to 85 percent of total national income in the prewar year 1939.

Socialistic experiments can be extended only by means of financial aid provided by the taxpayers. In consequence, it is highly essential in the interest of freedom that the purse strings should be tightened on expenditures that are carrying us at a rapid pace down the road of collectivism. It has been pointed out by the nonpartisan Hoover Commission, as well as by other authorities, that at least $4,000,000,000 can be cut from the Federal budget without in any way impairing essential governmental services. A campaign for substantial savings of taxpayers' money could become a rallying point for freedom which is being attacked on many fronts. All liberty-loving Americans should take a definite stand by joining forces with the nonpartisan committees for the Hoover report which have been organized in 38 States. The purpose of these committees is to keep the citizens intelligently informed on the savings that can be made by eliminating waste and inefficiency in government and zealously working for the adoption of better government at lower costs. In other words, the objective is to apply to government the same principles of management and experience that are necessary for survival in the field of business. The success of this commendable undertaking will depend upon whether the American people can be aroused to realize the inseparable link between freedom and solvency of the Nation as was clearly understood by its founders. At this crucial stage it is well to heed the counsel offered by Thomas Jefferson more than a century ago: "We must make our selection between economy and liberty, or profusion and servitude." A recent warning regarding the threat to freedom was made by Senator BYRD when he said: "Let us al-

ways remember that human freedom is not a gift to man. It is an achievement by man, and, as it was gained by vigilance and struggle, so it may be lost by indifference and supineness."

Chips Are Down

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. GOODWIN. Mr. Speaker, a recent editorial from the Somerville (Mass.) Journal states succinctly and pungently the feelings of many citizens with reference to desired economies in the Post Office Department. Under leave to extend my remarks, I append this excellent editorial hereto:

CHIPS ARE DOWN

The chips are down—the fight is on—the People versus the Politicians.

Never was an issue more clear-cut than the disgraceful exhibition now being staged where we see the Hoover plan for modernizing the post office being scuttled by the cowardly action of the Senate Committee on Post Office and Civil Service.

The bipartisan Hoover committee clearly showed the way to substantial savings in postal operations. If adopted, the Hoover blueprint would reduce the post office deficit from five hundred million to at least three hundred million—but more important, by streamlining and modernizing the post office structure and equipment, the efficiency of its service would be improved.

Since last July a series of bills endorsed by President Truman and Postmaster Donaldson has been before Congress. Yet no affirmative action has been taken.

Now the showdown reveals a few willful Senators smothering Senate bill 2213 by postponing indefinitely any action.

Senate 2213 is the bill to reorganize the post office. Among its many provisions for more economical and efficient administration of the post office is a proposal to remove 22,000 postmasters from politics by making Senate confirmation unnecessary.

Who is in favor? The President; the Postmaster General; the Hoover Commission; the National Association of Postmasters and Assistant Postmasters; letter carriers; railway mail clerks; the American people. Who is against it? A few politicians who place politics above the national welfare.

This bill was approved by a subcommittee but laid on the table by the full committee. Thus we witness the spectacle of a few selfish Senators prevailing over the will of the American people.

The Truth About Federal Health Insurance

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Dr. Ira Dean McCoy, from the Huron News of February 17, 1950:

THE TRUTH ABOUT FEDERAL HEALTH INSURANCE
(By Ira Dean McCoy, M. D.)

"Honesty of thought and speech and written word is a jewel, and they who curb prejudice and seek honorably to know and speak the truth are the only builders of a better life."—John Galsworthy.

The American Medical Association, at enormous cost, has bombarded the American public with a flag-waving, red, white, and blue propaganda leaflet "explaining" the proposed Federal health-insurance legislation. Every member of the AMA was assessed $25 in order that one of the Nation's top publicity agencies might be employed to frighten the American public by untruthfully calling the proposed legislation socialism, statism, and paternalism.

Often in the heat of argument or in criticizing another's belief, the words "paternalism" and "statism" are too indiscriminately used and the users forget or lose sight of exactly the form of government we have in these United States.

The Government is composed of men like ourselves whom the majority of us elect to govern us and it is always within our power to change the political complexion of our National Government every 2 years if we so choose. Far, far more dangerous to the welfare of our country than statism or paternalism is our apathy toward our duties as citizens. It is everyone's duty to be actively inquisitive and interested in Government; and it is the sacred privilege as well as our duty and obligation to cast our ballot at every opportunity. The more active and interested we as a people become in Government, the better will be our Government and the safer will be our liberties.

I firmly believe in the system of free enterprise and our capitalistic way of life; but in a complex nation the size of ours, government simply must take over the education and health of our people to a greater extent in the future. If the handling of atomic energy is too complex and too big for private industry, certainly the health and education of our people is too great and pressing a problem to be allowed to drift much longer. There can be no solution but more and more Government aid and control. After all, isn't good Government, "One for all and for one"? But let's get back to Federal health insurance.

In last week's article I said over 300,000 of our people, men, women, and children, will die this year because they cannot afford medical care. That isn't all the sad truth: this year, too, America will lose 4,300,000 man-years of work because of bad health. And this year, too, $27,000,000,000 in national wealth will be lost—lost because of sickness and disability. On the basis of selective-service experience at least 40 percent of our men of military age—between eight and nine million men—are unfit for military duty. On any one day, at least 7,000,000 people in the United States suffer some illness. As many as 23,000,000 persons have a chronic or disabling disease. Sickness and accidents cost the Nation at least $8,000,000,000 a year.

Our health services and facilities are wholly inadequate. Forty percent of our counties do not have even a full-time local public-health officer Hospitals are needed—areas of our country with an aggregate population of 15,000,000 people do not have a single recognized general hospital. Pure shortages of doctors, nurses, dentists, psychiatrists, and other trained health personnel are so great that many persons are forced to forego medical care. In 1944, 553 counties had less than one active physician per 3,000 population, the danger line. And numerous counties had no active doctor at all.

If we had adequate services available for mothers and children, we could prevent at least half of the deaths of mothers who die in childbirth, and one-third of the deaths of the young babies. Our State health agencies have, on their waiting lists, thousands of crippled children who require and cannot get proper attention because of the lack of facilities and personnel, and over half a million children with rheumatic fever fail to receive good medical care.

Staggering statistics, aren't they? But more shocking is the simple fact that we have the knowledge to prevent these needless deaths and this tragic waste. We have the highly trained personnel capable of applying that knowledge. The one essential ingredient lacking is the assurance that people needing that knowledge can have it when they need it.

But before we project the solution, let's look more searchingly at the problem. Can the average American family pay for modern medical care? Can you?

At least two out of every three Americans—that means 97,000,000 people—cannot, and this figure comes straight from the American Medical Association's Bureau of Medical Economics. If your family has an annual income of $5,000 or less per year, you are in this group. You cannot afford adequate medical care.

Most Americans avoid seeking prompt medical attention at the first sign of complaint. They tend to put off going to the doctor in the hope that the pain or illness will right itself. They delay mainly because of fear of medical costs.

Such delay is often serious, and sometimes fatal, as in tuberculosis and cancer. We doctors know that 30 percent of cancer is curable if caught in its very early stages. We know that the disabling effects of many other chronic diseases can be halted or even prevented entirely, if caught in time.

There is an endless amount of data to prove that the relation between money and life—between wealth and health—is direct and deadly.

The problem, from which we can no longer run, is simply this: how can we remove this major economic barrier which blocks better health for the Nation and assure everyone who needs it adequate medical care regardless of economic status?

The democratic solution is: National health insurance. By broadening the scope of our compulsory social-security program to include a system of national health insurance, by utilizing the proven, successful method of pay-roll deductions to which employers and employees would contribute equal shares—the costs of physicians and hospital care could be prepaid, guaranteeing both availability of care to all who need it and adequate payment to doctors, hospitals, and others who supply the services.

For a long time, the AMA fought even voluntary health insurance plans. It still fights them today, unless it can control them. It supports voluntary health insurance today, in a frenzied rearguard action to head off national health insurance. The AMA has long been several steps behind the march of events and the needs of the American people.

Voluntary health-insurance plans, while often excellent in the limited spheres in which most of them operate, cannot and will not be able to do the necessary job because:

1. Benefits are inadequate. The plans which provide anything approximating comprehensive insurance protection reach relatively few persons—actually less than 3 percent of the population—because they have been held back by the opposition of medical societies. The plans sponsored by medical societies provide only very limited services.
2. Voluntary plans have no sliding scales of payments to match incomes. They charge a flat rate, usually high, for limited benefits that cover only a fraction of the population. It is hardly likely that they could broaden their benefits without pricing themselves out

of reach of many present subscribers. 3. Many of them offer only cash payments instead of actual medical services, and these payments cover only part of the costs of care. 4. They have the smallest coverage where the need is greatest—in rural areas and among lower income groups.

A continuous smokescreen has been laid down by special interests to befog the public's mind on what national health insurance is and what it would mean to the doctor and to the patient.

Proponents of national health insurance cherish the freedom and intimacy of the doctor-patient relationship as much as our die-hard opponents. Patients, as now, would select their own doctors; doctors, as now, would accept or reject patients. National health insurance is just a method of paying for medical care.

The only change proposed by advocates of national health insurance is that, instead of the patient paying when and if he has money available, the doctor or the hospital of his choice would be paid by the insurance system at a rate and by a method to which the doctor had agreed.

Those who support national health insurance are keenly aware that our Nation has fewer physicians and hospital beds than we need, and these so poorly distributed that in some rural counties there are no resident physicians at all, and little or no hospitalization accessible.

Nevertheless, it is unrealistic to argue that national health insurance should be delayed for the years required to train many more doctors and build many more hospitals. The supply of medical personnel and facilities will expand only when, through insurance, the money to pay for them is guaranteed. This demand depends on families' purchasing power for medical care. This is the simple principle of supply and demand which operates throughout our economy.

Opponents claim that national health insurance will cost too much, that national expenditure for medical and health services would be greater under this plan, and that administrative costs would be excessive.

The first answer to this objection is that the Nation needs to spend more for health. Too many of us have been doing without for too long. Moreover, a large part of the expenditures under national health insurance would not be new or added expenditures. Money now expended in direct payments for medical care by sick persons would be distributed under the plan in small regular payments from all people. Consequently, the costs of sickness—ordinarily concentrated upon a small part of the population in any given year—would be spread over the whole year and over all the people.

As for administrative costs, it is worth noting that expenses of voluntary, nonprofit plans run to 12 percent or more in comparison with the premiums collected. An important part of these administrative expenses is the cost of soliciting and retaining members, a task that would be eliminated by national health insurance.

Many other costs would also be eliminated by national health insurance. It might at this time be interesting to note that the Blue Cross of Michigan has approximately 1,500,000 policyholders, or subscribers, as they choose to call the people who are buying Blue Cross insurance. From January 1 until June 30, 1949, the Blue Cross of Michigan had a total earned income of $12,399,566.37. But during that same period of time their operating expense was $1,135,477.46. Of that $1,135,477.46 are some interesting items of expense: $711,990.07 was paid out in salaries; $47,547.09 was paid out in travel and other expenses; and $79,783.54 was paid out in sundry expenses (of which no explanation is made). By these few figures I have given, it is very plain to be seen that the administrative costs of the Michigan Blue Cross are tremendous in comparison to the amount of money collected from their policyholders. It is, however, a nonprofit corporation. A great many patrons who are using the Blue Cross learn to their sorrow its services are limited. This could be due to the huge expenses I have already cited.

As a result of the very cunning insidious, and extremely expensive propaganda campaign carried on by the medical lobby, the AMA and its national physicians committee, most people think that all doctors, or nearly all, unqualifiedly follow the AMA "party line" in opposition to national health insurance.

The dictatorial, undemocratic rule of the AMA's house of delegates imposes its policies practically by fiat on a hapless and helpless membership. Serious disagreement by an individual doctor with the policies laid down by the house of delegates or by his local medical society may result in unpleasant economic and professional consequences for that doctor. Few doctors dare risk these consequences.

But opposition to AMA reaction has been growing and has expressed itself in several organizations of doctors who are in favor of national health insurance and who say so openly. These organizations—the Committee of Physicians for the Improvement of Medical Care, the Physicians Forum, and the Committee for the Nation's Health, composed of both laymen and doctors—are becoming growing spearheads of opposition to the entrenched leaders of the AMA.

The American Medical Association has been spoon-feeding the American people a terrific amount of propaganda against national health insurance, but I can cite the bill itself and tell you as well as anyone just what it is and what it will do for you.

1. It would make available to you and all other employed and self-employed persons (with few exceptions) all the care you need from physicians, both family doctors and specialists, hospital, laboratory and X-ray services, unusually expensive medicines, eyeglasses, and appliances; and dental care and home nursing to a limited degree.

2. It would also cover the dependent members of your family.

3. You would be free to choose your own doctor, hospital, etc., and to change your selection. Actually, countless individuals would have greater freedom of choice than they have now, because the prepaid plan of health insurance would help assure a better supply of physicians in many areas where there are not now enough doctors, and because the prepayment plan would enable millions who cannot now pay to have the services of a doctor of their choice for the first time.

4. Your doctor's professional freedom would be fully protected. He would not become a Government employee. He would remain a practitioner, free to accept or reject patients, to locate wherever he wishes, to participate in, or stay outside, the insurance plan. He would be paid by the insurance funds in amounts and methods which he or his own representatives would negotiate.

5. It would cost you 1½ percent of your earnings (up to $3,600 of income). Your employer would pay an equal amount. You would pay 3 percent (up to $3,600) if you are self-employed.

6. If you are a member of a voluntary health-insurance plan that meets minimum standards, this plan could continue to provide you with services, and your premiums would be paid from the national insurance fund.

8. Health insurance would not be run from Washington. It would be managed by local areas under a plan adopted by each State.

In closing these series on health and education, I wish to say there are four great issues confronting the American people. 1. The issue of war or peace; 2. peace between labor and industry; 3. the health of our country; 4. the education of our children. We must all work and strive to see that these issues are brought to a satisfactory conclusion.

Many of us fear the threat of communism but do we all realize the best way to combat the scourge of communism is to increase the opportunities of the ordinary individual? America is great enough and rich enough that we should have no slums; we should have equal opportunity insofar as public-school education is concerned in this country for all our children whatever their color or creed. All children have a right in this great country of ours to healthy and sound bodies insofar as our medical science can give it to them.

These are not visionary ideals. We can and must find a way for their fulfillment. "He stands straight who stoops to help a child."

Truman Prosperity on Borrowed Time

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. GOODWIN. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include herewith an article by Edson B. Smith in the Boston Herald and I commend to my colleagues a careful reading of this timely article:

TRUMAN PROSPERITY ON BORROWED TIME

Mr. Truman soon will start out on a transcontinental speech-making tour. In the course of his public addresses he probably will call attention to the great prosperity of the country and ask that he and the Democratic Party be given credit for it.

He probably will not explain to the voters that in considerable measure the undoubted great business boom is due to credit policies which, if persisted in, can end only in disaster. Superimposed upon the Government deficit has been a great expansion during the last 9 months in consumer credit and in real-estate mortgages.

If enough money is borrowed and promptly spent business is bound to boom. When the Government borrows it does not have to worry too much about repayment day so long as individuals and banks are willing to take new Government issues as offered. Unfortunately, in the case of individuals, debts have to be paid off when due. What a man borrows and spends today is just that much less he will have to spend in the future.

Maybe sometime we will have a Government blessed with more financial responsibility than the present administration. At some stage in this borrowing from the future for the sale of the present, creditors may get the jitters.

We all like periods of prosperity but some of us cannot help feeling very uncomfortable in the knowledge that the longer the present boom goes on the more trouble is being stored up for the future.

Lynwood, Calif., High-School Students Use Self-Created Booklet, We Hold These Truths—They Have a Zeal for Democracy

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 5, 1950

Mr. DOYLE. Mr. Speaker and my colleagues, at Easter recess of Congress I again had the privilege of visiting at Lynwood High School, California. It is one of the largest high schools in the great Eighteenth Congressional District, which I am now representing for the second term.

My first visit was an occasion upon which my privilege was to address the entire student body and faculty. I then noted the prompt, courteous, and patriotic manner in which they one and all saluted the flag of the United States of America and gave the usual pledge. They all knew which side their heart was on and where it was in their physical makeup.

Upon my most recent visit I found opportunity to ask the beloved school principal, William W. Jones, to explain to me the reasons for what I have just related to you.

Well, among other factors, he handed me a printed booklet entitled "We Hold These Truths." I will not here have opportunity to submit the complete text of this very valuable paperback, neatly printed booklet. It is printed in the Lynwood High School print shop, too, and was created and compiled by the social-studies department of said high school in January 1950.

It is such a significant, timely, and sincere publication that I am certain its contents will be of real value to you who are here in the United States Congress and all others who learn of it.

Every high school, academy, college—both public and private—could well emulate the example of Lynwood High School, California. No doubt the vision, vigor, vigilance, and good common sense of Principal Jones and his faculty associates helped to inspire and lead these high-school students to a constructive and valuable high in this manner. As knowledge is power, so the best and surest way to keep communism from spreading its poisonous points is to have American youth kept aware of their glorious heritage and their privileges and to point them into living a proud and vigorous and enduring democracy.

I am not here listing the several patriotic poems, songs, and sayings the student print shop also included, but such as America, America the Beautiful, God Bless America, There Are Many Flags, America for Me, This Day, My Creed, The Ship of State, America I Love You, O Captain! My Captain, Concord Hymn, Barbara Frietchie, by Whittier.

These are a typical list used.

The following text was printed in clear, sizable type, made attractive to read:

DEAR PARENT: Please accept this pamphlet, We Hold These Truths, a booklet which has been compiled by the social studies department of Lynwood High School under the chairmanship of Mrs. Ethel Gillette. It was printed in the school's print shop; the boys of the printing classes doing all of the work under the supervision of Mr. Wesley T. Dunn, our printing teacher.

We use this book for the promotion of the zeal for democracy program in our school. It is only a small part of the total program; nevertheless, we feel it is extremely important because in the documents reproduced in this book are embodied the fundamental principles upon which American democracy has been founded. Will you please keep it in your home where it will be readily available for use by your son or daughter.

Each student is given a copy of the booklet, and before he is permitted to graduate from this school he must commit to memory, as a minimum requirement, the following: The first and last stanzas of The Star-Spangled Banner, all of the American's Creed; the Preamble to the Constitution of the United States; the Gettysburg Address; that part of the Declaration of Independence which appears in italics; and the 32 high lights of American history which are included in the pamphlet.

We know that this does not constitute all that is necessary in the way of teaching the principles and ideals of American democracy; but we do feel that every American should be thoroughly acquainted with these principles as they are set forth in these documents.

Very truly yours,

WM. W. JONES,
Principal.

LYNWOOD HIGH SCHOOL,
January 1950.

DEAR FELLOW AMERICAN: By the grace of God and the fact that you were born in the United States of America, you have been endowed with the greatest heritage it has ever been the lot of man to enjoy.

No effort has been required of you to make this good fortune of yours a reality. As a result, there is danger that you may not value it highly enough, for the very reason that it has cost you nothing. Or there is the danger that you may feel it is yours just as a matter of course, because you were born an American and naturally everyone recognizes what fine persons Americans are and wants them to continue enjoying the privileges of living in the greatest country in the world. Either of these attitudes can result in disaster and a loss to the world of the highest political, social, and economic achievements that man has ever been able to attain.

You enjoy the benefits and responsibilities of American citizenship only because, down through the ages, there has resided in the heart of man a burning and driving desire to uplift himself, to do and be his best in the eyes of God and man. The history of his constant struggle against human and natural forces, to elevate his dignity and better his lot, is a thrilling story of which you as an appreciative and deserving heir can justly be proud.

The birth and development of the United States of America mark the highest achievement of this age-long struggle. Men and women who held an unfaltering faith in the constancy of a Divine Creator, the sacredness of human personality, and the dignity and worth of the common man, were willing to sacrifice their lives and fortunes that these ideals might become a reality in this Nation which they have given to you. It is yours to enjoy, but you cannot assume a complacent attitude and satisfaction in its possession.

From the time in 1607 when the first permanent settlers landed at Jamestown, to the end of the Second World War, our people have had to fight against foes that opposed them with physical force. The Indians, the wilderness of the frontier, and the French were the enemies to be overcome in the first epoch. Then the Revolution, the War of 1812, and the expansion westward engaged the physical strength of our forefathers in the establishment of our Nation. The winning of the Mexican War, the Civil War, and the extension of our boundaries to the Pacific coast demanded the extreme of physical exertion and sacrifice. Again, the Spanish American War, the First World War, and the Second World War called for the utmost in the mobilization of our industrial and physical strength to achieve victory. Each time, the victory has been ours because the moral, physical, and industrial strength of our people has been greater than that of our foes. The building and development of this strength is a glorious and proud story of a people who have ever been willing and equal to the demands of the establishment of an ideal and the founding of a great nation. In this short 343 years since Jamestown we have done more to improve the condition of man than was ever before achieved in all recorded history.

But now, the scene and times have changed. We have entered a new era in which the physical and industrial strength of our Nation are no longer a guarantee of the victory. We fervently pray for peace but the struggle and danger have not ended. The human and mind-poisoning forces of fascism and communism are threatening now as never before in our history to wrest from you this hard-won heritage. Although the development of the implements of total destruction, such as the atomic bomb, and the strengthening of our power to attack may ward off a physical conflict with the enemy, they are not sufficient in themselves. These enemies of ours have developed a weapon that seeps in and can undermine the greatest of military establishments because these defenses are founded on physical and material strength alone. They have developed as insidious weapons, the sinister forces of fear, hate, and doubt. These they plant in the hearts and minds of people to create confusion and the lack of will for opposition to their degrading doctrines. With these implements they have made great progress in extending their power in Europe and over a great part of Asia. They will not be satisfied until they have spread their rule over all the world. The extent of their power is so great that now we must fight for our very existence as a nation.

At present we have assurance that we could meet them and come out victors in the opposing of physical strength to physical strength, but this is not sufficient; for already they are at work with the weapons of fear, hate, and doubt, undermining all that we hold dear. We know what they plan and we know what they are doing. We also know that the only way to oppose and defeat them is to build in the hearts and minds of our people an understanding, patriotic, moral, and spiritual strength that will stand not only as an impregnable wall against their sinister assaults, but as well, a monument of strength declaring to all the world that liberty, equality, and justice can and will prevail.

This confict is not one of just a day or even years, but is a continuation of that age-long struggle to uplift mankind. You, in your lifetime, if you are to preserve the dignity and worth of your heritage, will have to devote your total efforts to warding off the catastrophe that would ensue should

fascism or communism succeed in achieving their goals. Such a catastrophe would erase the little progress that man has made toward uplifting himself, and civilization would be set back at least a thousand years. All that we hold dear in these United States would be lost, not even to be recorded as a part of history. But such a calamity cannot occur because you are worthy of the faith placed in you. You are an American, understanding, cherishing, and willing to defend the ideal upon which this Nation was founded. The ideal that the soul of man is more precious than the most fabulous accumulation of material wealth. That ideal is built into the structure of our Nation like girders of steel, and is set forth in those instruments of government which have served as blueprints for the plan we have followed to build this, the greatest Nation in the world.

Some of those instruments that are basic to the security of your rights, privileges, and responsibilities as freemen in a free Nation under God, are in part, reproduced in this booklet. Material wealth will pass away because it can be stored only in perishable and inanimate vaults, but the truths, ideals, and dynamic import of these instruments will last forever if they are stored in the immortal hearts and minds of men. Read these documents, learn them, and make them a part of your very being, that through you, "This Nation may continue as one deriving its just powers from the consent of the governed," and, "that government of the people, by the people, for the people shall not perish from the earth."

WM. W. JONES, *Principal.*

THE STAR-SPANGLED BANNER

(By Francis Scott Key)

(Our national anthem has a dignity of tone and measure that inspires respect and patriotic fervor in the hearts of all true Americans. Here we have printed only the first and last stanzas. This last stanza sets forth our motto and breathes a prayerful and thankful spirit that should more truly express the feelings of our people. We should sing it more often.—W. W. J.)

O say! can you see, by the dawn's early light,
What so proudly we hail'd at the twilight's last gleaming?
Whose broad stripes and bright stars, thro' the perilous fight,
O'er the ramparts we watch'd were so gallantly streaming?
And the rocket's red glare, the bombs bursting in air,
Gave proof thro' the night that our Flag was still there.
O say, does that Star-Spangled Banner yet wave
O'er the land of the free and the home of the brave?

O thus be it ever when free-men shall stand
Between their Lov'd homes and the war's desolation
Blest with vict'ry and peace, may the Heav'n rescued land
Praise the Pow'r that hath made and preserved us a nation!
Then conquer we must, when our cause it is just,
And this be our motto: "In God is our trust!"
And the Star-Spangled Banner in triumph shall wave
O'er the land of the free and the home of the brave.

THE AMERICAN'S CREED

(By William Tyler Page)

(The American's Creed is the composite of a number of outstanding statements by patriotic American statesmen. It embodies in its brief statement many of the beliefs and ideals which are basic to our form of government. You should learn it gladly.—W. W. J.)

I believe in the United States of America as a Government of the people, by the people, for the people; whose just powers are derived from the consent of the governed; a democracy in a republic; a sovereign Nation of many sovereign States; a perfect union, one and inseparable; established upon those principles of freedom, equality, justice, and humanity for which American patriots sacrificed their lives and fortunes.

I therefore believe it is my duty to my country to love it; to support its Constitution; to obey its laws; to respect its flag; and to defend it against all enemies.

PREAMBLE TO THE CONSTITUTION OF THE UNITED STATES OF AMERICA

(The preamble is probably the most important part of our Constitution in that it definitely sets forth the fact that ours is a Government of the people, since they are the ones who established it. You should know the preamble so well that you could recite it under any circumstances.—W. W. J.)

We the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.

GETTYSBURG ADDRESS

(Lincoln's Gettysburg Address is the most eloquent statement of American ideals and principles in American literature. Learning his words should give you a deep patriotic satisfaction because those words are still the hope of America.—E. J. M.)

Four score and seven years ago our fathers brought forth upon this continent a new Nation, conceived in liberty and dedicated to the proposition that all men are created equal. Now we are engaged in a great civil war, testing whether that Nation, or any nation, so conceived and so dedicated, can long endure. We are met on a great battlefield of that war. We have come to dedicate a portion of that field as a final resting-place for those who here gave their lives that that Nation might live. It is altogether fitting and proper that we should do this.

But in a larger sense we cannot dedicate, we cannot consecrate, we cannot hallow, this ground. The brave men, living and dead, who struggled here, have consecrated it far above our poor power to add or to detract. The world will little note nor long remember what we say here, but it can never forget what they did here. It is for us, the living rather, to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion—that we here highly resolve that these dead shall not have died in vain, that this Nation, under God, shall have a new birth of freedom, and that government of the people, by the people, for the people shall not perish from the earth.—ABRAHAM LINCOLN.

PREAMBLE TO THE CHARTER OF THE UNITED NATIONS

We the peoples of the United Nations determined to save succeeding generations from the scourge of war, which twice in our lifetime has brought untold sorrow to mankind, and to reaffirm faith in fundamental human rights, in the dignity and worth of human persons, in the equal rights of men and women and of nations large and small, and to establish conditions under which justice and respect for the obligations arising from treaties and other sources of international law can be maintained, and to promote social progress and better standards of life in larger freedom, and for these ends to practice tolerance and live together in peace with one another as good neighbors, and to unite our strength to maintain international peace and security, and to ensure, by the acceptance of principles and the institution of methods, that armed force shall not be used, save in the common interest, and to employ international machinery for the promotion of the economic and social advancement of all peoples, have resolved to combine our efforts to accomplish these aims.

Accordingly, our respective Governments, through representatives assembled in the city of San Francisco, who have exhibited their full powers found to be in good and due form, have agreed to the present Charter of the United Nations and do hereby establish an international organization to be known as the United Nations.

DECLARATION OF INDEPENDENCE

(A declaration by the Representatives of the United States of America, in Congress assembled July 4, 1776)

When, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume, among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to separation.

We hold these truths to be self-evident: That all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness. That, to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute a new government, laying its foundation on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and accordingly all experience hath shown that

mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government, and to provide new guards for their future security. Such has been the patient sufferance of these Colonies; and such is now the necessity which constrains them to alter their former systems of government. The history of the present King of Great Britain is a history of repeated injuries and usurpations, all having in direct object the establishment of an absolute tyranny over these states. To prove this, let facts be submitted to a candid world.

He has refused his assent to laws the most wholesome and necessary for the public good.

He has forbidden his governors to pass laws of immediate and pressing importance, unless suspended in their operation till his assent should be obtained; and, when so suspended, he has utterly neglected to attend to them.

He has refused to pass other laws for the accommodation of large districts of people, unless those people would relinquish the right of representation in the legislature—a right inestimable to them, and formidable to tyrants only.

He has called together legislative bodies at places unsual, uncomfortable, and distant from the depository of their public records, for the sole purpose of fatiguing them into compliance with his measure.

He has dissolved representative houses repeatedly, for opposing, with manly firmness, his invasions on the rights of the people.

He has refused for a long time after such dissolutions, to cause others to be elected, whereby the legislative powers, incapable of annihilation, have returned to the people at large for their exercise; the state remaining, in the meantime, exposed to all the dangers of invasions from without and convulsions within.

He has endeavored to prevent the population of these states; for that purpose obstructing the laws for the naturalization of foreigners, refusing to pass others to encourage their migration hither, and raising the conditions of new appropriations of lands.

He has obstructed the administration of justice, by refusing his assent to laws for establishing judiciary powers.

He has made judges dependent on his will alone for the tenure of their offices, and the amount and payment of their salaries.

He has erected a multitude of new offices and sent hither swarms of officers to harass our people and eat out their substance.

He has kept among us in times of peace, standing armies, without the consent of our legislatures.

He has affected to render the military independent of, and superior to, the civil power.

He has combined with others to subject us to a jurisdiction foreign to our Constitution and unacknowledged by our laws, giving his assent to their acts of pretended legislation:

For quartering large bodies of armed troops among us.

For protecting them, by a mock trial, from punishment for any murders which they should commit on the inhabitants of these states.

For cutting off our trade with all parts of the world.

For imposing taxes on us without our consent.

For depriving us, in many cases, of the benefits of trial by jury.

For transporting us beyond seas, to be tried for pretended offenses.

For abolishing the free system of English laws in a neighboring province, establishing therein an arbitrary government, and enlarging its boundaries, so as to render it at once an example and fit instrument for introducing the same absolute rule into these colonies.

For taking away our charters, abolishing our most valuable laws, and altering, fundamentally, the forms of our governments.

For suspending our own legislatures, and declaring themselves invested with power to legislate for us in all cases whatsoever.

He has abdicated government here, by declaring us out of his protection and waging war against us.

He has plundered our seas, ravaged our coasts, burned our towns, and destroyed the lives of our people.

He is at this time transporting large armies of foreign mercenaries to complete the works of death, desolation, and tyranny already begun with circumstances of cruelty and perfidy scarcely paralleled in the most barbarous ages, and totally unworthy the head of a civilized nation.

He has constrained our fellow citizens, taken captive on the high seas, to bear arms against their country, to become the executioners of their friends and brethren, or to fall themselves by their hands.

He has excited domestic insurrections among us, and has endeavored to bring on the inhabitants of our frontiers the merciless Indian savages, whose known rule of warfare is an undistinguished destruction of all ages, sexes, and conditions.

In every stage of these oppressions we have petitioned for redress in the most humble terms; our repeated petitions have been answered only by repeated injury. A prince whose character is thus marked by every act which may define a tryant is unfit to be the ruler of a free people.

Nor have we been wanting in our attentions to our British brethren. We have warned them, from time to time, of attempts by their legislature to extend an unwarrantable jurisdiction over us. We have reminded them of the circumstances of our emigration and settlement here. We have appealed to their native justice and magnanimity; and we have conjured them by the ties of common kindred, to disavow these usurpations, which would inevitably interrupt our connections and correspondence. They, too, have been deaf to the voice of justice and consanguinity. We must, therefore, acquiesce in the necessity which denounces our separation, and hold them, as we hold the rest of mankind, enemies in war, in peace, friends.

We therefore, the representatives of the United States of America, in general Congress assembled, appealing to the supreme judge of the world for the rectitude of our intentions, do, in the name and by the authority of the good people of these Colonies, solemnly publish and declare, that these united colonies are, and of right ought to be, free and independent states; that they are absolved from all allegience to the British Crown, and that all political connection between them and the state of Great Britain is, and ought to be, totally dissolved; and that, as free and independent states, they have full power to levy war, conclude peace, contract alliances, establish commerce, and do all other acts and things which independent states may of right do. And, for the support of this declaration, with a firm reliance on the protection of divine providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor.

HIGH LIGHTS OF AMERICAN HISTORY

1. 1492: Columbus discovered America.
2. 1542: Cabrillo discovered California.
3. 1607: Jamestown, first permanent English settlement.
4. 1619: Negro slavery begun in America.
5. 1620: Plymouth colony established.
6. 1763: End of French and Indian War; French possessions taken by England.
7. 1775–83: Revolutionary War for independence.
8. 1776: July 4, Declaration of Independence signed.
9. 1781: Capture of Cornwallis at Yorktown.
10. 1787: Constitution framed at Philadelphia.
11. 1789: George Washington inaugurated first President.
12. 1803: "Louisiana Purchase" from France.
13. 1812–15: War of 1812 with England.
14. 1823: Monroe Doctrine.
15. 1830: Beginning of railroads.
16. 1844: Morse's telegraph.
17. 1845: Annexation of Texas to the Union.
18. 1846: Oregon boundary dispute with England settled.
19. 1846–48: Mexican War; California and New Mexico ceded to United States.
20. 1848: Gold discovered in California.
21. 1850: September 9, California entered Union (admission day).
22. 1861–65: Civil War over slavery and secession.
23. 1863: Emancipation Proclamation.
24. 1867: Purchase of Alaska from Russia.
25. 1869: First transcontinental railroad.
26. 1876: Bell's telephone.
27. 1898: Spanish-American War; United States took Philippines.
28. 1901: Marconi's first wireless signal across Atlantic.
29. 1903: Wright brothers' airplane flight.
30. 1914–18: World War I.
31. 1941: December 7, Pearl Harbor.
32. 1945: End of hostilities—World War II.

A SUMMARY OF THE BILL OF RIGHTS AND SUBSEQUENT AMENDMENTS

Article 1: Freedom of speech, religion, the press, and assembly.

Article 2: The right to keep and bear arms.

Article 3: No soldier to be quartered without consent.

Article 4: Regulation of search and seizure.

Article 5: Prosecution, trial, and punishment for crime. Compensation for private property taken for public use.

Article 6: Right to speedy trial, witnesses, etc., in criminal prosecutions.

Article 7: Right of trial by jury in suits at common law.

Article 8: Prohibiting excessive bail, fines or cruel punishments.

Article 9: Retention of rights not enumerated in the Constitution.

Article 10: Rights reserved to the States or the people.

Subsequent amendments

Article 11, 1795: Judicial powers explained.

Article 12, 1804: Method of choosing the President and Vice President revised.

Article 13, 1865: Slavery prohibited.

Article 14, 1868: Rights of citizenship are not to be deprived any person.

Article 15, 1870: Colored and white citizens have equal rights.

Article 16, 1913: Congress shall have the power to levy income taxes.

Article 17, 1913: Senators of the United States are to be elected by direct popular vote.

Article 18, 1920: Prohibition of the sale, manufacture, and transportation of liquors.

Article 19, 1920: The right to vote shall not be denied because of sex.

Article 20, 1933: The terms of President and Vice President are to begin on January 20, Senators and Representatives on January 3.

Article 21, 1933: The Eighteenth Amendment to the Constitution is repealed.

I AM THE UNITED STATES

(Benjamin DeCasseres makes the United States talk—giving a record of historical events that have made our country great.—J. M.)

For 150 years all the peoples of the earth have held me as a hope in their eyes.

Every revolution in the last 150 years that had for its aim more freedom has modeled its laws on my Constitution.

From the four corners of the earth people of all colors, religions, and races have set sail to make their home under the folds of Old Glory.

In 150 years I have raised the level of wages and living to the highest point ever attained in all historic time.

I have given more persons opportunities to raise themselves, under my individualistic-capitalistic-free-enterprise system, from menial to commanding positions than any other nation in the world, past or present.

I have guaranteed to each and all, native and foreign, free speech, a free pen, freedom of religion, and trial by jury.

I have abolished slavery and succored the victims of flood, famine, and earthquake everywhere on earth.

I have given the world the greatest symbol for all time of revolt against oppression—George Washington.

I have given the world the greatest expounder of individualistic democracy and personal freedom in the history of mankind—Thomas Jefferson.

I have given the world the greatest symbol of a liberator of an enslaved people and the most humane ruler in time of civil war that history records—Abraham Lincoln.

I have made the words "liberty" and "America" synonymous.

I have given the world in a Congress, a Supreme Court, and an Executive the best-balanced governmental set-up in history.

No call from an oppressed people has ever gone unanswered by me.

When I have made mistakes—and I have made some great ones—I have admitted them finally and tried to rectify whatever injustice may have flowed from them.

My mighty rivers, towering mountains, my prairies, my forests, and my oceans have been open to travel for all my people without police permits or a spy system.

I was born in Philadelphia on July 4, 1776.

I gave the world its model Constitution on September 17, 1787.

I froze, shoeless, in the snow at Valley Forge.

I hung on by a hair for my life at Gettysburg.

I freed Europe and myself from the deadly menace of Prussian militarism in 1917–18.

Today I lift myself to my full proud height and proclaim that I who froze at Valley Forge and battled for my life at Gettysburg shall lay in the dust those enemies who again seek to enslave me. For I am democracy in action. I am the United States.

I AM AN AMERICAN

Are you? Then you should be proud to make this statement yours. It expresses the American's humble gratitude for his priceless heritage, and acknowledges his duties and responsibilities.—J.M.

I am an American.
The Golden Rule is my rule.
In humility and with gratitude to Almighty God,
I acknowledge my undying debt
To the founding fathers
Who left me a priceless heritage
Which now is my responsibility.
With steadfast loyalty
I will uphold the Constitution
And the Bill of Rights.
I will treasure my birthright
Of American ideals.
I will place moral integrity
Above worldly possessions.
Problems of interest to my country
Shall be of interest to me.
I will count my right of suffrage
To be a sacred trust,
And I will diligently strive
To prove worthy of that trust.
I will give my full support
To upright public servants.
But those with unclean hands,
I will firmly oppose.
Each obligation that comes to me
As a true American,
I will discharge with honor.
My heart is in America
And America is in my heart.
I am an American.

—*Benjamin E. Neal.*

THE FREEDOM PLEDGE

(The Freedom Train, speeding through the land with the most treasured documents of our American heritage, inspired this pledge. In a few words it states the beliefs and desires of all true American patriots. It should be your pledge too.—J. M.)

I am an American. A free American.
Free to speak—without fear;
Free to worship God in my own way;
Free to stand for what I think right;
Free to oppose what I believe wrong;
Free to choose those who govern my country.
This heritage of freedom I pledge to uphold
For myself and all mankind.

FULL TEXT OF BILL OF RIGHTS

Amendment 1: Congress shall make no law respecting an establishment of religion, or prohibiting the free exercises thereof; or abridging the freedom of speech, or of the press; or the right of the people to assemble, and to petition the Government for a redress of grievances.

Amendment 2: A well-regulated militia, being necessary to the security of a free state, the right of the people to keep and bear arms, shall not be infringed.

Amendment 3: No soldier shall, in time of peace be quartered in any house, without the consent of the owner, nor in time of war, but in a manner to be prescribed by law.

Amendment 4: The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue, but upon probable cause, supported by oath of affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

Amendment 5: No person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia, when in actual service in time of war or public danger; nor shall any person be subject in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use, without just compensation.

Amendment 6: In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature of the accusation; to be confronted with the witness against him; to have compulsory process for obtaining witnesses in his favor, and to have the assistance of counsel for his defense.

Amendment 7: In suits at common law, where the value in controversy shall exceed $20, the right of trial by jury shall be preserved, and no fact tried by jury, shall be otherwise reexamined in any court of the United States, than according to the rules of the common law.

Amendment 8: Excessive bail shall not be required nor excessive fines imposed, nor cruel and unusual punishments inflicted.

Amendment 9: The enumeration in the Constitution of certain rights, shall not be construed to deny or disparage others retained by the people.

Amendment 10: The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

WHAT THE FLAG MEANS

(By Robert Quillen)

The newspapers report that a New England boy of good American stock has refused to pledge allegience to the flag.

Well, son, the notoriety and conflict and martyrdom may be exciting fun, but you don't realize what you are doing. Evidently nobody has taken the trouble to make you understand just what the flag means.

It isn't a mere strip of cloth with a cluster of stars in one corner.

It stands for America—not a certain area of the earth's surface, not even the millions who inhabit it, but the spirit of America—the ideals and standards and institutions that are typical of America.

It stands for freedom, for the right of every decent individual to do as he pleases without fear of lurking spies or brutal police.

It stands for the right to say what you please, within the bounds of decent taste, without dread of a heartless and tyrannical government.

It stands for the pledge that you will not be killed or tortured in prison or beaten or shamed on the street or deprived of all human rights if you happen to belong to a minority.

It stands for the assurance that no man can have you whipped or scorn you or deny you a chance to get ahead merely because his parents were rich and yours poor.

It stands for the promise that police shall not break into your house or keep you in prison without fair and public process of law.

It stands for the pledge that your mother and sister and sweetheart will be treated as human beings worthy of respect and not as chattels or work animals.

It stands for the assurance that every boy will have a fair chance to earn all he is worth; for the right to get a free enducation; for a land where the poor hold their heads high; for a land free of swarming, sullen, sore-covered, vermin-ridden professional beggers; for comfort and abundance and safety; for fair play and sympathy for the underdog and hatred for all corruption.

All these pledges and rights have been threatened many times and denied at intervals, because of the folly and greed and dishonor of individuals, but it isn't the fault of the flag. The flag still stands for these good and decent things coveted by all mankind.

And if you can't pledge allegiance to such a symbol and fight for it to the last breath, you have very little understanding or a very bad heart.

AMERICANISM

(Extension of remarks of Hon. Sol Bloom of New York in the House of Representatives, Thursday, January 11, 1940)

Article by the Right Reverend James E. Freeman, D. D., LL. D.

Americanism is complete and unqualified loyalty to the ideals of Government set forth in the Bill of Rights, the Declaration of Independence, and the Constitution of the United States. It is respect for and ready obedience to duly constituted authority and the laws of the land. It is freedom without license, religion without bigotry, respect for all nations without entangling alliances, Christian charity without bias or race hatred, love of flag and readiness to defend that for which it stands against every alien and subversive influence from without or within. This I believe, is Americanism.

(Extension of remarks of Hon. John G. Alexander, of Minnesota, in the House of Representatives, Wednesday, Jan. 3, 1940)

Article by K. L. Brown

Americanism is an abiding faith in the correctness and justice of the principles contained in the Declaration of Independence, the Constitution of the United States, and the Bill of Rights.

Americanism is a way of life, based on this abiding faith. It is a willingness to live in peace and harmony with our fellow men, regardless of political or religious faith.

Americanism is a willingness to apply the principles of free speech, free press, and freedom to worship God to our fellow men, even when their ideas and speech and methods of worship are opposed to our own.

Americanism is a willingness to live for the principles of America in peacetimes, as well as a willingness to die for American principles in war times.

Americanism brings to each American liberty under law, and a regard for law which means liberty and happiness for each of us.

THE CODE OF THE GOOD AMERICAN

(The Code of the Good American, prepared by William J. Hutchins, was awarded first place and a prize of $5,000 in a national competition conducted in 1916 by the Character Education Institution of Washington, D. C.)

Citizens who are good Americans try to become strong and useful, worthy of their nation, that our country may become ever greater and better. Therefore they obey the laws of right living which the best Americans have always obeyed.

1. The law of self-control

The good American controls himself. Those who best control themselves can best serve their country.

I will control my tongue, and will not allow it to speak mean, vulgar, or profane words. I will think before I speak. I will tell the truth and nothing but the truth.

I will control my temper, and will not get angry when people or things displease me. Even when indignant against wrong and contradicting falsehood, I will keep my self-control.

I will control my thoughts and will not allow a foolish wish to spoil a wise purpose.

I will control my actions. I will be careful and thrifty, and insist on doing right.

I will not ridicule nor defile the character of another. I will keep my self-respect and help others to keep theirs.

2. The law of good health

The good American tries to gain and keep good health. The welfare of our country depends upon those who are physically fit for their daily work. Therefore—

I will try to take such food, sleep, and exercise as will keep me always in good health.

I will keep my clothes, my body, and my mind clean.

I will avoid those habits which would harm me, and will make and never break those habits which will help me.

I will protect the health of others, and guard their safety as well as my own.

I will grow strong and skillful.

3. The law of kindness

The good American is kind. In America those who are different must live in the same communities. We are of many different sorts, but we are one great people. Every unkindness hurts the common life; every kindness helps. Therefore:

I will be kind in all my thoughts. I will bear no spites or grudges. I will never despise anybody.

I will be kind in all my speech. I will never gossip nor will I speak unkindly of anyone. Words may wound or heal.

I will be kind in my acts. I will not selfishly insist on having my own way. I will be polite: rude people are not good Americans. I will not make unnecessary trouble for those who work for me, nor forget to be grateful. I will be careful of other people's things. I will do my best to prevent cruelty, and will give help to those in need.

4. The law of sportsmanship

The good American plays fair. Clean play increases and trains one's strength and courage, and helps one to be more useful to one's country. Sportsmanship helps one to be a gentleman, a lady. Therefore:

I will not cheat, nor will I play for keeps or for money. If I should not play fair, the loser would lose the fun of the game, the winner would lose his self-respect, and the game itself would become a mean and often cruel business.

I will treat my opponents with courtesy, and trust them if they deserve it. I will be friendly.

If I play in a group game, I will not play for my own glory, but for the success of my team and the fun of the game.

I will be a good loser or a generous winner.

And in my work as well as in my play, I will be sportsmanlike—generous, fair, honorable.

5. The law of self-reliance

The good American is self-reliant: Self-conceit is silly, but self-reliance is necessary to citizens who would be strong and useful.

I will gladly listen to the advice of older and wiser people; I will reverence the wishes of those who love and care for me and who know life and me better than I. I will develop independence and wisdom to think for myself, according to what seems right and fair and wise.

I will not be afraid of being laughed at when I am right.

When in danger, trouble, or pain I will be brave. A coward does not make a good American.

6. The law of duty

The good American does his duty: The shirker and the willing idler live upon others and burden fellow citizens with work unfairly. They do not do their share, for their country's good.

I will try to find out what my duty is as a good American, and my duty I will do, whether it is easy or hard. What it is my duty to do I can do.

7. The law of reliability

The good American is reliable: Our country grows great and good as her citizens are able more fully to trust each other. Therefore:

I will be honest, in word and in act. I will not lie, sneak, or pretend.

I will not do wrong in the hope of not being found out. I cannot hide the truth from myself and cannot often hide it from others. Nor will I injure the property of others.

I will not take without permission what does not belong to me. A thief is a menace to me and others.

I will do promptly what I have promised to do. If I have made a foolish promise I will at once confess my mistake, and I will try to make good any harm which my mistake may have caused. I will so speak and act that people will find it easier to trust each other.

8. The law of truth

The good American is true. I will be slow to believe suspicions lest I do injustice; I will avoid hasty opinions lest I be mistaken as to facts.

I will stand by the truth regardless of my likes and dislikes, and scorn the temptation to lie for myself or friends; nor will I keep the truth from those who have a right to it.

I will hunt for proof, and be accurate as to what I see and hear; I will learn to think, that I may discover new truth.

9. The law of good workmanship

The good American tries to do the right thing in the right way. The welfare of our country depends upon those who have learned to do in the right way the work that makes civilization possible. Therefore:

I will get the best possible education, and learn all that I can as a preparation for the time when I am grown up and at my life work. I will invent and make things better if I can.

I will take real interest in work, and will not be satisfied to do slipshod, lazy, and merely passable work. I will form the habit of good work and keep alert; mistakes and blunders cause hardships, sometimes disaster, and spoil success.

I will make the right thing in the right way to give it value and beauty, even when no one else sees or praises me. But when I have done my best, I will not envy those who have done better, or have received larger reward. Envy spoils the work and the worker.

10. The law of teamwork

The good American works in friendly cooperation with fellow workers. One alone could not build a city or a great railroad. One alone would find it hard to build a bridge. That I may have bread, people have made plows and threshers, have built mills and mined coal, made stoves and kept stores. As we learn better how to work together, the welfare of our country is advanced.

In whatever work I do with others, I will do my part and encourage others to do their part, promptly, quickly.

I will help to keep in order the things which we use in our work. When things are out of place, they are often in the way, and sometimes they are hard to find.

In all my work with others, I will be cheerful. Cheerlessness depresses all other workers and injures all the work.

When I have received money for my work, I will be neither a miser nor a spendthrift. I will save or spend as one of the friendly workers of America.

11. The law of loyalty

The good American is loyal. If our America is to become even greater and better, her citizens must be loyal, devotedly faithful, in every relation of life; full of courage and regardful of their honor.

I will be loyal to my family. In loyalty I will gladly obey my parents or those who are in their place, and show them gratitude. I will do my best to help each member of my family to strength and usefulness.

I will be loyal to my school. In loyalty I will obey and help other pupils to obey those rules which further the good of all.

I will be loyal to my town, my State, my country. In loyalty I will respect and help others to respect their laws and their courts of justice.

I will be loyal to humanity and civilization. In loyalty I will do my best to help the friendly relations of our country with every other country, and to give to everyone in every land the best possible chance. I will seek truth and wisdom; I will work and achieve if I can, some good for the civilization into which I have been born.

If I try simply to be loyal to my family, I may be disloyal to my school. If I try simply to be loyal to my school, I may be disloyal to my town, my State, and my country. If I try simply to be loyal to my town, State, and country, I may be disloyal to humanity. I will try above all things else to be loyal to humanity; then I shall surely be loyal to my country, my State, and my town, to my school and to my family. And this loyalty to humanity will keep me faithful to civilization.

He who obeys the law of loyalty obeys all of the other 10 laws of the good American.

THE AMERICAN BILL OF RESPONSIBILITIES

(A good citizen should know what his rights and privileges are, but even more important, a good citizen should know what his duties and responsibilities are. You will find listed below some of the rights and privileges that are guaranteed to you by the Federal Constitution, and also, a listing of your duties and responsibilities. In a democracy each citizen must accept responsibility and do his duty in order to keep and preserve the rights and privileges he enjoys.—E. J. M.)

Free speech: You must be willing to allow others to speak, even though you disagree. You must not use this right to injure others. It is wrong to use this right to advocate the change of your Government by the use of force.

Freedom of the press: You should read widely and wisely. You should not write or have printed things that are untrue or that would injure others. You should insist that others print the truth.

Freedom of worship: You should respect the religious beliefs of others. You should support and become a worker in some church.

The right to petition the Government: You should write to your elected officers. You should help to correct wrongs done to others. You should join organizations that work democratically to preserve and improve our democracy.

The right to assemble peaceably: You should plan, organize, and take part in meetings which advance the cause of democracy and our way of life.

The right to be protected from loss of life, liberty, or property: Help to protect the property of others and public property. Guard your actions so that they might not endanger the life or property of others. Help others to avoid having their legal rights infringed upon.

Right to a fair trial: Serve on juries when called, appear as witness when you have information that is helpful to enforcement of the laws. Respect law-enforcement officers. Obey the law. Help officers catch lawbreakers.

Right to be safe from unreasonable search and seizure: Respect the privacy of others in their homes, mail, telephone calls, and conversations. Do all you can to see that others do not violate this right of your fellow citizens.

Right to go where you wish and do work of your choice: Do not try to limit the movement of others. Do the kind of work you can do best. Do your best in your work.

Right to make contracts and agreements and have them enforced: Read all agreements carefully. Carry out all contracts you make. Be sure both parties have the same understanding of the contract. Do not enter any contract except in good faith.

Federal constitutional rights: Make every effort to prevent local officials or groups from denying lawful rights to citizens or groups of citizens within your community.

Right to vote for local, State, and Federal officials: Vote whenever an election is held. Keep yourself informed about candidates and issues. Encourage others to vote.

The rights to be a candidate for public office: Be willing to accept nomination for public office if your ability can help your community, State, or Nation.

Right to bear arms: Use weapons safely and only for legal purposes. Obey laws regarding firearms; use firearms only to protect your home, pursuing criminals, or hunting.

Right to make profit on your own invention or ideas: Make every effort to see that the profits from inventions, writings, and works of art go to the person who creates them.

Right to bankruptcy procedures: Make every effort to encourage those who fail to make a new start.

Rights of impeachment and recall of officials: Demand proof of dishonesty of public officials. Respect those you elect to public office. Report any dishonesty you know about.

Rights to be protected when in foreign nations: Remember that when you are in a foreign nation you represent the United States, and conduct yourself accordingly. Be willing to serve your Nation in time of war.

Statehood Now for Alaska and Hawaii

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Martins Ferry (Ohio) Times Leader for Tuesday, May 2, 1950. My stand on statehood for Alaska and Hawaii is well known, and I am happy to place in the RECORD this editorial from one of the outstanding newspapers in my district:

STATEHOOD NOW FOR ALASKA AND HAWAII

This session of Congress should grant statehood to Alaska and Hawaii.

The people of these two Territories are eager and able to assume the rights and responsibilities of self-government.

The arguments for admitting them to full partnership in the Union seem to us overwhelmingly strong.

President Truman is for giving them statehood.

The Democratic and Republican national platforms promise them statehood.

The National Conference of Governors and the Governors' Conference of the 11 Western States have adopted unanimous resolutions endorsing their pleas for statehood.

And large majorities in one branch of Congress—the House of Representatives—have passed bills to give them statehood.

All this would seem to indicate that they have an excellent prospect of getting statehood this year.

But that is not the case. Serious obstacles lie ahead.

The bills are before the Senate Committee on Interior and Insular Affairs and the climate there is, to say the most, only mildly favorable.

The Alaska statehood bill, on which the committee is now holding hearings, is in trouble.

Only a handful of Senators have shown up at the hearings so far, all favoring statehood for Alaska, in principle, but some of them appearing to favor it for the future, not just now.

Objections have been raised that the terms of the bill aren't generous enough in grants of land to the proposed new government of Alaska.

But Territorial Governor Gruening and the Territory's voteless Delegate to Congress, E. R. BARTLETT, are happy with the bill as it stands.

They say it gives Alaska the same treatment given New Mexico and Arizona, the last two States admitted. They believe opponents are trying to kill the bill with kindness—to make it so liberal that it would never pass.

BARTLETT charges the salmon-packing industry with spearheading opposition because it fears operation of a State government might mean higher taxes.

But Alaska needs statehood so that its people can supervise development of their own rich resources, increase population and wealth, gain ability to support the kind of government they want.

The Senate committee starts hearings on the Hawaii bill next week, and it, too, will encounter difficulties.

The Truman administration is pressing for early, favorable action on both bills. It should press harder, and the American people should support its efforts.

Get statehood for Alaska and Hawaii out of committee and up for a vote in the Senate before these bills are lost in an adjournment log jam.

Outstanding Civic Leaders of Chicago Urge Extension of Rent Control

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. O'HARA of Illinois. Mr. Speaker, the board of governors of the Metropolitan Housing and Planning Council of Chicago is composed of outstanding civic leaders representing all groups in our city. Perhaps no one is closer to the housing situation in Chicago, and can speak on the matter of the necessity for extending rent control with more authority, than the members of this board.

That my colleagues may have the benefit of the conclusion reached by the civic leaders of Chicago who are so close to the situation and have made such an intensive first-hand study of all the problems relating to housing, I am extending my remarks to include the following resolution passed on May 3, 1950, by the board of governors of the Metropolitan Housing and Planning Council of Chicago:

"Whereas the removal of rent controls would create devastating hardships, primarily to families of low and lower-middle income; and

"Whereas experience has revealed that the removal of controls results in a drastic rise in rents (as was apparent in the removal of controls on hotels), which inevitably generates an accelerated inflationary spiral; and

"Whereas there is machinery for local decontrol and local petitions where arranged: Therefore be it

"*Resolved*, That the Metropolitan Housing and Planning Council of Chicago urges that the Congress of the United States extend the present Federal Rent Control Act for 1 year from June 1, 1950."

Passed by the board of governors May 3, 1950.

The members of the board of governors, which passed the above resolution, are Saul Alinsky; Arthur Bohnen; Aldis J. Browne, Jr.; Earl B. Dickerson; George H. Dovenmuehle; Harvey G. Ellerd; Marshall Field, Jr.; John R. Fugard; Ernest A. Grunsfeld, Jr.; Henry T. Heald; Frank A. Hecht; Porter M. Jarvis; Elmer C. Jensen; Joseph D. Keenan; Philip M. Kultznick; Glen Lloyd; Mrs. Arthur Lowestein; Michael Mann; Mrs. Walker G. McLaury; George A. Morgan; Mrs. Bradford L. Patton; Mrs. Maurice A. Pollak; Wilfred S. Reynolds; Leonard M. Rieser; Walter V. Schaefer; Alfred Shaw; Hermon D. Smith; Sydney Stein, Jr.; Lea D. Taylor; John L. Van Zandt; Albert J. Weisberg; Louis Wirth; George Young, and the officers.

The officers of the council, included in the membership of the board, are Ford Kramer, president; Howard E. Green, vice president; Byron C. Sharpe, vice president; Edward McC. Blair, vice president; Mrs. Sewall Wright, secretary; Walter L. Cohrs, treasurer.

Mrs. Frederick H. Rubel is the director of the council.

Do Not Be Fooled by Propaganda

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. BIEMILLER. Mr. Speaker, with permission to extend my remarks in the RECORD, I attach the following article, Do Not Be Fooled by Propaganda, by Joseph D. Keenan, director of Labor's League for Political Education, which appears in the May issue of the American Federationist. It is a clear, concise analysis of the kind of nonsense being directed at American workers by those who pretend to protect them.

The article is as follows:

"The rights and interests of the laboring man will be protected and cared for * * * not by the labor agitators but by the Christian men to whom, in His infinite wisdom, God has given control of the property interests of the country and upon management of which so much depends."

With those words George F. Baer, president of the Philadelphia and Reading Coal and Iron Co., answered the plea of a miner's son during the terrible coal strike of 1902. The miner's son, William F. Clark, died in Wilkes-Barre, Pa., just a few weeks ago. But the answer he got from the arrogant coal company president shocked the Nation in 1902 and will long live on in the memories of trade-union men.

Do you think things have changed since 1902? If you do, you are partly right. Today unions are stronger and collective bargaining is accepted by the public. Today it is not good public relations for a boss to say he has the divine right and wisdom to rule the lives of his employees as he sees fit and the public be damned. But because industry heads today can't come right out and say they want to abolish unions, it doesn't mean they would not like to do so.

Today they use subtler means. They say the day of despotic capitalism is over. They say the situation is reversed. They aver that it is the labor bosses who are dictating to big business and to the unfortunate workingmen who have been forced into labor monopolies.

CROCODILE TEARS

The antiunion industrialists of 1950 weep crocodile tears for these poor working people who have fallen under the heartless rule of the agitators and labor bosses.

What were the arguments passed out by the proponents of the Taft-Hartley Act? Did they assert that it was an act to destroy unions and outlaw collective bargaining? Of course not. According to them, it was an act to "liberate" the workers. It was an act to give poor, oppressed industry heads equal bargaining power and protection against "big labor."

Former Congressman Fred Hartley has written a book, Our New National Labor Policy. In that book he has sought to justify passage of the Taft-Hartley Act. Says he:

"The positions of labor and management were reversed. * * * Labor was in the saddle and riding hard. * * * Top labor leaders were equal in power to the elected heads of our Government. Their power had long ago surpassed that of the largest corporation in the Nation."

Hartley further states:

"The plight of the laboring man was a real one. The rank-and-file worker meant no more to the leaders of organized labor than the rabble to Louis XVI."

Hartley praises Dixiecrat GRAHAM BARDEN, of North Carolina, as a man who "had nothing but contempt for the labor racketeer and the professional union agitator." Throughout the book Hartley consistently uses the term "labor boss" to describe elected union officers.

When they enacted the Taft-Hartley law over a Presidential veto, the labor haters evidently believed their own words. They made union shop elections compulsory. The labor-haters were sure that American working people would flock to the polls and vote against their unions. What happened is history now. By overwhelming majorities, 98 percent of the elections favored the union shop. Is there any other institution in America that could have won a greater vote of confidence?

SALARY COMPARISONS

Compare the salaries of so-called union bosses with those of industry bosses. Even top union salaries are low by comparison. The two top officials of the A. F. of L. and CIO, William Green and Philip Murray, draw salaries of only $25,000 each. By contrast, A. B. Homer, president of the Bethlehem Steel Corp., got a total salary and bonus income of $263,280 in 1948. When Homer retires at 65, he will receive a pension of $110,460 a year, toward which he contributes not one cent. Benjamin Fairless, president of United States Steel, drew $207,900 in 1948. Tom Girdler, chairman of Republic Steel, drew $275,000 in 1948 and the president and five vice presidents of Republic each drew more than $70,000.

All the income of all the unions in the country didn't equal the net profits realized last year by just one automobile corporation, General Motors.

Even more ridiculous is the charge of the propagandists for big business that union members don't democratically select their officers and have no control over them. Here the contrast with industry is also startling.

Ask yourself, Can you name one institution that is more democratic than your union? Or how about the firm for which you work? Who selects the board of directors? Who selects the top executives? Do the stockholders control the firm they own? Or is it controlled by a few insiders who own little of the stock?

Take, for example, the country's biggest corporation, American Telephone and Telegraph Co., commonly known as the Bell system. Walter S. Gifford just recently retired as head of A. T. and T. He received an annual salary of $209,000 and now gets a pension of $95,000 a year.

INSIDE CONTROLS

This company is running advertisements that 900,000 stockholders own A. T. & T. But as any A. T. & T. stockholder knows, the divorce of ownership and control of the company was accomplished years ago. Mr. Gifford and other inside top officials and directors own only 1 of each 2,300 shares that provided the company's capital. This is just four-hundredths of 1 percent of all the stock. Yet these insiders control this huge company just as surely as if they owned all the stock.

A similar situation exists in most corporations today.

Read the average corporation financial statement sent to stockholders. It is a masterpiece of vague confusion. Compare it to the detailed financial reports available to all union members and checked by their elected trustees. Remember there are far more banking and business officials than union officials in prison for embezzling money.

Are all trade-union officers plaster saints? No. Sometime unqualified people are elected to office. But at least union members can elect new officers. They have not lost control of their unions in the way that stockholders have lost control of the corporations they own. The best proof of that is in the A. F. of L. mailing room in Washington. There are more than 40,000 local A. F. of L. unions. Officers turn over so fast that 40 percent of the address plates of local union officers have to be changed each year. Is that "dictatorship of self-perpetuating labor bosses"?

Remember these facts when you are handed some of the Senator TAFT's leaflets in which he says that only the Communists and union racketeers want repeal of Taft-Hartley.

SHOOTING AT SECURITY

When they say a particular law is aimed at your officers, not you, don't be fooled. When they weaken the right and power of your elected leaders to represent you effectively, they are taking a direct shot at your security and your paycheck.

The kind of Congress we get depends upon the kind of job we do on Election Day. If we fail to reelect our friends, we may well be put back to the good old days when neither the stockholder, the public nor the employees had any control over the arbitrary dictates of industry heads. If you want your wages and security protected by strong unions and freely elected officers, your vote is needed this election year.

Remember that in 1946 we failed to reelect 45 out of 128 Representatives who voted for labor against the Case antilabor bill. But in 1948 every friend of labor was reelected. Which will it be this year?

It is up to the 8,000,000 members of the A. F. of L. How? Contribute to LLPE, participate in LLPE, register and vote.

The other side may have the money, but we have the votes.

If all of us use our votes as good citizens, then we will have a strong and prosperous America with true freedom for all and true competitive enterprise operating for the prosperity and the happiness of everybody.

Problems Confronting Marine Corps

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks I include a splendid address delivered by our colleague, Representative DONALD JACKSON, of California, before the national convention of the Marine Corps Reserve Officers Association at the Washington Hotel, Saturday, May 6:

Mr. Chairman, distinguished guests, ladies, and gentlemen, it is indeed a great privilege and an honor to be here with you this afternoon and to have an opportunity to talk

quite frankly about some of the problems confronting the Marine Corps today, and to possibly indicate to many of you what you can do as individuals and in the organizations to which you all belong.

In common with every other American who has ever served in the United States Marine Corps, I have a deep sense of gratification and pride. It is not possible to see service in that great fighting organization without taking unto oneself a measure of the spirit of the corps which has characterized it during the course of a long and illustrious history.

As a matter of fact, and in some quarters, I am known as something of a nuisance when the subject of the Marine Corps is mentioned. It is true that I have taken the floor of the House of Representatives on many occasions to call to the attention of the membership of that great body some impending threat to the integrity or the function of that outfit. But, as eternal vigilance is truly the price of liberty, so is it the price, these days, for the continued existence of a strong, well-equipped, and adequately manned United States Marine Corps. I should be less than frank if I did not state without equivocation that there are those in high policy positions here in Washington who would prefer to see the Marine Corps abolished. Some of these individuals come to their position out of an honest, if very much misguided, conviction that the functions of the Marine Corps are in no sense so vital that they could not be assimilated into other components of the Armed Forces. Others of our detractors simply state frankly, and with no apology, that the Marine Corps has outlived its usefulness, consists of nothing but a glorified pageantry of press agentry, and is in general a force disruptive to the policies of unification.

To these individuals I would say, quite as frankly, that the alleged unification of the armed services has been one of the greatest legislative fiascos in the history of this country. I say that, despite the fact that I voted for the measure in good faith and in the belief that certain phases of our military and naval operations were in truth and in fact overlapping and duplicating. However, unification, as such, has not served to alleviate the basic and fundamental problems of the national defense. There are those who will take violent disagreement with the statement I have just made. Perhaps there are some in this room who feel that we have made substantial progress toward a true spirit of unification throughout the several branches of the Armed Forces. If complete disruption of morale in the Naval Establishment can be termed an outward and beneficial example of unification, then indeed we are making progress. If retaliatory and punitive steps taken to silence any statement of honest conviction on the part of those who disagree with official dictates from the Office of the Secretary of Defense is indeed making progress toward the unification of the armed services, then perhaps we are moving forward along the desired course of action. If, to create an intellectual Siberia for American officers and men in the armed services who happen to sin in that they disagree, then perhaps unification has indeed been the panacea for the ills of interservice rivalry. I realize, Mr. Chairman, and distinguished guests, that these are blunt statements, but I am also convinced that the hour is at hand for blunt speaking. The Congress of the United States, in passing the unification measure, did not intend that a vast bureau of unlimited powers was to take the place of the separate service groupings which had preceded the legislative act. Neither did it intend to create a situation in which the dice were to be loaded against any one branch of the armed services. It did not intend to create a Frankenstein monster, with the power or the inclination to veto the acts of the legislaive branch, such as we have seen happen on several occasions. When the Congress of the United States authorizes construction of a flush-deck carrier, or a circular carrier, or a square carrier, or a flat submarine, or any other type of construction which has been duly approved by those responsible for design in the Department of the Navy, it is my contention that no bureau chief and no department head in the Government of the United States holds the right to veto that authorization or any subsequent appropriation. The House of Representatives and the Senate are still presumed to be the spokesmen for the people of this country, and I shall resist any suggestion that their legislative acts can be overridden or disregarded by the executive branch of Government, except through open and due process of Executive veto. The system of checks and balances established when this Republic was born placed very definite limitations on the powers to be exercised by the executive, legislative, and judicial branches of the Government. This power has been abused and continues to be abused in the instance of the Military Establishment, and the issue has now become one which is much greater than the personal fortunes or the careers of any officer in any of the armed services. The fundamental question now to be decided is whether or not the Congress of the United States is to legislate for the 160,000,000 people in this country, or whether that legislation is to be initiated and implemented by the Secretary of Defense or by any other appointed official.

The United States Marine Corps stands in danger today, gentlemen, not from public opinion, but from the executive decrees of appointed officials, who in many cases can act with entire legality, although in violation of clear intent, within the framework of the legislation passed by the Congress. It has been stated, and I see no reason to take issue with the statement, that the Marine Corps could today be reduced to the strength of a platoon and kept in that status indefinitely. True, according to the legislation which was written during the Eightieth Congress, one of the functions of the platoon would be the development of techniques in amphibious operation, but there is nothing to insure that they would have anything more to work with than a pair of water wings and an Old Town canoe. Public opinion is with the United States Marine Corps. From one end of this country to the other, former marines, parents of marines, and interested citizens who share in the pride of the corps, have written to me, imploring me to take whatever action I could to insure that the structure of the Marine Corps would not be destroyed. That, gentlemen, is a large order. We who have served in the Marine Corps hold a narrow beachhead in the Congress of the United States. There are those who have done magnificent work in protecting the corps and in trying to insure its continued progress and adequate appropriations for the job it has to do.

MANSFIELD of Montana; DAGUE of Pennsylvania; CASE of South Dakota; SMATHERS of Florida, the latter, in case you have not received the intelligence, the new Senator from the State of Florida; and on the Senate side, Senators DOUGLAS of Illinois, and MCCARTHY of Wisconsin. All these, and others, have done Trojan work in holding the line in the legislative halls. Last year Congressman MANSFIELD and myself circulated a petition on the floor of the House, asking other members to join with us in sponsoring legislation which would have created the Office of Secretary of the Navy for the Marine Corps, and would have placed a floor under Marine Corps strength at a figure of 6 percent of the combined strength of the other armed forces. In less than an hour's time we had more than 50 names on our petition, and given more time we could certainly have gotten 250. I bring up this fact only to demonstrate the warm feeling of friendship held for the Marine Corps by many who serve on Capitol Hill. Again I say that it is neither from the public or from Congress that the Marine Corps need fear attrition. The danger to the corps lies in the great power wielded today by the Secretary of Defense. In this connection I should like to quote several paragraphs from a speech made upon the floor of the House of Representatives on Tuesday, April 4, 1950, by my colleague, Congressman JACK ANDERSON of California, a member of the Committee on the Armed Services. Mr. ANDERSON said:

"About a month after Congress was overruled on the aircraft carrier, Washington was flooded with rumors to the effect that Marine Corps aviation was to be absorbed by the Air Force, by Secretary Johnson. These rumors became so intense that our distinguished elder statesman of national defense—the gentleman from Georgia—to whom, let me say, the Nation owes far more than it can ever repay for his vision and leadership in national defense in the Congress for over a third of a century—yes; it was the gentleman from Georgia, Chairman VINSON, who finally found it necessary to visit the Secretary to ask his intentions as regards the Marine Corps.

"From this visit came a letter from the Secretary. That letter flatly disavowed that it was or had at any time been planned to alter the status of Marine Corps aviation. The Secretary asserted in his letter that no studies had been initiated at any time in the Pentagon on the subject.

"Mr. Chairman, the Armed Services Committee and the Congress accepted that letter at face value and dropped the subject.

"But it is widely known—and I must mention it to point up further our need for concern today—that the Secretary personally told members of the press in New York, off the record of course, directly the opposite, and I happen to know that the Secretary had personally directed initiation of comparative cost studies in the Pentagon which had as their purpose justifying the transfer of the Marine air arm to the Air Force, his disclaimers to the contrary notwithstanding."

And so it goes. As I impugn the motives of no man, so I do not question the patriotism or the basic honesty of any department head here in the Nation's Capital. I do say, however, that there is at present an ever-accumulating mass of evidence which tends to indicate beyond any question of a doubt that the prerogatives of the Congress are being infringed upon by those charged with directing policy in the Department of Defense.

We who have seen service in the Marine Corps feel it incumbent upon us to render whatever continuing service we can to that great fighting organization. How well we shall continue to serve the corps and its best interests will depend in large measure upon how adequate is the liaison between headquarters and Capitol Hill. Again I tread upon very thin ice in this connection, because of the fact that such "liaison" is most certainly frowned upon by the powers-that-be in the Defense Establishment. Unless we who must bear the brunt of the legislative fight are kept wheil informed of the order of battle, we shall certainly not be able to conduct any sort of a successful operation without being constantly outflanked by those in opposition. Given the true facts, I have no question as to what course of action the American people themselves will take with respect to the Marine Corps. The distinguished gentleman from Missouri, Mr. DEWEY SHORT, a member of the House Committee on Armed Services, under questioning on the floor of the House during debate on the unification measure stated: "No Representative in his right mind would

vote against the Marine Corps. That would be one of the shortest routes to take back to civilian life." The public and the Congress alike have evidenced their regard on too many occasions to render further evidence necessary. We know where the Marine Corps stands in that regard. We do not know where it stands at the policy-administration level, and that must continue to be a focal point which we must watch with vigilant concern. I am sure that it will suffice to say that marines on the Hill do not intend to retreat from the position we have taken. It is our feeling that there is a definite role for the Marine Corps to play, a role which does not infringe upon the legitimate activities of the other branches of the armed services. Let me say how much I personally appreciate being with you here today, and I am sure that I speak for every other ex-marine on the Hill in saying that we are extremely grateful for the help and cooperation being accorded to us by the Marine Corps Reserve Officers Association. As we continue the fight here in the Nation's Capital, it is heart-warming to realize that throughout the country, organizations such as MCROA are standing behind us. It may well be that we shall need the concerted efforts of every marine organization, every former marine, and hundreds and thousands of other citizens before this fight is over. We know that you will not fail if the necessity arises for a concerted drive in the legislative halls. Thanks again for making it possible for me to be with you today, and good luck to you all!

Joint Statement of 18 Constituent Organizations of National Civil Liberties Clearing House in Opposition to So-Called Subversive Activities Control Bills

EXTENSION OF REMARKS
OF

HON. ARTHUR G. KLEIN

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. KLEIN. Mr. Speaker, under leave I am inserting in the RECORD a statement issued jointly by the 18 constituent members of the National Civil Rights Clearing House expressing opposition to the subversive activities control bills pending in both Houses of Congress.

The statement speaks for itself.

Nevertheless, I wish to emphasize and underscore the fact that the individuals who signed this statement and the organizations they represent cannot be justly accused of any sympathy or leanings toward any kind of Marxism.

They are as American as the works of Thomas Jefferson and Benjamin Franklin; they are as American as comic strips and ice cream; they are as American as the institution of Congress and the Constitution under which Congress works to protect this Nation.

Because apparently no one is immune from irresponsible and libelous attacks impugning character and loyalty, and because in the present state of hysteria almost anyone who stands up for old-fashioned American freedom of speech and conscience lies in treble jeopardy. I cannot say too strongly that the sponsors and signers of this statement, many of whom are personally known to me, are not even reformers or radicals.

They are just people who, like me, take pride in the noble traditions of this country and love it as it is; people to whom human freedom and dignity are terms of reality and not of lip-service alone; men and women whose faith in democracy is deep and unyielding.

I am including in this insertion the text of the joint statement; the names of the signers and of their organizations; and also the list of officers and members of the steering committee of the National Civil Liberties Clearing House as shown by the letterhead:

JOINT STATEMENT IN OPPOSITION TO THE MUNDT-FERGUSON-JOHNSTON AND NIXON BILLS (S. 2311 AND H. R. 7595)

The Senate Judiciary Committee on March 21 reported out the Mundt-Ferguson-Johnston bill (S. 2311). This bill differs only slightly from S. 1194 (MUNDT) and S. 1196 (FERGUSON), on which hearings were held last spring. Its major objectives are to compel registration by Communist political organizations and Communist-front organizations, and to impose criminal sanctions on individuals for various subversive activities, whether or not in connection with such organizations. Meanwhile, Mr. NIXON has introduced H. R. 7595, identical with the new Senate bill, into the House of Representatives, and hearings on it have been begun by the Committee on Un-American Activities.

We who sign this statement are completely and unalterably opposed to communism and all threats to our national security, whether from the extreme right or the extreme left. We are equally opposed to any violation or weakening of the civil liberties guaranteed in the Constitution—freedom of speech, press, and assembly; due process; and all the other great foundations of our democracy. We believe the proposed legislation would be such an unconstitutional violation of those civil liberties, and would be more dangerous to our American democracy than the evil it seeks to control. We believe, moreover, that its passage would materially aid the cause of communism. It would thus undermine the structure of the American Government and the American society which it ostensibly is meant to buttress.

In our opinion, there are three basic characteristics of the proposed legislation which render it both undesirable and unconstitutional:

1. The language of the bill, which makes criminal any act which would substantially contribute to the establishment of a foreign-controlled totalitarian dictatorship, violates the due process requirements of the Constitution because of its vagueness. The vagueness of the phrase "substantially contribute" threatens the organizational activity of the entire liberal movement in the United States since people would be afraid to joint with their fellow citizens to seek any form of change, progress, or reform which is or might be supported by the Communists. It is standard technique for the Communists to give lip service to a great many liberal causes for their own nefarious purposes. In addition, if enacted, the bill might well be construed as making criminal the performance by an attorney of his duty in defending a Communist client. It might even make criminal the mere advocacy of the repeal of the law itself.

2. It would inflict serious penalties on individuals—criminal sanctions, social and economic ostracism, and character assassination—merely on the ground of association with certain organizations whose natures are not themselves defined with sufficient precision, and would thus inevitably restrict inquiry and thought, belief and expression.

3. The bill would inflict penalties by legislative proscription of organizations instead of by judicial proceedings in which such organizations would be individually tried in accordance with our constitutional guaranties. Hence, the bill is a bill of attainder; this is shown, for example, by the fact that members of Communist political organizations face loss of passport privileges and access to Federal employment, merely by virtue of their membership and not after determination by the courts.

Moreover, it is our conviction that the enactment of the proposed legislation is completely unnecessary for American security and indeed perversely likely to strengthen the very enemies it is intended to disarm. The registration provisions of the bills would not give the Government any information which the FBI does not already possess, nor is it needed to authorize the prosecution of anyone for actual acts which are genuinely subversive—they are already covered adequately by a number of laws. On the other hand, Communists, who would have to label their propaganda as such, would be clever enough to support publicly only the worthiest ideas, in an attempt to enhance the appeal of communism; and every good cause to which they added their unwelcome help would be tarred with their brush, and non-Communists who believed in the same cause would be subject to the unjust accusation of furthering the designs of communism and the Soviet Union. Communism and all its works were never at a lower ebb in American public opinion than they are today. Driving the Communists underground can only make it more difficult to combat them. Helping the Communists make martyrs of themselves can only enhance the appeal they make to the unthinking.

Our supreme interests in defeating the proposed legislation is self-interest—the self-interest of all of us Americans who are not Communists but uncompromising opponents of all totalitarian dictatorships. If this proposed action is taken against Communists today, a dangerous precedent is created for extending it tomorrow to progressives, Socialists, or trade-unionists. Lest such fear be called fanciful, we call attention to a recent statement by Guy Gabrielson, Republican national chairman, that the Socialists will be next * * * "We haven't gotten around to spotlight them yet, but I promise you we will. Avowed Socialists have no more place in the official family of the President of the United States than have Communists * * * socialism is just the first step toward communism."

The only important fear which we need have of Communists in this country today is that they will provoke us into suicide, by piecemeal destruction of our own free institutions. Police-state tactics will not destroy communism. We must not forget that in czarist Russia, the first nation in which communism triumphed, these tactics turned out to be a boomerang. By refusing to adopt police-state tactics, America will strike the heaviest possible blow against communism, and preserve its own democracy.

Patrick Murphy Malin, national director, American Civil Liberties Union; Charles M. LaFollette, national director, Americans for Democratic Action; Dr. Ralph E. Himstead, general secretary, American Association of University Professors; Elmer W. Henderson, director, American Council on Human Rights; Helen Blanchard, legislative representative, Amalgamated Clothing Workers of America, CIO; John Slawson, executive director, American Jewish Committee; David W. Petegorsky,

executive director, American Jewish Congress; Michael Straight, chairman, American Veterans Committee; Benjamin R. Epstein, executive director, Anti-Defamation League of B'nai B'rith; Rev. Thomas B. Keehn, legislative Secretary, Council for Social Action, Congregational Christian Churches of the United States of America; E. Raymond Wilson, executive secretary, Friends Committee on National Legislation; Jacob Pat, executive director, Jewish Labor Committee; Ben Kaufman, executive director, Jewish War Veterans of the United States of America; Isaih M. Minkoff, executive director, National Community Relations Advisory Council; Mrs. Irving M. Engel, president, National Council of Jewish Women; Elisabeth Christman, secretary-treasurer, National Women's Trade Union League; Philip Schiff and Herman Shukofsky, co-chairmen, Social Action Committee, National Association of Jewish Center Workers; John W. Edelman, legislative representative, Textile Workers Union of America, CIO.

The letterhead of the National Civil Liberties Clearing House shows that the principal office is at 1000 Eleventh Street NW., Washington 1, D. C., telephone Sterling 3711. The following officers are listed on the letterhead:

Advisory board: Francis Biddle, chairman; Thurman Arnold; Mary McLeod Bethune; Zechariah Chafee, Jr.; Grenville Clark; Morris Llewellyn Cooke, Sr.; Robert E. Cushman; Edward J. Ennis; Earl G. Harrison; Dr. Charles S. Johnson; Dr. Herbert Wechsler.

Chairman, E. Raymond Wilson (Friends Committee on National Legislation); vice chairmen, government and civil liberties, Violet M. Gunther (Americans for Democratic Action); academic freedom, Dr. Richard B. Kennan (National Education Association); civil rights, Herman Edelsberg (Anti-Defamation League of B'nai B'rith); human rights, Dr. Francis J. Brown (American Council on Education).

Secretary, Dr. Flemmie P. Kittrell (Southern Regional Council); treasurer, Philip Schiff (National Jewish Welfare Board); executive secretary, Mary Alice Baldinger (American Civil Liberties Union).

Steering committee: Marcus Cohn (American Jewish Committee), Mike Masaoka (Japanese-American Citizens League), Rev. Thomas B. Keehn (Legislative Committee, Council for Social Action, Congregational Christian Churches of the U. S. A.), John W. Edelman (Textile Workers Union of America, CIO), Olya Margolin (National Council of Jewish Women), Louis C. Pakiser, Jr. (American Veterans Committee).

Was It Cancer?

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. BIEMILLER. Mr. Speaker, with permission to extend my remarks in the RECORD, I want to tell the story of a family I ran across in the May issue of the Ladies' Home Journal, in its How America Lives series by Dorothy Cameron Disney. The quotations are from the Journal article.

WAS IT CANCER?

Merrill and Virginia Phillips, of Walton, Ind., and their 5-year-old son, Mickey, are an average American family. Merrill is a plumber-electrician who earned $60 a week. For the past year they had been devoting every spare moment to building their own home.

It started when Virginia noticed a lump on her breast. Did Virginia go straight to a doctor? No, she didn't. For one thing, the Phillipses had no family physician. A much more important consideration was financial. The Phillipses had hospitalization insurance—it cost them $7.20 a month, but the policy provided only partial coverage. Any extra medical expense might jeopardize their hard-won home. So Virginia continued to delay, and to lie awake nights, sick with worry.

"Virginia and Merrill were engaged in a daily gamble with their health. An accident—nothing else—brought their affairs to a crisis." While on a job one evening, an oil tank fell, breaking both of Merrill's collarbones. He was put in a cast from neck to waist.

"With the accident, their financial circumstances took a turn for the worse. Although there was no difficulty about meeting medical expenses—Merrill's employer carried insurance—their income dropped from $60 to $50 a week. Of this sum, the insurance company paid $23, the balance paid from the boss's own pocket. The patience of any employer, as Merrill was keenly aware, has limits."

The accident brought Virginia's breast tumor to the attention of the general practitioner attending Merrill. He insisted on an operation for Virginia although he thought the tumor was benign. At the same time he urged removal of a mole on Merrill's head.

As though this weren't enough, their son, Mickey developed a crippling cyst on the back of his knee. A bone specialist was needed.

"The Phillipses' insurance policy didn't cover the services of a specialist." "'It wasn't easy,' the Phillipses say today, 'But we figured Mickey would have to wait his turn.'" No other decision, under the circumstances, was possible.

Just then, "the blow fell. Merrill's employer explained that he must reduce expenses, and Merrill was out of a job. When he left the shop he could count on only the $23 a week unemployment payments. The family had $93 on hand. This meant they could stay afloat for approximately two months. After that, they would go into debt at the rate of $40 a month."

On the doctor's further insistence, Merrill had his mole removed—as a charity patient. Analysis proved it cancerous. Merrill needed follow-up X-ray treatments, said the doctor. "The Phillipses' insurance policy didn't cover X-ray treatments. Frightened but firm, Merrill refused the treatments."

This story has a happy ending—only because the Phillipses got charity care. This family, self-reliant enough to build their own house with just their hands and home-made plans, was forced to take charity from their neighbors and the State. Mickey's cyst and Virginia's tumor were removed and Merrill's X-ray treatments paid for by charity—charity doled out to indigent persons.

But meanwhile—they spent weeks and months of agonized worry, not only about the illnesses, but because they couldn't carry the financial load. And now their future is more insecure than ever.

For hard-working American families like the Phillipses, every day that the medical lobby blocks national health insurance and disability insurance means needless worry, financial ruin, and human suffering.

They are victims of the dollar barrier which now prevents four out of five families from getting adequate medical care. We must remove that dollar barrier.

Under national health insurance, for $3.90 a month—1½ percent of Merrill's salary—the Phillipses would have had comprehensive care. This would include full diagnostic treatment. For Virginia, Merrill, and Mickey there would have been no worry about the costs of diagnosis, surgery, and follow-up treatment, including home visits by the doctor of their choice.

Without national health insurance, they paid $7.20 for incomplete protection. The benefits just were not there when they needed them most.

National health insurance—a middle-of-the-road plan for self-respecting Americans—would have covered them—not charity.

Let Us Give the District of Columbia Permanent Authority Now for Daylight Saving Time

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. KLEIN. Mr. Speaker, I am, quite naturally, gratified by swift action in the last gap to insure daylight saving time for the District of Columbia this summer.

However, I believe that right now is the time to complete action on the pending bills to give the Commissioners permanent authority to establish daylight saving time in their own discretion.

The Senate bill, S. 3176, was passed by the Senate on April 21, 1950, and is now pending before the House Committee on the District of Columbia, unaffected by the passage of H. R. 6354. My own bill for permanent authority, H. R. 1387, is also pending before the committee. Either bill can be reported; I am seeking no personal distinction, and I should counsel the simplest method, which is to report and pass the Senate bill at the next call of the District Calendar.

ANNUAL DEBATE IS EXTRAVAGANT

The extravagance of the annual debate over the purely local issue of daylight saving time in Washington is becoming comic.

Based on an unofficial estimate of $19,700 an hour as the cost of a session of Congress, the cost of debate on the floor alone, in both Houses, reaches the fantastic figure of about $50,000 each session.

Off-the-floor costs are not so easy to compute; but I think it is not unfair to assume that the time of the committees, the Commissioners, the committee staffs, and of the many witnesses, printing costs, and other incidentals, brings the total off-the-floor expense to another $50,000.

This means that, out of deference to intransigent milch cows in far-off States, the taxpayers have been assessed some $500,000 since the war ended—just

to make a legislative decision which obviously was going to be made anyway.

TOO HIGH A PRICE

This is too high a price.

It is self-evident that an overwhelming majority of the residents of Washington, including virtually all the salaried officers of the District of Columbia government, favor daylight-saving time.

There are a few people who will be inconvenienced by "fast time," and some others who will not be inconvenienced but who will resent and oppose it.

Most people are very much the beneficiaries.

While it is unlikely that in the future temporary authority for daylight-saving time will be denied, it takes little imagination to see what would happen to radio and television programs, travelers' schedules, plane flights, and every other activity involving interstate commerce in such an eventuality.

Now, Mr. Speaker, is the time to settle the whole business while it is fresh in our minds. I am communicating separately with my chairman in an effort to enlist his support.

The Amerasia Investigation

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George Sokolsky:

THESE DAYS

(By George Sckolsky)

All the material in this article is taken from the Report of Subcommittee IV of the Committee on the Judiciary of the House of Representatives, published in 1946:

"On June 6, 1945, the Federal Bureau of Investigation * * * caused the arrest of Philip Jacob Jaffe and Kate Louise Mitchell, editor and coeditor * * * of Amerasia. * * * Andrew Roth, a lieutenant in the United States Naval Reserve, stationed in Washington; Mark Julius Gayn, a magazine writer * * * and Emmanuel Sigurd Larsen and John Stewart Service * * * employees of the State Department in Washington, D. C. * * *

"Among the documents seized in the possession of Jaffe at the Amerasia office in New York City at the time of his arrest were 267 prepared by the State Department, including 2 copies of a top-secret classification, 20 originals or duplicate originals, and 14 copies of a secret classification, and 51 originals or duplicate originals, and 14 copies of a confidential classification; 50 prepared by CSS, including 2 originals or duplicate originals, and 1 copy of a secret classification, and 11 originals or duplicate originals of a confidential classification; 19 prepared by ONI (Office of Naval Intelligence), including 1 original or duplicate original of a secret classification and 3 originals or duplicate originals of a confidential classification; 34 prepared by MID (military intelligence), including 9 copies of a secret classification, 1 original or duplicate original, and 11 copies of a confidential classification; 58 prepared by OWI, including 3 copies of a secret classification, 1 original or duplicate original (and 4 copies of a confidential classification. * * *"

(A number of documents similarly detailed were found when Larsen was arrested at his home in Washington, D. C.)

"The records made available to this committee indicate * * * that Roth, who had been under surveillance, was the contact man or go-between for Jaffe in Washington * * * four items which were seized by the FBI in the possession of Jaffe, and which bore no official classification, were subjected to laboratory analysis, with the resulting disclosure that they were copies of official reports on Indian politics written in longhand by Roth, or typewritten on Roth's machine. * * *

"* * * Virtually all of the late 1944 and 1945 items seized from Jaffe, which on their face indicated them to be Government property, were removed from the State Department.

"Many originated elsewhere, but had been routed to State. Larsen had authority enabling him to take such items from the State Department, although under the regulations he could not retain them or disclose their contents.

"Although the various parties were frequently observed in the company of one another by trained investigators, no one of them was ever seen to deliver any Government items to another."

From the minority view of FRANK FELLOWS, member of the committee:

"Larsen, when arrested, was a research specialist in the Far East Division of the Department of State. The Department of State had no system worthy of the name for protecting the files of that Department.

"He (Jaffe) was photographing and publishing some of them, thereby, through the medium of his magazine, at least, selling the contents of some of the classified documents of this Government at the time when the United States was fighting for its very existence.

"These papers were seized from Jaffe at the time of his arrest in his business establishment, where he was publishing a magazine. They were not his own documents. They were not seized as the result of searching his files.

"They were found in suitcases and pasteboard containers on the tables and desks of his business offices. I do not see how anybody could claim these papers were illegally seized. The circumstances clearly indicate that Roth, who had previously worked for him in this very office, was delivering papers to him."

The activities reported above by a congressional committee, the chairman of which was SAM HOBBS, of Alabama, a Democrat, occurred while this country was engaged in a war which involved an armed force of 11,000,000 men and women and cost this country more than $300,000,000,000.

What has been done about this report?

McCarthy's Victims

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. BIEMILLER. Mr. Speaker, with permission to extend my remarks in the RECORD, I attach the following article, McCARTHY'S Victims, by Joseph Alsop, which appeared in the Washington Post, May 8. Mr. Alsop's remarkable qualifications to discuss the far-eastern situation and the personalities concerned are greatly in evidence in this open letter. If the others who have joined in this unwarranted assault on the integrity of the State Department had the same qualifications, it seems likely that the assault would never have taken place.

MCCARTHY'S VICTIMS—AN OPEN LETTER TO SENATOR TYDINGS

(By Joseph Alsop)

After long hesitation, I am impelled by the appalling effects in Europe of the MCCARTHY witch hunt to offer my testimony to your committee, for what it may be worth.

I do so for two reasons. First, I have already sharply criticized the conduct of our affairs in China on several occasions. Second, I was intimately involved in the events which led to the loss of China, whereas Senators MCCARTHY, WHERRY, and TAFT and their informants are offering second-hand evidence. This evidence is so obviously corrupted by political and other pressure that it is a duty to correct the impression conveyed.

Stating the case as briefly as possible, I think it fair to say that the really crucial years in China were those when Gen. Joseph W. Stilwell commanded the China-Burma-India theater, from 1942 to 1944. In this period, Professor Lattimore, who was always at best a fringe figure, played his most important role in our China policy, as a personal adviser to Generalissimo Chiang Kai-shek. In this rather brief assignment, he accomplished nothing, but he was quite obviously loyal both to the American Government and to Generalissimo Chiang.

Professor Lattimore had no part whatever in the real debate about China policy, in which the different points of view have been fantastically misrepresented by Senator MCCARTHY and his friends. No informed person ever supposed that offering blank checks to the National Government of China would accomplish anything. Those who advocated a strong policy of aiding the National Government only did so with the proviso that the aid given would be closely controlled by American representatives on the spot, as it was during the short and successful period of General Wedemeyer's command. It should be noted that the congressional advocates of postwar aid to China specifically rejected the responsibility involved in this sort of local, on the spot control, in the first major bill appropriating funds for the purpose during General Marshall's Secretaryship of State.

Returning to the vastly more important war period, the other school of thought was composed primarily of General Stillwell and his political advisers. General Stillwell, so far as one could judge, was chiefly animated by his personal destestation of Generalissimo Chiang, arising from their disagreements. His political advisers, among whom was Mr. John Stewart Service, were operating on a more reasoned theory, however.

They asserted, first, that the National Government was too feeble and corrupt ever to be reformed, even with direct American help and under direct American pressure. They said, second, that the Chinese Communists were therefore bound to win in the end, no matter what measures might be taken by the United States. In the third place, they argued that the Soviet Union, insofar as it had intervened in China at all, had given all its assistance to the regime of Generalissimo Chiang Kai-shek rather than to the Communists, who received no tangible Russian aid whatever until the war was over. Fourthly, they suggested that the Chinese

Communists might be induced to declare their independence of the Kremlin if they were treated as friends and allies by the United States.

Opening friendly relations and offering aid to the Chinese Communists was frankly admitted, at the time, to be a bold gamble. The gamble now looks better than it did then. On the one hand, the Yugoslav Communists, whose experience was precisely what the experience of the Chinese Communists would have been if they had received American aid, have now rebelled against the Kremlin. On the other hand, the recent behavior of the Japanese Communist leader, Nosaka, a wartime refugee at Yenan and intimate friend of Mao Tse-tung, clearly suggests that the idea of independence of the Kremlin must have been in the air in Communist China in wartime.

My right to speak, if I may be said to have a right to speak, derives from the fact that in wartime I was one of the chief American opponents of the school of thought I have summarized above. As a member of the staff of the American Volunteer Group, as chief of the Lend-Lease Mission to China, and finally as an assistant to Dr. T. V. Soong, I did everything in my power to present the pro-Nationalist point of view in influential quarters in Washington.

Those who wished to develop an American policy of friendship toward, and aid to, the Chinese Communists were finally and decisively defeated with the dismissal of General Stilwell, in October 1944. This occurred many months after I had finally succeeded in getting into uniform, as a member of Gen. C. L. Chennault's staff in the Fourteenth Air Force. But although I had long before become a mere junior officer in the Air Force, the effect of my letters to Harry L. Hopkins and the other representations I had made was acknowledged by implication in General Marshall's first instructions to General Wedemeyer.

These are, so to speak, my credentials. Having known the situation in wartime China far more intimately than any of the pro-McCarthy witnesses you have yet heard, I think it my duty to say that while I disputed the judgment, I never had the faintest doubt of the loyalty of any of the American officials or others whom McCARTHY has attacked. They were serving the United States to the best of their ability, with courage and fidelity. This should be sufficient to protect them from the kind of vulgar attack McCARTHY has made, even if their judgment was incorrect.

Although our views clashed sharply, I was particularly well acquainted with Mr. Service. To the best of my knowledge, although I thought then, and think now, that he was gravely in error, he was a most conscientious and decent American public servant. It is difficult, of course, to offer hard evidence to support such contemporary impressions. But I may cite one fact, at least, to show how erroneous it can be to judge situations from the viewpoint of a later time.

Former Vice President Henry A. Wallace has been, in effect, a pliable stooge for the American Communist Party for more than 2 years. From this, many people have inferred that Wallace was a Communist stooge in wartime. In fact, however, nothing could have been more contrary to the party line in wartime than to urge the dismissal of General Stilwell; yet Wallace recommended the dismissal of Stilwell and his replacement by Wedemeyer in a telegram from China to President Roosevelt in the late spring of 1944. Incidentally, the telegram was sent with the full knowledge of Mr. John Carter Vincent, who entered no protest whatever, although he too has been under attack as a Communist stooge.

In conclusion, there are two points which I feel I must make. First, I do not think I was wrong in opposing the policy of gambling on winning the friendship of the Chinese Communists and inducing them to declare their independence of the Kremlin. I do not think I was wrong, simply because I, and the others who took the same view, could not possibly foresee that when this policy of winning the friendship of the Chinese Communists had been defeated with the dismissal of General Stilwell, there would be a long period after the war during which we had no China policy at all.

None of the men now under attack by Senator McCARTHY had any important responsibility, to my knowledge, for this singular hiatus. Speaking for myself, if I could have foreseen that the only alternative to a policy of gambling on the friendship of the Chinese Communists was a kind of vacuum of policy, I should have been on the other side in the struggle in China. The gamble on the Chinese Communists, although unnecessary, in my opinion, was at least a reasonable gamble, such as could be reasonably advocated by entirely loyal Americans.

Second, I should like to suggest to your committee that, if the test of loyalty is following the line of the Communist Party, you had much better launch an investigation of Senators McCARTHY, WHERRY, and TAFT, than an investigation of Messrs. Lattimore, Service, and Vincent. Let the test be a tabulation of the key votes of the three Senators above mentioned on the great postwar measures of foreign policy, and especially of their votes on key amendments by which bills can be nullified.

Unless I am gravely mistaken, such a tabulation will show that these three Senators, and most of the others who have joined them in the present clamor, have voted the straight Communist Party line on every major issue of foreign policy, as laid down in the Daily Worker, ever since the end of the war. If temporary agreement with the party line is to be made the test of loyalty, let these men be called to the bar to explain their records.

In summary, I do not attempt to excuse or palliate the grave American mistakes in China, which I have often before denounced. But I submit that we may as well abandon all hope of having honest and courageous public servants, if mere mistakes of judgment are later to be transformed into evidences of disloyalty to the state. And I submit further that the Members of the Senate who are now persecuting these men who made, as I think, mistakes in China, have far more to explain, excuse, and rationalize in their own records. I still believe that the loss of China was unnecessary. But I think it far more important that we should not destroy the decent traditions of American political life. These now seem to be endangered.

Flood-Control Project at Havre, Mont.

EXTENSION OF REMARKS
OF
HON. WESLEY A. D'EWART
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. D'EWART. Mr. Speaker, I was about to make a speech today concerning the need for a small flood-control project at Havre, Mont., a project which would cost only slightly more than $1,000,000. Some of the Members will recall that I have spoken about this project frequently. It was authorized many years ago. Each time the Corps of Engineers has asked for funds to build it the Budget Bureau has turned it down. Each time we have asked the Appropriations Committee to appropriate for it as an additional item, we have been refused. For 2 years the Senate has appropriated money only to have the House conferees turn it down. The only reason we can get for these repeated rebuffs, this refusal to construct a tiny project that is of great importance to the people of Havre, Mont., is that it is against the President's policy to start new construction.

Now the President has announced that one of his stops on the political tour, at taxpayers' expense, which begins this week will be in Havre, Mont. The cost of this tour alone would pay for the Havre project. Instead of making a speech today, I want to suggest that the citizens of Havre ask the President, when he honors their city with his presence, whether he is ever going to withdraw the objections that have stopped their project. I suggest they ask the President, who proposes to put us in debt another $7,000,000,000 this year, when he thinks he can afford $1,000,000 to protect the citizens of Havre from floods. After he has viewed their growing town, ask him if its protection is not worth at least one three-hundredth of the amount he proposes to spend on the St. Lawrence waterway. If he can spare time from politics to consider this problem, perhaps we will get the project underway.

Changing a Republic Into a Socialist State

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. RICH. Mr. Speaker, a republic gone to seed is the very worst form of autocracy; and our Government-wreckers have taken long strides toward making of this Government the worst autocracy the world has ever seen.

History teaches that, in the case of every destroyed republic, the destroyers first broke down all lines of demarcation between governmental functions, and rendered the people's representatives, the legislators, impotent. They do not usually abolish legislatures, but they so weaken them, that they enact only such legislation as the wreckers demand of them, leaving the bureaucrats to control or dictate every act of government.

Our Congress has so far surrendered its powers to the Executive and the bureaucrats that it generally enacts into law every measure demanded of it and ours has become a government of men, not of law.

The process of destruction began with the reign of Franklin D. Roosevelt and his horde of bright young men fresh from the colleges, and without experience in government, business, or otherwise.

The late President Roosevelt claimed several mandates, but, viewing them in retrospect, it is now apparent that they were assumed mandates sneaked over on

an unsuspecting Congress and the people, each of which was part of a pattern to destroy this Republic. In a Jackson Day dinner radio address on January 7, 1939, the late President said:

In answer to the demands of the American people we have expanded the functions of the Government of the United States. We are handling complicated problems of administration with which no party has ever had to wrestle. To do that we are constantly recruiting lieutenants who will give intense and genuine devotion to the cause of liberal governing. We have brought to the Government men and women whose first thought is to be of service to their country through their Government—men and women with fewer attributes of selfishness and more objectives of clean service than any group I have ever come in contact with in a somewhat long career.

Almost without exception they are more intent on doing a good job than in keeping themselves on the payrolls. Almost without exception, they possess that quality of cooperative effort which distinguishes them from the old-time political officeholder.

The exceptions which the late President Roosevelt did not mention stand out in bold relief when we view what those unselfish souls did in the pursuit of efforts to render "service to their country through their Government."

They established a long list of alphabetical agencies for curing a depression which was never cured—agencies headed and manned by such immortals as Rexford Guy Tugwell, Henry Agard Wallace, Harry L. Hopkins, Corrington Gill, Aubrey Williams, and others comprising a list too long to enumerate. When it became known that those unselfish guides of our destinies were other than what they pretended to be, and the populace clamored for their jobs and their political heads, they were kicked upstairs into better jobs, where they could go on with their government-wrecking and destruction.

Under the guidance of the late Roosevelt, with his falsely claimed mandate to cure our depression, the general-welfare clause of our Constitution was all but read out of that memorable and honorable document. That clause was stretched to put the Government into activities never contemplated by our founding fathers—it was distorted in a catch-all phrase to justify the appropriation and use of the peoples' money for every hairbrained and cockeyed scheme conceived by the unselfish horde of bureaucrats that had been recruited, as now seems apparent, to wreck this Government.

When it at long last became apparent that the New Deal had utterly failed to cure, or even to show improvement in the prolonged depression, Mr. Roosevelt jockeyed us into World War II as a means of saving face for the New Deal and its horde of unselfish martyrs who were recruited to save the Nation.

The fighting and winning of World War II, plus the loss of the fight against the depression, left this Nation with a known public debt and contingent liabilities of more than $430,000,000,000—far more debt than had been incurred throughout the entire history of the country.

Since the shooting of World War II stopped, the same hordes of Roosevelt brilliantes—unselfish and God-given blessings to mankind—and their descendants, so to speak, have evolved other and further schemes for the continued saving of this Nation, but they have evolved out of their inner consciousnesses a horde of world-wide alphabetical agencies designed to succor and rescue the entire world from communism, commercial disaster, and the like—all at the expense of American taxpayers, American industry, and American labor.

These world-wide alphabetical Fair Deal schemes have already cost our taxpayers some $30,000,000,000, for gifts, loans, hand-outs, and assistance to the rest of the world; and the end is not yet.

Secretary of State Dean Gooderham Acheson has now declared an additional remedy for saving the world—"total diplomacy," which is daily coming more and more to mean: We give away our wealth all over the world to buy friendship and opposition to the spread of communism, as we give it away at home in the form of gifts, hand-outs, and subsidies to buy the necessary influence to keep the Fair Deal's destructive juggernaut rolling.

Furthermore, in addition to our gifts, grants, and hand-outs all over the world in a futile effort to buy friendship, the all-powerful internationalist bloc in the State Department and elsewhere in the Fair Deal hierarchy, are hell-bent on taking the United States into a one-world government where she will be shorn of her inherent and inalienable right to legislate for and govern her own people—a one-world government in which, through alien minds and foreign governments, our own States and people will be forced to surrender their sovereign rights and even their persons to trial by foreign courts and tribunals.

In short, the Fair Deal—a continuation of the Roosevelt New Deal, to which many dangerous innovations have been added—goes merrily on with its steps toward a planned economy at home and all over the world.

Already many American business concerns are being put out of business because of the loose way in which the State Department has handled, and is handling, the reciprocal trade agreements, but the wrecking does not stop there. It is now seriously proposed by the administration that the International Trade Organization be approved—not by treaty but by executive agreement—and that the matter of handling tariff matters, international financing, and even of labor, be delegated to a foreign organization ruled and governed by aliens and alien minds—an organization in which the United States will have but one vote out of 50-odd by the foreigners.

It emerges crystal clear that the Government-wreckers and world-planners mean and intend to make American industry and American labor subservient to this alien-minded and alien-government trade organization, under the claim that the living standards of the rest of the world can be raised to those in the United States.

To anyone who is not willfully and mentally blind, it is altogether clear that such aim cannot be attained through such organization, or otherwise; and that, in the process, American industry and labor will inevitably be reduced to the standards of the rest of the world, rather than the world's standards being elevated to our own.

Extension of Selective Service Act

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1950

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include the following article written by Gould Lincoln, appearing in the Washington Star in favor of an extension without limiting provisions of the Selective Service Act that in the light of existing world conditions is based on sound and logical reasoning:

DRAFT COULD BE NEEDED DESPERATELY AND IN HURRY

(By Gould Lincoln)

Overriding the views of the administration and of high ranking armed services officials, the House Armed Services Committee has written into the bill to extend for 2 years the Selective Service Act a provision making necessary a declaration by Congress that a national emergency exists before any further inductions may be made.

Cold war or no cold war, this seems to be as far as Congress is prepared to go, with an election just around the corner. Indeed, 6 months ago there were plenty of predictions that Congress would not extend the so-called peacetime draft act at all. It is due to expire June 24 unless given new life by legislation. Only the serious situation in the world, which certainly has not improved in recent months, has brought some willingness on the part of many Members to pass any legislation relating to the draft.

STEP IS NOT ENOUGH

The action of the House Armed Services Committee, which has now unanimously reported the bill with the amendment already described, is a step in the right direction. But it is not enough. Once before in our recent history an attempt was made in Congress to kill off a draft law by permitting it to die. That was in the summer of 1941, 5 months before the Japanese made their attack on Pearl Harbor. General Marshall, then Chief of Staff, argued for hours before the congressional committees in favor of extending the Selective Service Act, pointing out that if it were allowed to die—as die it would—the Army would be hamstrung. Yet when the measure extending the life of the draft law came to a vote in the House it prevailed by only a single vote.

It seems incredible today that so many Members of Congress could have been so short-sighted as to vote against the continuance of the draft. Had the bill failed, this country would have been in far more desperate shape than it was when the attack did come.

In 1945 and 1946 this country tore down great and victorious armed forces. The race to demobilize was swift. The war had been won; there was going to be no more war.

But the peace had not been won—and it has not yet been won. With many pains, and large appropriations, we are building back to a military position. It takes time. It became evident a couple of years ago that the country was not going to get enough enlistments to keep the armed forces up to the strength authorized by Congress, notwithstanding increases in pay and in many advantages of training offered young men entering the Army, Navy, and Marine Corps. So the Draft Act was passed. And also provision was made for voluntary enlistments for 1 year for 18-year-olds, and for 21 months for older men.

NO ASSURANCE ON MEN

The enactment of the Draft Act stimulated enlistments. By January 1949 it was not necessary to draft more men, and the draft has not been used since. But this year, 160,000 enlistments end. With the draft removed—and it will be removed to all intents and purposes by the amendment requiring Congress to act before any more men can be drafted—the sole reliance of the Armed Forces will be voluntary reenlistments and voluntary new enlistments.

What assurance is there the same condition will not be found that brought about the passage of the present Draft Act? There is none.

The administration is asking that, at least, the authority to start up the draft again be left to the executive branch, which could act promptly. The wisest action, however, would be to retain the draft as it now stands, with its machinery continued in effect and ready to go into active operation at the drop of a hat. The draft is one of those things which, if needed at all, will be needed desperately and in a hurry.

What the American Flag Means to Me

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. HERLONG. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following essay by Carlyle Ausley, Jr., of Ocala, Fla., 16 years old and a member of the National Honor Society. Carlyle's essay won first prize for boys in the tenth to twelfth grades of the Ocala High School in a competition sponsored by Marion County Post, No. 27, the American Legion. He tells—

WHAT THE AMERICAN FLAG MEANS TO ME

The American flag, though only a piece of cloth or bunting, has been brought to a proud position by love and sacrifice, and was authorized by Congress June 14, 1777.

Carrying our flag high in a place of honor above my horse last winter in a parade, suddenly I was thinking deeply what the flag meant to me. My mind became more peaceful; gratitude for all good things seemed first place, love for all that's real and worth while, the great need of being helpful to others with patience.

The red color I figured was proud, and must mean valor and zeal. The white must be hope, good conduct, and purity. The blue, being the color of heaven, was surely reverence to God, justice, truth, and sincerity. The star, being high, like in the sky, meant high ideals.

The flag's history is just the history of the American people, where I will find my place, like 140,000,000 or more other humans under this flag.

Feeling by now the physical as well as mental weight of the flag, I promised myself to study the lives of the men who wished to lead us under our beautiful flag so when I become of age to vote I would do it honor.

In time of war its stars and stripes were never pale, and in peace it proudly floats, like now, in the breeze, and is so fair to see, being the third oldest of national flags.

Looking at the flag in a position of honor in front to the right of the speaker of that day these quick thoughts came, for the flag seemed alive, representing a living country—freedom to hunt, fish, grow, mine, cut, make and manufacture; freedom to ship and sell, freedom to work or quit, freedom to hire or fire, freedom to make the most of my natural gifts, and a chance to reason rather than be forced, with my rights safeguarded.

On a casket of a great soldier once I noticed a flag, and I knew if he could talk I would hear, "Our flag will always wave on for the good of mankind, and when I lived I expressed opinions on all matters, also I kept my self-respect. I deserved no better government than what I exerted myself to get. If I had it to do over again I would shudder to see my flag ever dirty or abused—like lettering on it—because we must first respect before we love. Besides, my country was the best fed and clothed, with the same opportunity for all."

The parade finally came to where it disbanded; but my thoughts were still in tune—if I am pleased with my country, thrilled with the red, white, and blue; can just be what my flag stands for, my country will be proud of me, too.

European Recovery Program

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Philip Warden, from the Washington Times-Herald of April 26, 1950:

TRUMAN'S AIDES CLAIM IT'S ERP OR A DEPRESSION

(By Philip Warden)

Administration leaders have told the House and Senate Foreign Affairs Committees in a secret session that foreign aid spending must be continued unabated or the country faces the threat of a depression.

President Truman and his aides told the Congressmen that the European recovery program billions are all that is preventing an unmanageable surplus of farm products. Stop foreign aid spending, and our markets will be glutted, they maintained.

EMPLOYMENT PERILED

Administration leaders also declared that the Marshall plan dollars are being spent in industries where widespread unemployment would develop at once if the aid program were curtailed. They asserted unemployment would spread quickly to other industries.

The administration has decided to put all its emphasis on the depression threat at home in its campaign to sell the Marshall plan to Congress for another year, rather than on Europe's economic requirements.

The Senate is considering the administration bill to authorize 3.4 billions for aid to Europe for another year. The bill has been passed by the House.

PRODUCTION RECOVERED

Administrator Hoffman, of the Marshall plan, said yesterday that Europe's industrial production is 20 percent higher than before the war, her food production is back to prewar levels, and her export trade is above prewar.

Asked if he felt that we should continue giving money under these conditions, Hoffman replied:

"The real problem in Europe today, which must be solved or both Europe and America will suffer, is to build up Europe's dollar earnings.

"Europe needs our goods, not our dollars. That is what we are giving them—the goods they can get nowhere but here. Europe could triple her production and still not have enough dollars to buy what she needs from us.

COTTON GIFTS CITED

"For example, Europe does not have enough dollars to buy the cotton she needs. We have been giving her the cotton. If we stop giving her cotton, her mills will close, unemployment will spread, and she will be right back where she was when the war ended."

The administration will rely upon the aid program to prevent the stock piles of surplus food from getting much larger, rather than revise farm supports along realistic lines.

Democrats from industrial areas are being told that they must vote for the aid program or the industries in their areas are likely to suffer and unemployment follow.

Alaska, Key Point of Nation's Defense

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. CRAWFORD. Mr. Speaker, many of our leading editors are taking cognizance, in their editorial columns, of the great importance of Alaska to the United States. The editor of the Tulsa (Okla.) World, in an editorial April 4, calls it "a key point of Nation's defense."

By unanimous consent, I submit that editorial for consideration of the Members of Congress. It follows:

ALASKA, KEY POINT OF NATION'S DEFENSE

Practical attention to Alaska as the most vital point in the American defense system is made certain by the statement of Gen. Dwight Eisenhower. The importance of Alaska in this respect has been growing for many years; the public mind is fairly familiar with the general idea. But it was essential that an authoritative statement be made. The situation poses for the United States a gigantic problem in finance and preparedness. It is one of those things which cannot be avoided.

Immediate plans are for expenditure of from $300,000,000 to $500,000,000 in the next year or so. Most of that is to be earmarked for air expansion, which implies a great deal of preparation along various lines. Probably the work of outfitting Alaska as a defensive base is further along than most of us know. The whole affair starts with the nearness of Russia. Alaska is no longer a remote outpost of the United States or a piece of land which Russia sold. It is now

of first-class importance to the two greatest nations of the earth, and consequently to all nations and all mankind.

On the historical, sentimental, or reflective side, Alaska is a mighty subject. The far-sighted Secretary of State, William H. Seward, bought the country for $7,200,000; that was in 1867, when it was difficult to fix general attention upon anything so remote, even nebulous. It was not until long afterward—or not more than 30 years ago—that the idea of Alaska as defensive territory and a key to the north side of the world gained any real credence. Billy Mitchell was discharged from the Army for making suggestions and he was reprobated for intimating that air was the future power. No greater change in outlook or viewpoint than is involved in the matter of Alaska can be imagined.

When Alaska was bought for what is now called chicken feed, there was no conception of the airplane, no particular idea that nations far apart would ever be gouging and shoving each other in the purlieus of the Arctic Circle. The price paid for the land is a very small fraction of what we now seriously propose to spend on it next year.

While we are considering the practical side, as we must, we Americans are called upon to recognize, in all its phases, a new era. That is an era in which we take a leading part. There is dramatic interest in the story of Alaska. It is close to the heart of American defense, yet it is called geographically remote from the States. It may soon be a State. But, State or detached Territory, it is a matter of vital concern to all of us. It is something rather bigger and more far-reaching than we are usually called upon to consider. Alaska is one of the three cardinal points in vast strategic areas. Manifestly, it is time we quit thinking of it as a cold distant country of ordinary potentialities. It actually is an immediate, engrossing matter of defense, strategy, finance, industry, transportation, and all-around responsibility.

In Support of the Metal-Clad, Lighter-Than-Air Ship

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1950

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and statement:

TOMS RIVER, N. J., *April 4, 1950.*

Hon. JOHN D. DINGELL,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR MR. DINGELL: As you know from my wire of yesterday, I genuinely appreciate your thoughtfulness in sending me a copy of your letter of March 21, to the Secretary of the Navy with respect to airships. It is most gratifying to see that you have continued your interest in this badly neglected type of aircraft.

What sort of a reply will be forthcoming to your letter is problematical but it is my feeling it will be a polite but completely noncommittal one, leaving your idea still unacted on.

On March 18, at the request of the Associated Press, I made a statement on the then recently announced request of the Navy for funds for building four new blimps. A copy of that statement is enclosed herewith for your own information and for whatever other use you might care to make of it, since of course it is public property. Some of the eastern papers carried portions of it, but what happened elsewhere I do not know.

Needless to say, I sent a copy special delivery, to the Secretary of the Navy the moment the statement was released, but of course I have had no Navy Department comment, nor do I expect such.

From reading this statement, it will be clear to you where I consider the responsibility to rest for the shamefully muddled airship situation. Furthermore, you will note that I almost despair of any remedial action originating with the Navy itself.

During the war, after we had the blimp project fairly well under control, I tried to resurrect the metalclad idea but obviously with no results. I even asked Ralph Upson to meet me and discuss the matter, which he graciously did despite all his other pressing work. More recently, I got together with Carl B. Fritsche whom you of course remember as a far-seeing citizen, and we discussed the possibility of getting the metalclad idea reestablished somehow. There is no doubt but that the necessary talent is available, and it is not too much to hope that financial interest can be obtained if there is some indicated prospect for help from Washington.

You will note, therefore, that in my AP statement of March 18, I mentioned the metalclad and also the idea of getting more widespread interest in airships in general. I am more convinced than ever that we must have competition in the airship field to insure progress. It cannot be denied that the great progress made in airplanes has been mainly due to the fact that many minds and many interests have worked simultaneously and competitively on the airplane project.

I cannot stress too strongly the completely fallacious policy of placing airship development and welfare in the hands of airplane personnel. That is precisely the root of all the evil that has beset the airship. It is susceptible of correction administratively but will never so come about for several reasons. Not the least of these is the gradually dawning reason that the piloted military airplane is on the decline, pushed out of the picture by guided missiles, and other developments. Hence there is an instinctive desire to draw into or rather retain in the airplane empire, anything that will keep it alive, even unto the lowly airship. Actually, neither the airship nor the guided missile has any business being in the hands of airplane people.

I do not wish to burden you with a lot of reading but I am sending you copies of various things I have written from time to time on the airship subject. You, yourself, will have to be the judge of how much you can find time to read, but I assure you it contains the gist of the whole airship situation. Let me suggest, however, that the following would be of first value to you:

(a) My AP statement of March 18, 1950.
(b) My 1947 report to the American Legion.
(c) My Airships in the United States Navy. (In this I predict that the fabric airship will go the way of the fabric airplane and be replaced by metal-hulled airships of considerably increased performance and effectiveness.)

The whole world is now aware of the presence of foreign submarines on our Pacific coast, and the Chief of Naval Operations has announced that our anti-submarine strength in the Pacific is to be augmented. However, there has been no statement that such augmentation will include the airships that were so fallaciously removed from the Pacific coast about 3 years ago on the easily exploded pretext of "economy." Does this situation, then, make hypocrisy of the Navy's retention of airships at all?

I do hope that on some coming early visit to Washington I may have the privilege of stopping in for a chat with you, for I am more convinced than ever that the United States is missing a great bet in neglecting airships.

With kind personal regards and best wishes, I am,

Very sincerely,

C. E. ROSENDAHL.

STATEMENT BY VICE ADM. C. E. ROSENDAHL, UNITED STATES NAVY, RETIRED, MADE AT THE REQUEST OF THE ASSOCIATED PRESS, MARCH 18, 1950

The recently published statement that the Navy has belatedly asked for funds for a few modern blimps comes as gratifying news to those who have long hoped that airships would be given a fair opportunity to develop and demonstrate more of their real value to the national defense. Contrary to some opinion, airships have never had such an opportunity, not even in World War II. This latest airship announcement also should be interpreted by the public as apparent assurance that official circles are now at last really concerned over the menace presented by modern submarines in the hands of a ruthless enemy.

Such alarm over modern submarines is well founded. In their various forms and applications, present and coming submarines are the most formidable weapons that could be used against us. By the same tokens, underseas craft can and should be made a keystone in our own military strength. Thus, it is my opinion that submarine vessels and antisubmarine warfare should get top billing at once, a billing in which the airship can, if properly permitted, share to at least a modest degree. The latent potentialities of airships, both large and small, are nuggets of our defense treasure yet to be assayed.

But all that glitters in the headlines isn't gold of reality. Mere acquisition of a few better blimps isn't the whole story by a long shot. Unless the corollary problems such as those of airship personnel and administration are also solved realistically, airships will never reach maturity. But I am reluctantly convinced that solutions to interdependent airship problems will never come until and unless some topside conceptions are changed, and in so saying, I am merely repeating what I have said publicly and officially for many years—but fruitlessly, thus far.

As has been the history of other military weapons, the day of the piloted military airplane as a stellar performer in our national defense is ending. Obviously there will continue to be important uses for manned airplanes of and for the Army ground forces, of and for the Air Force, of and for the Navy. But such airplanes should be integrated into the national defense as work horses in the team rather than as individual stars. Airplanes reached their zenith and covered themselves with undeniable glory in World War II. Let them now settle down to their logical places of today and of the future.

Yes; the ominous shadows of the submarine and the guided missile are eclipsing the former brilliance of the military airplane. But neither submarine nor guided missiles can attain their rightful places until and unless some basic ideas change.

I do not presume to speak for submarine people nor for the artillerymen in whose province the guided missile belongs for the basic reason that it is a modern item of artillery. This is true for both landgoing and seagoing artillery. Let us hope they raise their voices and be heard and heeded in their respective causes of such transcendent importance. But as for airships, I am not unfamiliar with their unfortunate plight, a plight that stems from their continued unrealistic handling by the Navy, and particularly by their fallacious submergence in naval aviation.

While the airplane was top dog there was something to be said for having naval aviators in many important top places because they were aviators. Today, however, these billets should be filled by those naval officers most qualified regardless of whether they be winged or unwinged. What a farce it is to say that if one of the two top men in an important command is an aviator, the other must be a nonaviator, and vice versa. This is but one of the anachronisms still extant. Naval aviation should be integrated into the Navy, and not vice versa. Modern control of the sea will be exercised from the surface primarily by men of broad rather than special qualifications. By no stretch of the imagination do such broad attributes demand inclusion of a once-demonstrated ability to fly an airplane or an airship, for that matter.

With specific respect to the airship, complete recognition must be given to the basic fact that airships are "displacement" vessels of the air and not even remote cousins of heavier-than-air machines. Hence, to afford airships their rightful chance to develop, they should be placed under their own specialists and pioneers and not under airplane men who have a big and important enough field of their own and to whom the airship is just another chore. We must forget the fallacious idea of having dual qualifications in both airplanes and airships, merely as apparent career insurance for airshippers, with the consequent flitting of such men from one to the other, trying to carry water on both shoulders. Nor should the airship branch be used as a catch-all for excess airplane pilots. Indeed, the recently ordained infiltration of airplane men into the airship field may indicate a dawning suspicion of a coming unemployment problem.

From the standpoint of airship progress, let us hope this latest official recognition of the airship will attract new minds and attention from American industry that has done so much for the airplane. For example, it is extremely unfortunate that we ever let development of the metal-class or metal-hulled airship lapse. The Navy has held self-imposed responsibility for airship development for some 30 years, and the whole country looks to the Navy for leadership and inspiration in this field.

Such inspiration, I am reluctantly forced to conclude, will never come as long as we persist in anachronistic domination of the Navy by aviators simply because they are aviators. While commendable and increasing tolerance of the airship is now evident, by itself that is not a sufficient solution. I do not see how we can expect perfection in armed-service unification until we are able to set our own naval house in order, and one of the most urgent needs therein is for straightening out the muddled, unrealistic handling of airships.

The Kerr Natural-Gas Bill

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES

Monday, May 8 (legislative day of Wednesday, March 29), 1950

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Real Reason for Kerr Bill Veto," from the April 20, 1950, issue of the Southeast Oklahoman, of Hugo, Okla., and an editorial from the Texhoma (Okla.) Times of April 20, 1950, relating to the so-called natural-gas bill.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Southeast Oklahoman of Hugo, Okla., April 20, 1950]

REAL REASON FOR KERR BILL VETO

We agree with the tenor of opinion in a Paris News editorial which condemns President Truman's veto of the Kerr bill which would have left independent producers of natural gas free of regulation, including price setting, by the Federal Power Commission. However, our estimate of Mr. Truman's reasons for the veto goes somewhat beyond that of the Paris News editorial writer.

"President Truman's veto * * * was in keeping with his determination to have everything regulated by the Federal Government," it was asserted. That point we would not argue, but we think that politics, pure, simple, and selfish, furnished basis for the Presidential disapproval. It adds up this way:

Oklahoma's Senator KERR, Texas' Speaker of the House SAM RAYBURN, and other Representatives and Senators to whom Mr. Truman, to put it mildly, is under deep obligation, had the President's nod before the bill ever was introduced. He did not, so far as we know, attempt to exert any influence against its passage by both Houses of the Congress. It was about the same bill as one advocated, we are told, during the preceding session, with administration assent.

If the President had been opposed to enactment of the Kerr gas bill by a Democratic Congress he could, very easily, have made his displeasure known earlier. And if the essence of the measure did not meet disapproval in a former session, it should not have been objectionable this year.

The tip-off is the statement that the President had been advised that enactment of the measure during this session would be bad political strategy. The truth, we suspect, is that both industry and labor lobbies, representing the North and East, turned the heat on and threatened political recrimination if Mr. Truman signed the Kerr bill. That is the President's most sensitive spot. He judges a lot of things by the yardstick of political expediency, far more, we believe, than is consistent with reasonable standards of statesmanship.

The Paris News made a significant point in the statement that, little by little, gas and oil are taking the place of coal, not only in railroading, but in many industries. Now, as is well known, the price of coal is high and must be kept high to meet the demands of John L. Lewis. If the coal-mine owners cannot meet competition they must curtail operations. Result, fewer coal-mining jobs and less money from union dues for Mr. Lewis and his fellow top brass union officials to spend. It is a safe guess that both the coal operators and the miners were side by each in urging the veto of the Kerr bill. The President needed only mild reminder of how much they did for him at the last election and how much they could do to him in the congressional elections this year and in the next presidential election.

Of the precise merits of the vetoed bill we are ill prepared to express opinion. Both Senator KERR and Speaker RAYBURN denied that it necessarily would raise the price of gas to northern consumers a red cent. They should know whereof they speak. Certainly neither would like to be proven wrong in the matter by subsequent events.

But we do sympathize with the bill's purpose to keep just one industry out of the clutches of a Federal bureau. Now it is reasonable to assume that northern and eastern industrialists and labor leaders, having persuaded the President to go with them, will, as the Paris News predicts, demand that the Power Commission keep down the price of gas, regardless of what it costs to produce it and put it in the pipelines.

If BOB KERR, SAM RAYBURN, and other congressional stalwarts from the Southwest accomplish no more, they have learned the exact depth of Harry Truman's gratitude and how far he can be depended upon to stand hitched when the heat is on. Situated as they are, they are constrained to suffer in silence—but they know the worst.

[From the Texhoma (Okla.) Times, April 20, 1950]

The Kerr bill, to exempt independent natural-gas producers from Federal control, excited more interest in the course of its passage through Congress, in the interim while President Truman considered whether or not to sign it, and since his veto than has any other piece of legislation in recent years.

It is significant that not a single nationally syndicated columnist took a stand in favor of the bill—all of them said the legislation was "against the public interest" and would favor "the big interests."

Most of the columnists, of course, write from New York or Washington and they identify "the public interest" with the pocketbooks of the residents of the cities of the East and North.

So far as the people of the Southwest were concerned, the bill was "in the public interest." But we're outnumbered—there are more votes in the overcrowded cities.

And we're condemned to stand by and see our irreplacable gas drained out from under us at a price set by a Government in control of those hostile to our best interests, drained to warm the inhabitants of eastern cities adjacent to the coal fields.

It sometimes seems that the people of the North and East regard the South and Southwest as subject provinces.

If the price can be set by the Government on gas as it comes from the ground, why can't the same be done with coal or iron ore or timber.

This natural gas isn't going to last long. The Panhandle Eastern Pipeline Co. is even trying to get permission to pipe gas from our field to Canada. Let us hope the attempt fails.

Rent Control

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1950

Mr. MULTER. Mr. Speaker, the House Banking and Currency Committee commenced its hearings this morning on the extension of rent controls. During the course of those hearings today the Honorable Tighe E. Woods, the Housing Expediter, made a very fine statement showing the absolute necessity for extension of rent controls on the Federal level. Even though my city and State have been removed from the jurisdiction of Federal controls, I heartily concur in all that Mr. Woods has said. I am sure that if my colleagues will examine this very compelling factual statement they will agree that we must extend rent controls for another year.

His statement is as follows:

I want to express my appreciation to this committee for the opportunity to testify on the need for extending Federal rent control.

I subscribe wholeheartedly to the purpose of the Congress as stated in the rent-control

law, namely "to terminate at the earliest practicable date all Federal restrictions on rents on housing accommodations." I have followed the directive of the Congress and have taken more than 500 decontrol actions during the last year on my own initiative. However, hundreds of communities still have an acute housing shortage and great hardship and suffering would result if rent controls were prematurely terminated. In my opinion, the need for Federal rent control will still be a national problem after June 30, 1950, the expiration date of the present act.

By 1941 we had made a start on working off our backlog of accumulated housing needs when Pearl Harbor diverted both materials and manpower to the war effort. At the same time the shortage was intensified in hundreds of areas by the tremendous influx of war workers and servicemen and their families. It was necessary to establish rent control in these areas to prevent the skyrocketing of rents. I should like to point out that rent control has always been confined to areas of extreme housing shortage and has never been in effect in a considerable portion of the geographic area of the country where it was not needed. At its peak 1946, it applied to about 16,000,000 rental dwelling units in 650 defense-rental areas.

During the 4 years of active warfare an average of less than 230,000 new dwelling units were started per year. Along with this restriction of new construction came the war boom in marriages and new families which added a greater and greater strain to the already inadequate supply of housing in the areas of shortage. Since the war, the initiative and energy of the building industry, stimulated by Government aids, have borne fruit so that by 1949 all previous building records were broken. Two contradictory conclusions have been drawn with respect to the volume of new construction. On the one hand, it has been argued that as a result of the high level of new construction there is an adequate supply of vacant housing to meet the demand.

On the other hand, it has been claimed that rent control retards new construction and should therefore be ended. Both conclusions are unwarranted.

The charge that rent control retards new construction is without foundation. There is no rent control on new construction. The Congress removed rent control in July 1947 from dwelling units newly constructed on or after February 1, 1947. This action was taken after repeated assertions that rent control was discouraging the construction of additional housing units. I have stated over and over again that I do not and will not advocate the reimposition of rent control on newly constructed units.

Has the existence of rent control on other than newly constructed dwelling units held back new construction? An all-time high of more than 1,000,000 nonfarm housing starts was set in 1949, and record-breaking new construction is continuing in 1950. And this tremendous building boom is taking place while Federal rent control continues in effect. The critical housing shortage created the need for such a large volume of new construction. The enterprise of the building industry, the economic resources of our country, and Government aids have made this record possible.

The existence or nonexistence of rent control has nothing whatsoever to do with the volume of housing produced. Let us examine what happened to new construction in some decontrolled cities and in comparable cities which have remained under rent control. In Spokane, Wash., in the 5 months following the decontrol of that city—August through December 1949—there was an increase of 72 percent in the number of new dwellings authorized over the corresponding months in 1948. However, in Seattle, Wash., which is still under rent control, there was an increase of 75 percent between the same periods. In Knoxville, Tenn., in the 7 months following decontrol, there was an increase of 9 percent in the number of new dwellings authorized over the corresponding months in the previous year, but in Nashville, Tenn., which is still under rent control, the increase was 198 percent between the same periods. In Tampa, Fla., in the 6 months following decontrol the number of new dwelling units authorized declined 15 percent below the number in the corresponding months of the previous year. Between these same periods the number of new dwellings authorized increased 121 percent in Shreveport, La., which is still under rent control. It is obvious that factors other than rent control determine the volume of new construction.

The claim that the large volume of new construction has provided an adequate supply of vacant housing is not borne out by the facts. The record-breaking volume of new construction is making a noteworthy contribution during this period of housing shortage. Nevertheless, the fact remains that the increase in the number of nonfarm households during the 1940's has exceeded the number of new dwelling units started by nearly one and one-half millions. Today housing vacancies are still at abnormally low levels.

Over-all vacancy rates are generally between 1 and 2 percent as compared with normal rates of 5 to 6 percent. Vacancy rates for habitable dwellings for rent are generally less than 1 percent and many of them are less than one-half of 1 percent. These conclusions are based on recent official surveys of vacancies made by the Bureau of Labor Statistics and the Bureau of the Census in 25 areas located in all regions of the country from coast to coast. Some of the over-all vacancy rates were as follows:

One and six-tenths percent in Detroit and Cincinnati;

One and three-tenths percent in Jacksonville and St. Louis;

One and one-tenth percent in Atlanta, Boston, and Indianapolis; and

Eight-tenths percent in Chicago, Kansas City, and New York City.

The habitable rental vacancy rates were between 0.5 and 0.9 percent in Buffalo, Detroit, Portland (Maine), Memphis, Jacksonville, Cincinnati, Portland-Vancouver, Nashville, New Orleans, Baltimore, and Los Angeles. The rate was 0.4 percent in Atlanta, Boston, Chicago, Indianapolis, Pittsburgh, New York City, and St. Louis. And it was 0.1 percent in Kansas City and Minneapolis-St. Paul. The vacancy rates for all 25 areas are shown in exhibit A which is attached to this statement and which I should like to have made a part of the RECORD.

With these low vacancy rates throughout the country it is clear that new construction has not yet caught up with the backlog of housing demand.

Newspaper ads and various unofficial surveys have been quoted as evidence that the housing shortage has ceased to exist. Some testimony to this effect may be given in the present hearings. I respectfully suggest that the committee examine, as I have done in a number of cases, the nature of the vacancies claimed. My experience indicates that most of the few vacancies which do exist fall into one or another of the following categories:

1. Units which have been rented or sold but are not yet occupied and are not available to anyone seeking housing.

2. Dilapidated housing which is not habitable.

3. Units under construction and not ready for occupancy.

4. Newly constructed units priced beyond the reach of the average family income.

5. Units undergoing remodeling, conversion to multiple units, or to other usage.

6. Rooms in rooming houses or otherwise unsuitable for family occupancy.

7. Temporary or condemned units scheduled for demolition.

8. Units where children are prohibited.

What do low-vacancy rates mean in terms of human suffering? They mean that many families are still forced to live in attics, cellars, shacks, Quonset huts, barracks, and other makeshift housing accommodations. Let me cite a few illustrations from the many hundreds that have been called to my attention.

The News-Journal of Mansfield, Ohio, on March 27, 1950, described the plight of a veteran who had written to the newspaper about his inability to find housing for himself, his wife, and their 2-year-old son:

"He explains that he is a war veteran, discharged from service in 1946, and that for the past 3 months he has been trying unsuccessfully to find a three- or four-room unfurnished apartment.

"He tells of one offer to rent him four unfurnished rooms for $135 a month and another at $22 a week or $85 a month, after which he says: 'People working in factories don't make $100 a week and therefore can't pay such high rent.'"

The following letter, dated March 14, 1950, was sent to the St. Louis Rent Advisory Board:

"After getting out of the Navy in January 1946, we had to live with my sister-in-law for 1 year while trying to locate a place to live. Finally we were forced to rent without utilities, and unfurnished, a two-bedroom, four-room apartment, signing a severe 3-year lease at $96.80 per month.

"Since that time we have tried to locate by advertising, driving around, talking to people, a place at a rental of less than $90 per month with no success.

"Our lease on the present apartment expires in June and renewal is on even more severe terms for another 3-year period. This we cannot possibly afford. For the past year we have been trying to locate a place without success. We find it incredible that anyone can publish the lie that there is ample rental housing in the St. Louis area."

The following is an excerpt from a letter dated February 28, 1950, from Revere, Mass., addressed to President Truman:

"I pay $16 a week out of my $34 a week pay. About half my pay is gone—and I have to feed, clothe, and pay dental, medical, carfare, and provide for us out of the remaining $18. I have to live in two rooms. I'm married and have a baby. I'd like to move to larger quarters—can't afford to. The prices jump up $10 a room, about. Thank God I had terminal-leave pay, a bonus, and now GI dividends to see us through or else we'd almost starve and go naked."

A letter from Philadelphia dated February 19, 1950, said:

"I am not a person of note, but I am a motner of two young children. Due to a heart condition, my husband is not a veteran. * * *

"For years I have tried, unsuccessfully, to rent a unit in one of the low-rent housing projects. No veteran—no unit. The apartment I am in is indescribable. To get another, I will have to dispose of my children. To buy a house is out of the question with my income. * * *

"I have no knowledge of any surveys or statistical records. Yet I know how those I meet in the store, trying to buy a meal for their families, have to struggle to pay rent as it now stands."

These are but a handful out of the hundreds of reports and letters in our files from cities, towns, and villages throughout the country which tell in terms of human misery and suffering the meaning of the statistics I have cited on the abnormally low vacancy rates.

I recognize that not all of the families who have been unable to find adequate rental housing have been compelled to live in makeshift accommodations. Some of them have

been able to obtain shelter by buying a house. In fact, there has been a decrease in the number of rental units in recent years as a result of a shift from tenant to owner occupancy. It has been argued that this change was caused by rent control, which is therefore responsible for the continued shortage of rental housing. This shift from tenant to owner occupancy would have occurred even in the absence of rent control. According to census reports, the number of tenant-occupied dwelling units in the United States decreased by approximately 2,000,000 between April 1940 and April 1947. However, about half of this decrease occurred in rural farm areas which have never been under rent control. The decline in urban and rural nonfarm areas was 6.2 percent. The decline in rural farm areas was 29.6 percent. In other words, the percentage decrease in rental units in areas which have never been under rent control was more than four times as great as the decline in controlled areas.

Factors other than rent control caused this shift from tenant to owner occupancy. It must be remembered that properties have been selling for two and three times as much as they would bring before the war. The opportunity to realize a big profit on investment has motivated many owners of rental property to sell. Rents never fluctuate as rapidly as sales prices and the incentive to sell would have existed whether or not there was rent control. Proof of this is found in the fact that most of the newly constructed units have been built for sale rather than for rent, even though there has been no rent control on new construction for almost 3 years.

From the standpoint of the tenants purchasing homes, there were three considerations: (1) The natural desire and the American ideal of home ownership; (2) in many cases shelter could be obtained only by purchasing during the shortage; and (3) increased incomes and liberal credit, especially to veterans, made it possible for many families to own homes for which they had long planned.

I recognize also that in the midst of this housing shortage some small families and single persons are occupying dwelling units which are large enough to accommodate bigger families or are suitable for conversion to provide additional units. It has been argued that the removal of rent control would free these units for occupancy by larger families and do away with the housing shortage. This argument assumes that landlords would prefer to rent to large families with children rather than to small families or single persons. It also assumes that the large families with many children would be better able to afford the higher rents which would follow decontrol than the small families and single persons.

It is common knowledge that most vacant units are offered for rent to adults only. In fact, when a landlord offers a unit for rent to a family with children it becomes a feature story in the newspapers. For example, the Boston Traveler of January 30, 1950, reports what happened when a landlord who is the father of three children advertised an apartment for rent headed "Children welcome":

"He contracted writer's cramp trying to answer the flood of mail the postman handed him and he hasn't finished the job yet.

" 'It was 323 all told, including telegrams and special deliveries,' he recalls ruefully.

"Eighty percent of the families who did have children he classed as in desperate circumstances—separated because of housing conditions, in crowded quarters or in quarters unfit for children.

"This conscientious man made a brave attempt to write to all 300-plus of the disappointed because he knows what it's like to be desperate. He had spent a whole year separated from his wife, and at that time, two children because of lack of living quarters."

It is well known that small families and single persons generally have lower expenses for the necessities of life than larger families with growing children. It is extremely unlikely that rents high enough to force a small family or single person out of a dwelling unit could possibly be afforded by a large family already living on a tight budget.

With respect to large units suitable for conversion, the present act and rent regulations provide for the decontrol of any conversions which result in additional self-contained family units. This offers every incentive to the remodeling of large units to accommodate a greater number of families.

We have started, under housing legislation passed by this Congress, to relieve the housing needs of low- and moderate-income families, but no substantial volume of housing may be expected from this program for some time. The bulk of new construction since the war has been priced to meet the needs of only the higher-income families. In large cities new units suitable for families with children generally rent for $85 a month or more. There is, therefore, no relief in sight for the millions of families who so desperately need housing.

In the face of our present acute housing shortage, there would be an intolerable rise in rents if controls were removed on June 30. Chicago landlords have already gone on record as to the size of rent increases they would put into effect in the absence of rent control. In a case which they recently carried to the United States Emergency Court of Appeals they contended that their evidence justified an increase in rent of 71.5 percent but insisted that the court order an immediate increase of 45 percent with the statement that the balance should come through the operation of economic laws at the end of rent control. These demands by the landlords of Chicago, where the over-all vacancy rate is less than 1 percent, show what would happen in our larger cities.

The danger of underestimating the amount of pressure which the housing shortage can exert upon uncontrolled rents is apparent in some of the cities which have been decontrolled. In 12 cities where it was thought that the housing shortage had eased enough to permit the removal of rent control and in 2 cities where State control was substituted for Federal control, recent surveys of rents were made by the Bureau of Labor Statistics.

The most significant figures in these surveys are those which show (1) how widespread the rent increases were after decontrol for the units whose rents were free to rise, that is, excluding units having continuous leases since decontrol and units individually decontrolled before area-wide decontrol; and (2) the average percentage increase for the units whose rents were raised. The surveys show that many cities had experienced widespread and large increases in rents within a few months after decontrol. In 7 of the 14 cities surveyed rents were raised for more than 50 percent of the dwelling units whose rents were free to rise. For example, in Dallas rents were raised for 67 percent of these units; in Knoxville for 61 percent; in Beverly Hills, Calif., for 74 percent; and in Omaha for 62 percent. The figures I have quoted represent the percentage of tenants who had to pay increases.

Of equal importance is the amount of increase these tenants had to pay. In eight of the cities the tenants whose rents were raised had to pay average increases of 26 to 41 percent. These increases averaged 41 percent in Houston and Beverly Hills; 35 percent in Dallas; 30 percent in Topeka and Eugene, Oreg.; and 26 percent in Knoxville, Jacksonville, and Oklahoma City. Average percentage increases in the general rent level for all units whose rents were free to rise are obtained by combining the rents which had not increased with those which had. These average increases were 20.5 percent in Dallas, 26.7 percent in Beverly Hills, 15.8 percent in Knoxville, and 14.2 percent in Omaha. The inclusion of units whose rents had not been increased in obtaining such general averages conceals the real hardship imposed by decontrol on tenants whose rents have been raised.

Moreover, the heaviest burden was imposed on the tenants occupying units renting for less than $30 a month. In Dallas 75 percent of these tenants had increases averaging 55.8 percent. In Knoxville 63 percent of these tenants had average increases of 36.1 percent, and in Eugene 57 percent of these tenants had increases average 34.6 percent. The Federal Reserve Board in its 1949 Survey of Consumer Finances shows the startling fact that families with incomes of less than $2,000 are paying 23 percent of their income for rent. A 35- to 50-percent increase in rent would cut drastically into their purchases of the other necessities of life.

A summary of the Bureau of Labor Statistics rent survey results for units whose rents were free to rise in all 14 cities is shown in exhibit B, which is attached to this statement and which I should like to have made a part of the record.

The present act does not permit the recontrol of any community which is decontrolled by State or local option. I suggest that the committee consider the possibility of authorizing local governments to secure the reestablishment of Federal control where rents get out of hand.

As the President stated in his special message on rent control "a sudden and simultaneous removal of rent controls on a national scale would precipitate a wave of exorbitant rent increases. Such increases would seriously reduce the purchasing power of millions of families. Since there are very few livable housing quarters available for rent within the means of low- and middle-income families, they would have no choice but to pay the rent increases demanded. These families are already living on tight budgets. The money to pay high rents would have to come out of their purchases of food, clothing, and other necessities. The burden would be most serious for the one-fourth of our families with income of less than $40 a week.

"A sudden and rapid increase in rents would affect adversely sales and employment in many industries and trades. In addition, public assistance costs would rise, increasing Federal, State, and local budgets. Public and private pensions for the aged would become more inadequate."

Letters we have received from decontrolled areas spell out in detail the hardships that result from exorbitant rent increases. The following letter, dated August 10, 1949, came from Dallas, Tex.:

"I am just the mother of a family which has been subjected to rent decontrol here in Dallas, and since our rent has been just about doubled, I find it rather hard to make ends meet, as the children start back to school next month and will require school supplies, clothes, lunch money, etc., and the funds will not be available. Since the decontrol, we have had to forego much, such as cleaning of dress clothes, even for church-going, shoes for the children, floral offerings for relatives' funerals, and many other things that gall one to the quick. Now, since a very close relative is ill in another city in Texas and needs my aid, I cannot even afford the train fare and will have to refuse to go to her side. All these things and many others are happening to the little people in rent-decontrolled cities.

"Dallas is strictly the big man's town, and the penthouse city council is utterly unaware

of the way others live, nor do they care, as they can never be touched by the trials and tribulations that we renters are subjected to.

"Thank you so much for listening to me, as it seems I just had to let off some steam somewhere, and I knew you would be sympathetic.

"P. S.—This decontrol situation will not help the juvenile-delinquency problem, either, as more mothers will have to leave their homes to go to work in order to supplement the family earnings."

This letter, dated March 8, 1950, came from four tenants in Danville, Va.:

"Since the abolishment of rent control in the last session of the Virginia Assembly, to become effective June 25, we, the undersigned, should like for you to have an idea of the effect it is going to have on the citizens of the city of Danville and also the State.

"This is going to create untold hardship and suffering among the mass of people because of the greed and unscrupulous tactics of the majority of the landlords. The landlords have lain in wait to gouge whomever they could as soon as the lids were off and have lost all sight of a reasonable profit on their investments.

"The landlords in this area seem to have the same idea, so there is no alternative of moving out and moving somewhere else where the rent will be more reasonable. The situation is general and people are frantic.

"We, the undersigned are occupants of a 12-unit apartment house composed of six 3-room apartments and six 5-room apartments. The three-room apartments, occupied by the undersigned, consist of three unfurnished rooms, very crude bath. The stove and refrigerators are not furnished. No painting nor other improvement have been made during the past 10 years except by the tenants. In 1943 at the beginning of rent control, these apartments rented for $40 per month. From 1943 to 1949, two hardship increases were granted under rent control, which made a total 20-percent increase. With the abolishment of State rent control, notices have been received by the undersigned that rent on the three-room apartments will be increased from $48 to $70 beginning in June. This one increase amounts to 45.8 percent, or an increase of 75 percent over 1943.

"We consider this completely out of all reason and know that the citizens of this city and this Nation cannot stand increases in such proportions when they are already so heavily burdened with taxes and the general high cost of living.

"We trust that you will submit this information to the proper authority as an appeal for relief for citizens who are being subjected to these scandalous and unwarranted increases."

The pressure of the housing shortage is further indicated by the attempts at unwarranted evictions and collections of illegal rents. The 1949 act restored the authority to control evictions. This authority made it possible to prevent about 75,000 illegal evictions during the past year. At the same time 134,000 eviction certificates were issued where the landlord had legitimate grounds for eviction. In 438,000 other cases where eviction certificates were not required (such as nonpayment of rent or nuisance) a simple notice of intention to evict was filed by the landlord and accepted without question.

In addition to preventing illegal evictions, other violations were cured in 242,000 cases. In 73,500 of these cases where essential services had been reduced, landlords were required either to restore the services or have their rents reduced. In cases where more than the maximum rent had been collected refunds to tenants and penalty payments to the United States Treasury were secured amounting to more than $7,500,000. Of this amount, about $5,500,000 was obtained by compliance negotiation and the remainder by court litigation.

While rent control prevents much suffering and hardship for tenants, it nevertheless permits landlords to secure all rent increases which would be justified in a normal rental market.

What happens if a landlord wants to modernize a kitchen or make some other improvement on his property?

He can get an increase amounting to the rental value of any major improvement, plus an extra allowance for increased costs. Furthermore, before he starts, he can find out exactly how much of an increase he will get.

Suppose a tenant rents out part of a dwelling?

The landlord can get an increase for additional expenses and extra wear and tear on his property.

What if a landlord was caught with a low rent on the date the maximum rent was set?

If a landlord is renting for less than other landlords were gettting for similar accommodations on the maximum rent date, he can get his rent increased to make up the difference.

What if a landlord has already received an increase, but still doesn't have much income left over after he pays his operating expenses?

He can get an increase in his rent to make sure that he has a liberal amount of income left over after paying all of his operating costs, including taxes and an allowance for depreciation.

How about the increase in the price of fuel or any other operating costs the landlord has to pay?

He can get an increase in rent to make up for higher operating costs like fuel, repairs, taxes, utilities, and other services. He thus has every incentive to keep his property in good repair.

Rents are not frozen under rent control. Since controls went into effect there have been 5,000,000 rent increases—half of them as a result of landlords' applications and half by 15 percent leases under the law.

During the period, April 1949 through March 1950, area rent offices processed 589,103 landlords' petitions for rent increases of which 448,120 were granted. In other words, three out of every four landlords who applied for a rent increase obtained it. The 448,120 petitions granted raised the rents for 915,074 dwelling units because in some cases a single petition secured rent increases for all the dwelling units in the building. The increases averaged 17.8 percent. Pending petitions constitute less than 3 weeks' work.

You will recall that the 1949 act directed that so far as practicable rents be adjusted so as to yield landlords a fair net operating income. This directive was carried out by the providing in the Rent Regulations for rent adjustments to give landlords a net operating income equal to 30 percent of gross income for small buildings (that is, structures containing less than 5 units) and equal to 25 percent of gross income for large buildings. Landlords need only report income and operating expenses for the current year. Net operating income is the amount of income the landlord has left over after paying all his operating expenses, including property taxes and in addition an allowance for depreciation. So far only about 80,000 petitions have been filed for rent adjustments under this provision. All but about 4,000 of these have been processed but only about 29,000 were found to be earning less than a fair net operating income. This would appear to be the clearest kind of evidence that there was no foundation to the claim repeatedly made bfore this committee in previous hearings that most landlords had little or no income left after paying their operating expenses and that many were operating at a loss. Similarly, the repeated claims that many landlords have been losing their properties as a result of rent control are not borne out by the facts. During the period of rent control, nonfarm real-estate foreclosures have been practically negligible and at the lowest levels of the past 25 years.

It was recognized that some landlords may have been adversely affected by increased operating costs even though they were still not eligible for adjustments under the fair net operating income provision. In order to correct such inequities, another provision for rent adjustments was added to the regulations. This provided for rent adjustments to compensate for increases in operating costs since the maximum rent date regardless of the amount of net operating income being earned. In accordance with the directive contained in the Housing and Rent Act of 1949, a landlord-tenant consultant was designated for every defense-rental area. These consultants have provided both landlords and tenants with information on the grounds for rent adjustments and have assisted thousands of them in the preparation of formal applications. Since April 1, 1949, more than 5½ million consultations and personal interviews have been held by the consultants and other specially trained area office personnel.

But what about the landlords who haven't had an increase in rent?

They have benefited in other ways as a result of the critical housing shortage.

Before rent control landlords customarily expected to lose a substantial amount of rental income each year because of vacancies. Now practically every landlord can count on a full 12 months' income from every rental unit. Thus, his total income has gone up, even though his individual rents have not been increased. Before rent control landlords had to compete with each other for tenants. As a result they had to offer special inducements, such as particular color schemes and other unnecessary redecoration. Now such expenses are no longer necessary. Finally, most landlords have benefited from the fact that the value of their property has doubled or trebled during the period of rent control.

The present Rent Control Act contains adequate safeguards to prevent the continuation of rent control in any locality where it is no longer needed. Any incorporated city, town, or village has the right of self-determination and can remove rent control if it finds that the housing shortage has eased to the extent that control is no longer necessary. Any State has the right of self-determination and can end rent control throughout the State or any part of the State if it finds control no longer necessary. Any local rent advisory board which finds that the demand for rental housing has been reasonably met can secure the removal of rent control upon the submission of its recommendation and substantiating evidence. Finally, the Office of the Housing Expediter is directed to remove rent control from any area where the demand for rental housing has been reasonably met. In keeping with this directive, I have taken 534 decontrol actions on my own initiative since April 1, 1949, thus decontrolling about 1,305,900 rental units. Incorporated cities, towns, and villages have exercised their right to decontrol themselves in 262 cases, involving about 1,039,400 rental units. Actions by 7 States removed controls from about 3,087,000 rental units. However, more than 2,500,000 of these units remain under rent control by State law in New York and Wisconsin. Six local rent advisory boards, by their recommendations, secured the termination of control for about 84,400 units. Local boards have also been called upon by city councils and State Governors

considering the possibility of decontrol for information on the local rental housing situation and for their recommendations. I have relied on them in the same manner in all cases where there appeared to be a possibility for decontrol. In areas which have been decontrolled local boards were retained to advise on any changes in the housing situation which might make recontrol necessary. In seven cases controls were reestablished on the recommendation of local rent advisory boards. To sum up, a total of 809 decontrol actions removed controls from an estimated 5,516,700 rental units since April 1, 1949.

Federal rent control still remains in effect, however, for about 8,650,000 rental dwelling units occupied by about 30,000,000 people. This estimate takes into account the number of units decontrolled, shifts from tenant to owner occupancy and the reverse, shifts from residential to other uses, additional units created by conversion, and demolitions and disaster losses. The 1940 census lists 3,521 incorporated cities, towns, and villages in 42 States in the areas still under rent control. All of these incorporated places have had the right to decontrol themselves since April 1, 1949. There are 92 cities in the United States which, in 1940, had a population of more than 100,000. One of these, Flint, Mich., has had local rent control and another, the District of Columbia, has a separate rent-control law. Of the remaining 90 major cities which were under rent control on April 1, 1949, 64 are still under Federal rent control and 8 more in New York and Wisconsin are under State control.

Federal rent control will cease in two additional States, Alabama and Virginia, before June 30, 1950. However, on June 30, 1950, there will still be more than 8,000,000 rental units under Federal rent control. There will still be about 3,400 incorporated cities, towns, and villages under Federal rent control in 40 States. There will still be 62 cities with a 1940 population of more than 100,000 under Federal rent control. Rent control will, therefore, still be a national problem after June 30, 1950.

The continuation of rent control for another year will provide an orderly transition to a free rental market and an orderly process of decontrol as each community meets its housing needs. As the President stated in his special message: "In contrast to the hardships and economic dislocations which would follow a sudden and premature termination of rent control, we have the sound alternative of continuing a policy which protects the tenant and at the same time is fair to the landlord. The welfare of our citizens, as well as the stability of our national economy, require that this policy be continued.

Sources: Surveys by the U. S. Bureau of Labor Statistics except for Nashville, Tenn., which was surveyed by the U. S. Bureau of the Census.

DEFINITIONS

1. Over-all vacancy rate: The "over-all vacancy rate" is the percentage which the number of vacant units found in the survey is of the total number of units in the sample. Included among the vacant units are any vacancies found among units under construction which have exterior windows, doors, and final usable floors in place, units already rented or sold but not yet occupied, units being held in estate or other litigation, units held for seasonal occupancy, and all available units being offered for rent or sale.

2. Habitable rental vacancy rate: The "habitable rental vacancy rate" is the percentage which the number of vacant habitable rental units found in the survey is of the total number of units in the sample. A unit is not habitable if its state of repair includes deficiencies in physical construction rendering it inadequate or unsafe as shelter, i. e., sagging of roof, walls or floors; holes, open cracks, rotted, loose or missing materials over a considerable area of foundation, walls, roof, floors, or ceilings; extensive damage by storm, flood, or fire; or several similar deficiencies each to a lesser extent which in combination render the unit inadequate or unsafe as shelter; makeshift or inadequate original construction. A vacant rental unit is one which is actually being offered for rent. A unit which is being offered for rent or for sale is considered a rental unit. A unit already rented but not yet occupied is not counted as a vacant rental unit.

Biggest Story

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the thirteenth article by Mr. Frank Waldrop on the infiltration of communism in our country:

BIGGEST STORY

(By Frank C. Waldrop)

The first Soviet government in the world was formed in the ballroom of a girls' school in Petrograd, Russia, on November 17, 1917. It wasn't much.

The leader of the new system was Vladimir Ulyanov, alias Lenin, a professional conspirator and revolutionary.

Soviet means merely group or council.

Soviets were to pull together the farmers, the factory workers and the rank and file of soldiers and sailors, unit by small unit, in the villages, towns, and cities.

Delegates from village soviets would go to higher soviets carrying their wisdom upward in happy spirals until at the top the rule of the saints would take care of every one back down the line.

Of course, in every soviet, there would be a Communist or so to plant the seed of Karl Marx's scientific socialism, the key to positive progress.

That was the theory. But not the reality.

While Lenin talked in the ballroom of the girls' school, the firing squads out in the streets were killing on sight a list of "enemies of the people."

This was supposed at first to be just an unpleasant preliminary to happy days for everybody surviving.

Little did the Russians dream that bad as things were, they would soon be worse.

For the list of "enemies of the people" kept getting longer, not shorter. The more who were killed the more had to be killed.

One bargain Lenin did keep. The German General Staff had sent him from Switzerland to the Russian border in April 1917, to do anything he could toward knocking Russia out of the war against the Kaiser.

The Germans were logical enough in their way. President Woodrow Wilson had jockeyed the United States of America in against Germany, so they undertook to lift the pressure from the east by any means they could.

Think what the world could have been saved if that chapter in the history of our times had never been written.

At any rate, Lenin formed his brand of government in Petrograd on November 7, 1917, and on December 5, 1917, he produced, like a rabbit from his hat, an armistice with Germany. To the war-sick Russians, anybody who could stop the murderous German gunfire looked like a savior.

But then came the problem of building the Soviet state on lines of scientific Marxist socialism, with the Communist vanguard leading the way.

That was something else. For the list of "enemies of the people" was now reaching down past the nobility and the aristocracy, past the big landowners and the merchants. It was beginning to blot out the doctors, the lawyers, the school teachers, the writers, and the independent-minded of any rank.

Instead of bread, land, and peace, there was disaster everywhere. People who owned cats kept them on a leash, so they could decide when it was time to eat.

And instead of peace anywhere, a whole series of swirling regional wars broke out. The war between Germany and the western powers ended on November 11, 1918, and soon thereafter the victors sent expeditionary forces to see what could be done about restoring orderly Russian Government.

But people were too sick of war, West as well as East, and so the expeditions soon came home again.

Memorable dates were:

July 16, 1918: The Communists shot the deposed Czar, Nicholas II, in a cellar at Ekaterinburg along with his family.

March 2, 1919: The Communists formed the Third International Congress of Communist Parties of the world. Their simple aim in life was to spy and campaign and propagandize in every nation to cause a world revolution at once.

They were blindly sure that what they were doing to Russia would be simple everywhere. They were not alone in the idea.

April 25, 1920: The Russian Communists opened war on Poland, in line with the above march toward world revolution. But it was a short-lived conquest that ended in a rout, for the Soviet system back home was breaking down as fast as it had been built up.

March 17, 1921: The "New Economic Policy," Lenin's admission that the Soviet state could not deliver the goods.

The NEP was nothing more that a retreat to private enterprise. And as long as it lasted the Russians ate better than they ever had since 1917. Industry even climbed back to prewar levels.

January 21, 1924: Lenin died, exhausted and a proven failure at government, but forever marked as a matter of intrigue and class warfare. Had the western nations kept their occupation forces in Russia until then, the Soviet experiment in the world would have stopped right there.

Biggest Story

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the fourteenth article by Mr. Frank Waldrop on the infiltration of communism in our country:

BIGGEST STORY

(By Frank C. Waldrop)

Two things saved the Communists in the chaos that swept Russia after 1913.

First, they knew exactly what they wanted and they stuck to it while all the other contenders for power switched and changed and fought one another.

The Communists from the start aimed straight for the gold and the guns. Their first gold they got from the Germans and that helped them buy guns.

And nothing adds to gold and guns, like guns and gold.

Second, they were as they remain today, the shrewdest judges of our age at making promises that excite giddy minds and hearts.

Politicians out of power are never limited in the promises they make except by their caution or their consciences.

The Communists, having neither and rolling the dice in the spirit of winner take all, hit the war-shaken people of Europe, Asia, and the Americas in 1913 with a propaganda of dazzling reach and style.

In every country of the world since time began, writers have all loved the melodramatic side of life. The more uproar, the more interest they take.

Why is that? Well, writers write to be read and readers like to read about the blood and fury, the captains and the kings, the disasters and the thunders, not the quiet side of peaceful progress.

Thus, as the Communists undertook in Russia the melodramatic enterprise of revolution plus an experiment in government frankly aimed at the overturn and capture of the whole world, romantic minds everywhere were agitated.

Over in the State Department, today, you can turn the dry, yellowing leaves of dispatches sent long ago and see the thing begin to unfold.

There was, for instance, the case of John Reed—Harvard, class of 1910. A brief departmental press release mentions him as a stowaway who left the United States without a passport and was found in the coal bunker of a ship as it put in at Abo, in Finland.

He had on him, so the message said "large sums of money, films and letters to important Bolsheviks," which surprised nobody, as Reed had been seen in Russia in 1917, had been one of the main organizers of the just-formed "Communist Labor Party" over here and had been indicted for sedition.

The messages did not add that John Reed, as a real Harvard man, would go on with the Communists in their move back from Petrograd to the ancient capital of Moscow.

Or that he would fire the excitement of easily agitated minds in the United States of America with a propaganda account of the revolution, entitled "Ten Days That Shook the World."

Or that he would die of typhus, like uncounted hordes of others and be buried in the wall of the Kremlin where Joseph Stalin rules today.

Or that his beautiful widow, Louise, would soon marry another young man who had been sent to Russia by Woodrow Wilson to observe and report.

Or that the second young man would quit his diplomatic job with the United States of America in disgust because nobody in the State Department cared for the message sent back by another of his exploratory delegation, "I have seen the future and it works."

Or that the second young man who had married the widow and had kicked up his heels, would one day return to Moscow as the first United States Ambassador to the Soviet Government of Russia.

Or that, within a year after becoming that ambassador, the second young man, no longer so young, no longer so pleased with what had once been called the future at work, would quit Russia disgusted and alarmed.

Or that by 1950, he would be one of the most determined voices in the United States of America, crying beware the future that worked—but the wrong way.

The name of the second young man was William Christian Bullitt, who has said of those far-off times:

"You cannot imagine the difference between the men who were in Moscow then and the ones who followed them.

"Jack Reed, Lincoln Steffens (who told Woodrow Wilson he had seen the future and it works)—all of them were the warmest-hearted, most out-giving souls that ever lived. They were men who aimed for good and only for good."

And so it may have been. But they were all talkers and writers and theorizers and they were the kind who can imagine a thing right before their eyes.

They were the kind who looked, for instance, at a plan for what was to be the biggest office building in the world, the Moscow Palace of the Soviets.

The palace got as far as a medium-sized hole in the ground, about 1928. It has never gone any further.

Yet, the Communist propaganda made it as real to the faithful as if they could ride up in the elevators to the very top of the tower that was to be the tallest in the world.

To the faithful that tower of dreams was real. The typhus that killed Jack Reed was hardly there at all.

The Help That Hurts

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wall Street Journal of May 8, 1950:

REVIEW AND OUTLOOK
THE HELP THAT HURTS

We've been talking with a small-business man, the kind that Washington professes to do so much worrying about.

He would seem to have reason to be cheerful. After dipping last year, his sales are climbing again. There's more demand for the sensitive equipment his firm makes to measure moisture in lumber, textiles, and paper. His customers also are doing better this year than last and they're more quality-conscious. So they're more alert to the need for moisture-measurers.

But our small-business man friend is perplexed. In the past few weeks he has traveled over about a third of the United States calling on customers. He finds among many of them what he calls an air of uncertainty. There's just a slight unwillingness to risk the money for new equipment though the customers want it and, generally, are making the money to pay for it.

Being something of an amateur reporter, our friend has tried to dig underneath that uncertainty and see what causes it. So far, however, he hasn't been able to put his finger on the cause.

That set this businessman to thinking about his own business and its prospects and problems. He sees a chance for quite a lot of sales, if this air of uncertainty could be blown away. To take care of much larger demand, however, he'd have to get more factory space, buy more equipment and perhaps double his 25-person payroll (evidence he's a small-business man).

That, in turn, directed his mind to one high hurdle—how much various governments take away from him before he can take any money out of his business.

Our small-business man has his factory in a California city, and here are the major taxes he has to pay: City license tax, city sales tax, city income tax, State sales tax, State corporate income tax, State corporate franchise tax, State use tax on materials for his products, State unemployment insurance tax, Federal social security (old age benefits) tax, Federal corporate income tax.

Then, assuming his business is good enough to provide some income for himself after these bites, he has the prospect of paying both State and Federal personal income taxes.

This has created just a touch of uncertainty on the part of our friend about any expansion. He wonders whether that isn't one of the things that bothers his small-business men customers. We wonder, too.

That brings us to the latest proposal out of Washington to aid small and independent businesses. President Truman has wrapped up into a five-point program several ideas that have been kicking around the Capital for a long while. The main points would:

Provide Government insurance of bank loans up to $25,000 each.

Permit the Government to charter "national investment companies" that would offer equity capital and long-term loans. They would be privately owned but Government-supervised.

Let the Government's Reconstruction Finance Corporation relax its collateral requirements on loans to small business.

Turn the management of this program over to the Government's Department of Commerce. That means putting the RFC in the Department.

The administration proposes, by this program, to help the small-business men by putting Government agencies and departments a little closer to their operations.

The two major points of President Truman's program are easing of loan requirements by the RFC and the setting up of capital and credit banks. The dangers of these two steps are obvious. Some small companies that borrowed from the RFC and later found they couldn't pay off are now in the hands of the Government. That could happen many more times under more liberal lending. It's true that the suggested "national investment companies" would be privately owned. But this proposal sounds very much like that incorporated in a bill submitted by Senator O'MAHONEY. In releasing the details of his bill some months ago, the Senator said:

"It is recognized that such capital banking corporations must be in a position to provide not only money but business guidance to small and independent business. It is contemplated, therefore, that the Federal Reserve Board and the Department of Commerce will collaborate to establish machinery within which the capital banking corporations will be able to provide such service."

It's easy to see, therefore, where that financing road leads—to a steady encroachment of Government into the affairs of small businessmen.

There will be lots of talk about how this help-the-small-business man scheme will be self-financing. But we can see the costs of administration piling up and the need for Federal funds to make up losses from loans that go sour. That means a further call on the taxpayer.

We've no doubt about the reaction of our small-business man friend from California. He can see that tax hurdle rising higher and higher. So what's the use of trying to make the leap and expand his business and provide more jobs. He might break a leg doing so.

For Equity in Local Elections

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. HARRISON. Mr. Speaker, under leave granted to extend my remarks in the Appendix of the RECORD, I include the following editorial from the Evening Star, Washington, D. C., entitled "For Equity in Local Elections":

FOR EQUITY IN LOCAL ELECTIONS

In approving a Hatch Act amendment to permit partisanship by Federal employees in nearby local elections, Congress has paved the way for more representative government in the enfranchised parts of the Washington metropolitan area. Under the Civil Service Commission's interpretation of the no-politics law, Democratic or Republican employees of the Federal Government could not run for local offices except in disguise—as independents. And independents in the past often have lost to nongovernmental candidates supported by one or the other party. This situation sometimes has placed Federal employees at a distinct disadvantage. And local boards and commissions may have been deprived of the services of exceptionally qualified citizens who were under Hatch Act restrictions.

Congress considered another development in reaching its decision to remove the restrictions for purely local politicking. This is the fact that the bar on Federal employees' political activities had tended to create nonpartisan organizations which had every appearance of being full-fledged political parties, except in name. Thus, Federal workers could be as active as they pleased in such a third-party movement, but were denied the right of campaigning under old-line party colors. Representative HARRISON, of Virginia, pointed out that the amendment will permit Federal workers to take part in local politics in the parties of their choice. They would still be prohibited, of course, from engaging in national political campaigns.

This will not prevent local communities from holding nonpartisan elections for certain offices, if that is the will of the voters. But, unless the entire election is to be on a nonpartisan basis, it is unfair to Federal employees to place them under handicaps not applicable to nonfederally employed residents. The amendment, therefore, is in the interest of a more equitable administration of the Hatch Act. And so, also, is the additional amendment giving the Civil Service Commission a wider choice of penalties to inflict on violators of the law.

United States To Pay Off Eight Billions of British Debts

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Arthur Veysey from the Washington Times-Herald of April 26, 1950, and an Associated Press dispatch on the same subject:

UNITED STATES TO PAY OFF EIGHT BILLIONS OF BRITISH DEBTS—PUBLIC O. K. SOUGHT FOR AGREEMENT

(By Arthur Veysey)

LONDON, April 25.—The United States will begin paying off Britain's sterling balance war debts within 6 months under tentative agreements, already reached, it was learned today.

The debts total more than $8,000,000,000. The chief creditors are India, Pakistan, and Egypt.

Negotiations for transferring the debt from Britain to the American taxpayers began last September and have continued in Washington and London.

CONGRESS IS HURDLE

The talks have been completed except for determining the method by which the shift of the debt will be presented to Congress and the American public. The negotiators refer to their present deliberations as a search for a formula.

For a while the negotiators planned to present the debt shift as "a final effort to put England on her feet."

However, they recently decided Congress or the American public might not be interested in "putting England on her feet" after paying more than $50,000,000,000 to that end in the last 10 years. So the current plan is to present the plan as a necessary battle against communism in Asia.

The negotiators agreed that unless something is done, communism will take over the rest of Asia.

HAND-OUT TO ASIA

They agreed also that the best thing to do was to hand out a considerable amount of money to certain people in Asia. Britain would like to hand it out, but doesn't have it. Therefore the bite will have to be put on the American public.

So far no decision has been made as to how much of the $8,000,000,000 the United States will assume initially. The actual sum will depend upon the success of the negotiators before Congress.

The British, recognizing the increasing unwillingness of Americans to continue handouts to Britain, are opposed to presenting the plan as a straightforward assumption of the British debt. They urge instead that Congress be asked for funds to fight communism in Asia.

SEPARATE TRANSACTION

In an entirely separate transaction the countries receiving the hand-outs would wipe out part or all of the British debt. The reduction in the debts would depend upon the amount of the American gifts.

The British continue to fight bitterly any suggestion that the American money must be spent only in America.

American financiers and exporters who have urged the Truman administration to take over the British debts have proposed such a restriction, saying it would not only benefit them but might be a plum to dangle in front of Congress and the public.

PLAN ON DEBTS SLAPPED IN SENATE

Cold opposition was raised in the Senate yesterday to Britain's proposal that the United States shoulder part of Britain's $9,000,000,000 debt to the sterling-bloc nations.

Three leaders spoke out vigorously against it and their position was believed to reflect a general feeling among lawmakers.

Here is what they had to say:

Chairman CONNALLY, Democrat, of Texas, of the Senate Foreign Relations Committee: "The British proposal is astounding. It is my view that the United States cannot and should not entertain the British plan."

Senator TAFT, of Ohio, chairman of the Republican Senate Policy Committee: "It is an extraordinary presumption on their part to ask us now to assume their debts."

Senator WHERRY, of Nebraska, Republican Senate floor leader: "I am not in favor of giving any further aid to Britain."

Long Beach, a California City Sings—A Municipality Music Minded

---

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1950

Mr. DOYLE. Mr. Speaker, Long Beach, Calif., fully observes National Music Week, May 7 to May 14.

Mr. Speaker and my colleagues, my home city, Long Beach, Calif., is nationally known as a city which sings. The people there recognize that a city which sings has less sin, sickness, and sorrow. So, amongst emphasis which its places upon the power and place of music in municipal experience, it always observes with emphasis and vigor National Music Week, May 7 to 14, inclusive. This present National Music Week is directed by Gladys Comstock Smith, whose great-great grandfather was Judge Nicoll Halsey. Judge Halsey was born in South Hampton, Long Island, N. Y., in 1782, and was a member of the New York State Assembly, and later served two sessions in the Twenty-third Congress of the United States, to wit, from 1833 to 1834. He was one of the Erie Canal commissioners.

I believe it is self-evident that the songs which a nation sings are not less important than the laws which their legislators enact. Music emanates from the souls and hearts of the "folks." Thus it is that I have come to believe that the songs of a people, and the poems which people love, have at least as much to do with their character, happiness, and their prosperity as do the laws which their legislators put on the statute books. For people sing out of their souls and out of their hearts. Permanent history is made out of the hearts and souls of people. What people sing, how they sing, and where they sing determine much history.

The people of Long Beach, Calif., believe it essential that people participate in recreational programs. They voted a special tax levy of 3 cents per $100, to set up a separate budget for recreation for its people. They created a recreation commission. They studied and ascertained that what people do in their leisure time, determines their real character and worth. So my city has become nationally recognized for its promotion of participation by the maximum number of people in items of music, drama, baseball, art, handicraft, roque, tennis, swimming, libraries, song festivals, community singing, and so forth, and so forth. I am pleased to call to your attention an article forwarded me which appeared under date of May 5, 1950 in a Long Beach newspaper. You will note that the theme of the week is "Our American Heritage in Music." I am informed that the distinguished great, great granddaughter of Congressman Nicoll Halsey selected the theme of the week.

When I had the pleasure of speaking with her at Easter congressional recess, about the place of music in the national experience she replied, "Congressman CLYDE DOYLE, we are grateful that in these United States of America every man, woman, and child have full freedom to express the joy or sadness of his heart in music; without fear of oppression."

So, Mr. Speaker, here is the news item about National Music Week in Long Beach:

Long Beach will observe National Music Week May 7 through 14. General chairman of the week's events is Gladys Comstock Smith, founder-president of the Guild of Women Composers and president of the Long Beach Presidents' Club. Cochairman is Harry R. Christensen, baritone, director of several Long Beach choirs and a member of the Kiwanis quartet. Mrs. Smith is a piano composer and poet. Clubs cosponsoring the week are the Guild of Women Composers and the Presidents' Club.

Our American Heritage in Music is the theme for the week and stress will be placed upon American music.

First offering of the week will be May 7 at 4 p. m., when Long Beach Chapter of the American Guild of Organists will sponsor a program in First Presbyterian Church. The speaker will be Rev. R. Merrill Jensen, pastor of Immanuel Baptist Church, who was a concert organist before going into the ministry. Dr. Emerson C. Cox is dean of Long Beach Chapter of the American Guild of Organists. The program will be provided by the music department of the host church.

Throughout Music Week a half hour pipe organ recital at noon will be given daily in First Congregational Church by members of the American Guild of Organists, as follows: Monday, Robert Douglas, graduate student in music at UCLA; Tuesday, Harry and Christine Thomlinson, ministers of music of Palm Springs Community Church; Wednesday, F. Raymond Parmelee, Pacific Coast Club organist; Thursday, Vivian Sutton, organist at Bethany Baptist Church; Friday, Dorothy Rankin Smith, from the music department of Jordan High School; Saturday, Wallace W. Roblee, instructor of organ at Redondo Beach High School.

On May 9, Allied Arts International will give a program of music and classical dancing at 7:45 p. m. in the YWCA auditorium. Franklin Pierce Chaney is president and Edith Emily Dane, vice president of the organization.

On May 10, the Woman's Music Club of which Mrs. B. Tuckley Thompson is president, is to have open house in Ebell Auditorium beginning at 1:30 p. m. where a spring concert will be given. In the evening, a concert will be given by four choral groups of the adult department of Long Beach City College under direction of Arne Zahl, including Mothersingers of Long Beach Council of Parents and Teachers; American Legion Auxiliary Chorus; Call of Church Choir, and Barbershoppers.

May 12 the Woman's City Club of which Mrs. Lucille Swenson is president, will have open house in the Masonic Temple, 835 Locust Avenue.

Mother's Day will be observed in conjunction with Music Week on May 14 when an evening concert is to be given in Convention Hall of the Municipal Auditorium under direction of Gladys Comstock Smith. Included will be manuscript numbers by members of the Guild of Women Composers. John Berry, violinist, will play and piano numbers will be given by George William Mack. Harry A. Christensen and a chorus of 200 singers from the Southern California Welsh Choral group will sing. The groups is sponsored by the Cambrian Society of Long Beach of which W. O. Williams is president and Ann Thomas, secretary.

Development of Irrigation in Nebraska

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1950

Mr. MILLER of Nebraska. Mr. Speaker, under permission to extend my remarks in the Appendix of the RECORD,

I include a résumé of the remarks which I made before the Loup River Basin Irrigation and Conservation Association, at Scotia, Nebr.:

THE DEVELOPMENT OF IRRIGATION IN NEBRASKA

It was 7 years ago, as a member of the Committee on Irrigation and Reclamation, that I asked the then Commissioner of Reclamation, Harry Bashore, who now lives at Mitchell, where the money and plans were for the development of irrigation, power, and soil conservation in Nebraska. I remember the Commissioner's reply. He said, "Dr. MILLER, there are no funds for Nebraska. We have to put the grease where the wheel squeaks the loudest." I replied, "Mr. Commissioner, I expect to do a lot of squeaking. Nebraska needs the type of surveys given other States." In other words, up to 1943, there had been no demands for a detailed study of the great water system of Nebraska, in order to determine how much water was available, what power could be developed and what lands could be irrigated. It was the resolution introduced at that time, and added to the Flood Control Act of 1944, which permitted the Bureau of Reclamation and the Army engineers to proceed with the present studies being made of the Niobrara, Platte, and the Loup Rivers.

To come under the Federal irrigation laws you must form a legal irrigation district under State law. Your survey plans and feasibility must clear the regional office of the Bureau of Reclamation in Denver, and your own State department of public roads and irrigation. It must get clearance through the Bureau of Reclamation, the Department of the Interior and the Budget Bureau before being presented successfully to the Committee on Reclamation in Congress. Then the project must clear the committee, both Houses of Congress, and be approved by the President. This seems like a long road but do not get discouraged.

The Reclamation Committee, of which I am still a member, has recently made some changes in the Reclamation Act. It makes more feasible some of the projects which heretofore could not comply under existing regulations. As you know, under irrigation laws, you originally had 10 years as the development period and then 40 years to pay back the principal without interest. The new proposed law extends the period of repayment. There are certain nonreimbursable items such as flood and silt control, recreation, navigation, and fish and wildlife that are not charged up against the project.

It has been the history of good irrigation projects that water applied at the proper time is a great stabilizer, and gives comforting assurance that this Nation can be well fed. It also assures the farmer a backlog of safety, security, and stability, not only to his family but to the community around an irrigation project.

Irrigation brings new wealth to a community. It brings new purchasing power and improved standards of living, not only to the farmer, but to the professional and business men living in these irrigated areas.

An outstanding example of the benefits which irrigation brings can be found in Scotts Bluff County where about 43 percent of the land is irrigated. The production in Scotts Bluff County, in 1944, was nearly six times that of 1910, when irrigation was just getting started. In 1940 the value of farm crops in Scotts Bluff County was double that of the next ranking county of the State. The population in Scotts Bluff County actually increased 405 percent between 1910 and 1940. There will be a further increase for 1950. The story of Scotts Bluff County can be repeated in a score of places in the Nation where water has been harnessed, and placed to work upon our soil. Putting these new lands into production through irrigation, means new wealth, new sources of taxes and better standards of living. We can create several Gardens of Eden in Nebraska.

Some of my colleagues from the East raise the question of why bring more land under cultivation when we now have a surplus of some crops. These surpluses have not always existed. We should remember that the population of the United States is increasing about two and five-tenths million each year. We can well have 50,000,000 more people in 20 years. They must have food.

The amount of cultivated land in the United States is limited. The development of irrigation projects is a long range endeavor. We ought to always look ahead in order that the people of the United States will have sufficient food for their needs.

As we find new industrial uses for agricultural products, I feel certain that the farm surpluses will not be plaguing the Nation. I doubt if we have ever had an oversupply of food. More often it has been the inability of the people to buy.

Since 1922 with the exception of 1 year, we had to import more farm products than we exported. The records will show that from 1934 to 1942 we imported, annually, on the average products from 50,000,000 acres in excess of our exports. These imports helped to cause the farm and general depression of 1929.

We are again approaching the position where we are promising the farmer high prices for his products, and on the other hand we are importing the same products at less than our American parity level to keep the farmer from obtaining a good price.

We have about 20,000,000 acres of land in the United States under irrigation. There are perhaps another 20,000,000 acres which, with the wise use of water, could be irrigated.

I am hopeful that the feasible projects in Nebraska can get through the blueprint stage and be ready for action in Congress by 1951. I am sure that I can defend the Nebraska projects as one which will bring not only new wealth, but will provide an expanding economy for generations yet unborn. We must plan, not for today or tomorrow, but for those who will occupy this land after we in this meeting have passed over the Great Divide. It seems to me that the cornerstone and very foundation of our country is that of developing our resources for the benefit of mankind. We have brave and hospitable people. Give them fertile soil, a sound government, and they will reach new horizons which have been denied to the present generation.

Peace or War in the Middle East?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. MULTER. Mr. Speaker, for months many of us in this House have been warning that the arms situation in the Middle East is getting out of hand. We have been urging our Government, especially our State Department, to take steps to stop the armament race between the Arab states and Israel and to persuade Great Britain to cease her arms shipments to the Arab countries. Unless that is done real soon, we may be faced with another conflict in the Middle East which would be more devastating and detrimental to the nations of that area and to the peace of the world.

Secretary of State Dean Acheson is now in Europe and, according to reports, he is scheduled to discuss the Middle East arms situation with British Foreign Minister Bevin during the coming days. The outcome of that discussion may mean peace or war for the Arab states and Israel, it may mean life or death to the peoples of the Middle East.

In connection with this matter, I desire to bring to the attention of my colleagues a very timely and excellent article by Roger Stuart, the noted Washington staff writer of the New York World-Telegram and Sun, in its issue of May 6, 1950. Mr. Stuart, one of the best-informed journalists in Washington on foreign affairs, visited the Middle East about a year ago and is well acquainted with the problems of that area. His article follows:

UNITED STATES MAY ACT TO STEM FLOW OF BRITISH ARMS TO ARABS—ACHESON PLEDGES TO TAKE UP ISSUE WITH BEVIN AS FEARS OF NEW WAR AGAINST ISRAEL INCREASE

(By Roger Stuart)

WASHINGTON, May 6.—Washington is seriously concerned that an arms race, already in progress in the troubled Middle East, may lead to another conflict between Israel and the Arab states, this time more devastating and costly than the last.

Indeed, it is due to oft-expressed fears by congressional leaders of such a development that Secretary of State Dean Acheson has agreed to take up with Ernest Bevin, British Foreign Minister, the whole question of arms shipments to the Arabs at the Big Three Conference scheduled to open in London Monday.

The Secretary's promise to do so was given to 32 Democratic and Republican Congressmen, who called on him to protest Great Britain's part in rearming the Arab countries. It was the first concrete evidence the State Department is more alarmed than it previously had chosen to admit.

As recently as 2 months ago, Assistant Secretary Jack K. McFall, replying for Mr. Acheson to a query from Senator HENRY CABOT LODGE, JR. (Republican, Massachusetts), asserted he was "happy to inform you that an analysis of information available to the Department indicates that no party to the Palestine dispute is making serious preparations to renew hostilities."

BRITISH FURNISH ARMS

Meanwhile, there was no hiding the fact—both the State Department and the British Government itself admitted it—that Britain was furnishing heavy arms, as well as lighter military equipment, to Transjordan, Egypt, and Iraq. No arms whatever were made available by the British to the Israelis, while the United States had consented to sell both Israel and the Arab states only such light equipment as could be used for internal-security purposes.

That the arms being sent by the British to the Arabs consist of such potent items as jet planes, tanks, and cannon, subsequently was conceded by Foreign Under Secretary Ernest Davies in the House of Commons. He declined, however, to reveal figures on shipments. He contented himself with saying merely that Britain was under treaty obligations to sell arms to the Arabs, but was not required to supply the Israelis.

Concern over the situation in the Middle East began to mount in Congress after the United Nations Security Council lifted its arms embargo last August. At that time both the United States and Britain declared they did not wish to see an arms race develop

in the Middle East. But while this country declined to permit shipments of any heavy armaments, Britain immediately began to increase her help to her Arab friends in building up their stock piles, even as the press in Arab countries renewed bellicose talk of a second round.

"The Palestine war is not yet over," screamed a Cairo paper, Akbar El Yom. "Egyptian blood which drenched the soil of Palestine has laid a path along which we are in duty bound to tread to clinch the victory for which our martyrs fought."

"We must all unite in strong opposition to Zionism," cried the Iraq Foreign Minister, "in order utterly to destroy it."

Coincidentally, the Egyptian Government, its Embassy in Washington revealed, approved the largest budget for "purposes of national defense" in the Nation's history. Part of the money, it was announced would be used to establish a heavy-ammunition factory, a light-ammuniton factory, "and will enable the Egyptian Government to open plants for the manufacture of airplanes."

One United States Congressman, Representative JACOB K. JAVITS, Republican-Labor, New York, returned from a trip to the Middle East last winter with information of Arab rearmament sufficiently alarming to cause him to appeal to Secretary Acheson. He recounted inflammatory stories he had seen in the Arab press and added it was his conviction that "an arms race between the Arabs and Jews in the Near East is being forced" by the British shipment of arms to the Arab states.

DON'T EXPECT WAR

His protest, however, elicited from Secretary Acheson only the assurance that the State Department did not expect a renewal of hostilities in the Arab-Israeli conflict, nor did it object to British arms sales to Iraq, Transjordan, and Egypt.

"There has most certainly been inflammatory and bellicose statements made in both the Arab and Israeli press concerning a renewal of fighting," the Secretary's reply to the New York Congressman said. "While such an attitude on the part of journalists is deplorable and harmful to the eventual establishment of good relations between Israel and the Arab states, under the circumstances, with bitter fighting only so recently terminated, it would probably be too much to expect that highly aroused passions should quickly cool.

"Some of the warlike pronouncements of officials of near-eastern governments," he added, "may well have been made for the purpose of domestic consumption."

ISRAEL WORRIED

That was in mid-January. Meanwhile, word reached Washington from Israel that the Government of that infant republic was genuinely worried. In economic straits itself, due to the cost of its recent war for independence plus the burden of repatriating more than 400,000 refugees from Europe, Israel was faced with two serious problems: (1) The stockpiling of arms by the Arab countries surrounding it, and (2) its own inability to procure arms in comparable quantities.

There was increasing evidence, too, that the Arab League, loosely wrought organization of the half-dozen countries which had fought Israel, was determined its members never should reach a permanent peace settlement with the Jewish nation, at least not on the basis of present territorial status. Indeed, at a recent meeting of the league in Cairo the decision was adopted to expel any member who entered into peace negotiations with Israel.

This was aimed primarily at Transjordan, whose King Abdullah had indicated a willingness to let bygones be bygones and to resume peaceful relations with its next-door neighbor.

SENATOR IVES PROTESTS

Repercussions immediately were felt in the United States, from whence much of the support had come for the establishment of Israel in the first place. By now dozens of Senators and scores of Congressmen were going on record in protest against continued British arms shipments to the Arabs. Typical of the many speeches made in Congress was one by Senator IRVING M. IVES, Republican, of New York, who declared:

"Today the very survival of this stronghold of democracy in the critical Middle East (Israel) is jeopardized by the inexcusable rearmament of its Arab neighbors, openly engaged in all-out preparation for a second round. Already staggering under financial burdens nearly too onerous to bear, Israel is compelled to enter into an armaments race which even further drains her sorely needed resources."

Finally, on March 28, a delegation of 32 Congressmen called on Secretary Acheson to discuss the whole middle-eastern problem, including the Arab League's reluctance to talk peace with the Israelis and the matter of the arms shipments by the British.

No punches were pulled. One of the delegation, Representative EDNA P. KELLY, Democrat, of New York, told Mr. Acheson:

"I am in disagreement with the policy of accepting England's arming of Egypt. I believe the unrest in this area can be overcome in three ways."

OUTLINES PLAN

The first of these, she said, was for the United States and Britain to develop a coordinated course of action limiting quantities of arms to be made available to both Israel and the Arab states. The second was for an agreement between these two great powers to cease further shipments after a balance of armaments had been attained. And the third, she insisted, was for the United States and Britain to undertake immediate and earnest efforts to reach an understanding and obtain permanent peace treaties between Israel and the Arab states.

Representative ABRAHAM J. MULTER, Democrat, New York, another member of the delegation, later told the House that in his opinion, as long as arms continue to be supplied to the Arabs by the British, peace in the Middle East will be a mirage.

It was at this meeting that Secretary Acheson agreed to take up all aspects of this situation with Foreign Minister Bevin at the meeting in London starting next week. Subsequently the fact that he had agreed to do so was confirmed to Senator SCOTT LUCAS, Democrat, Illinois, the Senate majority leader, by the State Department. As a result, Senator LUCAS declared on the eve of Mr. Acheson's departure for London:

"I have written the Secretary a letter commending him for that decision. I feel confident that I can assure the friends of Israel that the United States will continue * * * working to minimize all possibilities of the recurrence of conflict in the Middle East."

Ghosts From Tehran and Yalta

EXTENSION OF REMARKS

OF

HON. EDGAR A. JONAS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1950

Mr. JONAS, Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial from the Chicago Daily Tribune.

In very concise manner the editorial has epitomized the manner in which Earl Browder former head of the Communist Party of the United States influenced the shaping of policy of this Government in international affairs in 1942 and 1943, the full impact of which has not yet been felt.

BROWDER AND ROOSEVELT

Earl Browder's boast before the Tydings investigating committee that, as boss Communist in the United States, he reported during the war to Mr. Roosevelt confirms the existence of a Communist-New Deal working relationship which has long been obvious to anyone willing to recognize it. Senator TYDINGS, a Democrat, was not anxious to explore the details, nor did Browder tell all that he might, but he told enough.

Browder asserted that in 1942 and 1943 he gave information to Roosevelt which had an important role in reshaping American policy in China. He said that he was receiving military reports from Communist observers in China and relaying them to Roosevelt.

In turn, he said, Sumner Welles, then Under Secretary of State, gave him information to transmit to Mme. Sun Yat-sen, now a vice president of the Communist regime in China, and Welles and Lauchlin Currie consulted him at the State Department on American policy in China. Currie, administrative assistant to Roosevelt, had been dispatched to China by the wartime President on January 24, 1941, to make an economic survey of Chiang Kai-shek's Nationalist Government. Owen Lattimore, a professor specializing on the Far East, followed on June 29, 1941, as political adviser to Chiang by appointment of Roosevelt.

Lattimore has been charged by Senator MCCARTHY with having served the Communist cause in helping shape the State Department's China policy. Currie was named in 1939 by Whittaker Chambers, principal witness against the convicted Alger Hiss, as a fellow traveler who never went quite so far as to join the Communist Party, according to the notes of former Assistant Secretary of State A. A. Berle, read at the second trial of Hiss.

We find, therefore, that these two men, charged with playing with the Communists, were loaded on Chiang by Roosevelt, and we find that Browder was advising the State Department and the White House on what to do in China. At the end of an extended process, Chiang's Nationalist Government lies in defeat, and the Communists are triumphant over all of China. Anybody who believes that every effect has a cause can draw the suitable inference.

Now let us pursue Browder a bit further. In 1944 he published a book called Tehran, heralding the results of Roosevelt's first conference with Stalin, which had been held November 28 to December 1, 1943. Browder held that the Tehran decisions, which were wholly in Stalin's favor, should guide American policy in war and peace. The book contains fulsome praise of Roosevelt, who had gambled at Tehran on the theory that, by conceding Stalin everything and denying him nothing, Soviet cooperation would be assured in the postwar world.

On page 59 Browder said that Roosevelt's defeat for a fourth term in 1944 was the main hope for salvaging a negotiated peace to preserve a base for fascism. On page 106, in order to avert this fancied calamity, Browder recommended that partisanship in the election be suspended. On page 108 he urged that Roosevelt be drafted by popular demand, and on page 109 that the people must make Roosevelt's campaign for him.

"It must be a nonpartisan campaign," Browder said. Here we have some grounds to suspect that what has variously been called the bipartisan, nonpartisan, and unpartisan policy really owes its authorship to the man who then was boss of the Communist Party.

Browder certainly yielded to no one as a rooter for a fourth Roosevelt term, and after the election he claimed credit for Roosevelt's election, stating that Communist policies and work contributed essentially to the victory of November 7. The Yalta Conference, at which Roosevelt made further vast concessions to Stalin, among the most important of which was to give Russia strategic rights in China at the expense of Chiang's Nationalists, had been held by the time Browder made this boast, and it was acclaimed by him as unreservedly as were the results at Tehran: "Our interpretation of Tehran has been confirmed by Yalta."

Browder had great cause for satisfaction. Roosevelt had pardoned him in 1942 after 14 months in prison on a 4-year sentence for obtaining a passport to Russia by fraud and perjury. He had been acepted by Roosevelt and his circle as an unofficial adviser. The China policy he favored was in process of paying out with a Communist triumph. Roosevelt had greatly helped toward that result, and so had his pro-Communist agents.

Browder had returned these favors by making a scarcely disguised appeal for Roosevelt's selection by acclamation as fourth-term President. He contended that Communists had contributed heavily to Roosevelt's success, as was demonstrably true in New York State, where Roosevelt trailed 500,000 votes in the straight Republican-Democratic Party contest, but picked up 800,000 votes from the pro-Communist American Labor Party and the Socialist splinter Liberal Party, which had broken away from the Labor Party.

Looking back, it is clear that the association between Browder and the Communists and Roosevelt was one for mutual profit. Roosevelt's dividends were in domestic political support and success; what Browder collected was for the benefit of Soviet Russia and world communism, which were enormously aggrandized by the Tehran and Yalta agreements which shaped the future of eastern Europe and China.

Roosevelt died a month after Yalta. A little more than a month after that the Kremlin, through Jacques Duclos, French Communist leader, directed American Communists, who had masqueraded for the preceding year under Browder's leadership as a "political association," to reconstitute themselves as a revolutionary party. Browder was ditched as its leader. He had served Stalin well, but now that Roosevelt was dead and Russia had got from him everything it had sought, the new Soviet policy setting the stage for the cold war demanded hostility to everything American. Roosevelt's good friend, Browder, did not fit the requirement after his years of professing that Communists were merely advanced New Dealers.

The Case for and Against the State Department

EXTENSION OF REMARKS

OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1950

Mr. SAYLOR. Mr. Speaker, under leave to extend my remarks, I include an editorial which appeared in the Johnstown Democrat on April 26, 1950, entitled "The Case for and Against the State Department." This forthright and frank discussion of the matters which vitally affect the security of our country and the integrity of our Government should give each and every person who reads this article cause for serious thought about the matters discussed.

The editorial follows:

THE CASE FOR AND AGAINST THE STATE DEPARTMENT

President Truman has added his voice to that of Secretary Acheson in meeting the attack on loyalty within the State Department spearheaded by Senator MCCARTHY.

The difficulty about this whole business is that both sides are oversimplifying the issues, overstating their cases.

The picture is neither all black, as Senator MCCARTHY would have us believe, nor all white, as Secretary Acheson and President Truman would have us believe. There are a lot of gray hues.

A circumstance that lends itself to this extremism, on both hands, is the background of this Nation's attitude toward communism and Communists in years gone by.

From the vantage point of the Monday-morning quarterback, we in America have many mistakes in foreign policy to answer for.

Some of these errors were sincere, honest blunders of the type that will continue to be made as long as the human element is a factor in government. Perhaps, in some far-off, future day, when we turn over to mechanical-brain machines the formulation of foreign policy, we shall be able to arrive at the correct, the wise, the all-knowing answer every time.

On the other hand, some of these blunders were the result of dirty work at the cross roads. In the past, we have been led into erroneous conclusions because of the disloyalty and the subversive activities of a few experts and advisers. When intellectual crooks lead well-meaning men to false conclusions, however innocently on the part of the misled Government officials, grave errors can result, and do result. And those errors can be just as fatal as though they were made by subverted officials—under their own power.

The Truman administration now must realize this—although by some strange rule of politics, the present administration seems to think it cannot admit the truth publicly.

For example, mistakes were made at Yalta—by President Roosevelt himself—which will have tragic significance in our foreign relations for 100 years.

No one is trying to say that President Roosevelt was disloyal. But President Roosevelt, himself in ill health at the time, together with many of his principal advisers, were given a couple of bum steers on policy. And those bum steers, on top of which was piled boner after boner, finally resulted in the loss of China to the forces of communism.

These are skeletons in the Democratic administration's closet. And Mr. Truman is eager that the dust of that closet be not disturbed.

Other skeletons there are, too. Probably more than any of us on the outside know about. But there are a few which briefly have been exposed to public view, however fleeting.

Most dramatic of these, of course, was the Hiss case. And here the administration managed to stick its feet in its mouth. It was in the early phases of this exposé that the affair was described by President Truman himself as a red herring.

Secretary Acheson also managed to get himself out on a limb for Hiss. It certainly was not in the best of good judgment that Mr. Acheson stupidly announced that he did not intend to turn his back on Alger Hiss, even though the latter had been convicted of what amounted to treason.

Perhaps the less said about the Coplon case, the better—for the Government.

Then there was the case of Henry J. Wadleigh, a former State Department employee, who has confessed disloyalty, but has not been prosecuted because the statute of limitations ran out in the meantime. But, nonetheless, here was proved subversion within the State Department.

The Amerasia case, too, does not reflect credit upon past security practices of the State Department. In this affair, hundreds of top secret State Department documents were spirited out of the files and photographed. The Amerasia case, incidentally, likely will make the headlines again soon. New evidence has come to light which may make the FBI look like a bunch of chumps.

A loyalty program has been set up by the Truman administration. And we don't hesitate to say—on the basis of what we learned in Washington last week during an editors' meeting there—that in our opinion that loyalty program is working.

Now, of course, it's possible to say that the administration locked the door after the horse was stolen. And, to a degree, there is justice in this charge. But at least there is this advantage to present loyalty screenings. It's going to be pretty tough for anyone to steal any more horses.

That security for the future isn't enough to suit Senator MCCARTHY, and those who side with him in this controversy. As we see it, however, Senator MCCARTHY, by the tactics he has used, is running the grave risk of doing more harm than good.

Sure, root out the subversives. Sure, eliminate the poor security risks, due to moral turpitude. Sure, punish the guilty, when that can be done legally and within the framework of the Bill of Rights.

But don't burn down the school house, just because a teacher or two is suspected of being a bad security risk.

From a very practical and a very real standpoint, the United States State Department must be maintained as a going, functioning, effective concern—even while it is being cleansed.

The American State Department is an organization of 19,000 persons. The infected personnel within the State Department—even giving MCCARTHY the benefit of every doubt—was an infinitesimal fraction of 1 percent of the total personnel.

The vast majority of the employees of the State Department are loyal, sincere Americans who are earnestly trying to do the best job they know how to do at a time in world history when every bit of wisdom and coolheadedness is necessary if we are to win this ideological warfare—this "war that calls itself peace," to quote an ECA spokesman.

We do our State Department and our national welfare a serious disservice if we make that job any harder than it needs to be made. And we seriously doubt that the best way to catch spies and perverts is to give the impression that the State Department is overrun with them.

Senator MCCARTHY is a smart cookie. He's a smooth operator. As we listened to him, we were impressed by his abilities as an infighter. And he has kept it up long after most men would have collapsed from overexertion.

But this is inescapable: Clear away the wreckage of the entire McCarthy crusade, and you discover that he has not made one single charge stand up in its entirety. That's not a good record.

Even in the Lattimore case, the Wisconsin Senator's charges have not been borne out 100 percent.

Professor Budenz says he has been told that Lattimore was a member of a Communist cell. But Budenz says he does not know personally that Lattimore was a Communist. Nor was he willing to describe Lattimore as the top Communist spy in America; in fact,

Budenz went so far as to say that this charge by McCarthy was not correct.

So, Lattimore is not yet proved to have been a commie infiltrationist. And no matter what conclusions about Lattimore any of us may have arrived at individually, in this country a man is innocent until he is proved to be guilty.

Lattimore has not been officially connected with the State Department for 5 years or so. He prepared a memorandum or two for the Department, but so did dozens of other people—who were not suspected or accused of Communist leanings.

The more we think about this business, the firmer we are in these conclusions:

The Government has much to answer for in the past. The Government was not honest with the people of the United States in failing frankly to admit its past errors, made either through innocent but stupid fumblefistedness as the result of throat-cutting by trusted advisers.

The Government would be in a much more defensible position today—and able to withstand the McCarthy blunderpass attack—if it could come into court with completely clean hands.

However, much of what McCarthy is shooting at already has been taken care of—beginning back in 1947.

The danger of the McCarthy attack is that it breaks down morale within the Department, among the thousands of loyal Americans; interferes with the effectiveness of the Department in dealing with today's foreign problems, by diverting the time and attention of foreign policy leaders from their real job to the task of defending the Department; and, as a result of these circumstances, strengthens the Communist cause by weakening the effectiveness of our machinery to counter it.

On top of all this, McCarthy's tactics have made a mockery of democratic principles in his resort to the weapons of guilt by association and guilt by coincidence.

Altogether, it hasn't been a pretty performance.

It is one that we will look back on, some day, with misgivings, if not with shame.

A Day of Memory, Contemplation, and Study

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following editorial which appeared in the New York Herald Tribune of Sunday, May 7:

"THEIR WORDS THEIR MONUMENT"

"One does not," as Jewish tradition holds, "set up monuments for the righteous; their words are their monuments." Indeed, it is really so in all faiths; the monument is built out of what men thought, or suffered, or created in their time, and no memorial marker set up afterward can carry a greater content than that which is infused into it by the spirit of those to whose memory it is erected. It is for this reason, and in this tradition, that the Jewish Theological Seminary suggested May 7 as a day of memory, contemplation, and study which would provide a supremely fitting, if intangible, monument to the 6,000,000 Jews who perished in the frightful persecutions of the last dozen years.

The victims are too many to remember—except in certain hearts, still burdened with some tiny fragment of the tragedy—as the individuals which they were. But it was a culture which was crushed together with the lives of those who served it. It was a culture woven of many brilliant strands—the scientific criticism of the German Jews, the saintless of the Polish-Jewish tradition, the Talmudic scholarship of the Lithuanian tradition, and many more. The men and women are dead; but this, the product of their minds and consciences, lives and should be kept alive in their memory. This is the spirit of the May 7 observance throughout the country; this is the meaning of the memorial month of study set aside this year to the works of the Rabbi Akiba, one of the great Jewish spiritual teachers and an earlier martyr, at the hands of Roman savagery, of Judaism. Here is a truly living monument, intangible but enduring, and fully worthy of those whom it commemorates.

The Medical Services Team in Today's Defense Forces

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Richard L. Meiling, M. D., Director of Medical Services, Office of the Secretary of Defense, before the annual convention of the American Pharmaceutical Association, the Traymore Hotel, Atlantic City, N. J., Thursday, May 4, 1950:

THE MEDICAL SERVICES TEAM IN TODAY'S DEFENSE FORCES

It is a pleasure to spend this period with you and to discuss the current work of the medical services in the armed forces.

With the changes which have taken place in our defense forces during the past 3 years, it is not surprising that there have been some corresponding changes in the medical services which support them. These organic changes in our military forces were not just the result of legislation; they were a concrete reflection of the fact that concepts of warfare, and our means of defending ourselves in such a war, have changed radically. On all sides, we see evidence that man's scientific and mechanical achievements have thrust us into a new and challenging era. The plans of our military medical services must be revised in some respects if we are to keep step with the total defense plan.

The advances in the field of medicine and the allied sciences during the past few years have influenced the basis upon which modern medical defense plans are developed. Our ability to keep the fighting man in fighting trim has been vastly improved. Obviously the expanding importance of such things as the vaccines, serums, antibiotics—biologicals of all types—and a host of others means an even greater emphasis on the role of the pharmacist, whether in uniform or in civilian practice. It is a part of our broad mission of keeping the greatest number of soldiers, sailors, and airmen at combat-duty posts for the greatest number of hours.

Yet these same new advances have served to demonstrate again a trend in medicine which is fast becoming an obvious fact. That is the emergence of medical care as a team concept. The more we have come to understand the complex human mechanism, the more we have tended to branch off into special fields of investigation and therapy. We now are at the place where one of the biggest needs is to reform these many contributors into a cohesive working unit which will pool and concentrate their combined knowledge and skills upon the requirements of the medical problem and, where applicable, on the needs of the patient himself.

Let's take a look at the present-day military medical services and the organization with the Department of Defense.

The Office of Medical Services, of which I am Director, was established a year ago as an integral part of the Office of Secretary of Defense. The Director of Medical Services is responsible for establishing and controlling policies, programs, and standards of military medical services, and for exercising general direction, authority, and control over the administration and utilization of personnel and facilities throughout the health services of the Armed Forces.

The appointment of a civilian physician as Director of Medical Services is the application of the time-honored American concept of civilian control of the military policies in our Nation's defense organization. Through this we are achieving a close working relation between the professional men in uniform and their colleagues in civil life—a relationship which must be constantly maintained if the health programs of armed forces are to match the high professional level of care in this Nation generally.

The organization of the Office of Medical Services is built around three divisions, each headed by a general or flag officer of the three military departments.

The plans and policy division is a long-range planning group, working with such agencies as the Joint Chiefs of Staff and the Munitions Board for the development of major programs and strategic and tactical value.

The program coordination division is concerned with current medical activities of the three military departments at the broad program level. Major policy matters such as the joint utilization of hospitals and other medical facilities as well as joint utilization of highly specialized personnel, are developed and promulgated.

The third division is the Civil and Military Health Interrelations Division, which deals with a large number of agencies and organizations whose work is directly related to the health programs of the armed forces. These include such groups as the National Security Resources Board, American National Red Cross, National Research Council, United States Public Health Service, Veterans' Administration, foreign military medical services and civilian professional organizations.

The Surgeons General of the Army, Navy, and Air Force are responsible for the operation of the medical and health activities in their respective departments. They meet with the Director of Medical Services weekly or oftener as members of a military medical advisory council, to discuss the many medical and allied problems of the Armed Forces.

In addition, the chiefs of the several auxiliary corps in all three departments are regularly available to the Director of Medical Services and are consulted on their special interests and problems.

An important part of the policy-making pattern is the Armed Forces Medical Advisory Committee, under the chairmanship of Mr. Charles P. Cooper and composed of eminent physicians and dentists. This committee which considers major problems of health in the armed forces and which reports directly to Secretary of Defense Louis Johnson, represents some of the finest professional talent and experience in the Nation and has performed an outstanding service for the Defense Establishment and for the country.

In the time we have here this morning, it is not possible to discuss all the current programs of the military medical services, yet it seems important for us to briefly cover some of the most outstanding ones. They have a basic importance in the over-all health plans for our military forces and therefore are of direct interest to you in the pharmacy profession.

For some time we have followed the policy of joint utilization of military hospitals, which I mentioned a moment ago. This means that the man or woman who wears the uniform of any branch of service may be hospitalized in the nearest hospital which is equipped to care for him, whether that be an Army, Navy, or Air Force facility. This policy was dictated by the simplest principles of good management. For the sake of the patient, it is important that he be treated promptly—which means in the nearest hospital. For efficient utilization of professional manpower, the available personnel must be distributed in such a way that they may serve the greatest number of patients. For the conservation of time, money, and equipment, the wastage of unnecessary transportation must be eliminated. For all these reasons, joint utilization is the policy of the Department of Defense. It means conservation of critical national health resources in time of emergency.

Many of you are familiar with the outstanding job which has been and is being done by the Armed Services Medical Procurement Agency. This agency was developed by the military medical services some 20 months before the Unification Act became the law of the land. The organization, which serves as a joint agency for the procurement of all medical supplies, drugs, equipment, and related matériel for all three of the military services, is an excellent example of interservice coordination in action. The combined purchasing functions of the agency have been welcomed by the industries which supply are Armed Forces, by the military departments themselves, and by the hospitals, clinics, and other facilities which depend upon them for supplies.

Operating from one central headquarters in Brooklyn, N. Y., the Armed Services Medical Procurement Agency has simplified the maintenance of stock levels in all three departments; it has minimized the losses from out-dated drugs, biologicals, and so forth, and has done an exceptionally fine job in the testing and analysis of supplies and materials purchased for the Armed Forces. New programs are constantly being developed by this agency and the staffs of the military medical services to further improve the medical supply program.

As we pursue these and many other programs which make up the modern health organization of the Department of Defense, I am constantly impressed with the need for concerted team effort to reach our goals. The growing complexity of the demands which are made upon us in providing broad health services for the military forces demands the combined knowledge and effort of many individuals and groups. We cannot meet our responsibility in any other way.

For this reason I take this occasion to welcome the pharmacist to this team. I should like also to comment briefly upon the pharmacist in uniform, both as to the opportunities for him and the contribution which he can make to the defense team.

First, let us acknowledge that the actual number of assignments for full-time practicing pharmacists in the military forces is somewhat limited. The large hospitals require full-time pharmacists, as well as a few other installations. These are important assignments, yet they do not add up to a large total. There is a much larger number of positions throughout the services in which the officer's principal duty is the management of a pharmacy, with other Medical Department duties performed as part of the staff organization. Additional billets are provided in various technical control work and in testing and research laboratories, as well as for the development of specifications, requirements, and procurement.

But I should like to discuss with you today a concept which I believe warrants consideration by you and by your association. Under present organization and staffing arrangements, pharmacy officers are commissioned in the Medical Service Corps. From this corps must come the officers who will hold responsible posts throughout many phases of medical and allied work. It is in the Medical Service Corps that the military medical services must find able, responsible men to serve in hospital administration, research, and testing projects, medical supply, staff assignments, command duties within the medical services and a host of other vitally important duties.

For most of these assignments, there is no standard background of education and training. If you were responsible for choosing individuals for these important tasks, to whom would you turn? I believe you would seek men with a sound professional background, whose training and experience made them specially informed of medical needs and problems, and who by education, association, and knowledge were prepared to become key members of this medical team.

In short, I believe you would turn to the pharmacist.

To the pharmacist who finds a definite attraction in the military service, who derives a sense of personal and professional satisfaction from the stimulation of military medical problems, and who brings to his work a sense of devotion to the defense needs of our country, it is an attractive and gratifying career. The different interests of the individual officers can lead to a variety of assignments. This past week, I spent considerable time with the amphibious and airborne troops, in both water and airborne landing operations. The famed Eighty-second Airborne Division had five pharmacists "hitting the silk" with their respective commands. These officers, fully trained in the military problem of an airborne operation, were actually in the air and on the ground to supply the first phase of the professional medical care—an essential part of the medical teamwork. Today these officers are company commanders; tomorrow they will be staff officers, logisticians, mobilization experts, etc., in the field of medical military planning.

When the pharmacist extends his interests to broader fields of leadership, he is pursuing exactly the same path which other professional men take as they rise in their chosen field. What happens to the professional man who demonstrates his competence and earns a place of respect among his associates? He soon finds himself responsible for problems of management, of establishing relations with a variety of groups related to medical care, for taking leadership in his community—in short, for tackling and solving many problems which lead him far above the confines of his specialty.

This is the history of every professional man who has demonstrated a capacity for leadership. It is the course of real opportunity for the pharmacist in military service. The pharmacist is a valuable member of the health services in the practice of pharmacy—yet his true future lies in his opportunity to go on to more and more responsible posts.

Members of the pharmacy profession have demonstrated many times in our history that they are completely capable of handling large-scale responsibilities, both in civil and military posts. You are aware, no doubt, that David Henshaw, a practicing pharmacist of Boston, rose to a place of respect and distinction in our Nation when he was appointed Secretary of the Navy in 1843. Since that time, many of your profession have served with distinction in civic positions of great responsibility.

The need for men of outstanding ability is greater today than ever before. The Medical Service Corps will bear a heavy responsibility if this country should again be forced into an armed conflict. It looks to the pharmacy profession to provide both practicing pharmacists and a source of trained professional men who can respond to the demands for a variety of essential and responsible posts in the military medical services. Whether the pharmacist elects to serve in testing and research, in administration, in supply, in staff or command work depends upon individual preferences and aptitudes. Not every pharmacist is capable of assuming these command responsibilities, just as some civilian pharmacists are not able to extend their interests beyond the practice of prescription pharmacy. Yet for the pharmacist who has vision and the capacity for leadership, the military medical services offer a real challenge, broad opportunities, and an important place on the medical team which serves our Nation's fighting forces.

Recovery in Midcareer

EXTENSION OF REMARKS
OF
HON. JOHN KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled "Recovery in Midcareer," which was written by Mr. Boris Shishkin, Director of the European Labor Division, Economic Cooperation Administration:

RECOVERY IN MIDCAREER

(By Boris Shishkin, Director, European Labor Division, Economic Cooperation Administration)

April 16 was the halfway mark on the road toward European recovery. That date rounded out 2 years since the Organization for European Economic Cooperation was formed to unite 19 governments of Europe in a common task. Their task was to rally the countries of western Europe from their divergent, and often conflicting, economic paths, and guide them along an agreed course toward agreed goals of recovery and reconstruction, made attainable by a 4-year program of American aid.

It is not unusual to hear the European recovery program described as if it consisted entirely of dollars provided by American taxpayers and spent for the benefit of Europeans. Such a description is doubly wrong.

This program, envisaged by General Marshall and known as the Marshall plan, is made up of three elements. The first is self-help. As President Truman made it plain from the outset, the United States would help only those countries that help themselves. And no one can deny today that much of the progress from the economic disease and disaster of 2 years ago toward economic health has been due to the earnest, often desperate, effort of Europeans themselves, within the limited resources and disrupted lives of their own countries.

The second main ingredient of the ERP is mutual assistance. To be eligible for the American aid, European countries must help each other. And help each other they do. Age-long barriers have been swept aside in a mutual effort to stabilize currencies, to

facilitate the transfer of money and credit, to make way for expanding trade and to open barriers to migration of workers. Mutual efforts of several countries have been bent to improve production of food, to provide a common source of hydroelectric power and to establish European-wide exchange of technical assistance.

The third and the most important element of the European program is the availability of American dollar aid provided under the Marshall plan. For these are the dollars which Europe needs, and does not have, to buy raw materials, machinery, and equipment essential for the rebuilding of her economy.

Most of these things European countries buy from the United States. So that by far the largest proportion of the dollar aid to Europe is actually spent directly in the American market and provides the source of income for the American worker, farmer, investor, and trader.

But even the much smaller proportion of Marshall-aid dollars with which European countries make recovery purchases in Canada, Latin America, and other markets are eventually spent in the United States for the purchase of American goods. This is true because the receipt of these recovery dollars enables the other countries to buy from the United States products which they want but would not have otherwise bought.

America's aid to Europe is, therefore, not a charity. The fact is that during the last 2 years many American workers and farmers derived their employment and income from the production of export goods essential for European recovery, which Europe would not have been able to buy without the Marshall aid. At the level of some $3,000,000,000 projected for the third year of the ERP, nearly 1,000,000 American industrial and farm workers will receive employment due to the Marshall plan.

Yet the reason American labor has given solid support to the European recovery program has not been a selfish one. The heaviest contributor among others in the American community, the worker, has under written his share in the earnest desire to lend a helping hand to our neighbors in Europe in their time of dire need.

Along with his fellow Americans who also worked and fought for freedom in the war, he has known that a Europe impoverished and submerged in distress cannot resist Communist penetration from within or the threat of Communist attack from without.

The American worker has been willing to help Europe get up on her feet and start on the road to self-government, self-sufficiency, and self-respect because that is his road and because that is the road to peace.

What has the Marshall plan meant to the workers of Europe? At the halfway milestone of its progress, the European recovery program has already established a record of solid accomplishment in two respects most vital to Europe's workers.

Inflation was sweeping over Europe when the ERP began. The buying power of wages was dwindling from week to week as prices kept spiraling up, and black markets were gaining ground in many European countries. The Marshall plan has made it possible to check the most violent forces of inflation.

Uncurbed, inflation would have quickly reduced the masses of European consumers to starvation. It would have brought back barter and paralyzed productive activity. Today prices and currencies in western Europe have been generally stabilized.

When the ERP started, production in Europe was at a low ebb. Raw materials were lacking and could not be bought with inflation-ridden currencies. Many plants were down for the lack of fuel and power. Others needed machinery replacement parts and even simple tools. The program has pumped into the arteries of the European economy a flow of materials, machinery, and equipment. Provision of these critical industrial needs has made it possible to raise the production index 20 percent above the 1938 norm and maintain high levels of employment in the majority of the participating countries.

To bring to a war-exhausted continent a large measure of economic stability has been no mean achievement. To lift production volume from a low mark to one-fifth above the prewar level in the short space of 2 years has been a feat without precedent in the annals of Europe.

But the very progress of the program has brought European industry face to face with the demands for far-reaching change. Muscle-bound in custom, often obsolete in method and organization, industrial enterprise can no longer seek shelter in protected markets from the challenge of modern technology in production and distribution.

It has become clear that Europe cannot remain divided into a number of independent economic compartments and at the same time achieve an expanding market sustained by a rising standard of living. And the ERP countries have embarked upon the task of chopping down trade barriers in order to free the flow of commerce within Europe.

It has become equally clear that the old-fashioned methods of production, geared to high profit from limited output, cannot withstand the fresh winds of competition fanned by freer trade. Traditional methods are simply not efficient enough to enable European manufacturers to compete in the dollar market or to yield the low-cost products within reach of the mass of European consumers.

The ERP countries are now coming to grips with this problem. The vast reservoir of technical know-how accumulated in the United States—especially in the last decade—has been, for the most part, a closed book to many European industries. What is more, neither European employers nor European unionists have pursued the twin objective of high wages and mass production for a wide and competitive market which so largely has been the practice in the United States.

Today the ERP is opening this closed door to modern technology and providing European industrialists and unionists the opportunity to study the huge American workshop. It is likewise stimulating a brisk exchange of industrial experience and technology among the European countries themselves.

As a part of the new productivity drive in Europe, a number of countries are establishing national productivity centers where a competent native technical staff will coordinate the program, usually under the direction of a board on which management and labor are both represented. These centers, whose work is expected to carry on after the Marshall plan, will not only help bring modern industrial techniques within reach of the country's industry but will also make studies to help assure that the benefits of higher productivity are equitably shared and that high employment is sustained with a minimum of dislocation.

To meet the productivity program thus formulated by each country, the Economic Cooperation Administration is providing a number of forms of technical assistance. This aid makes it possible for teams of manufacturers, technicians, and trade-unionists to visit the United States and to have a first-hand look at the broad range of American industrial activity and labor-management relations. Groups from particular industries have been making more specific and detailed studies of organization and engineering of production in the related industries in America.

When these teams return to Europe they make their knowledge of new techniques available to wider audiences. In the meantime American teams of consultants are coming to Europe to study the technical problems of industries there and give advice based on the American experience.

As a part of this program digests are being prepared from the major technical publications in the United States, and samples of appropriate American products are being provided for analysis by Europeans. Aides in the training and retraining of workers to help them meet the requirements of new technology are also provided.

Such a comprehensive drive to increase the productivity of European industry is no easy task. In too many parts of the European industrial scene it will mean uprooting the deeply ingrown tradition of production limited to the requirements of a limited market. This has been made possible by fencing industrial enterprises and groups of enterprises within a solid wall of agreements, sheltering the producer against the risks of competition and protecting the less efficient producers in the cartel.

Where this economic pattern has shaped the growth of economic life, all segments of the community, including the labor movement, bent their practices to fit this design. In many European countries this restricted pattern still prevails. But industrial resources of Europe must be freed from its stifling grip if the living standards of the great mass of European workers are to be raised and if European products are to compete in the world market.

To become strong and dynamic the European economy must also have a mobile labor force. Yet European labor is traditionally static. In modern times the workers of Europe moved only when they fled—as they have fled hunger, privation, and religious and political persecution. With the exception of limited seasonal migration, there has been little movement from region to region, from country to country, from industry to industry. The European worker is wedded to his community and trade.

The obstacles to the free movement of workers in Europe are many. But the most important of all is the extremely acute housing shortage, which continues to plague virtually all European countries. Unable to move to new and better jobs or to jobs suitable for the particular workers' skills, a sizable proportion of European workers are not working on jobs for which they are best fitted and not getting the pay their skills could earn.

The ECA, in close cooperation with the OEEC, has already done much to increase the mobility of workers within Europe. Agreements have been reached to resettle the unemployed workers of one country in other countries offering employment opportunities. Cooperative programs have been developed for industrial training and retraining. Employment services of individual countries have established cooperative arrangements going beyond national boundaries. And a substantial beginning has been made to assist the construction of low-cost housing for workers near the jobs on which workers could be employed.

Utilizing the resources and the experiences of the ILO which has long been working on these problems, an enlarged program of technical assistance is being developed with added intensity. A beginning has also been made in the larger task of facilitating migration overseas—mainly to Latin America, Australia, and the dependent overseas territories of ERP countries—from the parts of Europe having a large surplus population.

Italy and Western Germany are two countries in which the problem of excess population is critical. Assistance to further migration from these surplus areas has already been provided under the ERP in Italy, and the ILO is looked to as a base for a

broader program of technical assistance to help European migration overseas.

If markets within western Europe expand, productivity increases and the real income of the mass of the workers is improved with the aid of the ERP, the prospect of sustained high employment in Europe will remain well assured. A large share of the responsibility for the attainment of these objectives rests upon the free trade-unions of Europe. It is up to the European trade-union movement to make sure that the benefits of recovery, increased productivity, and freer trade are shared equitably among the various groups in the economy.

Free trade-unions in Europe showed statesmanship and remarkable restraint in their wage demands during the period of inflation following the war. To these unions goes a large measure of credit for the winning of Europe's postwar battle against inflation.

The free labor movement of Europe today is ready to cooperate in a program to raise industrial productivity providing it is carried out within the context of full employment and in the framework of policy designed to translate the benefits of higher productivity into lower prices and higher wages.

Despite the bitter and insidious attacks from the Cominform, the European recovery program is succeeding by bringing vitality and stimulating a healthy flow of production and trade to western Europe. It is giving new assurance of growth and strength in a Europe only recently dominated by devastation and despair. A healthy and strong Europe arising upon the solid foundation of a vigorous productive effort need not fear the future.

Aided by the ERP and set firmly toward the objective of rising income and full employment, Europe will easily throw back the challenge of communism and give the lie to the prophecies of doom spread by the Communist agents.

We in America have a special obligation to keep the faith with the workers of Europe. They look to us in America for making good on a task well begun but which today stands only half done. It must be completed.

The structure of economic coperation we are helping the Europeans to build must be brought to its full completion in the next 2 years. Unfinished, it would make a failure of our purpose. Completed, it will stand forever as the pivotal structure in the larger building of a prosperous and peaceful world.

Home Demonstration Week

EXTENSION OF REMARKS

OF

HON. CHASE GOING WOODHOUSE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1950

Mrs. WOODHOUSE. Mr. Speaker, this first week in May is known as Home Demonstration Week and is a noteworthy occasion to at least 3,000,000 women who during the past year have taken part in a great homemakers' educational movement. These women, found in every county of the United States as well as in the Territories of Alaska, Hawaii, and Puerto Rico, are marking another milestone in their progress toward wiser and more skillful management of their homes.

You may hear about and perhaps see for yourself what a neighbor or friend has accomplished through this practical, down-to-earth method of getting and applying knowledge to family and home problems. Rural women are placing their achievements on exhibit during Home Demonstration Week.

The information and help needed to produce these results was obtained from some 3,500 home-demonstration agents. The agents are specially trained in the arts and sciences of homemaking and have direct channels to the resources of the land-grant institutions and the United States Department of Agriculture. They live in the county seat and belong to the community which they serve. Each is a member of the agricultural extension team which serves our farm areas and is supported cooperatively by the Federal, State, and local governments.

When added up, the results of the work of home-demonstration agents, in some 56,000 communities, is impressive. For example, some million and a half families improved their methods of canning, freezing, drying, or storing their food products. More than 200,000 increased the efficiency of their kitchens. Twice that number did some planting and improving of their home grounds with the advice and help of the home-demonstration agent. Statistics for family health, child training, clothing, nutrition and other fields of home economics are equally impressive. These achievements were made possible because nearly half a million volunteer local leaders willingly cooperated in attending special training schools and then took the information back to their own club or group.

Rural people have indeed been fortunate in developing such an educational movement which brings to women in their own homes all the newer knowledge in the arts and sciences of homemaking as well as the basic information needed for good family living.

At present more than two-thirds of the counties in the United States have home-demonstration agents. In the other counties, approximately 600 of them, the county agricultural agent gives women and girls some services in the field of home economics. I hope the system will steadily progress to the point where every county will have a home-demonstration agent—trained women to do the necessary teaching, not only in rural areas but in the urban communities as well.

I have seen home-demonstration work pay dividends in my own State. I have seen girls taught to design and make clothes for themselves and the members of their families. I have seen the help given women in combining unlikely material with skill and hard work to make their homes livable and comfortable.

Better homes have inspired women to extend their efforts toward improving their communities and their States. We are proud of their achievements in rural areas for they mean healthier, happier, more effective citizens.

But all homes are not in the country. We have homes in the city, too. City women are also faced with the problem of feeding and caring for their families, of making their homes more convenient and comfortable. The city woman, too, is eager to make the best home possible for her family. She wants to learn about labor-saving techniques for her homemaking tasks and to know about newer discoveries in science which might help her in caring for her family.

Some cities, notably Buffalo and Syracuse, N. Y., have retained the services of a home-demonstration agent since the First World War. A few other cities such as Baltimore, Md., and Portland, Oreg., have quite recently established a successful home-demonstration service for their residents. There are other scattered examples but they are few and far between. By and large, the woman in the city still does not have ready access to this practical, out-of-school education which she needs for her homemaking job—an opportunity which the rural woman in general does have.

I believe that this inequality should be corrected—that the time has come when city women too should have available the help of home-demonstration agents. State and local governments should be encouraged to provide such services in the same way as it is provided for rural people through the Cooperative Agricultural Extension Service.

Secretary of Agriculture Brannan paid a well-deserved tribute to the work of rural women during Home Demonstration Week. He told them: "It is in the home that great achievements in community life, in national life, and in the development of modern civilization itself have their inspiration and their stimulus. So, yours is indeed a challenging responsibility."

I am not unmindful of the excellent educational work done in the public schools by vocational teachers of home economics. They have approached the problem in a fundamental way with good results. But, in addition, a movement is needed in which the city homemakers themselves take the leadership.

On April 3, approximately 175 men and women, leaders in the rural communities of my own State of Connecticut, met at the University of Connecticut at Storrs to consider agricultural policy. One of the recommendations coming out of this conference asked that "more consumer education in foods and nutrition be inaugurated as soon as possible in urban areas" and suggested that "urban areas should have available educational work in foods and nutrition similar to that available to farm people."

This attitude on the part of rural people in one State is perhaps significant for the country as a whole.

The theme of Home Demonstration Week is "Today's home builds tomorrow's world." It is just as true that "tomorrow's world depends on today's home" meaning all homes, in the city, in the small town, on the farm.

President Truman in his message to rural women on the occasion of Home Demonstration Week said:

> Our homes are as important to the country as they are dear to each of us. Our homes are the basis of our democratic freedom. Most of our work is done with the home in mind. Home is where we turn the modern

wonders of science into better, healthier, happier living. Home is where we develop future citizens, and where we lay the foundation for community and world-wide understanding.

All of us can agree with the President on the importance of the home to the welfare of the Nation. The welfare and the improvement of the home is our concern. A practical education system has been provided for assisting homemakers in rural areas. It is past the experimental stage and now should be extended to homemakers in our cities.

Section IV of Current Appropriation Bill Is Impractical and Should Be Deleted

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. HOLIFIELD. Mr. Speaker, the problem of establishing some control over deficit and supplemental appropriations is a very important one, and a very old one as well, having plagued the Members of Congress from the earliest days of the Republic up to the present. We would all like nothing better than to do away with deficit appropriations altogether, but under the democratic system of government as it has developed in this country, this is hardly possible. In order to accomplish such a purpose, it would be necessary to have firm estimates of both revenues and expenditures, neither of which is possible. Much as we would like to know exactly what revenues will be available for appropriation under existing laws, it is impossible to see far enough into the future to determine with any great degree of precision what effect changes in the general economic situation may have upon tax receipts 6 or 9 months or a year from now.

Similarly, we would like to be able to make appropriations for the various departments and agencies of the Government on the basis of firm estimates of what it would cost to operate them through a 12-month period, but here again there are many variable and unpredictable factors. The Federal Government has, for instance, committed itself to paying the costs of administration for certain aspects of the social-security program. If a change in economic conditions causes an unforeseen increase in the number of persons applying for unemployment compensation, the administrative costs for this activity will increase and the Congress will be faced with the responsibility for paying the bill.

The number, size, and complexity of the problems of this character now confronting us, or that may confront us at any time in the future, almost staggers the imagination. There is the problem of veterans' benefits which have had a way, throughout the years, "of growing and growing the more as they grow older." The costs of national defense in a world in which peace is so uncertain cannot be estimated very far into the future or very accurately. Our vast foreign commitments, which are all a part of the defense picture, are subject to similar uncertainties. There are further uncertainties connected with public works, the volume and cost of which is bound to depend, to some extent, on the general economic situation. Even in an established undertaking like the post office, there are large areas of uncertainty. These situations all point to the urgent need of action on the part of the Congress itself to establish some sound and workable procedure for financial planning.

In the complicated social and economic structure of the present day, such situations as I have so briefly referred to, are bound to arise. As a result, we are confronted by a dilemma. On the one hand, as a matter of good financial management, we desire by every suitable means at our disposal to eliminate the necessity for deficiency and supplemental appropriations, while on the others, we are confronted by numerous emergency situations involving expenditures which are often necessary if the Government is to discharge its responsibility to its citizens. Many of these situations involve questions of human need. So far as I am concerned, I can see only one possible choice, when confronted by these alternatives. I firmly believe in the importance of good financial management, but when attempts at such management result in the paralysis of essential Government activities and in needless injury to individual citizens, I prefer to cast my vote for the continuous functioning of such services for our citizens. At an appropriate time, I shall propose an amendment covering these provisions of H. R. 7786.

The Bite Is On

EXTENSION OF REMARKS
OF
HON. EDGAR A. JONAS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. JONAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the timely editorial from the Chicago Daily Tribune of May 5, 1950. This pithy editorial points out the fraud to the taxpayers of this country in the financing of the Democratic political circus to be held in Chicago on Monday, May 15, by the Bureau of Internal Revenue having issued a ruling that contributions for financing the show are deductible items for computing income tax of the contributors.

The editorial is as follows:

SPONTANEOUS RECEPTION

The Chicago branch of the Pendergast party of humanity is out putting the clip on businessmen for $250,000 to lay red carpeting on the streets for Harry Truman on his coming 3-day visit. Truman is coming here to play politics with a brass band in behalf of himself, his party, and SCOTT LUCAS, his wobbling candidate for Senator. He says, and his managers say, that the stampede is wholly nonpolitical.

This is fraudulent enough, but the fraud is compounded when the boys in charge of his entertainment tell the businessmen they are soliciting, that any contributions to the New Deal kitty are deductible from income tax either as business expense or a gifts to a nonpartisan civic cause.

This view has been propounded by the Democratic chairman of the State racing commission and by another worthy who kicked through with $4,000 for Democratic campaigning, while his wife gave $2,000. Their precedent may be that the Democratic Party was exempted by its own Bureau of Internal Revenue from tax liability on the $420,000 proceeds of the cabaret performance highlighted by Truman's oratory at the $100-a-plate Jefferson-Jackson Day party round-up in Washington. This considerate ruling saved the Democratic National Committee from parting with 20 percent of the loot to the Public Treasury, although the Republicans had been nicked at that rate on a $1 box supper a few days earlier.

The Chicago pow-wow shapes up as an even more flagrant steal than the Washington job, and an added touch of shamelessness is that Republicans as well as Democrats are being subjected to the bite. A few State and city inspectors might be around looking for violations on their business premises should they prove reluctant to hold still. Still another scandal is that the National Guard is being routed out to march for Truman. Attendance is optional, but guardsmen sensitive to prospects for promotion may be expected to form ranks.

Barney Hodes has told the union bosses that their cooperation in routing out the rank and file for what he deftly terms a spontaneous reception will be appreciated, and cash contributions also are welcome.

In the degraded moral atmosphere of the times, incident to the ascension of the Fendergast-Binaggio-Truman mob, these sordid proceedings may not awaken too much revulsion, in the estimation of the mob. The Democrats have got away with so much that by now they may think they can get away with anything.

Let Her Go, Joe! Let Her Go!

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. O'SULLIVAN. Mr. Speaker, we hear so much mouthing these days from every conceivable source to the effect that free enterprise is fast going on the rocks because of the actions and the attitude of the great sponsor of the Fair Deal, President Harry S. Truman and his faithful cohorts.

If one gave the slightest credence to the moans and groans of reactionary Republicans and Democrats, both in and out of Congress, one would fancy that the long unemployed referees and receivers in bankruptcy were about to do yoemen service again as they did during the regime of the last Republican President, Herbert Hoover. It takes very little imagination if one believes the political bellyachers to hear the hoarse voices of the auctioneers as they cry the forced

sales under this Nation's last Republican national rule.

It therefore seems a bit strange and embarrassing to be sure to reactionary republicanism to find the press of the Nation reporting the tremendous prosperity of big business under the auspices of the Fair Deal.

If I were a reactionary Republican I would never open my big, lying mouth again until there was a slump in business, and if reactionary republicanism did that they would keep their mouths closed forever, or at least from here on out.

In support of my claim as heretofore made that big business is enjoying prosperity, the likes of which it has never before experienced, I quote the following from page 1 of the April 29, 1950, issue of the newspaper Labor, published in Washington, D. C.:

FAIR DEAL TOUGH ON GM OFFICIALS? NOT BY $8,000,000—HUGE BONUS EXPLAINS WHY THEY'RE SO ANXIOUS TO CUT TAXES ON RICH—SIXTY-ONE SHARE GIANT "MELON"—DISCLOSURE MAKES COMPLAINTS HARD TO UNDERSTAND; WHAT DO THEY WANT?

A move to limit income taxes is becoming the rallying cry for all kinds of lobby and propaganda groups in an effort to weld them into a single body bent on upsetting everything that the Fair Deal stands for. Their often-repeated complaint is that Fair Deal spending and socialism are ruining the country.

Some of the loudest complainers, and the heaviest contributors to the propaganda groups, are officials of the giant General Motors Corp. After General Motors reported record profits of $656,000,000 in 1949—the largest ever made by any corporation in a single year—many people began to wonder what they were complaining about, and how much it would take to satisfy them.

WHY THEY WANT TAX CUT

This week it became clear why they are so interested in efforts to put a limit on income taxes. For 61 top officials of the company were disclosed to be sharing a huge bonus melon for 1949 of better than $6,000,000 in cash, plus 24,338 shares of the company's stock, worth nearly $2,000,000 at present prices.

Uncle Sam, of course, will get quite a chunk of that in income taxes, but the company arranged to pay it in five annual installments to help the officials keep out of the upper brackets, so they can keep as much as possible.

The announcement certainly is not going to help their propaganda about the Truman administration making it tough for business to get along.

The bonus action had to be made public under regulations of the Securities and Exchange Commission, which requires that such information be given to stockholders. It was contained in proxy statements mailed to the company's 400,000 stockholders with notice of the annual meeting to be held in Wilmington, Del., May 19.

Charles E. Wilson, president, topped the list, with a total of salary, bonus, and director fees for 1949 of $586,100, which suggests that he has not suffered greatly from the Fair Deal. His salary and fees totaled $201,100, and the bonus was $308,021 in cash and 1,243 shares of stock. The shares were given an award value of $76,979, although at present market prices they would bring more than $100,000.

Next behind him were three executive vice presidents: Albert Bradley, who gets $511,225 all told; Harlow H. Curtice, $496,100, and Marvin E. Coyle, $496,000.

As further corroboration of the foregoing statement, I quote the following from page 1 of the May issue of the newspaper, The Voice of 770, published in Los Angeles, Calif.:

GM'S WILSON DOING WELL

(By Lewis Arlington)

Top pay for any corporation official in the United States last year went to Charles E. Wilson, president of General Motors Corp., who hauled in $586,100 in salary, director's fees, and bonus.

This was disclosed today in GM's proxy statement to stockholders announcing the corporation's annual meeting in Wilmington, Del., May 19.

The giant auto corporation not only broke all records in the pay it gave to one man, but also reached an all-time high in net profits in 1949. Its take was $656,434,232, the biggest profit ever made by any United States corporation and a 49 percent increase over its 1948 profit.

In announcing the company's profits earlier this year, Wilson modestly described 1949 as a year of "substantial achievement" and said that because of GM's gains "material benefits accrued to a large number of individuals as well as the economy as a whole."

The "material benefits" Wilson referred to were spelled out in the proxy statement issued April 22. The statement showed that GM's 61 officers and directors, including Wilson, shared among themselves a total of $6,035,248 in cash.

Exclusive of bonuses, their take represented an 18 percent increase over their pay for the previous year.

In addition to the over $6,000,000 in cash paid its executives, GM also gave them 24,338 shares of common stock, payable in five annual installments under its bonus plan. The company valued the stock at $61.93 a share. The shares on the New York Stock Exchange closed April 22 at $82, making their total value nearly $2,000,000.

GM tried to soften the impact of the disclosure of Wilson's 1949 haul by complaining that he would have only a little over $150,000 left after taxes. This is still almost 50 times as much as the average GM worker made last year before taxes. According to GM's own misleading payroll figures, which lump together earnings of upper-crust executives and hourly paid production workers, average pay for GM employees in 1949 was about $3,500. Government statistics show workers in the auto industry last year average $64.85 a week.

GM workers, who took a 2-cent hourly wage cut in March of this year, are demanding a 31-cents-an-hour package increase in current negotiations conducted by the United Auto Workers.

Wilson's total remuneration for 1949, when the 1,243 shares of common stock he received are valued at their April 22 price, was actually $610,947. Three GM executive vice presidents followed Wilson on the gravy train. They are: Albert Bradley, who received $511,225 last year; Harlow H. Curtice, $496,100; and Marvin E. Coyle, $496,000.

Other vice presidents who received big amounts are Frederic G. Donner, $411,300; Louis C. Goad, $411,100; Ronald K. Evans, $411,000; and Francis L. Burke, $311,000.

GM board chairman, Alfred P. Sloan, Jr., struggled through last year with pay of $48,600. The proxy statement noted, however, that as of February 28, 1950, Sloan owned 571,825 shares of GM common stock.

In a defense of the huge salaries paid to GM executives, Sloan said in 1946 that "the cost to the business of maintaining the highest available standard of managerial talent is relatively inconsequential."

"What such talent may create in terms of more job opportunities, better product values, and additional profits is most important," he said. "The penalty of any different approach might well involve, and, in fact, must eventually bring into question the effectiveness of the whole administrative structure of the business."

Mr. Speaker, the foregoing indeed is something for the apostles of doom and the prophets of gloom to cry over, so let her go Joe. Let her go.

As an old Polish housewife neighbor of mine was wont to say, "Cry your bucket full today and be dehydrated tomorrow, and then we will all get a rest from your insane, ill-warranted, stupid grief."

The Statehood Bills

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1950

Mr. BARTLETT. Mr. Speaker, the case for statehood for Alaska and Hawaii was restated this morning with force, clarity, and logic in editorials appearing in the New York Herald Tribune and the New York Times, and I take pleasure in submitting those editorials for the RECORD:

[From the New York Herald Tribune of May 8, 1950]

A CONVINCING APPEAL

The President's appeal to the chairman of the Senate Interior Committee, JOSEPH C. O'MAHONEY, urging swift passage for the bills admitting Alaska and Hawaii to statehood, is an able and convincing document on its own and is directed to a significant cause. Approved by the House, the two bills that would add a forty-ninth and a fiftieth State to the Union have been the subject of careful hearings in the Senate; and the time for action is definitely at hand. If anything could add to the general sentiment in favor of these bills, Mr. Truman's reasoned argument that admission of Alaska and Hawaii will "not only promote the welfare and development of the two Territories, but also greatly strengthen the security of our Nation as a whole," sets a final pinnacle upon the case for statehood.

This newspaper has maintained that both principle and expediency impel us to take the step. The history of the American Union is one of growing Territories being brought within the sustaining and stimulating framework of confederation; the tendency has always been to extend the hand in faith, rather than wait until population and economic development had reached a stage of fulfillment. Alaska with its hardy climate bids fair to breed a race of hardy and determined citizens. Hawaii may seem at first glance to present itself under a new aspect, but its distance across the open water creates no greater obstacles to union than the long overland routes which separated our early Western States from the settled East; and its admixture of racial strains is not basically dissimilar from that which we confronted in the old Southwest. As for the frequently repeated argument that, in the case of Alaska at least, the new State Senators would represent a disproportionately small constituency, Mr. Truman remarked with entire accuracy that this problem had been dealt with and disposed of in the Constitutional Convention of 1787.

The case for statehood does not rest, however, merely on ground of tradition and

precedent. The urgencies of the present strongly reinforce it. The need is for vigorous democratic communities at our western outposts, not only adding strength in their own right but as symbols of the continuing creativeness of the American experiment. The admission of Alaska and Hawaii at this juncture will permit the United States, in keeping faith with its past, to meet the challenge of today.

[From the New York Times of May 8, 1950]

THE STATEHOOD BILLS

President Truman is right in urging favorable action on the bills to admit Hawaii and Alaska to statehood. The measures have passed the House. Hearings on them have been conducted by the Senate Committee on Interior and Insular Affairs. What remains now is to bring them out to the Senate floor and adopt them. President Truman is obviously apprehensive lest they die in committee as did the Hawaii statehood bill in the Eightieth Congress.

The balance of argument on these measures weighs heavily in their favor. They are, we believe, enthusiastically endorsed by a substantial majority of the public. There is reason to suppose that if they can be brought to a Senate vote they will have the requisite support for passage. They can be defeated by inertia and the seasonal legislative log jam. If that is done the will of the public will also have been defeated.

The opposition to these measures comes down, eventually, to rather narrow partisan political grounds. This is not the proper basis upon which a question of such solemn magnitude should be decided. The status of these two great Territories is at stake. The judgment on that status should be one in statecraft, not petty politics. The Senate should get its chance to act, and if it does we believe that it will act wisely.

Repeal of Wartime Excise Taxes

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1950

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement, letter, and resolution of the International Union of Brewery, Flour, Cereal, Soft Drink, and Distillery Workers of America:

DEFINING ATTITUDE OF THE INTERNATIONAL UNION OF UNITED BREWERY, FLOUR, CEREAL, SOFT DRINK, AND DISTILLERY WORKERS OF AMERICA

The national coordinating committee of the beverage industry, composed of representatives of organized labor and of the alcoholic-beverage industry, held their first official meeting on March 23, 1950, in Chicago, Ill.

Joseph E. Brady, coordinator of the International Union of United Brewery, Flour, Cereal, Soft Drink, and Distillery Workers of America, CIO, was elected permanent chairman of this group and will direct its actions in conjunction with a board of directors. Paul E. Jorgensen, executive director of the National Licensed Beverage Association, was named secretary-treasurer.

Representatives of industry and labor who were in attendance pledged their full support to make the committee a strong and effective organization.

Much discussion centered around the Langer bill, S. 1847 (to prohibit the transportation of alcoholic-beverage advertising in interstate commerce). This legislation will presently be voted on by the members of the Senate Interstate and Foreign Commerce Committee in executive session.

A resolution was adopted by the committee which asks the Congress for an across-the-board repeal of all wartime excise taxes imposed by the Revenue Act of 1943.

The adoption of the resolution climaxed a day-long meeting in the Stevens Hotel held for the purpose of developing a coordinated campaign to combat any and all Federal legislation of a prohibition nature.

Brady stated that due to the high taxes placed upon the products of the alcoholic-beverage industry, bootlegging, moonshining, and other practices of the prohibition era are encouraged and are on the upward trend. Such illicit practices are causing the Government large losses of revenue. "As things stand now," he added, "the alcoholic-beverage industry is the Government's largest industry taxpayer and provides employment for approximately 1,100,000 workers. If these tax inequities placed against this industry are ever to be corrected, it will be necessary for us—labor and the industry—to work together in wholehearted cooperation and coordination. It is the only way we can impress upon the American people and our friends in Congress the seriousness of the possibility that this industry could be taxed out of existence."

To this end the committee's officers were authorized to contact the top level executives of the alcoholic-beverage industry, who, it is hoped, will lend their support to the undertaking.

Among those attending the Chicago meeting representing industry were: Edward T. Donahue and William W. Wadel of the Blatz Brewing Co., Milwaukee; Harold R. Thielecke, Wine and Spirits Wholesalers of America; Paul E. Jorgensen and Wendelin Kraft, National Licensed Beverage Association; Joseph A. Gollin and Jack Garvey, Schenley Distillers, Inc.; Roland S. St. Pierre, Licensed Beverage Industries, Inc.; Russell H. Hopkins, National Beer Wholesalers Association; and John Daly, Bronx Tavern Owners Association.

Representing labor were: Eric B. Bjurman, International Association of Machinists (independent); Roland J. Hidde, Wisconsin State Council of Brewery Workers (CIO); Fred B. Sweet, Hotel and Restaurant Employees and Bartenders International Union (A. F. of L.); Paul E. Maxwell, Glass Workers (A. F. of L.); Frank Poidl, Coopers International Union (A. F. of L.); and Joseph E. Brady, International Union of United Brewery, Flour, Cereal, Soft Drink, and Distillery Workers of America (CIO).

Congratulatory telegrams from organizations unable to send representatives to the meeting were read. Among these were messages from Repeal Associates, Washington, D. C.; Amalgamated Lithographers of America (CIO), New York; Pennsylvania Committee for Moderation and Law Enforcement; Distilled Spirits Institute, Washington, D. C.; Pennsylvania Federation of Fraternal and Social Organizations; and from Members of the Congress.

THE NATIONAL COORDINATING COMMITTEE OF THE BEVERAGE INDUSTRY,
March 31, 1950.

Hon. ROBERT L. DOUGHTON,
Chairman, House Ways and Means Committee,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: As chairman of the national coordinating committee of the beverage industry, I have been instructed to forward you the enclosed resolution.

This resolution was passed at a 1-day conference by members of the above-mentioned committee, meeting at the Stevens Hotel in the city of Chicago on March 23.

The national coordinating committee of the beverage industry requests that this resolution be given consideration by the House Ways and Means Committee.

This committee is composed of representatives of both labor and industry, and the members who were in attendance and who cast their vote favoring this resolution are as follows:

Representing industry: Edward T. Donahue and William W. Wadel, of the Blatz Brewing Co., Milwaukee; Harold R. Thielecke, Wine and Spirits Wholesalers of America; Paul E. Jorgensen and Wendelin Kraft, National Licensed Beverage Association; Josh A. Gollin and Jack Garvey, Schenley Distillers, Inc.; Roland S. St. Pierre, Licensed Beverage Industries, Inc.; Russell H. Hopkins, National Beer Wholesalers' Association; and John Daly, Bronx Tavern Owners' Association.

Representing labor: Eric B. Bjurman, International Association of Machinists (independent); Roland J. Hidde, Wisconsin State Council of Brewery Workers (CIO); Fred B. Sweet, Hotel and Restaurant Employees and Bartenders' International Union (A. F. of L.); Paul E. Maxwell, Glass Workers (A. F. of L.); Frank Poidl, Coopers International Union (A. F. of L.); and Joseph E. Brady, International Union of United Brewery, Flour, Cereal, Soft Drink, and Distillery Workers of America (CIO).

I would like to call to your attention the fact that the participating labor organizations on this committee at the present time represent over 1,000,000 union workmen and that some of the organizations representing industry are of national scope.

Very sincerely,

JOSEPH E. BRADY,
Chairman.

CINCINNATI, OHIO.

RESOLUTION ON THE REPEAL OF WARTIME EXCISE TAXES, BY THE NATIONAL COORDINATING COMMITTEE OF THE BEVERAGE INDUSTRY

Whereas the Seventy-eighth Congress did pass legislation known as the Revenue Act of 1943 which placed additional taxes upon many articles of commerce; and

Whereas the Seventy-eighth Congress did pledge to the American people that these wartime excise taxes would be repealed 6 months after the cessation of hostilities, and that the war has been over for nearly 5 years; and

Whereas these added wartime excise taxes were to be of a temporary nature and were imposed to curtail consumer purchases during wartime; and

Whereas said wartime excise taxes place an unequal burden upon working people and others of limited income and has a depressing effect upon all industry, thereby aggravating unemployment and business recession, particularly in the industries affected by such taxes and their allied industries; and

Whereas legislation has been introduced to repeal all wartime excise taxes of the Revenue Act of 1943 with the exception of the alcoholic-beverage excise tax of said Revenue Act; and

Whereas the alcoholic-beverage industry is the Government's largest industry taxpayer, having paid to the Federal, State, and local governments the enormous sum of $26,823,255,944 from 1933 to 1948; and

Whereas the alcoholic-beverage industry and its allied industries give employment to approximately two and one-half million workers; and

Whereas due to the high excise taxes placed upon the products of this industry, bootlegging, moonshining and other practices of the prohibition era are encouraged and are on the upward trend, thereby causing the Government large losses of revenue; and

Whereas the repeal of all wartime excise taxes of the Revenue Act of 1943 would greatly stimulate business in all industries upon which they are now levied: Now, therefore, be it

Resolved, That the National Coordinating Committee of the Beverage Industry hereby respectfully requests that the Congress keep its pledge to the American people by repealing each and every one of the unfair and discriminatory wartime excise taxes of the Revenue Act of 1943; and be it further

Resolved, That the House Ways and Means Committee, and all Senators and Representatives be advised by written communication or other means of this action.

This resolution passed this day, March 23, 1950, by the national coordinating committee of the beverage industry, at Chicago, Ill.

Improved Health Standards

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks of Admiral William H. P. Blandy, United States Navy, retired, president, Health Information Foundation, at annual convention, American Pharmaceutical Association, Atlantic City, N. J., May 4, 1950:

In the few months since my retirement from the Navy and my appointment as president of the Health Information Foundation, it has become increasingly clear to me that—barring brief periods when we have been the victims of severe epidemics, like influenza and polio—there has been no time in our history when more popular and professional attention has been centered on health questions.

Our newspapers and our magazines are filled with news and commentaries on health. More and more people are joining organizations like Blue Cross and Blue Shield. New associations are being formed to fight specific ailments—like heart disease and cerebral palsy—to take their places with the organizations fighting cancer, tuberculosis, polio, and other diseases. There are some 20,000 voluntary agencies in the United States, in addition to Federal, State, and county agencies, which are concerned to one degree or another with health. We are striving to encourage the enlistment of more doctors, more nurses, and more technicians in the fight against disease. We are building more hospitals. We are discovering new drugs. States and other areas which have fallen behind in the health parade are striving to catch up.

All of these things—the news stories, the new agencies, the recruitment drives for nurses, the rapid expansion of Blue Cross-Blue Shield—and many more which I have not time to mention—mean one thing above all others. The people of the United States have undertaken a crusade to win for themselves better health standards. They want better health. They are determined to get it. And, in spite of all the hurly-burly confusion which goes with such a high rate of activity, they actually are getting better health.

Any review of health progress during 1949 which you might pick up would convince you that the people of the United States are going ahead full steam to improve their health standards. There is no sign during 1950 that this rate of progress is slowing down. It seems to be picking up.

It is estimated, for instance, that during 1950 a total of 14,000,000 persons will be X-rayed to see if they have tuberculosis. There were 10,500,000 such X-rays in 1949. And, incidentally, the tuberculosis rate per 1,000 of population was 45.8 in 1940, dropped to 30 in 1948, and was 26 in 1949.

The success of tuberculosis detection on a mass scale has been such that there is now a movement on foot to put into action a multiphasic screening program for case detection of such other chronic diseases as syphilis, diabetes, anemia, heart disease, high blood pressure, and eye and ear defects. It is contended that mass testing for chronic diseases can be accomplished expeditiously through the use of rapid diagnostic procedures. And when we consider that 5 out of every 6 hospital beds are occupied by the chronically ill, we can see the importance of early detection.

It may be that in our zest for better health standards we are biting off a rather large piece with such mass testing. It won't be cheap and sometimes, you know, you have to decide whether you want a new car or a new television set. But, in the field of health, I would rather see us try to get too much than too little.

We have accomplished so much, here and there in our huge country, by applying the fundamental virtues of common sense and Yankee ingenuity that I should like to cite a few instances of acomplishment in the health field on a local scale and point out to you that—with the application of a little more common sense and a little more Yankee ingenuity—each of these accomplishments could be duplicated elsewhere. I grant that in many cases we would have to make adjustments for local conditions, but I doubt very much that a problem which has been solved in Wyoming cannot be solved, by similar methods, in any other State, allowing for the natural differences of geographic and economic conditions and for variations between those States which are predominantly urban and those which are chiefly rural.

All over the country we hear the cry that more doctors are needed in rural areas and too many are crowded in the big cities. A great portion of the State of Kansas is about as rural as a State can be and Kansas needed doctors very badly in its farm centers. It was a serious situation, as it still is in other rural areas, but Kansas responded with an answer. All over Kansas, in sections where doctors were badly needed, the people have been baiting doctor traps. When you want to catch a mouse you set up a situation which will attract mice to where you want them. In Kansas they have done just that—except that they wanted to attract doctors to rural sections of the State. People who knew the situation in Kansas analyzed it this way. Any young man of ordinary income who decides to become a doctor has a mighty expensive road ahead of him before he can support himself. Medical education is just about the most expensive kind there is. When the young doctor is finally ready to go into practice he needs access to a lot of expensive equipment—especially diagnostic equipment. He has been trained to use modern machines to diagnose illness. The old family doctor who knew measles by his sense of smell has given way to the highly-trained product of our highly efficient, up-to-date medical schools who feels secure in his diagnosis only when he has checked his judgment against the X-ray, the electrocardiograph and other diagnostic devices which were not available to many doctors a few years ago. Very naturally, they gravitate to the larger cities where the diagnostic facilities they have been trained to use are available to them.

Informed men in Kansas knew about this situation and they devised a way to meet it. In small town after small town—and I am speaking of places like Mankato, Kans., which has a population of 1,500—the townspeople got together and raised or pledged funds to buy the kind of equipment which would attract doctors to their communities. The last figure I heard was that 150 doctors have settled recently in Kansas towns which were sorely in need of medical aid and which supplied the equipment needed to bring medical aid to them. Furthermore, I understand that many more are waiting to settle in other Kansas communities. The doctors, incidentally, have not been too fussy about the appointments and decor of the places they are willing to work in. In these Kansas communities some of them have set up their offices in converted storefronts—but those storefronts have been equipped by the townspeople with the kind of tools that the modern doctor has been trained to use—and at relatively low cost.

That is what I mean by baiting doctor traps. Every professional man, and every business man, whether he be a doctor, a dentist, a pharmacist, a tailor, or a hardware merchant, wants to work where his abilities will be realized to the utmost. No one feels happy doing a half job. No doctor who is worthy of his M. D. feels that he is doing his best when he does not have access to the tools which will help him cure his patients. The moral seems to be this: if your town needs a doctor, find out why it doesn't have one. Then bait your town with what is needed to attract a doctor.

Several States—Michigan, Virginia, Connecticut, for instance—have begun to improve the preparation of medical college graduates for rural health work by assigning them to small town hospitals, where they complete their training and do resident work. I am sure that other States will follow suit, or devise other answers to the problem, just as so many States have been quick to seize upon the plan developed in Alameda County, Calif., where the medical society discovered that too many patients felt their doctors were overcharging, too many were unable to get a doctor in an emergency, and too many believed that in cases of malpractice doctors sided together against the layman. So Alameda County doctors established a bureau which provides 24-hour emergency service and, as has been proved in actual court cases, sides with the patient against the doctor in instances where fees have been too high or careless errors have resulted in injury to a patient. Incidentally, there has been remarkably few such cases since this system was established. The interesting result, however, has been that 20 other medical socities around the country have either followed suit or making local studies aimed at setting up similar systems.

Almost everywhere you look there is an answer to a medical problem which can be either copied or adapted to solve similar problems elsewhere. Michigan's Hillsdale Plan, started only 2 years ago in rural southern Michigan, is an example. Doctors working with this plan—and there are only 16 doctors in the county—concentrated on early cancer detection. Each of them made his office a cancer detection clinic. They informed the people that they were ready, at low cost, to give cancer examinations to every resident of the county. The result has been that the rate of early cancer detection among Hillsdale County residents has been four times as great as in the rest of the United States—and, of course, chances of cure has been greatly enhanced by this early detection.

Furthermore, Michigan has established 18 health information centers, where any resident can go to find out what to do about his own peculiar health troubles.

These things which have been done in Michigan, in Alameda County, in Kansas, and

in so many other areas of the United States are an object lesson to the whole country. There is not a single town, country, or State which cannot do at least something to improve its health facilities. It does take initiative, and, of course, it requires access to proper guidance.

A great many of our problems of health, it seems to me, are really problems in communications. A good many of the answers to our health problems already exist in a laboratory, in the files of a health agency, in some system which a town, or county, or other unit has set up to solve a problem which it thought was peculiarly its own but which, when we examine it, is common to similar towns or counties all around the country. But if these solutions remain in the files, their usefulness is limited. If Michigan's methods can be applied in Ohio, why not tell Ohio about it. If Kansas has found at least a partial answer to maldistribution of the supply of doctors, why cannot this answer be used in Minnesota?

Maybe Minnesota has not heard about what Kansas is doing, although actually the success of the Kansas technique has been such that I am sure it is well known in medical circles. I am citing it simply as an example of what I mean by the necessity for communications. Let us assume that Kansas solved its rural doctor problem but kept quiet about it. All the good that could be done by applying this technique would be locked up in one State.

It requires communications, the distribution of useful information, to get the most good out of these answers to our health problems. The media of communications are many, but because I am addressing an audience with a special interest in pharmacy I should like to point out to you that the retail pharmacy is a fine communications agency. Some 24,000,000 Americans visit drug stores every day. They have confidence in their pharmacists as men of professional training and responsibility and they listen when the pharmacist speaks.

I am pleased to note that the pharmacist is being used by several alert agencies in the distribution of health information to the public. The American Cancer Society has been aided by the cooperation of your association. There was very useful cooperation between American pharmacists and the American Diabetic Association in bringing to the people's attention the importance of early detection of diabetes. The American Pharmaceutical Association and the American Social Hygiene Association are cooperating in a joint attack on the venereal diseases. The American Heart Association has benefited from the assistance of pharmacists in fund raising, in communicating to the people the importance of research in heart disease.

This is a form of communications we do not often consider. In the field of health it is a very special avenue of comunications and I hope that it will be more widely used. I am sure that when the Health Information Foundation is in a position to call upon the pharmacist for help in conveying health facts to the people it will do so with a full realization that the pharmacist is in the front line of American health defense.

Communications will be a very vital part of the work of the Health Information Foundation. I have indicated to you my strong conviction that it is not enough to have the answers to our health problems—we must see that they are used and used widely. The only way to do this is to distribute the answers to points where they are needed.

The Foundation is, in the first place, a fact-finding organization. It will do research at several levels, national and local, to find out the facts about American health and health facilities. It will analyze those facts.

Then it will disseminate the facts—and in doing so it intends to use every possible medium of communications, from newspapers to radio, from magazines to pharmacists.

There is a third step in the foundation program—and I think it is the one which will determine the success or failure of that program. I am a great believer in action. Information is of only potential value until it is put into action. It is not enough to know what should be done. We must do it. And I believe that the foundation, in order to achieve its purpose—in order to make a really valuable contribution to the better health of America—must be a stimulus to action by the people, in their individual communities.

The first purpose of the foundation, as stated in its charter, recognizes the vital importance of this stimulation. The first in the list of purposes of the foundation is as follows:

"1. To stimulate greater public interest in the progress that has been made by medical science and to encourage still greater gains, and to assure increased availability of medical services throughout the broadly expanding field of medical care, with no sacrifice of quality."

We must stimulate the people to act upon their health problems, as they have acted in so many different, but unfortunately in many cases sporadic, instances such as those that I have cited. The foundation, once it has gathered the facts, hopes to be able not only to tell the people what they can do about their health problems but to stimulate them to put the answers into action.

We need to put the answers into action if this country is only to maintain the rate of health progress it has seen during the past 50 years—let alone advance that rate of progress. It is a paradox that our health needs will increase as we become healthier but it must be perfectly obvious that the higher percentage of older people in our population, which is increasing every day, means that we will require more and more health facilities. Older people need more medical attention than do the younger generations.

The time to begin this action is now. We cannot let America lag behind in health progress, any more than we can let it lag behind in other areas vital to national strength. If we are to live in a competitive world we must be strong enough to compete.

The Grange Farm Program

EXTENSION OF REMARKS

OF

HON. EUGENE D. O'SULLIVAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1950

Mr. O'SULLIVAN. Mr. Speaker, the Committee of Agriculture will soon conduct extensive hearings to endeavor to draft a new, long-range agricultural program to take the place, in whole or part, of the present laws.

A number of farm programs will be presented, undoubtedly, and among them will be the grange farm program.

There appears in the May issue of the magazine Grange the following article presented by National Master Goss at the Minneapolis Farm Forum last March, which I am sure will be interesting to the readers of the CONGRESSIONAL RECORD:

GRANGE FARM PROGRAM

(So many inquiries have been received about the Grange farm program, as presented by National Master Goss at the Minneapolis Farm Forum in March, his address is printed this month in full. The talk has been described variously by editors and others as "the only practical and positive program yet offered"; as "leading back to a self-help system"; as "you can't beat subsidy proposals with nothing," and that "The Grange program provides what is needed." It will bear careful reading.—The Editors.)

First, let me make it clear that we do not approve our present farm program or any program which contemplates the destruction of food as a means of maintaining satisfactory farm prices. Neither do we approve any program which would make it necessary for the farmer to look to the Government for his livelihood. Most people seem to think we should be either in one camp or the other. We have never been in either camp and have continually pointed out that there is a much better way.

Second, let me make it clear that we realize that the farm problem is only a part of a very serious economic problem with which the Nation is confronted; that during 7 years of unprecedented emergency effort, we increased our national farm and industrial output tremendously, particularly our industrial production which we increased as much as we would normally increase it in almost two generations, that we must find some way of using this tremendous increase if we are to avoid closing down factories and creating an unemployment situation heading directly to depression that no farm program can succeed unless we find ways of maintaining reasonably full employment; and that there is no turning back—we must either maintain a full production economy or follow the dismal road of depression which might destroy our whole system of free economy. The problem of industrial unemployment looms far more ominously than the farm problem. If it is not solved, nothing can prevent a collapse in agriculture. If it can be solved, the farm problem becomes much more simple, for in general, coupled with a program for upgrading our diets, farm production can be adjusted to our needs, and the problem of assuring plenty without destructive surpluses can be met.

On the other hand, the maintenance of a prosperous agriculture is the most important element in meeting the problem of industrial surpluses. Farming is the largest manufacturing industry in the Nation. Farmers eat, wear clothes, and live in houses just like other folks, but, in addition, they buy machinery, fertilizer, and supplies of every description, create the bulk of our transportation industry, and, although now only 20 percent of our population numerically, they and the 20 percent who are directly dependent on farm trade for a livelihood consume a very substantial part of our total industrial production. Anything which seriously curtails this purchasing power immediately affects employment and upsets our whole economic balance. At the bottom of the whole problem, therefore, is the necessity of maintaining a reasonable balance of output and income among the great economic groups which make up our society.

Third, we should recognize that there is no single farm problem. During World War I, we produced tremendous surpluses to win the war. Following the war we struggled for 20 years to find an answer to the problem of farm prices and surpluses. We tried the equalization fee, the export debenture, the domestic allotment, and many other devices in our hunt for some formula that would cure the trouble. The most valuable lesson we should have learned from this experience is that there are almost as many problems as there are varieties of crops, and that no single remedy will cure them all. The plan which will meet the problems of the wheat grower may not work at all on eggs; the plan which will suit eggs won't fit oranges; and the program which would bring help to the

orange grower would probably prove entirely unworkable when applied to cotton. The Grange believes that we must have a wide range of corrective measures available to apply to different crops under different conditions, in order to meet the many problems where farm production is as diverse as ours.

The Grange believes that agriculture is entitled to a fair price for its products at the market place, and we accord the same right to industry and labor. The economic balance previously referred to is essential to stable prosperity. Guidepost two helps point the way. As a means of determining what is equitable and fair, we therefore start with the development of a parity formula which will act as a measuring stick to determine what is a fair and equitable price level for farm products. While we have what we believe to be a more equitable and practical parity formula than the new formula which became effective January first, we have accepted this modernized parity formula as reasonably sound. In fact the Grange proposed this formula about 8 years ago. We do not like the law which permits the use of two different formulas with instructions to use whichever results in the higher price. We believe we should stick to the single modernized parity formula until a better one is made available.

ORDER OF PREFERENCE PROGRAM

With an equitable parity price level for a goal, our problem is how to attain market prices which will be as near as possible to that goal, and at the same time maintain a plentiful supply without unmanageable surpluses. The Grange recognizes that with such a wide variety of crops a broad program of measures is needed to meet the wide variety of conditions under which those crops are raised and sold. We favor just such a broad line of measures, and would make them available for use to meet whatever need may arise in a definite order of preference prescribed by law. That order of preference would start with those measures which call on the Government for the least assistance and control and end with those which call on the Government for the most assistance and control. These measures would fall into six major categories:

First, we recommend a Federal Farm Commission with two major responsibilities. If a wide variety of measures is to be available, someone must use discretion as to what measures to employ. Obviously this is a point at which the best of experience and discretion should be used, and equally obviously we should avoid the choice of one method or another for the purpose of political advantage. We believe this discretion can best be entrusted to a Commission of 12 members, 1 drawn from each farm credit district, thus assuring widespread knowledge of regional problems. To avoid politics, not more than half should belong to any one political party. The President should call for nominees from producer, processor, and distributing organizations. At this point we have a unique proposal designed to assure efficiency rather than political influence. The nominees should be transmitted by the President to a joint committee representing the Committees of Agriculture in House and Senate for their review and recommendations, together with any other names he may have under consideration. The Joint Committee could submit other recommendations. The President would not be required to follow the recommendations, but if he ignored them he would have great difficulty in having the members confirmed by the Senate. The use of a joint committee both in making recommendations on appointees and reviewing the recommendations is a new but very potent safeguard, for the only interest of such a committee would be to see that the laws the Congress passed were administered on as sound a basis as possible.

This committee would act in an advisory capacity to the Secretary of Agriculture. It should have access to all the information of government on matters pertaining to their responsibilities, and should report to the Congress all the recommendations it makes to the Secretary with the reasons supporting them. Thus they would be the representatives of Congress designed to assist in the sound administration of law, and while the Secretary would not be legally bound to follow this advice, no secretary, no administration would survive long which would wholly ignore the recommendation of such a committee and the wishes of Congress.

One major duty of the Commission would be to keep a continuing inventory of supply and prospective outlets for farm products; to work with producer, processor, and distributing groups in pushing items in surplus supply, and assist in adjusting supply to prospective demand. In our judgment, a very large part of the problem, particularly relating to fruits and perishables, would disappear at this point. There is plenty of evidence as to how effective well-directed marketing efforts can be. Our present problem is that we have neither the necessary information on which to base a well-planned marketing program nor the legal means of bringing together representatives of producers, processors, and marketing agencies to assist in carrying it out. In the Federal Farm Commission we are proposing such means.

As we have said, we would provide adequate measures to meet the various complex problems arising in the wide variety of commodities we produce. It would be the responsibility of the Commission to study the various problems as they arise and to recommend to the Secretary the use of the measure best designed to do the job, with due regard to the order of preference as set forth in the act, always reporting its recommendations to the Joint Agriculture Committee of the Congress so that it could be fully informed as to the administration of the laws the Congress enacted and the need for additional legislation, if any. This feature would assist materially in preventing either domination of the Commission by the Secretary or ignoring its recommendations and serve, at the same time, to maintain the best of cooperation between the Department and the Congress.

Second, we favor a broad expansion of the marketing agreements act so that every commodity which could make use of it would find it available. If this could be extended to all crops on which it could be used, it would probably prove to be the most useful single piece of legislation enacted by the Congress in meeting the farm problem in the last dozen years. For example it has enabled the dairy industry to maintain an ample supply of milk at all times with the resultant necessary surplus diverted to secondary uses such as butter, cheese, or skimmed milk, distributing the loss from such diversion to all producers. We believe in an economy of plenty. Under such an economy there are bound to be surpluses and we believe some such method of handling surpluses is necessary so that they will not destroy the basic markets, but will be diverted to useful purposes with any losses which may occur distributed among all the producers. Thus if the surpluses thus diverted become too big and involve losses the producers have an incentive to adjust production to meet the demand, yet maintain adequate supplies. When the Farm Loan Act was passed in 1916, the Farm Loan Board was charged with the duty of carrying on an educational campaign as to the advantages of the act. So we would charge the Commission with the duty of promoting sound marketing agreements where they would serve a definite need.

Third, in such cases as the marketing agreement method would not serve, we would provide some other form of a two-price or multiple-price system. The purpose would be the same, to divert the surpluses to secondary uses and distribute any loss which may occur among all the producers. There are a number of ways in which this could be done, including the equalization fee, the certificate plan, some form of debenture, or other means. These could be employed domestically in such ways as making wheat available for feed or making alcohol out of surplus potatoes, or they could be employed in foreign trade with adequate provisions against dumping. The lack of an adequate two-price system seems to be the weakest point in our present program. We support prices and make no provision to care for the surpluses. This leads to such indefensible situations as our present potato mess. We will not attempt to discuss the details of plans by which multiple-price systems can be developed. Again different methods should be available to meet the varying conditions of different commodities.

It will be noted that these three major provisions are self-supporting except for minor administrative expense. The Government would not be called upon for either money or controls. It is our belief that along these three lines the major part of our crops would be marketed in normal times. We feel that our whole program should be directed toward attaining a normal balance between supply and demand and obviate the necessity of Government controls or direct aid.

Fourth, we recognize that in abnormal times conditions will arise when the three self-help proposals we have presented may not suffice. To meet such conditions, we favor price supports related to parity. There are two types of such supports—flexible and fixed. In most instances, we prefer the flexible support. The case of potatoes may be used as an example to explain why.

The law provided for a support price on potatoes at 90 percent of parity. Suddenly DDT came on the market, mechanization expanded, and, with the use of fertilizer, enabled the producers to increase their production tremendously and thereby reduce their production costs. Under the modernized parity formula which has just gone into effect, such a condition would adjust the parity index for potatoes, if given time, but this would take years, and the industry was confronted with a most unusual and abrupt change in cost. It became so profitable to raise potatoes that growers increased production tremendously. This incentive to increase production was because the support price was too high and left too wide a margin of profit which brought out more potatoes than the country could use. If it is true that the supports were too high, the logical remedy would be to reduce the supports so that the margin of profit on potatoes would be in line with the margin on other commodities, and keep the production in line with the consuming demand. A support price, therefore, related to surpluses would seem to be the most practicable and equitable way of managing most supports, but it is entirely impractical to write into law any uniform basis of changing the supports, up or down, which will fit potatoes, eggs, oranges, cotton, wheat, and a hundred other varieties of commodities. Certain goals must be set and the right to modify the supports must be left to the discretion of the Federal Farm Commission, or the Secretary, acting with their advice.

The Grange has never contended that flexible supports would fit all commodities. Such commodities as wheat and cotton, which historically must seek world markets for part of their outlets, cannot safely be left to the manipulations of foreign governments in regard to surpluses and demand. In some instances the Grange would approve fixed supports, although I might repeat that it would be only when a two-price method or some other self-supporting method would not serve adequately. If fixed supports bring

out too much production, it may be necessary to find some way to control production either through marketing quotas or acreage allotments.

Fifth come production controls either through marketing quotas or acreage allotments. While we do not like either, we recognize that they may be necessary, if fixed supports are to be used, and possibly in some cases with flexible supports. We prefer the marketing quota to the acreage allotment because the marketing quota is reasonably manageable while the acreage allotment is too easily evaded resulting in little or no production control whatever. As an example, some years ago the acreage of cotton was cut to half, but farmers laid aside their poorest acres, poured fertilizer on the remainder, and many raised more cotton than they did before the cut. In most crops, we consider both devices as emergency in character, to be used only in extreme cases where it is necessary to make rapid substantial readjustments in production. Marketing quotas and acreage allotments are, therefore, accepted as a fifth general class of measures which we would make available but we would put them near the bottom of the list in order of preference.

Sixth, and at the bottom of the list, we would make production payments available only as an emergency measure. We do not want to see agriculture dependent upon Treasury payments for its existence, not only because of its effect on agriculture, but we believe that it would be economically unsound. We do not want to see farmers reduced to the uncertainty of income based upon the annual action of Congress. We do not want to see farmers reduced to the political necessity of voting for the candidate who would promise the biggest and best raids on the Federal Treasury. We do not want to see the Government paying a portion of the food bill of American consumers, rich and poor alike, with an unknown drain on the taxpayers which would inevitably result in inflation similar to that which has brought so much economic distress to so many European nations, making the rich richer and the poor poorer. We do not want to see the widespread regimentation of farmers which would follow, with the hordes of public employees necessary to administer such a program. Nevertheless, we feel that in periods of emergency or adjustment it may be necessary to use such payments to meet a condition which could not be met in any other way, provided such payments are safeguarded by a definite order of preference to be used in connection with the recommendations of the Federal Farm Commission. We believe that such a provision should be available for use, but should not be used until it was clear that other means would not suffice. We feel that it would be a serious mistake, and would go a long way toward destroying the incentive for farmers to develop self-help, self-supporting programs, if production payments were made the main reliance for meeting the farm problem.

Eventually upgrading our diets will have a most important part to play in adjusting our production to consumption needs. Armed with adequate measures to promote stability such as we have outlined, a Federal Farm Commission, or the Secretary, with the advice of such a Commission, could assist very materially in promoting adjustments designed to bring such an upgrading about. The Commission would help to bring common sense to bear in meeting the many intricate phases of our farm problems as they arise.

In closing, I call your attention to the fact that our program is flexible, and is broad enough to get the job done, yet is so set up as to use Government aid and Government controls only to the extent necessary, and to get rid of them as fast as self-help means can be made to meet the problem. It is designed to divorce the administration of farm programs from politics as far as possible. It would strengthen the relations between the Congress and the Department of Agriculture and assure constant information to those responsible for providing adequate legal measures for meeting farm and marketing problems. It would not discriminate among commodities. If labor and industry would approach the problem of a well-balanced national economy with the same degree of equity and thoroughness, we would be a long way down the road to the solution of our most difficult domestic economic problems.

From time to time as I learn of new farm programs being offered for consideration, I shall insert them, or so much of them as brevity will permit, in the CONGRESSIONAL RECORD.

I do hope that we can draft a farm program which will be in keeping with the importance which agriculture bears to the Nation's economy, and as free from partisan politics as possible. Our Nation's economy is geared to agriculture and agriculture is more than a business, or an occupation, or a political football—it is a way of life. It is the very backbone, and not the wishbone, of the Nation.

Polish-Americans Again Pay Tribute to Freedom Ideal

EXTENSION OF REMARKS

OF

HON. CHESTER A. CHESNEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1950

Mr. CHESNEY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include an article entitled "Polish-Americans Again Pay Tribute to Freedom Ideal," by Roman Pucinski, a constituent of the Eleventh Illinois District, an outstanding writer for the Chicago Sun-Times. This fine article, which appeared in the Sunday, May 7, 1950, edition of the Sun-Times, certainly reflects the patriotism of Polish-Americans and their everlasting struggle to preserve the ideals of free people. It follows:

POLISH-AMERICANS AGAIN PAY TRIBUTE TO FREEDOM IDEAL

(By Roman Pucinski)

It was once said that wherever you find two or more Poles you're bound to find a Polish organization.

A casual observer might add: In Chicago you'll find more than 4,000 Polish organizations serving an estimated 600,000 Chicagoans of Polish ancestry. They range from benevolent groups to athletic clubs with a large number of cultural, professional, civic, social, and choral clubs in between.

Sunday, most of those 4,000 organizations will participate in a mass tribute to the one hundred and fifty-ninth anniversary of Poland's Constitution, adopted May 3, 1791. The colorful ceremony will be in Humboldt Park near the monument of Gen. Thaddeus Kosciusko, Polish patriot and hero of the American Revolution.

TEN THOUSAND IN PARADE

A parade of 10,000—ranging from youngsters to old-timers in their nineties—will precede the observance. Many will be in native Polish costumes. The parade starts at 1 p. m. from the Polish National Alliance Building, Milwaukee and Division, and will move along Augusta to the park.

The annual tribute to the charter which gave Poland freedom from serfdom and from religious persecution is expected to attract 100,000 persons. It's a far cry from the small group of Polish refugees who observed the first Polish Constitution Day in Chicago in 1834. There were only 235 persons present then.

PATTERNED IN UNITED STATES

The Polish charter was suspended 2 years after its adoption when Russia and Prussia partitioned Poland for the second time. But it always has served as a symbol of freedom to the Poles. It was patterned after this country's basic charter of liberties and was described as the most liberal document of Europe in its time.

Chicago's Polish Americans are organized into four parent fraternal groups with members from coast to coast. Their headquarters are on the near northwest side, frequently called Polonia. Their total assets exceed $101,000,000.

The four groups are the Polish National Alliance, 1520 West Division, sponsor of Sunday's observance; Polish Roman Catholic Union, 984 North Milwaukee; Polish Women's Alliance, 1309 North Ashland, and the Polish Alma Mater, 1645 Milwaukee. All were organized in Chicago.

The organizations—along with 50 Polish Roman Catholic churches in Chicago—have served as focal points from which the Poles made their cultural, economic, industrial, religious, educational, and political contributions to Chicago's growth.

PROGRESS DOCUMENTED

In the lavishly decorated Polish Roman Catholic Union Museum at Augusta and Milwaukee are carefully kept documents of Polonia's growth here. They show that two Polish-Americans voted in Chicago's first mayoralty in 1937. By 1867 there were 30 Polish families in Chicago, and the first Polish parish was organized at Noble and Bradley. Known as St. Stanislaus Kostka parish, it grew rapidly. By 1899 it had 50,000 families and was considered the largest Catholic parish in the world. It still is one of Chicago's largest religious centers.

Holy Trinity, the second Polish parish, was founded at Noble and Chapin in 1872. Special services will be held at 10 a. m. Sunday in its ornate church to commemorate the Polish Constitution.

Some 200 Polish-Chicagoans joined the Union Army during the Civil War. And Capt. Peter Kiolbasa, one of the outstanding Polish leaders in Chicago at the time, joined the Confederate Army. When he was taken prisoner, he promptly transferred his services to the Union Army where he again became a captain.

WHERE THEY SETTLED

Early Polish settlers made their homes in the vicinity of Milwaukee and Division—still called the heart of Polonia. But as their ranks grew, they fanned out northwest along Milwaukee to Jefferson Park, south along Ashland and on the far southside in Pullman. Now hardly a community in Chicago lacks Polish-origin names on its poll lists.

In their desperate effort to escape political persecution in their native land, the Poles migrated here in ever-increasing numbers at the turn of the century. By 1890 there were 57,756 Poles in Chicago. By 1918, there were 383,000. In 1928 their ranks numbered 427,000 and the latest census figures are expected to exceed 600,000.

A recent University of Chicago population study indicated there still are 95,000 native-born Poles in Chicago. With the steady influx of Polish DP's—being brought here by the Illinois division of the Polish-American Congress—the figure is expected to pass the 100,000 mark soon.

It is not uncommon to hear the Polish language spoken by second generation

youngsters in Polish homes. Polish radio programs and two daily newspapers published in Polish have contributed toward retaining the old-country ties.

The spirit of close organization into various groups helped the Polish-Americans establish their own institutions in practically every field of social and economic endeavor. In 1891 the Rev. Vincent Barzynski, C. R., pastor of St. Stanislaus Kostka Church, founded the first Polish school of higher learning. At 1456 West Division, it is now known as Weber High School. Several other Polish high schools followed.

St. Mary of Nazareth Hospital—oldest Polish medical institution in the city—was founded in 1894 at 1120 North Leavitt. And St. Hedwig's Orphanage—now a haven for Polish war orphans as well as Chicago youth—was organized in 1910 in Niles.

POLITICAL START

Polish-Americans got their official start in politics in 1877 when Peter Kiolbasa was elected to the legislature. Their solidarity in voting for Polish-named candidates has been the subject of frequent debate. But they insist all other national groups are motivated by the same national spirit in supporting their own candidates.

The Poles point with pride today to Kiolbasa, who was the first city treasurer to return interest in city funds to the treasury. Until his time it had been the practice of city treasurers to use the funds for themselves while in office. Kiolbasa was elected treasurer in 1891.

The history of Poles here is almost as old as Chicago.

Their most priceless historic object is a perpetual light at the museum surrounded by bits of earth from every battlefield where Poles fought from 1331 to date—dedicated to their stubborn belief in the freedom of man.

Hammonton News Says: "Little People Can Halt Extravagance"

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. HAND. Mr. Speaker, I am including in the RECORD an editorial with the above title. I do so because of my great desire to advance in every possible way the truth that the enormous burden of Government and Government taxes is being paid in full measure by the average American family, who tends to overlook the excise taxes and indirect and hidden taxes which they pay to the Federal Government every time they move. When the truth once becomes known to all of our people, we will then halt the extravagant head-long rush of the administration toward national bankruptcy.

The editorial is entitled "Little People Can Halt Extravagance" and appears in the Hammonton (N. J.) News. It follows:

LITTLE PEOPLE CAN HALT EXTRAVAGANCE

Too often it is only the sensational news story that comes out of the Congress that meets the attention of the reading public, but Congressman T. MILLET HAND, of this district, rose in the House a few days ago and made statements which should be brought to the attention of every person in this great Nation.

In a few words, the Congressman brought out that, when the day comes that millions of Americans whose earnings are too low to pay much, if any, direct taxes realize that by a clever system of hidden taxes it is they who are really paying the bill for the extravagant waste in Washington, then, and only then will the wild spending be stopped.

Much spending at all levels of Government has been permitted simply because too many people feel that they don't own their own homes or make sufficient income to put them in the income-tax brackets.

This is unsound thinking today, the Congressman believes. There isn't any item that any of us buys that isn't loaded to the hilt with hidden taxes. Every time you pay a nickel for a newspaper or buy a loaf of bread you are paying high taxes, pyramided through every level of Government, HAND told his colleagues.

Surveys have shown that, if all the money of the wealthy were confiscated, it would operate the Goverment for only 31 days. This shows clearly that the average man with the low income pays the bulk of the tax bill.

We agree with Congressman HAND that not until the people generally become tax conscious will there be sufficient pressure to effect substantial Government economies.

Oily Swindle

EXTENSION OF REMARKS
OF
HON. EDGAR A. JONAS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. JONAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial published in the Chicago Daily News under date of May 5, 1950.

This editorial refers to Mr. Truman's visit to Chicago as the big political circus. It levels a blistering attack at the good faith of the jaunt and charges that the promoters are skating close to a species of fraud.

The editorial follows:

OILY SWINDLE

Like other Chicago people, we look forward with interest to the big political circus President Truman and his Cabinet will be putting on in Chicago May 13, 14, and 15.

It will be a pleasure to have these people in our city. It would be even more of a pleasure if the expenses were kept reasonable. But still, the quarter-million-dollar orgy actually planned has its educational value as a symbol of the Truman administration.

The main purpose of this extraordinary performance is to try to reelect Senator SCOTT LUCAS, whose chances do not look any brighter in the light of what happened to his colleague from Florida, CLAUDE PEPPER.

The Chicago visit is part of a long western tour which the President is undertaking to rebuild his party's political fences.

The tour is labeled nonpolitical so that the President can charge the traveling expense to the Government instead of the Democratic Party. This is an oily swindle, little different morally from some frauds for which less important people have been prosecuted in court.

We regret to note that the promoters of the affair in Chicago are skating close to another species of fraud.

Barnet Hodes, the former corporation counsel, has got the Treasury Department to issue a statement that contributions to the Chicago Host Committee may be deducted as business expense from income reported for taxes. Conditions are attached to this assurance from the Treasury, but the conditions are likely to be lost sight of by those actually putting the clout on the contributors.

The condition is that there must be a reasonable expectation on the contributor's part of making some money out of the crowds expected to swarm into the city.

In the case of some concerns, principally hotels and restaurants, the expectation would be reasonable. But for many others, any such pretense would be as completely false as the pretense that this whole affair is a nonpartisan tribute to Thomas Jefferson.

We do not believe Thomas Jefferson would feel honored by an income-tax fraud.

The politicians engineering this circus have enough ways—too many ways, in fact—of shaking down and blackmailing the people without involving the United States Treasury.

Should Rent Controls Be Continued for Another Year?—I Say "Yes"

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. O'SULLIVAN. Mr. Speaker, it is comforting indeed to have our progressive President, Harry S. Truman, recommend to the country and to the Congress that rent control be continued, where it has not been taken over by State authorities, for another year, and to learn that Housing Expediter Tighe Woods opened his fight before the Senate Banking and Currency Committee to extend such rental controls for a year.

The inglorious real-estate lobby has claimed falsely that rent controls have put a damper upon new housing construction and more new dwelling houses would be built if rent controls were not extended but allowed to expire.

In reference to this matter as pointed out on page 3 of the May 4, 1950, issue of the Machinist, Mr. Tighe Woods had this to say in answer to that claim of the real-estate lobby:

In Spokane, Wash., in the 5 months following the killing of rent control, new housing construction increased 72 percent; but in Seattle, which is still under rent control, the increase was 75 percent for the same period.

In Knoxville, Tenn., in the 7 months that followed the death of rent control, new housing construction increased 9 percent; but in Nashville, which is still under control, the increase was 198 percent for the same period.

In Tampa, Fla., in the 6 months following the ending of rent control, new housing construction declined 15 percent; but in Shreveport, La., still under rent control, building construction increased 121 percent during the same period.

In answer to another phase of rent decontrol, that rentals have increased instead of levelling off, I received recently the following very interesting and in-

formative letter from the Honorable Glenn Cunningham, Progressive Republican mayor of Omaha, Nebr.:

CITY OF OMAHA,
April 27, 1950.

The Honorable EUGENE D. O'SULLIVAN,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN: As the mayor of a large city in which rent controls were removed last November, I feel it my duty to report for your consideration the experience we have had under decontrol.

Under the provisions of an act of the Nebraska Legislature, rent controls were abolished in the entire State of Nebraska, on November 2, 1949. Since that time, everyone agrees, Omaha's rent prices have risen. Exactly how much they have risen is a widely discussed question, because there are various ways of computing it. I have been told, however, that the Bureau of Labor Statistics reported an average raise of 13.2 percent for this city.

But figures, for various reasons, do not tell the whole story, because human hardships cannot be expressed numerically, and although I cannot argue statistics, I can give cogent testimony concerning hardships brought about by the lifting of controls.

It would be highly illogical to maintain that all of the evidence to be considered in the question of rent control is on the side of the tenant. Everyone must realize that there were cases of landlord hardships when rents were under control. Landlords, however, were granted increases while controls were in effect, and were able to receive additional increases if the facts warranted. Without rent control, tenants have no such recourse, and must pay whatever is demanded in order to have a place to live.

It is readily apparent that neither control nor decontrol is the path to perfection, and that hardships will be experienced under either measure. I feel, however, that control is the better of two difficult alternatives, and that it should be continued wherever necessary until such time as the housing supply more closely approximates the demand.

Sincerely yours,

GLENN CUNNINGHAM,
Mayor.

Mayor Cunningham has been in the forefront of the fight for bigger and better public housing projects, and more reasonable rentals, without doing injustices to property owners and private builders. He is to be commended for his liberal Republican thinkings and doings, which point the better way for the young Republicans of Nebraska to follow, instead of groping in the political dark with outmoded reactionary Republicanism.

Why Is It Important to Our Form of Government That All Qualified Voters Cast Their Ballot in a Primary Election?

EXTENSION OF REMARKS
OF
HON. EDWARD H. JENISON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. JENISON. Mr. Speaker, everyone who studies the problems facing our form of government today comes to realize the danger resulting from widespread failure to meet a primary responsibility—namely, the failure to vote in elections. This has been particularly true in primary elections.

In an effort to take a constructive step toward solving this problem, the Illinois Agricultural Association and its affiliated county farm bureau organizations sponsored an essay contest prior to the recent primary election in Illinois April 11. The results were astounding, not only from the number of entries among the eligible school students, but from the quality of the essays themselves.

In Effingham County, Ill., 1 of the 11 counties in the Twenty-third Congressional District I have the honor to represent, over 150 pupils composed essays on this challenging question. The results indicated a study of the problem and an understanding of what ought to be done about it. In fact, the essays were so uniformly good that one teacher, Teressa N. Hoffman, instructor in the Plain Tree school, wrote the president of the Effingham County Farm Bureau as follows:

Mr. FORREST PHILLIPS.

DEAR SIR: Enclosed you will find the essays written by the pupils of Plain Tree school. The rules say to send the three best papers from my room. That is hard for a teacher to decide, so please forgive me for sending them all. My pupils were so eager and enthusiastic over your splendid project that I simply could not stifle that enthusiasm by not sending in all the papers. I think it is wonderful for the Effingham County Farm Bureau to sponsor such a splendid campaign as this is.

A few years ago I had a job in which I made a survey of a cross section of the voters. I was so thoroughly disgusted when upon inquiry I found how few people really made use of their great privilege of voting. So you see I really appreciate your effort in teaching our future citizens the worth and value of their vote. I think it is a splendid project and thank you most heartily.

TERESA N. HOFFMAN.

EFFINGHAM.

Chosen as the best in Effingham County was the essay of Thelma Bannick of the Palmer school at Dieterich. The other community winners were Gary H. Larrimore, Beecher City school unit winner; Donald F. Berry, Watson, eighth grade, Effingham community winner; Marcella Hartke, Teutopolis school unit winner; and Rose Marie Bauer, Altamont school unit winner. Because it is vital to the welfare of the Nation that such interest in government as is indicated by these essays be encouraged, I am including them in the CONGRESSIONAL RECORD under permission granted by the House. The essays were first published in the Effingham Daily News, this public-spirited newspaper having cooperated with the Effingham County Farm Bureau in carrying on the contest. The essays follow:

The first-place winner:

WHY IS IT IMPORTANT TO OUR FORM OF GOVERNMENT THAT ALL QUALIFIED VOTERS CAST THEIR BALLOT IN A PRIMARY ELECTION?

The purpose of the primary election is to nominate candidates best suited for office. If we vote in the primary elections, we can help to pick these candidates.

If we nominate good candidates in the primary, we may be assured that competent officials will be elected.

American soldiers have shed their blood on the battlefield to give the American citizens the right to vote.

By voting according to the dictates of their own conscience, American citizens can go far in making their contribution to good government throughout the United States.

People in our penitentiaries have their citizenship taken from them; therefore, they cannot vote. Voting is an opportunity to help run our Government. Our voices in Government are heard through our votes.

THELMA BANNICK,
Dieterich, Ill.,
Rural Route No. 1, Palmer School,
Dieterich Community Unit, No. 30.

Beecher City unit winner:

WHY IS IT IMPORTANT TO OUR FORM OF GOVERNMENT THAT ALL QUALIFIED VOTERS CAST THEIR BALLOT IN A PRIMARY ELECTION?

It is important to our form of government, that all qualified voters cast their ballot in the primary election because our voice in government is heard through our votes.

We should vote for the man best qualified for the office regardless of politics so the best man will be elected.

The people who elect poor officials are the ones who stay away from the polls in the primary election. Our primaries govern our elections.

It is every voter's duty to vote in the primary. Vote in the primary election April 11, 1950. Help make a better government for American people.

GARY H. LARIMORE,
Beecher City, Ill., Route 1, School Unit No. 20.

Effingham unit winner:

WHAT IS THE IMPORTANCE OF VOTING IN A PRIMARY ELECTION?

There is a lot of importance involved in a primary election. Primary elections are held for the picking of the candidates who are to run in the general election. If a person who is unworthy of the job is nominated for running in the general election, he may be put in office because a lot of people vote for the party and not the man. The reason for this man being in office may be because you never voted in the primary election. What good will our democracy do us if only a small percentage of people vote in primary elections? What good is the privilege of voting for the great percentage who don't vote in the primary elections? If we of the United States are to take advantage of our freedom of self-government we will have to vote in our elections.

DONALD F. BERRY,
Watson Eighth Grade, Effingham Community, Unit No. 40.

The Teutopolis winner:

WHY IS IT IMPORTANT TO OUR FORM OF GOVERNMENT THAT ALL QUALIFIED VOTERS CAST THEIR BALLOT IN A PRIMARY ELECTION?

Do you really appreciate the right to vote given to you by the writers of our Constitution? It is the difference between a dictatorship and a democratic system of government.

Records show that in some places even in some townships of this county as few as 20 percent of the voters go to the polls on primary election day. This is inexcusable. Take advantage of your privilege and fulfill your duty. Come to the polls on April 11.

Voting in the final election is no more important than on a primary election. In order to be on the ballot for the final election a candidate must win in the primary. So everyone can readily soe that it is the duty of every voter to see to it that the best qualified person wins in the primary election. If

each political party has a good qualified party election in the primary, it doesn't matter much who wins the final election.

MARCELLA HARTKE,
Teutopolis, Ill., Teutopolis Community Unit No. 50.

The Altamont unit winner:

WHY IS IT IMPORTANT TO OUR FORM OF GOVERNMENT THAT ALL QUALIFIED VOTERS CAST THEIR BALLOTS IN A PRIMARY ELECTION?

One of the most important duties and privileges of a democratic people is to take part in electing national officers and nominating and electing local officers. If our Government is to be "of the people, by the people, and for the people," each and every voter must express his wishes through the ballot box. He should do this not only in the general election but also in the primary election. If competent and honest men are nominated in the primary then it should not matter which candidates are elected because good statesmen are in charge.

Too many people blame the Government but do not stop to think that the officials in our Government are men who are there because people voted for them or because they didn't vote at all.

ROSE MARIE BAUER,
Altamont, Ill., Rural Route No. 3, Mound School, Altamont Unit No. 10.

National Security

EXTENSION OF REMARKS
OF

HON. ELMER THOMAS

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. THOMAS of Oklahoma. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Maj. Gen. W. H. Arnold before the Reserve officers' convention, held at Oklahoma City, Okla., on May 6, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I feel that it is a real honor to be asked to speak today before a group which has already served our country so well in time of need and which stands ready to renew that service if the Nation calls.

I am going to talk with you about national security in view of the present situation. In this day of high taxation and overwhelming defense budgets it is essential that we all understand alike how much can be done with the money that is available. In short, we are obligated to obtain the most effective possible national defense with the expenditure of a minimum number of dollars. This can only be done with your self-sacrificing support. Why it must be done is a somewhat longer story.

As you well know, the United States is presently involved in a cold war. This term has been coined to describe a type situation successfully exploited by the Soviets during their early struggle for power in Russia—a situation once described by Trotsky as "No war; no peace." The unannounced opening of this conflict by our erstwhile ally occurred even before the cessation of hostilities with Germany and Japan. For our part, a somewhat longer time was required to digest the inevitability of the quarrel.

What is this so-called cold war? What is its motivating force? What are the stakes?

Basically, the cold war is a clash of ideologies, of two mutually opposing concepts of the way in which the peoples of the world shall live and be governed. It is motivated by a minority cult who are imbued with the teachings of Karl Marx, as interpreted and perverted by Lenin and his ostensible disciples. This minority, now at the head of a great state, asserts its inalienable right to determine for all the peoples of the world what is good and what is bad for them. Clearly, it is the intent of this modern tyranny to dominate the peoples of the world, either through ideological conquest, if possible, or by force of arms, if necessary. The stakes are simply stated. Shall we or shall we not retain a Christian democratic way of life?

As recently as February 10, 1946, Joseph Stalin specifically said: "Wars are inevitable so long as capitalistic states exist."

Again, Stalin has written: "Words must have no relation to actions; otherwise, what kind of diplomacy is it? Words are one thing; actions another. Good words are a mask for concealment of bad deeds. Sincere diplomacy is no more possible than dry water or wooden iron."

Those are some of the words, and these are some of the confirmatory actions that have already taken place: Behind the so-called iron curtain in Europe certain significant developments have occurred. Satellite governments have taken overt action against United States diplomatic and military personnel, in addition to conducting a savage and relentless attack on Christian religions and democratic political parties and institutions. In Bulgaria, there has been a severance of diplomatic relations; the information services of the American Legations in Rumania and Czechoslovakia have been closed; Hungary and Poland have demanded the recall of some of our military attaché personnel. In Poland and Czechoslovakia, Communist imperialism has resulted in increased domination, even to the point of placing Russian officers in key military posts.

In the Far East China is now subject to communistic direction. Russian airplanes and military personnel have been reported by the press in the Shanghai area. Southern Korea is kept in ferment by continuous guerrilla invasions launched from the Communist puppet state of northern Korea. Currently, southeast Asia is being subjected increasingly to partisan warfare, sabotage, and espionage. Recently the frontier with Iran has threatened to become active again, while diplomatic moves have been made against the Dardanelles and Trieste, as well as in the United Nations. And only lately, Russian fighter pilots have been publicly decorated presumably for shooting down an American plane in the Baltic, with the loss of 10 American lives. The pilot of the missing plane was a Reserve officer of the Navy on active duty.

As a result of the victory of the Communists in China, some 600,000,000 people, more or less, have come under the domination of the Kremlin. Vast quantities of the world's natural resources also are now under their control. Should this march of Soviet imperialism in the guise of international communism continue—and I think any reasonable analysis of the present situation indicates that this is likely—then our situation will become progressively more acute as time goes on unless we are willing and able to counter the Communist expansion through constructive democratic efforts rather than mere containment.

Our new international policy, as expressed by President Truman and Secretary of State Acheson, is to take constructive action to halt the spread of communism so that the free peoples of the world may work out their own destinies in their own way.

As the acknowledged leader of the democracies, the United States must shoulder the responsibility for planning to meet the challenge and for furnishing most of the resources then required. Boiled down to tangibles, the basic resources at our disposal are military strength and economic wealth. Obviously there are many other vital factors contributing to our inherent stability and strength. Some of these are: The moral and spiritual fiber of our people and our allies among the other peoples of the democratic world; our deep-rooted belief in the rights of the individual and in the democratic process of law and government; and our indubitable abhorrence of regimentation and slave-state processes.

But from a practical viewpoint, and for speedy application, military power and economic might are overriding factors.

From the standpoint of military power, we alone cannot hope to achieve quantitative superiority vis a vis our potential enemies. This limitation is applicable not only to military manpower, but to most of the conventional materials of warfare. We can, however, hope to approach equality in these areas if we take into consideration the means possessed by the other nations of the democratic world. By applying our economic resources to the augmentation of their means, while simultaneously achieving qualitative improvement in our own military power, a sound basis for effective military security will be established.

Our Government has recognized the necessity for this course of action by the establishment of the mutual defense assistance program, and previously by acts granting military assistance to Greece and Turkey. Some $2,000,000,000 is involved in these transactions. There is no question in my mind but that this expenditure is well justified, for time, which is of the essence, has been gained. Nothing is more valuable to our cause today than the purchase of time—time for our friends to recover from the last war's devastation; time to regain hope for the future; time to learn their danger and strengthen their will to resist.

I do not believe that we can expect the democratic peoples of Europe and Asia to retain the moral and spiritual fortitude necessary to successfully combat communism unless they acquire individual and collective military power sufficient to deter aggression. This cannot be done in a day, in a year, but it must be done as quickly as possible. The American people today must be brought to the realization that the military assistance thus far granted our allies is not sufficient to accomplish its basic purpose. The stakes are too high to permit halfway measures. As in poker, he who checks is often lost.

Should we alone attempt to achieve superiority in being in military manpower and conventional armament, our very effort would most likely insure our ultimate defeat. Our greatest strength lies in our inventiveness and productive capacity. These capabilities would be seriously weakened by any sizable diversion of manpower and raw materials for purely military purposes. I do not think at all that we should attempt to match our probable enemies man for man, plane for plane, ship for ship, or tank for tank. I do think, however, that as an alternative, we must remain qualitatively in the lead.

In addition to preserving our own economic strength, we must foster economic well-being throughout the democratic world. Here again, our Government commenced operations some 2 years ago. The inception of the Economic Cooperation Act, carrying out the Marshall plan, has been of incalculable value in arresting Communist expansion. In 1949 nearly $6,000,000,000 was granted to friendly foreign nations by the United States. Here again, the task is not finished; and, until it is finished, hunger, unemployment, and

poverty will fertilize the growth of insidious Communist aspirations.

A determination of the proper balance between military power and economic stability is of paramount importance. I, for one, feel that a reasonable balance can be achieved and that the determination of this balance is the urgent business of an informed American people. Here, I would like to quote the Secretary of Defense, who said in December 1949: "But, while it would be disastrous to wreck our economy by inordinate military expenses, it would be equally disastrous to be penny pinching. The watchword must be military security first; economy second. And if we are realistic, we must face the fact that our military requirements are not static, but flexible. They are bound to be affected by major shifts in the international situation and new developments in science and warfare.

"* * * military security must by its very nature be relative. Obviously it is impossible to be absolutely secure. The cost of such security and the risks of obsolescence in a fast moving scientific age tend to negate efforts to achieve absolute security. This means that our military organizations must be adequate, efficient, and readily adaptable to change; our planning must always look to the future as well as the present."

The foregoing forms the basis for the present division of the Federal budget as between national defense and other expenses of Government. It is doubtful if there ever was or ever will be complete agreement, even among military experts, as to what the composition of our forces should be under present world conditions. Yet, there is almost unanimity of opinion on two points relative to the maintenance of military forces in being. One is that these factors should be as large as the Nation can afford without throwing too great a strain on the national economy. The other is that our present military budget represents about the maximum amount which can be spent without seriously straining the Nation's economy.

It thus becomes the responsibility of our key military leaders to so program the utilization of our funds and resources that we gain the utmost of a force in being and at the same time strengthen our military potential in reserve. To be effective, programs must be based upon realistic long-range plans, which in turn require some guaranty of the resources to be made available as the plans unfold. Nothing is more costly or pays less in dividends than annual ups and downs in the funds appropriated for our use, frequently resulting in an inability to carry soundly conceived programs to a satisfactory conclusion.

In the Army we are developing a balanced minimum Regular force, large enough to meet our extensive commitments for occupation and to provide for the security of the United States, as well as for retaliation in the event that we are attacked. In this connection, it should be noted that under the North Atlantic Treaty we have assumed an obligation to assist the other signatories of the pact in the military defense of western Europe. Our foreign commitments are at present so extensive that we must take calculated risks in spreading our minimum force to the four corners of the world. The outbreak of war would find us immediately engaged in a fight for survival with such forces as are in being. We cannot quibble for there are no second prizes in war. Yet, despite the need for maintaining a sizable regular force, we must somehow devote a reasonable proportion of our efforts and resources to the building of a truly effective Organized Reserve and National Guard. To keep Reserve units properly equipped with the latest types of modern armaments is alone a tremendous burden. While the Army is doing its best in this field, the program can only be effective if given the solid support of a patriotic-minded Reserve Corps.

Currently, the Army is endeavoring to keep the qualitative potential of the Regular force at a maximum by improving and modernizing equipment as rapidly as possible. We are conducting an extensive research and development program, and we plan to keep our in-being force equipped with the new armaments and trained in their use. Here is one of the most difficult problems facing the military leader operating on a limited budget: At what point does one leave the development phase and go into the "hardware" phase, that is, the actual procurement in large quantities. Modern weapons are extremely complicated and expensive, and frequently they require considerable time for manufacture. On the other hand, modern research moves rapidly so that often the weapon of today is obsolete tomorrow. Our force in being must be trained up to the minute and our industry must be geared to produce the latest weapons in the shortest time possible. Yet, we cannot waste our limited dollars on obsolete matériel which would soon have to be consigned to the scrap heap. To overcome this problem takes skillful long-range planning; but most of all, as I mentioned earlier, it requires a guaranty of income over a reasonable period of time.

With respect to the Organized Reserve Corps specifically, the Army has devoted considerable thought to the problem of how to achieve the necessary potential without expending a disproportionate share of the defense dollar. In view of the cold war and the heavy requirements imposed upon our minimum regular force, how much of our dollar, for example, can be set aside for Reserve pay? How much of the dollar is needed for rifles? We must decide together; and we must justify our decisions to ourselves.

The postwar ORC program laid down in 1945 became increasingly unrealistic by virtue of rapidly changing circumstances and revised strategic objectives. The new program is based upon a realistic appraisal of our means and our current strategic requirements. Within our budgetary authorization, the Army intends to make the ORC as effective and efficient as possible.

The new ORC program establishes a firm troop basis, with 9,000 units maintained at 100 percent officer strength. Provision is also made for progressive, efficient individual training; simplified organization and administration; and the issuance of adequate equipment for training, as fast as additional facilities can be made available. A sound system of promotion and attrition is established, with improved opportunities for professional advancement while providing maximum protection to the individual.

I am sure that the majority of you have seen the statement of the Secretary of the Army in the February 1 issue of Report to the Army relative to drill pay. Let me emphasize that the recent revision of drill pay policies was dictated entirely by budgetary considerations and in no way reflected a lessened interest in the ORC program.

We in the Army are keenly aware of the necessity for economy in our operations; and we are doing our utmost to extract a real dollar's worth for every one we spend. We are trying to be realistic, and above all, objective in our planning and thinking. But we must have the support of all components of the Army to insure success. If we cannot attain a desirable working balance between the Regular Army, the Organized Reserve Corps, and the National Guard, we shall either fail to meet our vital responsibilities with respect to national security or we shall fail to retain our perspective with respect to the even more important balance between military strength and our national economy.

I believe that it is possible to win the cold war without bringing on a shooting war. As one who participated in the war in the Pacific in a major capacity for 3 years, I am convinced of the utter stupidity of recourse to combat as a means of curing the world's ills. I believe we are all convinced that the best way to achieve victory in any war is to prevent the war itself. I believe that we can prevent another war only if we maintain the maximum military strength that our economy can support.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to insert in the RECORD of today's proceedings the complete statement made by William C. Doherty, president of the National Association of Letter Carriers, before the Senate Post Office and Civil Service Committee this morning. Probably there is no other person in the United States who has made a more thorough, more comprehensive, or far-reaching investigation of this question. Mr. Doherty's reputation for honest, plain, and unbiased testimony is known to every Senator. His timely statement on the postal crisis should be read by the American people everywhere. It speaks not only for the letter carriers, but also for the clerks, messengers, motor-vehicle employees, postal-transport employees, mail handlers, custodial employees, and practically all other employees in the postal service.

Mr. President, I have an estimate from the Public Printer that Mr. Doherty's statement will exceed by two and one-half pages the two pages allowed by the rule, without a statement of cost, and that the cost will be $369. Nevertheless, in view of the importance of Mr. Doherty's statement, I ask unanimous consent that it be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY WILLIAM C. DOHERTY, PRESIDENT, NATIONAL ASSOCIATION OF LETTER CARRIERS, AND EIGHTH VICE PRESIDENT, AMERICAN FEDERATION OF LABOR

Mr. Chairman, my name is William C. Doherty. I am president of the National Association of Letter Carriers and eighth vice president of the American Federation of Labor. The present membership of the National Association of Letter Carriers is 102,330, represented in all of the 48 States, the Hawaiian Islands, and Puerto Rico.

At the very outset, I desire to express my profound thanks to the members of this distinguished committee for granting me an opportunity to voice my views on the man-made postal crisis created by the orders contained in the Postal Bulletin of April 18, 1950. In so doing, I desire to place the National Association of Letter Carriers on record as wholeheartedly favoring immediate action on Senate Resolution 261 and Senate bill 3450. Both of these measures were introduced by Senator WILLIAM LANGER, of North

Dakota; also S. 3560, Senators JOHNSTON of South Carolina, NEELY, and HUMPHREY. A large number of similar proposals have been introduced in the House of Representatives. All of them are designed to compel the Postmaster General to immediately rescind his ill-timed, ill-advised, unnecessary, unwarranted, and obnoxious orders of April 18.

The Postmaster General's instructions to reduce delivery trips and to eliminate other service features heretofore available to the American public will result in an inferior postal institution. Mail users will now have to use the remaining facilities of the Post Office Department at the convenience of the officials in charge. The historical role of the postal system as one of swift, certain, and dependable means of communication is discarded.

Congress and the general public should meet this challenge head-on by stating in the most unequivocal terms that the United States Post Office belongs to the American people everywhere. It is one of the most useful and cherished American institutions. It is not an instrument subject to the whims of penny-wise and pound-foolish administrators.

The orders contained in the Postal Bulletin of April 18 will result in irreparable damage and destruction of our fine postal system. It will make the postal service—the Government function closest to the lives of the American people—a second-rate inferior Government agency. Letter carriers have always been mighty proud of the fact that the postal service rendered excellent necessary service. The service ideal is assassinated by the orders issued by the Post Office Department. Delivery of mail Nation-wide is restricted to one delivery a day in residential districts and service is greatly reduced in business areas. Parcel-post deliveries are to be cut in half in business areas. Weekly magazines, such as Time, United States News, Newsweek, and all others that have become an important part of American life, will no longer receive expeditious handling. The prompt mail delivery that the American people have been receiving since the days of Benjamin Franklin will not be available.

Postmasters have been ordered to discontinue directory service on all ordinary mail other than perishable matter and parcels of obvious value. While the reduction in the number of deliveries in the residential areas has attracted the most attention, there are other extremely far-reaching reductions provided for in the Postmaster General's orders of April 18. These orders affect practically every operation of the Post Office Department.

The collection of mail is curtailed. In one of the largest cities in the country located on the west coast, stickers were placed in the mail boxes informing the patrons that hereafter there would be two collections of mail daily from the box. No time was stated for these collections. Inasmuch as boxes in business areas fill up rapidly and require several collections during the business hours, it is impossible to determine how the mail can possibly be handled under the proposed schedule. The drastic cut in collection service will result in many hours of delay at the post office of origin.

The orders further provide that no mail shall be received at the windows or over the platforms except between the hours of 8 a. m. and 6 p. m. Every post office in America is practically bursting at the seams. It is impossible on a 24-hour basis to adequately handle all of the mail received. Yet, by this order the receipt of mail is drastically limited with the exception of a few classes of mail to a schedule of 10 hours a day. Many manufacturing plants confronted with a shortage of plant capacity meet the challenge by putting on additional shifts. The Post Office Department, carrying a volume of mail that cannot be handled in 24 hours, meets the challenge by reducing the hours of receipt of mail to 10 a day.

The order further provides that the distribution of many classes of mail will be limited to a 10-hour daily schedule. We are living in the atomic age; the Post Office Department however is reverting to the stone age. Mail received in the post office will remain there for many hours before being dispatched. Air mail will be placed upon an airplane and sped across the country in 12 hours. These great planes traveling over 300 miles per hour will speed the mail to the offices of delivery. When the mail arrives at its point of destination, in many cases it will take 20 or 30 hours before it is delivered. The mail travels through the air at a rate greater than 300 miles per hour, but it can well take 20 or 24 hours to deliver it 300 feet.

The orders are unquestionably the most drastic and destructive ever issued in the entire history of the Post Office Department. The ideal of service is completely eliminated from all future postal operations. Apparently the Postmaster General bases his policies upon the action of the House Committee on Appropriations in recommending for the fiscal year 1951 the total sum of $2,207,500,000. According to the Postmaster General's Bulletin of April 18, the actual expenditures for the fiscal year 1950 will be $2,240,000,000. At the hearing before the Treasury and Post Office Department Appropriations Subcommittee on February 27, 1950, Postmaster General Donaldson made the following statement:

"The obligations for 1950 are estimated at $2,183,517,086."

He further stated:

"There is available through amounts appropriated to date for 1950, and 1949 balances of appropriations available in 1950 the sum of $2,102,251,486. At this time it appears that the Department would require additional appropriations in the sum of $81,265,600 to cover the new salary increases and the requirements for increase in prices, rates, and additional postal business."

At this point, I desire to include a brief summary of the despicable orders which amount to a rape of the postal service:

1. For the immediate readjustment of residential city delivery routes so as to provide one delivery each weekday, Monday through Saturday.

2. Collection of mail from street letter boxes shall be limited to a minimum number of collections.

3. Deliveries to neighborhood stores and professional offices shall be limited to one delivery a day.

4. Deliveries of parcel post shall be restricted to one delivery each day in business areas.

5. Service for parcel post shall be discontinued where business houses are closed on Saturday.

6. Window service at the main post office shall be provided between the hours of 8 a. m. and 6 p. m. and at stations, between the hours of 8 a. m. and 5:30 p. m.

7. At the main office and stations where mail matter is received in large quantities over loading docks, the acceptance of such mail shall be limited between the hours of 8 a. m. to 6 p. m., except for first-class mail, air mail, daily newspapers, and weekly newspapers of local origin.

8. All bulk mailings of second-, third-, and fourth-class must be deposited between the hours of 8 a. m. and 6 p. m.

9. Discontinue preferential treatment of so-called time-limit third-class matter.

10. Discontinue, during the hours 6 p. m. and 6 a. m., the distribution of all mail, both incoming and outgoing, other than air mail, first-class, daily newspapers, and parcel post.

11. Saturday window service shall be restricted to between 8 a. m. and 12 noon at stations and branches. In some cities it may be possible to discontinue Saturday service altogether, according to the order.

12. In readjusting carrier deliveries to one trip basis, surplus regular carriers will result. Postmasters are instructed to assign these carriers as follows: (a) one regular carrier for each five regular carriers, for the purpose of granting compensatory time; (b) assign surplus carriers for the granting of annual and sick leave and other absence without pay.

13. All vacancies will be held open until further notice from the Department.

There are many other equally vicious provisions contained in the curtailment orders which clearly constitute a complete about-face on the part of Postmaster General Jesse M. Donaldson. Please, gentlemen of the committee, let me prove that statement by quoting the exact words of the then Acting Postmaster General, uttered on July 7, 1947, and which appear in the printed hearings on the second supplemental appropriation bill for 1948, before the subcommittee of the Committee on Appropriations, House of Representatives, Eightieth Congress, first session, part I, Post Office Department, page 14:

"The big increase in the volume of mail began to hit us with all kinds of complaints from postmasters, and from postal organizations, in March and April, particularly in April. And I think it was more pronounced to us because in those months we were cutting expenditures and reducing the delivery service and the clerical service in not allowing postmasters as much money as they wanted for auxiliary expenditures. Reducing the cost with an increase in the volume of mail just flooded us with complaints not only from postmasters but from the public. We get anywhere from 3,000 to 5,000 letters in the run of a week from the public on curtailed postal service. But we did curtail drastically during May and June of this year in order to come within the amount appropriated.

"We went back practically in every city in the country to a one-trip service in residential sections. I never thought in all of my years of experience that the public would complain so much about that, because I felt that the two-trip service in residential sections was more of a service function than just the public seeing the carrier come to the door twice a day. I knew that our two-trip service was not based upon what the public needs in the way of having a carrier come to their door, but is based upon a prevention of delay in mail. So much mail arrives in these big cities at an hour in the morning when it cannot be distributed and get out to the stations from which the carriers emanate, in time for delivery on the morning trip and therefore, if we do not deliver it on the afternoon trip, it is delayed until the next morning.

"Likewise, if you put carriers on a one-trip basis, we have got to determine whether he can handle his route on a basis of 8 hours within 10. It means that he must leave the office at 8 or 8:30 in the morning and he is continually on duty unless we swing him on his route somewhere, until his 8 hours are up. That means that some people do not get their mail during the morning, and some people do not get it until as late as 4 o'clock in the afternoon.

"I thought that there would not be so much kick about that until we began to do that during May and June and the people began to write us letters, because unless we can get that mail out in the afternoon delivery, it is delayed until the next morning. We have not been able even to begin to answer the complaints because we do not have enough force to handle that correspondence that has come in to us on account of this one-trip basis."

If further proof is needed in pointing up General Donaldson's complete about-face, let me cite statements made by him less

than 4 months ago before the subcommittee of the Committee on Appropriations, House of Representatives, Eighty-first Congress, second session, part 2, Post Office Department, Monday, January 16, 1950, page 389:

"Mr. DONALDSON. I am trying my very best to give the public the best possible postal service at the least possible cost. In this program, I am having the full support of all officials in the Department and the field and the rank and file of the postal people. We want no unnecessary expenditure anywhere in the service. We are taking advantage of every known device or program that is suitable in the operation of the postal service to improve the service, better the working conditions of the postal people, and reduce the operating costs."

Page 397:

"CONCLUSION

"The heads of all bureaus and offices within the Department and the field have been advised that they must exert every effort to operate their units with efficiency and with the greatest economy consistent with satisfactory service to the public. It will be my purpose to continue this policy and at the same time we will supplant any known obsolete methods and equipment as fast as possible. I consider it of paramount importance to continue to give the public good service. Any economy campaign which would go so far as to destroy the present standards would bring on reactions that not only would nullify economy but, in the end, would result in greater costs. Past history of too drastic actions after national surveys bears this out."

Postmaster General Donaldson knows from personal experience that every time the number of deliveries is reduced, the individual letter carrier has an increased volume of mail to deliver on an extended delivery district. General Donaldson also knows that the efficiency of the individual is seriously impaired because he has entirely too much mail for the separation case. After the case gets too full, the unit cost of handling each piece increases greatly. One-trip routes are not efficient units, nor are they economical; but they are inhumane. To keep a letter carrier on his route six hours or more without an opportunity to eat or relax even slightly, definitely belongs to the dark ages. It is beneath all human dignity to expect a letter carrier to eat his cold lunch at the corner relay or storage box, sitting on a curbstone without regard to the weather or other elements. It is equally beneath human dignity to fail to provide for other human necessities such as toilet facilities.

At this point in my testimony I desire to read into the record a statement by Congressman MIKE MANSFIELD of Montana, which appears on page 5952 of the CONGRESSIONAL RECORD of April 27:

"POSTAL SERVICE

"Mr. MANSFIELD. Mr. Speaker, I rise in protest against the order of the Postmaster General which will curtail delivery and other essential postal services to take effect on July 1, 1950.

"If this order becomes effective on a Nation-wide scale it will completely demoralize the whole postal service and cause the American people in general much concern. I am, however, especially interested in the postal service as it affects the State of Montana because there we have one of the most efficient postal organizations in the country, and because of the distances to be covered and the hazards to be met, one of the most difficult. There is a very high esprit de corps on the part of the postal employees in my State which, at the present time, has suffered a severe shock because of the order issued by the Postmaster General.

"As a matter of fact in the city of Butte, Mont., one delivery postal service was inaugurated on April 25, which is indeed jumping the deadline, many weeks ahead of the time when the proposed cut was supposed to go into effect. Mr. Speaker, I am inserting at this point in my remarks a telegram I have just received from my friend, Dan McGonigle, president, Branch 621, NALC, of Butte, Mont.:

"BUTTE, MONT., *April 26, 1950.*

"Representative MIKE MANSFIELD,
"House of Representatives,
Washington, D. C.:

"One delivery postal service inaugurated today despite vigorous protest. Letter carriers instructed to eat lunch on curb or impose on hospitality of some patron. Climate precludes former as you well know. The latter alternative is objectionable. Pretty picture—lunch pail on one shoulder, mail satchel on the other. Understand Postmaster General Donaldson scheduled again before Senate Post Office Committee Thursday, April 27. Respectfully request your attendance at that meeting and interrogation of Donaldson regarding uncivilized treatment of Butte letter carriers.

"Respectfully request also you demand in writing from Donaldson instructions Nation-wide that letter carriers will be afforded humane consideration and their dignity as a human being will be respected.

"DAN MCGONIGLE,
"President, Branch 621, NALC."

Undoubtedly, there will be pious rebuttal from the Postmaster General to the picture I have attempted to draw with words. It will be said that such things cannot happen, and will not happen.

Gentlemen, it has happened; it is going on this very morning in many places in these United States; unfortunately, it will continue to happen as long as these uncivilized orders are permitted to remain in effect.

I have here for the consideration of the members of this committee an enlarged photograph of a letter carrier forced to eat his lunch on a curbstone. It is not a fake photograph, designed to induce crocodile tears. I will give the facts in the case.

The photograph shows a letter carrier in the Fair Lawn, N. J., post office. His name is Joseph Ulinsky. Fair Lawn is a borough of Paterson, N. J., with a population of approximately 20,000. Unlike Paterson, Fair Lawn is 90 percent residential territory, from a post office standpoint. Carrier Ulinsky is assigned to a route in a section of Fair Lawn called Radburn. This section consists almost entirely of homes described as being "well back from the street, and a spacious lawn in front of almost every home." Stores, lunch rooms, taverns, and the like are confined to a small section of the main arteries running through the town. There are none of these on the route served by Mr. Ulinsky.

The first day that Carrier Ulinsky worked under the curtailment schedule, that is, one trip, he ate his lunch on the porch of a patron on his route. He took the half hour allowed him and then proceeded on his route. His first delivery after his lunch period was across the street from his open-air lunchroom. The lady of the house asked Carrier Ulinsky why he ate his lunch across the street. He gave what he considered a reasonable explanation. The lady informed Carrier Ulinsky that her husband was in the house and that he was "fit to be tied" because of the delay in his mail. It developed that his mail pertained to his business. The suggestion was made to Carrier Ulinsky that he deliver that particular address and then eat his lunch. Carrier Ulinsky rightfully took the viewpoint that, if he complied with that suggestion, the patron in the next house would react the same way and make a similar demand. To end all controversy, Carrier Ulinsky eats his lunch on the curbstone.

I, personally, checked this story and picture. I told the committee it was not a faked photograph. The information comes from the city editor of the Paterson Evening News that he sent a reporter to the scene on telephoned information from a neighbor in the vicinity of the spot where Carrier Ulinsky took his curbstone lunch period. The original photograph appeared in the April 26 edition of the Paterson Evening News.

A few additional relevant facts concerning this photograph will help point up what I am attempting to bring out about the stupidity of these April 18 orders. Carrier Ulinsky is on a route three-fourths of a mile from his office; he is not allowed bus transportation. He is scheduled to report at the post office at 7 o'clock each morning; he prepares his mail and departs for his deliveries at 9 a. m. He is scheduled to return to the office at 3:30 o'clock in the afternoon. In other words, he is scheduled to remain out on the street 6 hours and 30 minutes, sans eating facilities, sans toilet facilities.

Our second picture shows Letter Carrier Floyd Hunt sitting on a curbstone and eating his lunch. It appeared in the Council Bluffs Nonpareil of May 1. Carrier Hunt reports for work at 7:30 a. m. He leaves the post office at 8:50 a. m. and is due to return at 4 p. m.—or a total of 7 hours and 10 minutes out on his route.

There are no eating places, no restaurants, no taverns or grocery stores on his route. Obviously, he must carry his mail sack on one shoulder and his lunch pail on the other.

Carrier Hunt is a veteran of World War II. He spent 4 years and 5 months in the military; 2 years and 8 months in action. He had combat service in Salerno, Africa, Tunisia, England, Scotland, Wales, and Algeria. He was awarded the European ribbon with four battle stars, plus the combat infantry ribbon and good-conduct ribbon. He is a disabled war veteran with 10 percent compensation. He is married, has one child 3 years old, and presently is attempting to purchase his home.

There are thousands of military veterans in the letter-carrier service Nation-wide who, right at this moment, are also sitting on curbstones eating their lunches, thanks to the orders of Postmaster General Donaldson contained in the Postal Bulletin of April 18, 1950.

Letter carriers are neither supermen nor crybabies. I consider them average human beings with the same feelings and emotions as General Donaldson or any of his staff. If General Donaldson and the members of his staff will agree to forego the luxury of eating a hot lunch in pleasant surroundings and move out on the curbstone of Pennsylvania Avenue for their lunch, I believe it will be possible to convince the many, many Joe Ulinskys and Floyd Hunts in the postal service that curbstone eating is considered de rigueur in postal circles.

Postmaster General Donaldson is a master of the art of contradiction. Please, gentlemen of the committee, consider these words uttered by Mr. Donaldson at the Thirty-sixth Biennial Convention of the National Association of Letter Carriers held in Miami, Fla., in October 1948. These are his exact words relative to an investigation conducted by a Cleveland engineering firm:

"I have no criticism to offer of those people who made the investigation, but I believe they would have been in a better position if they had consulted officials in the Post Office Department about the kind of suggestions and recommendations they were going to make before they submitted their report. This they did not do and for that reason many of the suggestions and many of their articles of criticism were ridiculous.

"Well, I don't want to be ridiculous and I am not going to recommend that you provide every carrier in the United States with a scooter to carry his mail. [Applause.] Neither am I going to recommend that you keep a carrier out on the street for 8 hours while some clerk routes his mail and you shuttle the mail to him on the streets. [Cheers and applause.]"

According to General Donaldson's figures, the postal complement of employees will be reduced from 517,000 to 504,000 during the coming fiscal year. Even those ultra-conservative figures clearly indicate that 13,000 loyal postal employees will be added to the already expanding unemployment rolls. Most of these 13,000 displaced postal persons are veterans of World War II. Surely Uncle Sam must have a better fate in store for these battle heroes who gave so much in answering the call to the colors.

The able and distinguished chairman of this august committee, Senator OLIN D. JOHNSTON, put his finger on the crux of the situation in a recent radio broadcast when he said:

"There is seemingly a glaring inconsistency in the argument to support the action of the Postmaster General—I have a copy of the orders here before me—as part of his justification for the curtailment program he proposes, Mr. Donaldson says:

" 'Splendid progress has been made and the productive effort of the employees has been increased as indicated by the accomplishments in the fiscal year 1939, compared with the fiscal year 1949 * * *'

"Now here is the part of Mr. Donaldson's statement that I cannot reconcile with his proposal:

" 'During that period (1939 to 1949), the revenues increased more than 110.72 percent * * *

" 'The number of pieces (of mail) handled increased 64.70 percent;

" 'The weight of the mails increased more than 104.73 percent * * * while

" 'The increase in the number of employees was less than 48.43 percent.'

"According to these figures, it would appear that the Postmaster General is trying to test the theory of diminishing returns, in that the more mail handled by his Department, the less personnel he will keep to collect it, transport it, and make final delivery of it."

The Post Office Department boasts a fine tradition of service. Postal employees are imbued with the ideal of giving service to the American people. There is no agency of Government that has finer traditions than the United States postal service. Up until recently the Post Office Department has enjoyed the fullest confidence and has been held in highest esteem by the press and by the American people.

Traditionally, service has been held to be the fundamental purpose of the Post Office Department. It has generally been recognized that good postal service is essential to good business. Some in authority have recently taken the attitude of insisting that the Post Office Department must operate as a successful business. The Postmaster General has insistently called the attention of the American people to the fact that the Post Office Department is operating under a so-called huge deficit. Since the alleged deficit is an excess of expenditures over receipts, let us compare the postal fiscal structure with several other departments and agencies of the Federal Government:

STATISTICAL DATA

1. First-class mail is the only mail classification that pays its own way. In fiscal 1949 first-class mail had an excess of revenues over apportioned expenditures, i. e., profits, of $82,064,709.

Item: The one category showing a profit, viz, first-class mail, is the one classification used by all the mailing public, and it is the one service being curtailed mostly by the curtailment orders. (Source: Cost Ascertainment Report for Fiscal 1949.)

2. Other classifications of mail and special services showed the following excesses of apportioned expenditures over revenues, i. e., losses:

(a) Revenue-producing items:

Domestic air mail	$37,261,064
Second class (paid)	174,674,835
Third class	129,052,786
Fourth class	104,880,608
Foreign surface mail	26,497,033
Foreign air mail	47,723,295
Registry (paid)	13,129,158
Insurance	44,344
Collect on delivery	7,369,476
Special delivery	10,781,201
Money orders	28,409,699
Postal notes	4,006,001

(b) Non-revenue-producing items:

Free in county (second class)	$11,173,870
Penalty	37,710,833
Franked	1,071,753
Free for blind	335,833
Registry (free)	8,939,789
Nonpostal services	28,434,441

The only special service—postal savings—that pays its own way showed a profit of $2,412,982.

Certain unassignable transactions resulted in revenues of $28,938,800. These "unassignable" items consist of such things as receipts from box rents, fines and penalties, unpaid money orders more than a year old, and post route map sales. (Source: Cost-ascertainment report for fiscal 1949.)

3. Total postal income for fiscal 1949 equaled $1,571,896,442. Total expenditures amounted to $2,122,980,800 (both figures unaudited). Operating loss therefore amounted to $551,084,358. (Source: Cost-ascertainment report for fiscal 1949.)

Item: Comparison of postal operating loss with appropriations and revenues of other Government agencies:

	Annual appropriation, 1950	Miscellaneous receipts, 1949	Deficit
Labor	$191,733,753	$337,413	$191,396,340
Interior	590,203,947	130,683,928	459,520,019
Commerce	675,621,402	8,039,026	667,582,376
Agriculture	731,328,607	256,860,297	474,968,310

Source: Library of Congress, Economics Section, Apr. 13, 1950.

Item: An analysis of the above figure discloses that the Post Office Department pays more than two-thirds of its own way. None of the other agencies shown come close to that margin.

4. Totals on mail handled in fiscal 1949:

Pieces	43,555,107,766
Weight (pounds)	11,625,209,458
Special services	906,813,143

(b) Increases in 1949 over 1948:

	Percent
Pieces	8.13
Weight	12.14
Revenue	11.48
Special services	7.48
Employment	6.66

Source: Cost-ascertainment report for fiscal 1949.

5. Estimates of increases in 1950 over 1949:

	Percent
Pieces	1.30
Weight	----
Revenues	4.33
Special services	0.34

Item: Despite these estimated increases for 1950, plus Postmaster General Donaldson's testimony that mail volume and postal receipts have steadily increased each succeeding year for the past 10 years, it is estimated that employment in 1950 will show a decrease of 1.33 percent. (Source: All figures, cost-ascertainment report for fiscal 1949, and Hearing Subcommittee, House Appropriations Committee, Jan. 16, 1950.)

6. Chart showing increase in productivity of employees:

Fiscal year	Pieces of mail	Paid employment (man-years)	Pieces of mail per year of paid employment
1946	36,318,158,366	420,810	84,302
1947	37,427,706,174	439,210	85,226
1948	40,280,374,207	453,589	88,804
1949 [1]	43,384,681,213	482,748	89,870
1950 [1]	43,946,716,000	478,034	91,932
1951 [1]	45,059,798,000	480,640	93,750

[1] Estimated.

Source: Postmaster General Donaldson's testimony before House Appropriations Committee, January 1950.

On April 21, 1950, Congressman JOHN R. WALSH, of Indiana, introduced House Resolution 547, which calls for a sweeping investigation of the Post Office Department. At the time of the introduction, Congressman WALSH issued a statement containing far-reaching implications. Since the statement refers specifically to H. R. 2945, the postage-rate bill presently under consideration by this committee, and the drastic curtailment of postal services, I desire to place it in the record at this point:

"Yesterday I served notice that today I would introduce a House resolution to authorize and direct a sweeping investigation of the scandalous situation existing in the Post Office Department, particularly with reference to the subsidies and overpayments made by the Department to railroads for transportation of the mails.

"I have caused the introduction of the House resolution referred to; it is House Resolution 547.

"In my statement of yesterday, I called attention to the deplorable condition wherein the Post Office Department pays double transportation charges for space purchased from the railroads, out of postal appropriations, for the transmission of the mails. Postmaster General Donaldson testified as much before a Committee of the House of Representatives on March 7 of last year.

"In hearings before the Committee on Post Office and Civil Service, on H. R. 2945—which had for its purpose a readjustment of postal rates, the following colloquy took place:

" 'Mr. HAGEN. At that point let me ask this question: Has any survey been made recently as to what percentage of the actual paid-up space that is used in railway cars—and I understand it is on a cubic-foot basis—is used on the average run? In other words, we now pay the railroads, as I understand it, for the baggage cars for mail and the mail cars, so much per cubic foot on each railroad run, and we pay for that space regardless of whether there is 1 sack or 100 sacks, and some days it is more and some days less. Has any survey been made to show the average amount of usable space that has been used on these various runs over a period of time?'

"Postmaster General Donaldson made the following reply to Congressman HAGEN'S inquiry:

" 'Yes, Mr. HAGEN, there is a difference of pay to railroads. In other words, I think what you are talking about is space purchased by full cars or storage cars, or what not. That is different from the regular RPO line, the lines in which railway postal clerks operate.

" 'Now, with reference to the space for transporting mails by full-car lots or by 15 feet or 30 feet or 45 feet, or what not, I think

that our investigation indicated that we used about half of the space that we paid for. Under the law, if we transport a carload of mail from New York City to San Francisco, we pay for that so much per foot per mile, so to speak, and then we pay for the return movement of the car, whether we use it or not. There is far more mail moving west than there is mail moving back.'

"I might add in this connection that an investigation on the basis of cost ascertainment figures in 1946 indicated that the Post Office Department paid for 580,462,152,219 cubic foot miles for the transportation of mails, and actually carried only 323,677,344,195 cubic foot miles of non-local surface mails. This indicates that 44.24 percent of space was paid for but not used.

"Now here we find an administrator who testifies before a congressional committee that his Department contracts with the railroads for so much storage space, uses only half of it and, mind you, pays for the total amount contracted for with the taxpayers' money. This same administrator, on April 18, issued drastic curtailment orders reducing delivery service in the Post Office Department to such an extent that it will mean a reduction in force of a minimum of 10,000 employees. One can only surmise that empty box cars are more important than human beings.

"I should like to invite attention to the apparent policy pursued by the Post Office Department with respect to payments for service furnished by railroads transporting the mails. The policy adopted gives no consideration or, at best, very little to the taxpayer.

"On February 14, 1946, William V. Griffin and Hugh William Purvis, receivers for the Georgia & Florida Railroad, were suing the United States Government. The case was heard in the United States Court of Claims. John Hardy, General Superintendent, Railway Mail Service, Post Office Department, was on the stand. Under oath, he declared:

" 'I might add that the most—probably the determining factor in my decision was the fact that the railroad company pleaded that we continue the service because of the financial benefits that were accruing to the railroad, and that has been one of the policies of the Department, that in considering any curtailment or discontinuance of rail service, is to first make inquiry of the railroad company as to what effect upon the finances of the operation of their railroad any such curtailment would have, and we are invariably governed in our decision by the plea of the railroad in response to our inquiry.'

"During this same litigation, Mr. Hardy was asked the following question by Mr. Stern:

" 'Question 19. Have you had occasion to deal with and compare the rates for your service and railway express service?'

"Mr. Hardy replied:

" 'Well, all large railroads have what is known as managers of the mail and express traffic. The majority of those employees are former employees of the Post Office Department, railway mail service, and in my position we have almost daily contact with these managers of mail and express traffic, and from frequent conversations with those railroad representatives I can positively state that the railroads value the mail traffic greater than the express traffic; that is that they consider that their revenue from mail traffic in consideration of what is furnished for the Post Office Department as compared with that which is furnished the express company brings them a greater return.'

"Mr. Donaldson has stated that the Post Office Department used 'about half the space that was paid for.' From the evidence at hand, that might well be described as an understatement. Mr. Peter J. Schardt, chairman of the Committee on Railway Mail Transportation, is quoted in the November 20, 1948, issue of the Railway Age, in an article entitled 'What Future For Mail Revenue?' as follows:

" 'Mail traffic is not evenly balanced; it is heavier going south and west than north and east. The unbalance, moreover, varies sharply on different roads. The ratio of loaded mail space to total mail space authorized varies from 98.9 percent on one big class I road, down to 57.9 percent on another.'

"It is my firm conviction that the entire question of postal subsidies should be thoroughly investigated. Railroads are not the only ones to benefit by subsidies at the expense of the taxpayers. Let me show what a waste of taxpayers' funds is going on in the air industry under the pious name of postal subsidies. House Document No. 1242, Survey and Study of the Postal Service, Preliminary Report, January 15, 1948, page 6, reported:

" 'In paying the airmail subsidy, the Post Office Department is called upon to finance inefficient management, parties, hotel suites, entertainment, excessive public-relations costs, and to finance competition between existing scheduled carriers.'

"Getting back to the railroads, the statement has been made that the Postmaster General has no control over rail rates. That is true only in part. It is true that the Interstate Commerce Commission has the right to determine the rate to charge per unit, but the Postmaster General determines how many units are to be purchased. In a hearing on S. 1596 before the Senate Post Office and Civil Service Committee on May 27, 1949, Frank J. Delany, Solicitor of the Post Office Department, pointed out:

" 'In other words, we prescribe the service; the Commission—the Commission figures how much it costs the carriers and fixes the rates, also figures the mechanics, whether the rate is to be calculated in terms of space as provided by the Railway Mail Pay Act, or weight, the old weight system, but nothing about directing the Postmaster General in his determination as to what service he requires or how often he requires it, or whether he wants it on a one-way basis or a round-trip basis.'

"On more than one occasion the Postmaster General has stated in effect that his is an untenable position with respect to fees paid railroads for the transportation of mails. As I pointed out above, that is only half true.

"Here is another interesting aspect of this question. Page 23 of the report on the Post Office appropriation bill for 1949 carried the following:

" 'Special contracts with railroads are authorized by statute for transportation of mails where the Postmaster General believes special conditions warrant higher rates. Testimony reveals that there were six such special contracts in effect as of July 1, 1947, providing for an annual increase over regular rates in amount of $111,763. The committee questions the necessity for such special contracts, and desires that the Department undertake a survey to determine the possibility of their discontinuance.'

"I understand that these preferential contracts are still in effect, despite the recommendation of the committee. It is interesting to point out the swiftness with which the Postmaster General complied with the recommendation of the House Appropriations Committee this year with respect to looking for economies by a reduction in services that would not be a hardship or inconvenience to the general public. The Postmaster General, in my opinion, went much further than the recommendations of the committee implied.

"I might also say that the Postmaster General under the law has authority to negotiate with railroads for more favorable rates; this authority has not been used to secure favorable rates where a competitive situation exists. This is exactly opposite to the policy followed by the Department where small contractors are involved. As a matter of fact, the Department encourages cutthroat competition among letter carriers on so-called mounted routes where the difference in their contract bid is seldom more than a few paltry dollars.

"The resolution I have introduced will investigate these unhealthy conditions and bring about corrective action to the end that legitimate rates will be determined for legitimate services performed by the railroads, the airlines, and the steamships. If the Congress in its wisdom decides that these agencies require help from the Federal Government through subsidies, then I am sure they will give consideration to that question. I do hope that any subsidies authorized will be distinctly separated from payments for actual services performed so that these subsidies will not be charged against the operating cost of the Post Office Department.

"I invite support of my resolution. Something must be done to save the postal service and the American taxpayer from the horrible situation which exists today."

On April 24 President William Green, of the American Federation of Labor, issued a timely statement relative to the drastic action taken by the Postmaster General. I respectfully request that his statement be included at this point in my testimony. It reads:

"AFL President William Green today called for a congressional investigation of the Postmaster General's recent order drastically curtailing the Nation's mail delivery service.

" 'This order,' Mr. Green said, 'will cripple the postal system and severely handicap business which must depend upon prompt and efficient mail service. In the name of economy it will cost the American people many millions of dollars. At a time when unemployment is becoming serious it will throw many thousands of additional employees out of work.

" 'The American Federation of Labor will demand an investigation by Congress of this unwise and unnecessary blow at our vital postal service.

" 'Isn't it ridiculous to spend huge sums of Government money to develop high-speed mail transportation by air only to have the mail held up by horse-and-buggy delivery on the ground?

" 'If the Post Office Department is so anxious to make a better bookkeeping showing and wipe out an alleged operating deficit, why doesn't it eliminate wasteful expenditures to railroads for hauling empty mail cars across the continent and for hauling mail back and forth because of lack of storage at terminal points?

" 'The Postmaster General's order is equivalent to saving a few drops at the bung while wasting gallons at the spigot. The traditional policy of the postal system has always been service above all. That policy must be maintained to protect our national economy. Congress should move at once to investigate the Postmaster General's penny-pinching order which would nullify that policy.' "

The annual report of the Postmaster General for the fiscal year ended June 30, 1944, page 53, carried this most illuminating statement by Postmaster General Frank C. Walker:

"The postal service should not be used as a revenue-producing agency. It should be conducted as an organization for service only. The rates and fees for each class of mail and each special service should be generally sufficient to pay its cost of handling. When the operations of the postal service show a surplus it means that the public is not only

paying for the service which it buys, but in addition is paying a tax. When the postal service operations show a deficit it means that there are hidden subsidies which must be met out of the general taxes. Where there are deficits in any branch of the service, postal rates and fees should be increased on the class of mail or special service that is being handled at a loss, unless preferential rates are authorized by Congress for some special class of mail or service. In such cases the rates and fees for other services should be sufficient to absorb any loss."

On Monday, December 3, 1945, Jesse M. Donaldson, then First Assistant Postmaster General, participated in this most interesting colloquy, which appears commencing on page 78 of the printed hearings before the subcommittee of the Committee on Appropriations, House of Representatives, Seventy-ninth Congress, second session, on the Post Office Department appropriation bill for 1947:

"Mr. LUDLOW. Since when?

"Mr. DONALDSON. Over the last year. At the present time correspondence with reference to Public Law 134, which was effective July 1, has thrown us in arrears approximately 60 days in most of the bureaus, in replying to the correspondence.

"READJUSTMENT OF FIELD SERVICE

"The readjustment of our field service has also increased our correspondence. Of course you all know that during the war the postal service was greatly dislocated; there was migration of people to certain points where it was necessary to handle a large volume of mail. And the readjustment of the service due to curtailment in the city delivery service as well as other functions of the postal service during the war are now problems that we have to adjust. People have been patient during the war with the poor service we have been rendering. Since the removal of restrictions on a great many things, especially rationing, we have been receiving a great clamor for restoration of two trips by carriers and for more service in the post office than we have been giving. It is going to be absolutely necessary to readjust this service, and that is increasing the correspondence in the department.

"And then we have the problem of the returning veterans and reduction of personnel in post offices incident to the returning veterans, which increases our correspondence. It is very alarming to us in the head office because of the fact we do not have enough employees, especially experienced employees, to handle this volume of work incident to making replies to letters from postmasters and from Members of Congress, which are being delayed as much as 30 days—in some instances 60 days. It creates a problem that we cannot cope with unless we get more personnel."

"RESTORATION OF CERTAIN SERVICES

"Mr. LUDLOW. Mr. Donaldson, you have made an observation and I would like to make one. You spoke of the clamor for the restoration of service; that is to say, I assume, largely mail delivery service which was suspended in certain instances during the war. There are many places, I take it, that have only in recent years had one delivery a day in residential districts, particularly outlying districts that formerly before the war had two deliveries a day; and they have gotten more or less used to one delivery. What is the necessity of going back to the two-delivery service?

"Mr. DONALDSON. Mr. Chairman, it is not a question of giving the patrons in the city two deliveries a day so much as it is the question of getting the large volume of mail out of the post office and maintaining the schedule of carriers and of giving the patron a delivery at about the same time each day. You cannot make a storehouse of the post office, and where you have one-trip carrier routes in post offices, the patrons are going to get their mail later in the day with no reasonable regularity of schedule of the carriers which results in curtailment of service even on the one trip.

"Mr. KOPPLEMANN. This is probably what it would do: Newspapers are not taken on the first delivery as a rule, and people would like to get their newspapers in time more than their ordinary mail.

"Mr. DONALDSON. We would have another thing, Mr. Kopplemann: Many of the trains arriving at the large city stations arrive in the morning, and it is impossible for the post office to distribute that mail and get it to the carrier to take out on his first trip. The trains coming to Washington at 7 o'clock in the morning may bring 700 to 1,000 pouches of mail, and you cannot expect to distribute all of that mail to carriers for their first trip if they leave at 8 o'clock and that would mean only one trip and this mail would be left in the post office until the next morning.

"Mr. LUDLOW. Suppose the trips were made later in the day could not that requirement then be met?

"Mr. DONALDSON. No; you must keep the mail moving through the post office to keep it from accumulating as trains arrive, and outgoing mail must be kept moving in order to maintain the schedule of distribution.

"There are some places, yes, where we never did give more than one delivery, and perhaps they will not get more than one delivery now. You might call these the suburban routes, so to speak, and the volume of mail and the patronage are not so heavy, but in residential districts, in large cities. These two deliveries must be made in the residential sections if we are to maintain the service.

"Mr. LUDLOW. Is it your thought that it is in the public interest, therefore, to restore the two deliveries to all the services that have been limited to one delivery during the war?

"Mr. DONALDSON. As far as we can efficiently do so, we should.

"Mr. LUDLOW. Just as an off-hand cornfield opinion it seems to me that where people have become accustomed to one delivery they would be reconciled to one delivery, and it would result in a large saving of money.

"Mr. DONALDSON. It is not so much the saving of money——

"Mr. LUDLOW. I defer to your superior knowledge of the postal service.

"Mr. DONALDSON. It is not so much, Mr. Chairman, the necessity of having the carrier reaching the patron's house twice a day as it is to keep the mail moving out of the post office. In many residential sections throughout the country the delivery of mail is going to be 24 hours late; it is not going to be delivered until the next morning, much of the mail which should have been delivered today.

"Mr. KOPPLEMANN. That would require additional clerical help in the post office to handle the mail due to the fact of its laying over in the post office.

"Mr. DONALDSON. It would impede the distribution in the post office."

This is the language used by the late Robert E. Hannegan in the annual report of the Postmaster General for the fiscal year ended June 30, 1946, page 4:

"During the past 100 years the financial ideal sought by the management of the postal establishment, which has been to make the institution substantially self-sustaining, has rarely been achieved, and then usually during war years. The service ideal as differentiated from the financial has been, as it always should be, held paramount. In the development of our country, in the furtherance of social improvement, and in the fostering of business enterprise, the long-time policy of Congress and the Post Office Department has been to recognize that service must be provided and extensions made even though the costs far exceed the revenues obtained."

Twenty years ago Congress enacted the Kelly postal-policy law (39 U. S. C. 793), which established a definite method of procedure on postal fiscal transactions. That measure remains on the statute books today and is intended to serve as a yardstick for all Postmasters General. For reasons unexplained, recent annual reports of the Postmaster General have not reflected the credits authorized by the Kelly Postal Policy Act. The law reads:

"PROVISIONS OF THE KELLY LAW (39 U. S. C. 792)

"SEC. 793. Classification of extraordinary expenditures contributing to deficiency of postal revenues: certification to Secretary of Treasury and to Comptroller General: The Postmaster General shall certify to the Secretary of the Treasury and to the Comptroller General of the United States, respectively, as soon as practicable after the end of each fiscal year, the following:

"(a) The estimated amount which would have been collected at regular rates of postage on matter mailed during the year by officers of the Government (other than those of the Post Office Department) under the penalty privilege, including registry fees;

"(b) The estimated amount which would have been collected at regular rates of postage on matter mailed during the year by (1) Members of Congress and (2) other under the franking privilege;

"(c) The estimated amount which would have been collected during the year at regular rates of postage on publications going free in the county;

"(d) The estimated amount which would have been collected at regular rates of postage on matter mailed free to the blind during the year;

"(e) The estimated difference between the postage revenue collected during the year on mailings of newspapers and periodicals published by and in the interests of religious, educational, scientific, philanthropic, agricultural, labor, and fraternal organizations, and that which would have been collected at zone rates of postage;

"(f) The estimated excess during the year of the cost of aircraft service over the postage revenues derived from air mail; and

"(g) The estimated amount paid during the year to vessels of American registry for carrying the ocean mail in excess of what would have been paid at pound rates if carried in vessels of foreign registry.

"And the amounts so certified shall be separately classified on the books of the Treasury Department and the General Accounting Office, respectively, in stating the expenditures made from the appropriation to supply the deficiency of postal revenues (June 9, 1930, ch. 413, 46 Stat. 523)."

There follow herewith two accurate charts which prove conclusively that during the 20-year period 1930–49 the excess of expenditures over receipts in postal operation amounted to a total of $510,781,269, or an average annual deficit of $25,539,064. The compilation is taken from each succeeding annual report of the Postmaster General commencing with the year ended June 30, 1930:

Cost ascertainment report

Year	Revenues	Expenditures	Surplus	Deficit	Year	Revenues	Expenditures	Surplus	Deficit
1930	$706,492,179	$804,940,961		$98,448,782	1941	$813,836,289	$840,799,971		$26,963,682

1940	768,015,327	810,240,686	60,834,394	18,609,035		Total	17,999,038,468	20,057,214,656	1,547,493,900	728,230,700	1,239,004,326

NOTE.—No cost ascertainment report. Figures taken from annual report of Postmaster General.
Net loss, 1930–49 (20 years), $510,773,626.
Average per year, $25,538,681.

Heretofore the National Association of Letter Carriers has never taken a position relative to any pending legislation having for its purpose either increasing or decreasing postage rates. Historically, this association has supported the service ideal, believing that the American people are entitled to the best postal service on the face of the earth. It is utterly ridiculous to expect the American people to pay higher postage rates for an inferior brand of postal service. In view of the foregoing, the National Association of Letter Carriers withholds its approval of H. R. 2945, the pending postage rate increase bill.

Postal employee morale has reached an all-time low. Not even the vaunted hydrogen bomb could have done more damage in shattering the faith and confidence of these loyal hard-working employees in the field service of the Post Office Department.

In the name of Almighty God and human decency, I ask the Congress of the United States to compel the Postmaster General to rescind his devastating orders of April 18. Immediate favorable action by this distinguished committee on Senate Resolution 261 and Senate bill 3450 will accomplish that laudable objective.

Washington County (Ark.) PMA Annual Report for 1949

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1950

Mr. TRIMBLE. Mr. Speaker, under the direction of Ensel M. Coleman, L. E. Maupin, W. Shannon Pharr, Calvin F. Holcomb, Dave Barnett, and Lee L. Williams, the Washington County Production and Marketing Administration Committee is doing a fine job for soil conservation, water conservation, and protection of their forests. As an example of the good work which they are doing, I wish to insert their annual report for 1949:

ANNUAL REPORT, 1949, OF PRODUCTION AND MARKETING ADMINISTRATION AGRICULTURE CONSERVATION PROGRAM IN WASHINGTON COUNTY

INTRODUCTION

This report is an effort to give a better understanding of the purpose and accomplishments of the farm programs administered by the Washington County Committee of the Production and Marketing Administration.

The purpose of the agricultural conservation program is to achieve the greatest possible protection and improvement of the soil, water, and woodland resources of Washington County. It is a part of the Nation's effort to assure an abundant supply of food, fiber, and forest products for all our people.

The PMA program is a joint effort of all the people to conserve the natural resources of our farm land. The farmers contribute cash, labor, and equipment, which are supplemented by cash assistance to encourage additional conservation. This program enables everyone to bear a part of the expense of conservation which until a few years ago was borne by the farmer alone.

In behalf of Washington County farmers, we wish to express our appreciation to those who have helped to make the PMA program a success. We invite your cooperation in future years.

WASHINGTON COUNTY
PMA COMMITTEE,
W. SHANNON, PHARR,
Chairman.
CALVIN F. HOLCOMB,
Vice Chairman.
LEE L. WILLIAMS, *Member.*

FOREWORD

No man ever really owns a piece of land. This simple fact, which should become more and more obvious as generations come and go, is still the very root of our conservation problems.

The owner of land often feels that land is his, that he can use it, plant it or remake it in any way he sees fit. But, in more serious moments, he can see how little truth there is in such a belief. How presumptuous his self-styled "ownership" really is.

The land was here long before our forefathers lived. It will be here long after our bones have gone to dust.

At best, we are only custodians. Yes, we have a deed, and the title is in our name. But, really all it conveys to us are a few rights before the law.

We can erect a fence, keeping others off. The land becomes ours to use—either for making a living, building a home, or for purely recreational purposes, or numerous other uses.

We can, of course go a bit farther than that. We might cut down all of the trees and sell them. We might even sell off the topsoil.

Regardless of how we use or abuse this piece of land, it will be here for ages to come. Dozens of other "owners" will follow us, each thinking of the land as his, and his only. But the tenure of each is but a fleeting moment across the face of time.

As "owners," the worst that any of us can do is to destroy the productive capacity of the land. A farmer does that when he lets the soil on his hillside erode, or when he allows the gullies to carve his best field into useless pieces.

Here we not only damage the land and make it ugly to look upon, but even worse, we injure the chances of our children to make a living, and their children after them.

If fewer of us were to look at land as merely a commodity to buy and sell, and if more of us saw it for the precious heritage that it is—one entrusted to our keeping for only a brief moment, we would be ready to make gigantic strides toward real conservation.

ORGANIZATION

The PMA programs in Washington County are open to all farmers in the county and each one is invited to participate regardless of the size, type or location of farm.

This program is Government-farmer cooperation in the field. Congress makes appropriations to assist farmers in carrying out

needed soil and water conservation practices. Money appropriated is allocated to States on the basis of needs. The assistance represents a public investment in the maintenance and restoration of our soil, and so forth.

The PMA programs provide for a national program under the direction of farmer-elected farmer committees. With farmer-elected farmer committees directing the program the public is assured of getting the most for the money spent. Farmers acquainted with local needs and conditions see that money appropriated is used on practices adapted to the county.

The Production and Marketing Administration program is not only concerned with the needs of individual farmers but with the needs of the Nation. When the fertility of our farms is restored and maintained, the public can be assured of better quality products. We all depend on agriculture for the necessities of life and have a vital interest in maintaining its productivity.

Farmers in 1949 continued to build on what has been done in 17 years of PMA programs. These programs, as before will be open to every farmer and on every farm and all are eligible to share in the assistance offered. The program is voluntary and is available to farmers to help carry on a prosperous agriculture on a share-the-cost basis. The PMA program is planned, developed and administered by farmer committeemen who are elected annually by their farmer-neighbors. Each year county and community committeemen are elected to serve during the following calendar year. The county committee, composed of three regular and two cultural programs dealing directly with alternate members, is responsible for administering the PMA and other related agricultural programs dealing directly with farmers in the county. Community committeemen are elected to represent about 50 farms each and assist county committees in administering the program in their communities. This nonpartisan farmer-elected committeemen set-up is the heart of the farm program and has proven effective in developing and administering the program. In addition, this organization administers the price-support program of the Commodity Credit Corporation, marketing quotas, and production adjustments. The PMA program is farmer-developed and planned with the assistance of technically trained personnel from the PMA and all other agricultural agencies and organizations. Recommendations for programs are developed by farmers in county and community meetings each year. In addition to farmers, representatives of the agricultural agencies are invited to attend these planning meetings. These recommendations are made in such a way that they help, not only the individual farm and farmer, but the community and State and add to the over-all programs. Leadership in developing county suggestions is furnished by a farmer-elected committee and through them are channeled the knowledge and experience of producers as to the needs in the individual county and community. County recommendations for practices are submitted to the state PMA committee which in turn studies the recommendations in relation to national needs and advice from a state technical advisory committee composed of representatives of the college of agriculture experiment stations and technicians of other agricultural agencies. The practices adopted by the State committee are forwarded to Washington USDA officials and when approved become the practices for which assistance will be furnished. After practices for the State as a whole are approved, each county committee selects the practices which are best adapted to the county. Individual plans are developed for each farm whereby the most effective use can be made of the programs. These plans, made at the beginning of each program year, enable each farmer to take into consideration the availability of labor, equipment, materials and the farmer's ability to carry on his farming operations for the best interest for all individuals. Assistance in executing individual farm plans is furnished by farmer committeemen. This planned assistance to farmers makes PMA funds more effective and makes assistance of other agencies more effective.

COMMUNITY COMMITTEEMEN BY TOWNSHIPS

Brush Creek and Goshem: Charles H. Bragg, Lee Culwell, route 1, Elkins; Jack Coger, Douglas Stone, Lloyd Cate, route 2, Springdale.

Prairie: John A. Dean, route 1, Fayetteville; James E. Walker, route 6, Fayetteville; Olen Lacey, route 7, Fayetteville; Noah Smith, route 1, Fayetteville.

Durham and White River: Ben Hicks, Hicks; Orville Brink, Durham; Henry C. Thompson, Hicks; Sam J. Trammell, route 5, Fayetteville; Robert C. Vaught, Hicks.

Lee's Creek and Crawford: William J. Caudle, route 1, Winslow; Dess M. Chandler, route 1, Fayetteville; Fred Doyle, Edward W. Koch, Floyd Hayes, route 1, Winslow.

Elm Springs and Tontitown: Jack Taldo, John I. Smith, route 1, Springdale; Louis Fontinell, Box 52, Springdale; James Finn, route 3, Springdale.

Springdale: Earl E. White, route 3, Springdale; Horace W. Cloer, route 2, Springdale; Leslie Poe, route 3, Springdale; Arlie W. Luttrell, Roy E. Lowe, route 2, Springdale.

Wyman and Richland: Verd Shofner, route 1, Elkins; Bruce E. Parker, route 5, Fayetteville; Homer King, Elkins; Sam Oliphant, route 5, Fayetteville; Ernest E. Maguire, route 7, Fayetteville.

Winslow and Reed: Frank J. Skelton, Arnett; R. F. Morrison, route 1, Winslow; Lambert A. Porter, route 2, Winslow; Adam E. Reed, route 1, Winslow; Hubert Robbins, Hazel Valley.

Greenland and West Fork: Opie K. Volentine, route 2, West Fork; David L. Burnett, L. Dave Cowan, Greenland; George Stanberry, Ernest Pitts, route 2, West Fork.

Litteral, Johnson and Harmon: Aquilla A. Swagerty, route 2, Fayetteville; Arthur A. Cassat, Johnson; James H. Lawson, route 4, Fayetteville; Joe S. Reed, route 4, Springdale; Ross Mitchell, route 1, Springdale.

Center and Wheeler: Claude D. Blew, route 4, Fayetteville; Roland R. Luther, route 6, Fayetteville; Floyd Blew, Farmington; Charles E. Bertsch, route 1, Farmington; Otis McCall, Sr., route 3, Fayetteville.

Marrs Hill and Rheas Mill: John G. Buchanan, Gilbert Whitmire, Lloyd Hullet, route 3, Prairie Grove; Cecil L. Thompson, route 1, Lincoln; Benton Wray, Jr., route 4, Fayetteville.

Price and Starr Hill: Powell C. Williams, George Therneau, route 2, Lincoln; Elmer E. Steider, Lincoln; Claud D. Griscom, route 1, Lincoln; Charles A. Elms, Summers.

Boston and Morrow: Junius C. Duckett, Paul R. Cox, Cecil F. Remington, Rufus H. Seay, Ray Kidd, route 1, Cane Hill.

Prairie Grove and Valley: Tom B. Bell, route 1, Prairie Grove; Dean Ramsey, Prairie Grove; Martin Shofner, route 3, Prairie Grove; Ernest N. Yell, route 1, West Fork; Frank Garrett, Prairie Grove.

Wedington and Illinois: H. L. Gilbreath, route 1, Summers; Robert H. Pasley, Roy E. Spears, Summers; Ralph C. Davis, route 4, Fayetteville; Elmer Ezell, Summers.

Cane Hill and Cove Creek: William K. Jones, box 6, Cane Hill; Otis Quinton, route 1, West Fork; Tom H. Mourning, route 1, Prairie Grove; Robert L. Kidd, route 2, Lincoln; Lacy F. Cox, Clyde.

Dutch Mills and Vineyard: Luther D. Leach, W. Adolph Whelchel, Charles T. Goldman, Evansville; F. L. Eversole, Dale Richardson, Dutch Mills.

COUNTY COMMITTEEMEN

W. Shannon Pharr, Lincoln.
Calvin F. Holcomb, route 3, Springdale.
Lee L. Williams, route 7, Fayetteville.
Dave L. Burnett, Greenland.
Lincoln E. Maupin, Prairie Grove.

COUNTY OFFICE PERSONNEL

County administrative officer: Eusel M. Coleman, Fayetteville.
Chief clerk: Pearl C. Young, Fayetteville.
Principal clerk: Sarah J. Hankins, Fayetteville.
Clerk: Anita Cox, Fayetteville.
Clerk: Hilda N. Goldman, Fayetteville.

PMA PROGRAMS IN WASHINGTON COUNTY

Soil- and water-conservation program

The total land in the 5,293 farms in Washington County is 491,885 acres, cropland 224,493 acres, noncrop open-pasture land is 71,846, and 13,830 acres of commercial orchard.

County data for 1945, 1946, 1947, 1948, and 1949

Year	Farms in county	PMA assistance	Farmers contributed	Worth to county
1945	4,954	$118,528	$373,196	$2,698,207
1946	5,046	117,115	368,912	2,667,234
1947	5,168	119,728	377,143	2,726,744
1948	5,230	58,055	182,873	1,322,172
1949	5,293	111,544	351,363	2,540,354
5-year total		524,970	1,653,487	11,954,711

Assistance for all farms: Each farm in Washington County is offered the same assistance per cropland acre. In addition to the assistance, the PMA committee have been able to pool the individual farm plans and through local merchants' willingness to cooperate, made it possible to enter into fair price agreements and get lime delivered to the farm and spread at $3.50 per ton and 20 percent phosphate at $29.00 per ton, and pond vendors to build farm ponds.

Restoration of depleted minerals in the soil is not only a conservation measure, but a health measure which results in better nutrition. The application of superphosphate, potash and limestone, which aid in plant growth rich in body-building minerals, is important.

In 1949 farmers in Washington County applied 7,452,146 pounds of 20 percent superphosphate, 141,635 pounds of 50 percent potash and 4,049 tons of limestone to eligible crops. Eligible crops include pastures, hay crops, green manure and cover crops, except small grains. Most of this went on hay and pasture crops for livestock. The public gains by having animal products produced on land not depleted in body-building minerals. These farmers provided not only a protective but a productive cover for 47,509 acres of farm land by increasing a more vigorous growth of grasses and legumes for hay and pasture for livestock.

In addition to the minerals used on pastures, farmers either established additional pasture or improved the acreage already in pasture by sodding 305 acres of Bermuda and seeding 294,017 pounds of adapted pasture grasses or legumes on 14,305 acres. Noxious weeds were controlled on 36,433 acres of established pasture by mowing. (Bulletin 485, May 1949, on pasture improvement for Arkansas Uplands.) This bulletin on a number test on pastures improved gives a gain of 300 pounds per acre. Taking this gain as an average for improved pasture, in 1949 the 14,305 acres of improved pasture in Washington County would be a gain in beef of 4,291,000 or at 20 cents per pound would add $885,820.00 on pasture improvement alone in the county.

Controlling weeds on 36,433 acres of pasture by mowing contributed to an increased production of pasture plants. Farmers interested in dairy and beef production realize

that good pastures are their cheapest source of feed, and also that good pasture forage of grasses and legumes assist in preventing erosion of the soil. An initial phase of any pasture-improvement program is to eliminate undesirable plants, brush, and sprouts from the pasture (bulletin 485, May 1949, on pasture improvement for Arkansas uplands). This sets out that results of 2 years' grazing on two pastures is of value in determining the real value to be derived from mowing in a pasture-improvement program. The pasture mowed to control undesirable plants, produced 26 percent more grazing than did the pasture neglected or not mowed. Another comparison may be drawn, that is the actual gain per acre made by the animals for the two pasture seasons. Animals on the mowed or weed-controlled pasture gained, on the average, 203 pounds per acre, while similar animals grazing on neglected or not mowed to control undesirable plants gained 133 pounds per acre, an increase of 70 pounds, or 53 percent gain per acre in favor of the mowed pasture. Taking an average gain of 70 pounds per acre, this would equal 36,433 acres mowed times 70 pounds gain per acre would equal 2,550,000 pounds added beef at 20 cents per pound would equal $51,000 added increase in Washington County for pasture mowing.

The first step in planning a conservation program is the planning of a county-wide production program. The PMA county and community committeemen with the cooperation of educational and technical agricultural agencies agree on the primary items to be included in the county production program are increased production of livestock, dairy, and poultry products together with increased per acre yields of peaches, apples, grapes, berries, vegetables, corn, hay, and small-grain crops.

In order to meet production goals certain conservation needs must be met.

The PMA committees have set a county goal of 15,000 acres of pasture to be developed and improved in 1950. (Fourteen thousands acres of pasture were developed or improved in 1949.) The 1950 goal will require 300,000 pounds of seed which will cost approximately $75,000; 3,000,000 pounds of phosphate which will cost $43,500; 30,000 tons of lime annually which will cost $105,000; approximately 500,000 pounds of potash annually which will cost approximately $12,500; and the mowing to control weeds approximately $15,000, or a total approximate out-of-pocket cost to the farmer of $239,500. The total county allocation of ACP funds for all practices is $136,191. When the farmer out-of-pocket cost incident to terracing stock ponds, cover crops, and other needed conservation practices is added to the $239,500, it can readily be seen that the taxpayer is contributing a very small part of the cost of conservation work accomplished, the results of which are reflected in the stability of income of every citizen of the county.

Fifteen thousand acres of permanent pasture added can produce, for instance, 300 pounds of beef per acre or a total of 4,500,000 pounds of beef. At 20 cents per pound this will increase the gross farm income of Washington County by $900,000 per year. We PMA committees believe this to be a goal deserving the support of everyone.

Ninety thousand acres need to be planted to legumes and cover crops annually in Washington County.

We PMA committees have set a goal for 1950 to 10,000 acres of hairy vetch, 15,000 acres of small grain and ryegrass, and 15,000 acres of summer legumes.

This acreage planned will require 150,000 pounds of vetch seed worth approximately $30,000; 300,000 pounds of lespedeza and cowpea seed worth approximately $30,000; 30,000 bushels small grain worth approximately $38,000. Total out-of-pocket cost $98,000 to seed 40,000 acres of orchard, vineyards, and cropland. The increased production should be worth a minimum of $400,000 to say nothing of the potential production conserved, and added to the 40,000 acres. In 1949 21,000 acres were seeded. We think more seed will be available in 1950 and should get an increased acreage and reach the 40,000 acreage goal.

Value of 1949 ACP practices in Washington County: A total of 125 farm ponds have been built in the county which averaged 954 cubic yards per pond. Farm ponds contribute a great deal in increased production of beef and dairy products and add several hundred dollars in value to the farm. Cost of an average farm pond in Washington County is approximately $155 for a 954-cubic-yard pond. The assistance is 8 cents per cubic yard or approximately $76 and the farmer pays the balance and stabilizes the dam and spillway with sod or other protection. Farmers generally agree that ponds are worth millions to the farm in labor-saving and extra production. Farm ponds encourage development of pastures in fields that are not accessible to water otherwise. This practice particularly appeals to the businessman who has an isolated tract of land that would be useless if sufficient water was not available. Almost every section of the country frequently has dry spells that make it necessary to haul water for livestock. A good farm pond will prevent such inconvenience. Furthermore, farm ponds are valuable in many other ways. They supply water for fire protection, orchards, vineyards, and garden spray, fish production, recreation, waterfowl, and other wildlife. Farmers have built 791 farm ponds in Washington County with an average of 1,000 cubic yards per pond.

In 1949, 250 acres of land was terraced. Had 1949 been a normal crop year an increase of 10 bushels of corn or 10 bushels of small grains per acre could have been expected. This extra production would have a value of $15 per acre or $3,750 for the 1949 crop to say nothing of the added real estate value of $3,000. Since 1936, 6,620 acres of land have been terraced in Washington County. Farmers agree that terraced land normally on annual basis produces 20 percent more crops than unterraced land and adds $15 per acre in real estate value. The assistance for building the 2,649,000 linear feet of terraces is $26,600, and it is agreed by farmers that it cost about $3 per 100 linear feet to build terraces or a total cost of $79,370, of which the farmer's out-of-pocket cost is $52,770.

Price supports: Price supports for agricultural commodities enable farmers to receive a more equitable price for their production in line with costs of operating their "manufacturing plants." Without price supports farmers are in the position of selling an entire year's production in a few weeks on an open, glutted market.

Through price-support operations such as loans, purchase agreements, or direct purchases at equitable levels, farmers are enabled to market their products in a more orderly manner so as not to glut the market at harvest time and starve it at off-season time. This also tends to stabilize prices to consumers without wide fluctuations in consumer costs.

Price-supports are in effect on numerous commodities. Some have direct effect on prices of some commodities produced in Washington County such as apples and peaches, and others have indirect effect such as prices on milk, poultry, eggs, and hogs.

Announced support prices for various commodities place floors under prices farmers receive for their production although actual operation of the programs is not necessary in the county.

Although no direct purchases have been made of commodities in Washington County, the program was available.

Peaches, apples, grapes, and berries: Purchase of fruits for use in the school-lunch program has been made on occasion in some sections of the State when the supply was such that the price was depressed below a fair level. No purchases were made in Washington County but the availability of the program had a beneficial effect on prices for local production. There are approximately 300 peach growers, 1,000 apple growers, 800 grape growers, 500 strawberry and blackberry growers, and 600 growers of plums, cherries, and pears that benefit from such programs.

Poultry and eggs: Poultry prices have been supported indirectly without any purchases of local production. Prices received by farmers for eggs from local produce houses fluctuate with announced support prices. It has been estimated that there are 1,500 farm families in the county who sell eggs at some time during the year and 1,750 broiler growers producing approximately 12,000,000 broilers per year.

Pork: Support of hog prices on Chicago and other markets have maintained prices of local hog markets without direct-support programs in the county. Although Washington is not a hog-producing county there are approximately 500 farmers in the county who have marketed hogs during the year and have received indirect benefits from support programs on pork.

Storage facilities: Many loan programs are dependent upon storage of the commodity. Storage of commodities will also assist in orderly marketing operations. Commercial storage is available for cotton and grain and a few other crops on a limited scale but the big need is for farm storage.

Loans are available to farmers at low-interest rates through approved local lending agencies or direct from the Government to finance storage structures. The difference in market price of some commodities at harvest time and a few months later will pay for the cost of the storage structure in a few years. There is a need for more farm storage in Washington County and farmers are being encouraged to build more facilities. This program expires June 30, 1950.

In addition to loans to farmers for construction of farm-storage facilities, there is a program which guarantees payment for 75 percent of capacity of privately financed commercial-storage facilities for a period of 3 years.

Information on farm-storage loans and commercial-storage guaranties may be obtained from the county PMA office.

Marketing quotas: Marketing quotas are used, in effect, to help distribute the available market for a commodity among all producers, intended to provide mechanism for maintaining a sustained and ample production of the commodity at prices fair to farmers and consumers. Marketing quotas are not in effect on any crop in Washington County and have not been for a number of years; however, the present supply and anticipated production indicates that allotments and marketing quotas may be necessary in the future.

School-lunch program: The supervisor of Washington County schools reports that there are 30 schools operating school-lunch programs in Washington County with an average daily participation in the school-lunch program for the year of 4,400 pupils out of an average daily attendance of 7,200 pupils.

The cost of operation of the school-lunch program in Washington County is $215,000 of of which $50,000 is furnished by the Federal Government, a branch of the Production and Marketing Administration program, leaving $165,000 furnished by the schools and participants served in the county. During the year there are also about 55,000 free meals served by the program to underprivileged children.

The following surplus commodities in addition to the $50,000 furnished by the Government school-lunch program have been furnished schools in Washington County free except unloading and transportation charges: Apples, tomato paste, dried milk, butter, tomatoes, sweetpotatoes, canned peaches, canned corn, Irish potatoes, dried eggs, peanut butter.

The supervisor of Washington County schools states that the school-lunch program is a wonderful program and that schools could not operate a modern lunch-room service without this assistance.

United States Department of Agriculture county council: The Washington County PMA committee participated in the United States Department of Agriculture county council to assist in coordinating programs between agencies.

Crop insurance: Crop insurance is offered to counties on an experimental basis in eight counties in Arkansas. One county has multiple crop insurance on a trial basis. Congress has set up provisions for including other counties for crop-insurance purposes and Washington County may be included in the future.

Meetings held:

A. Number meetings held during 1949:

County committee	34
Community committee	16
Farmer meetings	25

B. Contacts by county office and county and community committeemen, 20,500.

Publicity: The farmers who performed this job of conservation on the farm, wish to thank those who have kept the problems of soil conservation before the public—editors of the county newspapers and managers of radio stations.

To all newspaper editors go our thanks for the space given to this farm program, and to the management of radio stations our appreciation of radio programs during the year.

Soil and water conservation practices carried out since beginning of program	Extent	Farmer contribution and assistance	Increase worth to county and citizen
20-percent phosphate	40,119,760 pounds	$778,656	$11,822,080
Ground limestone	66,541 tons	283,668	1,418,340
50-percent potash	209,005 pounds	16,302	130,416
Mulching material	1,045 acres	3,136	12,544
Winter legumes, green manure and cover crop	93,195 acres	673,251	4,866,255
Summer legumes	297,924 acres	1,537,812	6,151,248
Terraces	363,159 linear feet	73,464	734,464
Stock ponds	791 ponds	298,628	2,986,280
Contour ridging	15,601 linear feet	4,164	12,492
Waterways	124 acres	8,810	35,240
Establishing pasture by seeding grasses and legume mixtures	92,866 acres	797,256	7,972,560
Mowing pasture	132,382 acres	148,758	892,548
Ryegrass	70,190 acres	179,844	719,376
Harvesting legume and grass seed	19,048 acres	193,040	965,200
Contour farming	6,107 acres	7,602	38,010
Small grain for cover or green manure	137,289 pounds	14,016	56,064
Alfalfa	5,046 acres	74,578	289,312
Miscellaneous practices	16,142 acres	26,259	78,777
Total		5,419,244	39,181,206

The average worth to county and citizen is $7.23 per $1 spent by Government and farmer.
Farmer contributes $3.11 (his expense plus labor included) for each $1 of Government assistance.

TESTIMONIALS

The use of agricultural limestone, phosphate and potash on pastures, meadows, legumes, cover crops and many other good conservation practices were introduced by the PMA agricultural conservation program, Jeff Brown declares.

Mr. Brown is a farmer and stockman of the Springdale community and raises cattle on his 310-acre farm. In the spring of 1949 Mr. Brown applied 320 tons of limestone, 3,000 pounds of 20 percent phosphate, 700 pounds of potash and seeded 670 pounds of lespedeza and 250 pounds of redtop on his pasture.

"On this same pasture I had 65 head of cattle grazing, 1,400 bales of hay were cut and approximately twice that amount was left for winter grazing and I had the fattest cattle that I ever had—that is one reason I plan to continue to cooperate and recommend the PMA conservation program.

"I do not hesitate to show my neighbors the results of good practices, who are one by one increasing their participation in good conservation practices.

"As president of the Springdale Chamber of Commerce, a civic organization that believes in and recommends better farming, I do not hesitate to recommend and approve the PMA program's recommended conservation practices and also that the PMA farm elected farmer committee system be continued and enlarged."

Mr. Robert L. Combs, dairy and livestock farmer, owner and operator of a 375-acre farm in Washington county, attributes the improvement of soil and increased production of crops directly to the PMA conservation practices. "The PMA program is the finest agricultural program that has ever come along. Soil is the only real asset our Nation has. Destroy our soil and we have nothing, so to speak. Farmers who bare their backs to the sun to raise food and fiber to clothe and feed the world should have some assistance with the conservation problems. Until the PMA program was set up our soil received the least attention of any industry in the country. Even though our soil is the most valuable asset, too many people take for granted that our country will remain the best fed, clothed, most prosperous nation of the world. People do not seem to realize the importance of the soil or farm land and what is produced on it. How long this Nation remains so depends on how well this Nation cares for the soil. The PMA conservation program has been designed to assist farmers do this."

"I like all the features of the PMA programs and I recommend that farm programs become and use the farmer elected, farmer committee system, elected by the farmers and farmer administrated as the present PMA program system."

Mr. Combs is a veteran farmer in Washington County and put into effect the following practices in 1949: applied 20,100 pounds of 20 percent phosphate, 1,000 pounds of 50 percent potash, 322 tons of limestone, 1,000 pounds of ryegrass, 400 pounds of Crimson Clover, 1,600 pounds of lespedeza, 300 pounds of hairy vetch to pasture and mowed 100 acres of pasture to control weeds.

"In carrying out PMA conservation program's recommended practices, I have built up my soil and pastures and my 45 Jersey dairy herd is producing twice as much milk per cow, and I have been able to increase my herd and produce a better quality milk at less cost. My cows are also in better condition, calve a better calf and have practically no trouble at calving time now, but before I starting using lime, phosphate and potash on my pastures, I had more than my share of trouble at calving time and milk fever. On the portion of the pasture where lime, potash and phosphate was not applied, the cattle would not graze until forced to by the use of a fence."

J. Raymond Kennan, owner and James A. Clark, operator, farmers of the Tuttle community, operate a 247-acre livestock farm.

We are interested in farming, and being farmers, we are especially interested in having farm income increased in Washington County.

Land use and increased production has shown the need for improved methods as encouraged by the PMA program. The use of lime and phosphate has increased the hay and pasture yields greatly. A personal experience and test that we have made will give proof to any doubting person. A 14-acre field which was run down and which was producing about one load of lespedeza hay per acre in 1943–44 has shown outstanding improvements. In 1945 we decided to improve this field. We put 60 tons of lime and 6 tons of phosphate, PMA material on this 14-acre tract. The soil was tilled to a good seed bed, having of course, the lespedeza seed and residue worked into it completely. We then seeded 2 bushels of barley and 2 bushels of orchard grass per acre. The following year the field produced 22 bushels of barley per acre and 56 bales of hay were cut per acre in August. In the fall we pastured 50 cattle on this field for at least 50 days. Last year 20 bushels of orchard grass were threshed per acre besides a good yield of hay and pasture. In 1948 this same field was phosphated with 400 pounds per acre and this spring (1950) another 400 pounds per acre will be spread.

As you can readily see, the stimulation of the PMA program has caused and encouraged us to follow the PMA farm program which will continue.

In 1941 when Mr. Kennan bought the farm, it was considered as a corn and livestock farm with a carrying capacity of 14 cattle, 5 workstock, and 2 brood sows. Mr. Kennan and Mr. Clark have improved the pastures and farm in general by carrying out conservation practices recommended by the PMA such as the following practices that were put into practice in 1949—applying 18,300 pounds of 20-percent phosphate, 840 pounds of 50-percent potash, seeding 640 pounds of lespedeza, 160 pounds of red clover, 504 pounds of orchard grass and mowing 20 acres of pasture to control weeds. By applying practices as the above we have increased the livestock on this farm from 19 to an average of 50 head cattle, and 6 brood sows, and small grain replaces the corn.

We also believe in the method in which the program is being formulated and administered, that is under the control of local elected farmers by the farmers of the county.

Mr. Kennan and Mr. Clark attribute the improvement of pastures, soil and increased production directly to the PMA conservation practices.

Roe D. Stokenbury, Elkins, Ark., former member of the PMA county committee, member of the board of directors of the local Farm Bureau Cooperative, member of the REA board and prominent farmer and dairyman, says "PMA has done its part in helping me to make my 450-acre farm what it is today. I use my farm allowance each year to assist in building up my soil; through the use of phosphate, limestone, legumes, and barnyard fertilizer this is being accomplished. Since I am primarily interested in dairying, I'm developing my pasture to better take care of my needs. Through the conservation of water, brought about by PMA farm ponds, my livestock does not have

to walk as far to water. Through establishing and improving permanent pasture by seeding pasture grasses and through weed control, promoted by the PMA mowing practice, my pastures have improved not only in quality but also in the number of livestock taken care of per acre.

"More farmers need to come to the full realization of what their soils need, and having found out, use every advantage possible in building their soil to fullest productivity.

"In 1949 I put into effect on my farm the following practices: used 31,900 pounds of phosphate, 2,240 pounds of potash, 34 tons of limestone and seeded 2,200 pounds of lespedeza, 60 pounds of hop clover and 85 pounds of Kentucky 31 on my pastures and hay meadows.

"I am not a member of either the county or community committee at present; however, I served as a community committeeman since in the early thirties, until 1945, and was elected on the county committee and served until the end of the 1949 program year. Even though I am not a member now, I believe in and recommend the committee system used through the past years and at present by the PMA in formulating and administering the program which is farm-controlled."

Mr. Herbert L. Thomas owns and operates a 217-acre farm in Washington County, on which he raises registered Angus cattle. The farm is stocked with about 100 head at present.

Mr. Thomas states: "After 10 years on my farm near Fayetteville, I think I should express to the PMA conservation program my appreciation. When I moved on this hill farm, a good deal of it had been cultivated in row crops and little or nothing done to stop erosion, rebuild the soil, or add to the beauty and value of the place. Through the help, advice, counsel, and contributions of the PMA we have terraced a portion of the land, sodded Bermuda grass, and put in a combination farm pond." In 1949, through the PMA, Mr. Thomas added 16,700 pounds of phosphate, 20 tons of limestone, and seeded a great deal of it with lespedeza, hop clover, rye, and orchard grass which was furnished or partly paid for through the PMA conservation program. "I have, of course, through PMA recommendation, added lime and phosphate and I have learned the value of pasture mowing, the usage of my own fertilizer, and I think that what has happened on my farm is no exception to many other farms in this area whose owners have slowly but surely learned these lessons from the PMA conservation program. In fact, I consider that PMA has been one of the valuable mediums of making application to the farmer the accomplishments of research. I frankly think we would be a much poorer community without PMA's good work, and this being an agricultural area, business has naturally profited greatly from the improved condition of the land and the farmer."

CONCLUSION

It is our hope that the information contained in this report will give you a better understanding of the purpose and effect of the various programs administered by the Production and Marketing Administration.

It is our aim to reach all farms and when we have done this we still will not have accomplished all, as we strive for more and better conservation and administration on all PMA programs.

We are at all times open for suggestions which will tend to make future programs more effective.

The committee and the county office personnel recognize the assistance of the various agencies in the county, the Extension Service, Soil Conservation Service, Farmers' Home Administration, vocational agriculture instructors and Veterans Training Instructors. They have all had a part in formulating the over-all program.

We thank you for your interest in reading this report. We also recognize the fact that many of you had a definite part in making the programs effective.

WASHINGTON COUNTY PMA COMMITTEE,
W. SHANNON PHARR, *Chairman,*
CALVIN F. HOLCOMB, *Vice Chairman,*
LEE I. WILLIAMS, *Member.*

Labor Record of Hon. Elmer Thomas, of Oklahoma

EXTENSION OF REMARKS
OF
HON. ELMER THOMAS
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. THOMAS of Oklahoma. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement setting forth my labor record.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

ELMER THOMAS' LABOR RECORD

In 1907 Oklahoma became the forty-sixth State. The new State, made up by combining Oklahoma and Indian territories, had only a few laws and such laws pertained almost exclusively to the rights of property. Laws affecting humanity, and especially the rights of laboring people, were conspicuous by their absence. Labor had much to ask of the first legislature, and it gained much.

ELMER THOMAS served in the State senate from statehood until 1920, and during these years he had the opportunity of assisting in organizing the new State and enacting all the laws affecting labor in the early days of statehood. He voted for an 8-hour law for women; for a bill providing hospitalization for railroad men, and for a full crew bill applying to the railroads of Oklahoma. He voted for the original State Workmen's Compensation Act in 1915, as well as for a Plumbers' Qualification Act.

ENTERED CONGRESS

In 1922 he was elected to Congress and during his service in the House of Representatives he voted for a bill restricting foreign immigration, and voted to submit the Federal child labor amendment to the States.

ELECTED TO UNITED STATES SENATE

In 1926 he was elected to the Senate and in that body he continued his support of measures sponsored by the various groups of organized workers.

As a Senator he voted for the Norris-LaGuardia anti-injunction bill, and for the McCarran amendment providing for the prevailing rate of wages on all relief work. He voted for the railroad retirement bill; for the Guffey-Snyder coal bill, and for the Wagner low-cost housing bill. He voted for the Wagner Labor Act, and he has always supported and voted for bills which tended to place the workers on a parity with agriculture and industry.

AUTHOR OF 40-HOUR-WEEK LAW

On February 21, 1934, he introduced the bill establishing the 40-hour week, and such bill was promptly passed.

That law has become the cornerstone of every contract and wage agreement affecting labor and the workers throughout the United States. It is now the basic principle affecting Government employees, and not only has this law affected organized workers and Government employees, but it has influenced thousands of collective bargaining agreements with companies in private enterprise.

The International Association of Machinists has this to say about this law:

"This legislation, sponsored by Senator ELMER THOMAS, is regarded by wage earners as one of the most far-reaching and cherished benefits ever conferred upon them by congressional action."

Labor, the publication representing the standard railroad labor organization, has always endorsed him for reelection to the Senate. In 1938 this publication said:

"Senator THOMAS has a splendid record and has always been backed by organized labor."

William Green, for the AFL, has said:

"Senator THOMAS is one of the best friends labor has in the Senate and it would be a calamity should he be defeated."

ENDORSED FOR REELECTION IN 1950

In the pending campaign he has already been endorsed by many of the State and national labor groups and organizations.

The Machinists Nonpartisan Political League, in its publication, The Machinist, of date March 30, 1950, had the following to say:

"Senator THOMAS has supported measures to increase purchasing power of both farmers and city workers. As chairman of the Senate Agriculture Committee he has supported high-support prices for farmers. At the same time he has favored collective bargaining for city workers and opposed the Taft-Hartley Act. He is backing the move to liberalize the old-age benefits under the social-security law."

Labor, in its issue of January 28, 1950, endorsed Senator THOMAS for reelection in the following words:

"Senator THOMAS has served 24 years in the most influential legislative body in the world. This experience has been invaluable to the people of his State and the Nation."

Railway Labor's Political League, at a meeting held in Washington on February 22 to 24, 1950, endorsed Senator THOMAS for reelection. The April 1950 edition of the paper representing the league stated that his voting record on matters affecting the workers is such as to justify the support of the organization.

On May 4, 1950, Mr. Harry See, national legislative representative of the Brotherhood of Railroad Trainmen, wrote Senator THOMAS as follows:

"It is a pleasure for me to inform you that the Brotherhood has endorsed you for reelection as Senator from Oklahoma in the coming primary election."

On April 27, 1950, Senator THOMAS received the following letter from the Executive secretary of the Oklahoma State Federation of Labor:

"I have just recently had an opportunity to review your voting record of the Eighty-first Congress on legislation of particular interest to the working people of Oklahoma.

"I find that your voting record is very satisfactory and clearly indicates your sympathy with the common people of your State. It is a record of which we are very proud.

"We sincerely hope that you will continue to be our United States Senator and that we can be assured of your continued support in behalf of the working people of Oklahoma.

"With best wishes and kindest regards, I am

"Very truly yours,

"DEAN BAUGH,
"Executive Secretary."

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials regarding the curtailment in postal service, from the Danbury (Conn.) News-Times of April 20 and April 21, 1950.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Danbury (Conn.) News-Times of April 20, 1950]

BILLIONS FOR FOREIGNERS; PENNY-PINCH UNITED STATES POST OFFICE

Here is a country so rich, so prosperous, so able, it is presently supporting almost all the non-Communist world. Since the end of World War II, for instance, we have fed, clothed, and kept Great Britain by our dole.

Yet, it is announced we are too poverty-stricken to support our own Post Office Department.

Heretofore the Post Office Department has been the best in the world. We have been proud of it for many years. American business has depended upon it, and not in vain, for prompt, efficient service.

Family correspondence is highly important, too, and the housewife running to the door twice a day when "it's time for the postman," knows that if a letter is mailed to her on time, it will be delivered on time.

Now, in the interests of "economy," postal deliveries are to be cut, and postal staffs reduced.

This means, not only that there will be only one delivery of mail in residential sections, but that some windows in some post offices will be closed. You will be able to buy stamps, in some communities, only at certain times of the day.

Economy is excellent and should be practiced wherever possible. The Hoover Commission showed that there are many places the Government could save millions of dollars, without in any way hampering business or social life.

But to begin an economy drive by cutting down on the mail service, by firing or laying off thousands of employees of the Post Office Department, is not only foolish, it is asinine, and could harm American business greatly.

If we need to economize, why not cut down on the billions we are tossing to the four corners of the earth? Why not pay fewer millions to the farmers for unneeded potatoes, cotton, eggs, and the like?

Politics may be the explanation. Mr. Truman, a shrewd politician, may have planned this as a dramatic coup. If the hue and cry raised by this order to curtail the postal facilities of the country is loud enough, he can rescind it, and then say: "Well, I tried to economize, and the people kicked."

We refuse to believe that American people will stand for this nonsense, this criminal hamstringing of business, this cutting into the social intercourse of the many millions of Americans who depend upon the mails. We are used to being bullied by our Government, and we hand over our wages and salaries to the tax-collectors like so many mice.

But this is too much. Billions for Englishmen, Frenchmen, Belgians, Germans, Japanese, Italians, Dutchmen, and Scandinavians, but only pennies for the United States Post Office Department, which serves faithfully and well 150,000,000 Americans.

Are we going to take this one lying down?

[From the Danbury (Conn.) News-Times of April 21, 1950]

THAT POSTAL CUT

Everybody seems to be talking about the order of Postmaster General Jesse M. Donaldson to his employees—our employees, that is—to cut down on mail service to all the American people.

Ostensibly this is an economy measure. Actually it appears a snide move by the Truman administration to make economy, real economy, that is, unpopular with the people.

That the economy move will mean the discharge of something like 10,000 postal employees is certain. Many of these are substitute carriers and clerks, barely eking out a living now.

So, the American public will be forced to put up with third-rate mail service, business will be harmed, social and family correspondence delayed, and American war veterans will find themselves jobless.

Meanwhile, we continue to send billions to the far corners of the earth, to support Germans, Japanese, and Italians who fought us and killed our sons.

It all just makes no sense whatever. This Government could save billions of dollars by sensible operation of most of its departments, bureaus, and agencies. It could send less abroad. It could do many sane and intelligent things to relieve the taxpayers.

It does none of the things recommended by the Hoover report.

Instead, it suddenly orders the Post Office Department to cut down on services to the American people. The Post Office Department is honeycombed with politics, as the Hoover report pointed out. It has an appropriation of $1,786,000,000. Congress lopped $25,000,000 from the appropriation Postmaster General Donaldson asked for. So he and his associates in the Truman Administration come up with a proposal that will set us back to Civil War standards of mail service.

Will the American people stand for this absurd and despicable Fair Deal ukase? Will they allow our mail service to be lowered to the standards of the Balkan countries? Will they sit back and take it?

The American taxpayers are weary of waste, inefficiency, and giveaway to foreign countries. They want economy, sane, sensible, intelligent, and reasonable economy.

This cut in postal service is pure hocus pocus, unnecessary, unbearable, and wicked. It could have such an adverse effect on all business as to slow our economy painfully, and no one knows this better than President Truman.

That, to be sure, is the explanation. He and his associates want to make economy so unpopular that they can sink the country even deeper into the morass of deficit spending and waste.

Conduct of Congressional Investigations

EXTENSION OF REMARKS
OF
HON. HARLEY M. KILGORE
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. KILGORE. Mr. President, the current issue of the Georgetown Law Journal contains an article of much interest. It is Congressional Investigations—Salvation in Self-Regulation, by Henry H. Glassie and Thomas M. Cooley II. It is too long to be included in the RECORD, but I should like to include the Tentative Draft of Suggested Committee Rules which appears as an appendix to the article.

There being no objection, the draft was ordered to be printed in the RECORD, as follows:

TENTATIVE DRAFT OF SUGGESTED COMMITTEE RULES

I. GENERAL

A. Meetings shall be called by the chairman on not less than 1 day's advance written notice to each member when Congress is in session or 5 days' advance written notice, or 3 days' advance notice by telegram, when Congress is not in session; provided minimum time of notice may be waived by the senior minority member of the committee.

B. The chairman may appoint any member to act as chairman pro tempore in his absence.

C. A quorum of the committee shall comprise three members, including one minority member, and voting on any matter requiring a quorum shall be by members physically present and not by proxy; provided approval or disapproval of committee reports may be made by members in writing when Congress is not in session.

D. No member shall take part in any investigation or hearings in which he is personally interested. Upon challenge by any member of the committee or a witness being questioned, the question of a member's personal interest shall be determined by the majority vote of a quorum of the remaining members of the committee.

II. HEARINGS

A. Hearings shall be held at the time and in the place set forth in the notice to members.

B. All hearings shall be open to the public except executive sessions convened for marking up bills, or for voting, or executive sessions ordered by a vote of a majority of a quorum at a duly called meeting.

C. No witness shall be examined in executive session or under oath unless there is a quorum of the committee present and the committee counsel or a staff member designated by the counsel.

III. TRANSCRIPT OF TESTIMONY

A. All testimony in public hearings or in executive sessions shall be taken down stenographically and preserved.

B. The transcript of all public hearings shall be available to the public; and upon payment of the cost of a copy thereof, any interested person shall be entitled to obtain such a copy.

C. The transcript of testimony taken in executive sessions shall be available to the public:

1. When a majority of a quorum at a regularly called meeting shall so determine, or

2. When any part of such testimony has been made public, or

3. When such testimony has been used as the basis of a report issued; in any of which events any interested person shall be entitled to a copy of such transcript upon payment of its cost.

D. The transcript of his testimony given either in public or in executive session shall in all cases be available to the witness from whom such testimony is taken.

E. The transcript of any executive session may, under conditions prescribed by a majority of the committee, be made available to any interested person upon a confidential basis without being made public.

F. No transcript of testimony taken under oath at either a public hearing or an executive session shall be altered or edited.

IV. STATEMENTS BY WITNESSES

A. Any witness, whether appearing at public hearing or executive session may file a sworn statement which shall become part of the record, and shall be permitted to read aloud a brief summary thereof, provided that the statement and summary are given to counsel for the committee 4 days before the hearing or 2 days after the witness is notified of the date of the hearing, whichever is later. But no witness shall be compelled to submit any statement or give evidence other than in answer to direct questions.

B. Any witness may also submit written interrogatories for use by the committee in questioning other witnesses on matters relating to the witness in question, or his testimony. The interrogatories shall be used or not in accordance with the discretion of the majority of a quorum present; provided if the interrogatories are not used, they shall, at the request of the person submitting them, be included as an appendix to the transcript of hearing, with a notation of their rejection.

C. The committee acting by a majority of a quorum retains the right to reject statements, summaries or interrogatories which are plainly irrelevant to the subject of its inquiry, and to require any witness to put his statement, summary or interrogatory in concise form before its inclusion in the record or reading before the committee.

D. Any person reasonably believing that testimony or other matter taken by the committee has a tendency to affect his reputation adversely may, within 10 days after the date of such adverse testimony if taken in public session or within 10 days after its release if originally taken in executive session, file a sworn statement relating to it, which, if concise and relevant, shall be made a part of the record.

E. Self-incrimination: Nothing in these rules shall impair the right of a witness to refuse to answer on the ground of self-incrimination.

V. ATTORNEYS

A. All witnesses, either at public hearings or at executive sessions, shall be permitted to have present counsel of their own choice.

B. Counsel may advise his client with respect to whether he should answer any question, and may state his grounds for objecting to any question; counsel may further challenge the relevancy of any question and the interest of any member, which challenge shall be disposed of by the committee as in these rules provided; counsel shall not be allowed to participate otherwise except with the permission of the committee.

VI. REPORTS

A. No report or portion thereof or excerpt therefrom shall be filed or made public until it has been approved by a majority of a quorum present at a duly called meeting.

B. No summary of a report or prediction of the contents of a report shall be made public by any member prior to the issuance of a duly approved report.

C. No member shall issue a statement of his conclusions with respect to any investigation or part thereof except concurrently with or subsequent to the filing or publication of a duly approved report.

D. Any member who makes public a summary or prediction of the contents of a report or makes a statement of his conclusions with respect to any investigation or part thereof prior to the issuance of the formally approved report shall, on the vote of the majority of a quorum of the Committee at a duly called meeting, be denied the right to take part in the formulation of or vote upon the committee report with respect to such investigation.

E. No report shall be issued upon an investigation or testimony taken in executive session unless all of the testimony on which the report is based shall be released concurrently with the report.

VII. SUBPENAS

A. All subpenas shall be signed by the chairman, or in his absence by a member designated by him, and attested by the Clerk of the House of Representatives (or Secretary of the Senate).

B. All subpenas shall designate the matter of inquiry with reasonable particularity as well as the specific documents or other evidence required to be produced.

C. Subpenas shall be issued only upon written authorization of the chairman and ranking minority member, or upon the vote or written authority of not less than three members of the committee.

VIII. PUBLICITY

A. No public hearing shall be broadcast on the radio, televised, or be made the subject of a motion picture or newsreel.

B. No photographs shall be made in the committee room while hearings are in session and proceeding.

IX. RELEVANCY OF SUBJECT MATTER

A. Only matter which is relevant and pertinent to the subject of inquiry shall be taken in evidence, and questioning by members and staff shall be limited to such matter. This rule shall be most strictly construed in favor of the witness claiming its protection whenever the question is one relating to his religion, race, political belief, or personal affairs.

B. In any case where a challenge is made to relevancy or pertinency it shall be finally resolved by the vote of a majority of the quorum present.

X. COMMITTEE STAFF

A. Staff members shall be selected by the chairman with the advice and consent of the senior minority member or subject to a vote of a majority of a quorum at a regularly called meeting.

B. Upon request by the senior minority member, such staff shall include one professional appointee selected by such senior minority member with the advice and consent of a majority of the minority members.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial regarding the curtailment in postal service, from the Rushville (Ind.) Republican.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CUT IN POSTAL SERVICE

Decision to reduce postal service in behalf of economy will not be accepted by the American people with good grace. While there is a universal cry for a reduction in Government expense it is hardly fitting to start with a branch so vital in the life of the people.

A single mail delivery in residential and semibusiness sections will not be accepted without protest. Yet that is the first move inaugurated by the Department. Postmaster General Donaldson says that is necessary following the refusal of Congress to grant increases in postal rates which would net some $600,000,000.

Just how reduction of deliveries will save money is hard to understand. If the Department has sufficient manpower now to make two deliveries what will become of the manpower released by cutting the service in half? Certainly it does not mean that any sizable number of employees will be laid off.

Surely there are other places where millions could be saved without reducing a service so vital to the public. Then, too, there would be a bit of slick politics mixed up in Donaldson's scheme. If the people want economy, let's take it out of their hides, so to speak. Adequate mail service is extremely vital to the Nation. To go back to horse-and-buggy service will be a distinct harassment to every American.

Plan for a National Defense Program

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. JOHNSTON of South Carolina. Mr. President, Dean W. H. Washington, school of economics, Clemson College, Clemson, S. C., has submitted, in the form of a letter to the Honorable Wilton E. Hall, former United States Senator from South Carolina, a proposed plan for a national defense program.

In that these 11 proposals were sound in thought and logical in these times of world strife, Mr. Hall printed the plan in the Anderson (S. C.) Daily Mail, of which he is publisher.

I ask unanimous consent to have printed in the Appendix of the RECORD this proposed plan for a national defense program.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

TO COLONEL ANDERSON:

I propose this plan for a national defense program:

1. It is believed that national defense, as far as possible modern military practical and theoretical training, all possible phases should be offered for all qualified Americans according to their desires, abilities, and as potentially needed for our country (before actually needed). Full recognition should be given for approved service in Regular Armed Forces and National Guard.

2. It is believed that this program should not be a high school or college responsibility, but the program is a Regular and Reserve responsibility, with the good will and support of all school administrators and teachers, civic, and veteran organizations.

3. Training should be regular, at least on two different days each month, under qualified Regular and Reserve officers with pay and appropriate allowances on Regular scales in proportion to approved time, effort, and efficiency (enlisted as well as officer).

4. Regular biweekly (24 per year) training periods to be supplemented with minimum of 2 weeks with troops, full time, at such places first year as: (a) Fort Jackson; (b) Sumter Air Base; (c) Clemson; (d) the Citadel, etc. (Somewhat as ROTC training at Fort Jackson in 1920 and at Clemson a few summers later.) Each additional year continue or specialize more at (e) Fort Benning;

(f) Camp Lee; (g) Fort Bragg; (h) Fort Monmouth; (i) Army headquarters; (j) War Department; (k) National War College, etc. Training to be of full regular scales, time considered, with transportation, longevity, allowances for enlisted personnel.

5. Retention of status and promotions to be based upon regularity and efficiency in training and in service.

6. Longevity and retirement credits to be based in addition to the above on the accumulation of "points" at the rate of one for approved service each training period (not to exceed one per day) and each day approved for duty in service. Twenty-four training periods plus 14 days summer troop service, plus 15 for Reserve annual unit assignment—53 normal annual; 50 points required; 60 allowed.

7. After 20 years of approved service, inactive status may be applied for; but approved service may continue to age 60. Additional points may be earned by extended active duty with troops up to age 60.

8. In case of national emergency voted by the Congress and approved by the President of the United States, manpower should have already been trained in modern, scientific, and practical defense, and ready to answer the call for service in qualities (appropriately trained in MOS's) and in needed numbers when and where needed.

9. This program to apply to all physically qualified male Americans, not members of the Regular Armed Forces, for at least 6 years beginning after 17 and before 23 years of age. Qualified women may serve in appropriate places as enlisted or officer personnel, voluntarily.

10. Transfer to inactive reserve may be applied for without prejudice, after one full year Regular or extended active duty service, with any branch of the Armed Forces (Army, Air Force, Navy, National Guard, etc.)

11. This program should in no way detract from, but it is intended to strengthen, the Regular Forces. It is, in fact, intended to build for world peace.

W. H. WASHINGTON.

CLEMSON, S. C.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article regarding the curtailment in postal service, from the Lowell (Mass.) Sun, of April 27, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TODAY'S QUESTION

"What do you think of the plan to curtail mail deliveries to one a day in residential areas?"

Tillie Sousa, 49 Auburn Street, stitcher:

"I am not in favor of such a move as I think it would cause a great deal of inconvenience. Many times a delay of 1 day could cause serious consequences to the individual expecting the mail, when that correspondence would have a time value connected with it."

Gilman Gentle, 106 Epping Street, operator:

"I certainly do not favor any such change in the mail schedule. The public has grown used to the two-a-day delivery system and I think there would be more of a loss all around, if the deliveries were curtailed to the one-a-day system. Besides, I should imagine having it the way it is would keep the post office better able to handle any rushes or emergencies."

Frank Shevack, YMCA, salesman:

"I am not in favor of any change. I think we pay enough for the postal service and therefore should receive all the service we can get. It seems certain that many inconveniences to the public could arise if such a change were made. And it would never work out in the rush seasons with mail piling hourly in the post office."

Charles Mulonis, 10 Gerard Street, dyer:

"It doesn't seem like a good move to me. The public pays for the service and I don't think that it is too much to ask that the mail be delivered twice a day all over the city. It should appear that such a plan would eliminate the jobs of some of the men now working in the post office and that would add to the unemployment ranks."

The American Free Enterprise System and Socialistic Trends

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled "Aren't You Grown-Ups Ashamed?" which appeared in the York (Pa.) Dispatch of April 15.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AREN'T YOU GROWN-UPS ASHAMED?

I

There is no use pretending you don't see me.

You just sit still and listen.

I'm not very smart yet, but I'm smart enough to see what you are doing to the country in which I must grow up and support my family.

When I do that, will I be allowed to be myself, or will I be a social-security number in a Government file?

When I get sick, whose doctor can I go to, my doctor or the Government doctor?

When I go to school, who is going to decide what I learn, my mother and father or a Government Bureau?

When I am able to afford a house, will I be able to build one just as good as I can make it, or will it be a Government-built house, worth only part of what the Government taxed me for housing?

When I go to work, will I be able to pick my own job, or will I have to get a work permit from the Government and take whatever job they give me?

And if I have criticized the Government, will I get a work permit?

II

What makes you think it would be "bad" for me to have to make my way in competition with others?

If I work a little harder, or better, or get lucky, will I be able to keep any more of what I earn than the other fellow who didn't work as hard, or as well, or get as lucky?

This luck business is important: In your heart you know that in the game of life there has to be a jackpot, or the game won't be played very hard.

Where did you get the cockeyed idea that the man who earns twice as much should be taxed four times as much?

(I know where you got it: right out of Marx.)

When did you get this idea that government can take care of everybody?

You know you can't get something for nothing; yet you pretend that people in Washington can give you things without first taking them away from you.

Don't try to blame the people in politics: They are simply doing what you want them to do.

Naturally they favor the things you favor because getting elected is their business.

They would change overnight if you would.

And don't get the idea that they respect you for being saps: Only a fool can be sold a ride on his own horse.

And that is exactly what is happening when you vote yourself security by giving the Government more and more so the Government can give you some of it back.

I'd rather risk having to stand on a breadline a few times than spending my life standing in line for Government hand-outs.

III

And you men who run labor unions: You know darn well that unearned wage increases are stage money.

And how about you folks who manage America's business; don't you know any better, and can't you do something about it?

Even I know that you can't expect prosperity when everybody is getting more money for producing fewer things.

Have you forgotten that the only reason Americans produce so much more and live so much better and easier is the whopping supply of tools of production that people used to be willing to save for in the days when profit was not a nasty word?

At the rate you are now going the private property system will fall apart, and the tools will fall apart with it. Then good-by America—and me.

What's wrong with the idea of paying people fairly for the use of the tools bought with their savings? The tools do most of the work.

I don't quite know what you mean by the word "conservative," but if it means what I think it means, that's me.

If there were any other place in the world where Government wouldn't plan my life for me even more so, it wouldn't be so bad, but America is the only place left—and look what you are doing to it.

Aren't you ashamed.

Three Golden Balls

EXTENSION OF REMARKS
OF
HON. HENRY C. DWORSHAK
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a constructive editorial entitled "Three Golden Balls," from the May 3 issue of the Times-News, a daily newspaper of Twin Falls, Idaho.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THREE GOLDEN BALLS

Although in recent years the American people have been stumbling over themselves in a wild scramble to get "their share" of all the Federal aid being doled out in Washington, there are signs that the public is slowly coming out from under the spell.

It's true you still hear the old argument, coming from various sources, that "if we don't take it someone else will." But there is a growing trend, still small, to be sure, against this line of reasoning.

Gov. Alfred E. Driscoll, of New Jersey, is among those who have seen the light. "We are losing self-government in America and destroying our Federal system by the continued expansion of the pernicious system of so-called grants-in-aid," he said recently.

Even more significant is a little incident which occurred one night recently in Hartford, Conn. Speaking before a group of citizens, Gov. Chester Bowles, of OPA fame, made an impassioned plea that they urge their communities to take advantage of the opportunity to get Federal grants and loans for housing projects. When he had finished, a young World War II veteran named Jay V. Smith, who owns a restaurant in Greenwich, obtained permission to say a few words. Whereupon Governor Bowles received the shock of his life.

"There is no such thing as Federal aid or Federal money," Smith told the audience. "All these funds the Governor told us about were collected from the people. The growing popularity of Federal aid in States and large cities is becoming more and more contemptible, due to the political cowardice of some Governors and mayors who are determined to stay in office come hell or high water.

"Our dear old Uncle Sam is handing out the money with one hand while holding the club behind his back with the other if you should fail to behave. Few States have been able to resist the rule of the three golden balls that ornament the Washington front porch. Think it over."

The audience broke into loud applause. It was not because it had been told something it did not already know. Those present couldn't help bu' admire one with courage enough to challenge all this "political cowardice" and the sham which characterizes much of our Federal aid.

We should wake up to the fact that the Government can give us nothing it has not already taken away from us—that in getting funds from the Federal pawnshop we are actually hocking our freedom. And these pawn tickets on our freedom are loans we can't redeem.

ECONOMY WITH LETTERS

At the turn of the century Staten Islanders were enjoying an unusual period. Residents of a new part of a growing city, they were looking forward to expansion and prosperity.

And they were getting three deliveries of mail a day.

The new one-a-day order, from Washington, is hardly progressive.

Suppose you drop a letter in the mail box in your community—and just miss the evening pickup, say on a Monday night. Although it's addressed to someone only a short distance away, he won't receive it until Wednesday.

For the average householder, that's one of the toughest features of the economy move just taken by the United States Post Office Department.

The plan promises to boom business for the telephone company and increase personal business.

You'll always be able to say that the material is in the mail and should be along any day now.

Grandpa heard the postman's whistle three times a day. Now his grandson is apparently lucky if the letter carrier trudges around once a day.

It has all come about because the Post Office Department is running up a whopping deficit. And, not coincidentally, Congress is debating the famous one-package appropriations bill.

It's a well-timed move, like receiving a letter containing a check the day the mortgage payment is due.

The howl of protests is likely to be heard from here to there, from Tottenville to Monterey, Calif.

Even if it's an advertising blurb or a plea for funds, everyone likes to receive his mail on time. The fear of not getting something in the mail will drive some people to great lengths.

And as Hamlet said, "Ay, there's the rub." For tops in service someone must pay the bill. You have to pay for what you receive—even if the Government is providing it.

In his shrewd, but obvious, move, Postmaster General Donaldson is attempting to recoup a slashed appropriation. He believes householders will complain to their Congressman, and what Congressman isn't very much aware of his mail?

If economy isn't achieved in postal operations, income will have to be increased through higher rates or the fund allocation boosted. Or some similar alternative will have to be followed.

The situation, generally, is a test of American attitude and opinion. Do they want economy in Government? If so, where and when is it to take place?

The answers will have to be provided by the one-a-day mail recipients.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial regarding the curtailment in postal service, from the Staten Island Advance of April 20, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Fifteenth Anniversary of Rural Electrification Administration

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. WILEY. Mr. President, on Thursday, May 11, we will celebrate the fifteenth anniversary of the establishment of the vital Rural Electrification Administration. I am glad to say that in these 15 years, there has been a tremendous increase in the harnessing of electricity on the farms of the Nation, and I want to pay sincere tribute right now, to all of those individuals of both political parties who have labored so long and so well in the farmers' behalf. I say "both political parties" because I think it is generally agreed now that both the Republicans and the Democrats of the Nation are firmly committed to a strong unhampered REA program.

During the Republican Eightieth Congress, more funds were voted for REA purposes than at any time in American history.

Yes, I emphasize "bipartisan" because similarly, in recent months, there has been a spontaneous demand in REA's in my own State and in other States to make absolutely sure that the REA is not embroiled in partisan politics. I think that it is essential for the future of the rural electrification movement, that we keep the REA on a nonpartisan basis.

We, of Wisconsin, are particularly proud of the REA. Right now, over 72,000 rural consumers are served over 23,000 miles of wire. The REA has advanced over $58,400,000 to finance the construction and operation of the systems.

There are many challenges ahead to the REA system. Now, the system is being expanded through rural telephone cooperatives, which will deservedly bring this great phone blessing to more and more of Wisconsin's farms.

In recent months, there has been a particularly strong surge of bipartisan sentiment on behalf of the REA throughout my State. As more and more of the modern conveniences are brought to the farmer and to his housewife to relieve what has been the drudgery and the hard, incessant toil of the life in the rural areas. Never again must the American farmer be treated as a second-class citizen, denied the elementary comforts and conveniences of his city brother.

In this connection, Mr. President, I have in my hands a summary article, published in the May 8 issue of the Wisconsin Farmers Union News, which reviews the situation, I believe, in an interesting manner.

Mr. President, I ask unanimous consent that the text of this Farmers Union News article be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REA'S 15 YEARS OF HISTORY TELLS STORY OF PROGRESS

In May 1935, the chain letter fad was at its height, Rear Admiral Byrd returned from another trip to Antarctica, the Cleveland Indians and New York Giants led the major baseball leagues, and 6,000,000 American farm homes were without electricity, including 80 percent of the farms in Wisconsin.

In that month, also, President Roosevelt ordered the establishment of the Rural Electrification Administration, paving the way for a completely new way of life for these millions of American farm families.

When REA was a lusty infant in swaddling clothes, only one farm in every ten had central station electric service. Farming with no electric power to lend a helping hand meant back-breaking toil from morning until dark, and often far into the night, with

only an oil lamp's flickering light. It meant endless chores for the farm housewife, cooking with a wood stove, washing with an old-fashioned washboard, carrying hundreds of pails of water a month.

"SKIMMED CREAM"

American farmers knew the value of electricity, and they wanted it. But power companies were reluctant to build lines to all farms—they "skimmed the cream"—by extending their facilities only to farms within easy reach of their lines, thus insuring profitable operation of these spurs. Other farms, too far from the high line, were ignored. Many commercial power companies told farmers they could get power if they were willing to pay for construction of the lines to their farms. The cost was usually prohibitive.

When REA came on the scene, it was slow going at first. Rural people in Wisconsin got together, talked it over, acted cautiously. They learned that REA provided nothing except expert technical advice, guidance, and loans to be paid back with interest.

They formed cooperatives and applied to REA for loans. If an electrification project was considered feasible—that is, if the Government's financial investment was deemed safe—the co-cp got the loan and started building lines.

PERTINENT FACTS

The success of the program can be mirrored through several pertinent statistics. As 1950 started, REA has approved almost $2,000,000,000 in loans to 1,066 borrowers. These included 976 cooperatives, 41 public power districts, 24 other public bodies, and 25 commercial power companies. At the first of this year, REA also had on file or in process in the field, additional loan applications totaling $356,428,800 for new system construction and various line improvements. Most of these applications are for expansion of existing systems financed by REA.

These REA borrowers had almost a million miles of rural electric lines in operation, serving more than 3,000,000 farms and other rural consumers in 46 States. Additional lines are being built more rapidly now than ever before—one new consumer is being connected to an REA-financed system every 15 seconds of every working day.

The speed with which rural electrification has been advanced in Wisconsin is shown by the fact that the first loan to be granted was in May 1936. First REA-financed lines were energized by the Columbus Rural Electric Cooperative, Columbus, in May 1937.

But rural electrification in Wisconsin is past the stage where the accent is on the extension of lines. It is developing to a point which will create a new problem. That problem arises from an increased farm use of power to create income. In December of 1941 the average power use for that month on the State's REA-financed lines was 84 kilowatt hours. In December of 1949, this increased to 210 kilowatt hours. The national average is 141 kilowatt hours. This constantly increased demand for power on the farm eventually is expected to throw an additional strain on the State's power sources. Even now many suppliers are nearing the limit of their capacity to produce dependable service.

SEVENTY-THREE THOUSAND CONSUMERS

Wisconsin's 31 REA borrowers, 30 of them rural electric cooperatives, were serving 72,796 rural consumers over 26,148 miles of wire on February of this year. At that time the Rural Electrification Administration had advanced $58,405,125 to finance the construction and operation of these systems.

During 1949, the State's REA borrowers connected an additional 6,681 rural consumers and added 3,196 miles of energized line.

The State's borrowers own and operate their systems. REA neither owns nor operates power systems. These new private enterprises create new jobs and new opportunities while meeting a need. The principle of one member, one vote assures democratic control. The cost-of-service co-ops bill their members to cover the service and a share of paying off the Government loan. As the loan is paid off the member is credited with an equity in the system. When they retire the debt the members will own the system outright. All of the State's rural electric co-ops operate in areas where existing companies were unable or unwilling to provide service.

CORNFIELD DEMOCRACY

Rural electric cooperatives have been referred to as "democracy in the cornfield." That they are democratic and excellent examples of free enterprise, there is no question. The members elect their directors by popular vote, and the directors hire a manager to handle the day-to-day operation of the business. The co-op's annual meeting is the high spot of the year for members and directors, for here the members themselves elect their directors and decide important policy issues. Contrary to a popular misconception, no member is liable for the cooperative's indebtedness—his only cost is the small initial membership fee, which is refunded if he moves out of the co-op's territory.

Although more than three-fourths of all consumers on REA-financed cooperative lines are farms, membership in rural electric cooperatives is not confined to farmers. Also included are many thousands of rural nonfarm dwellings, schools, churches, stores, community buildings and other commercial enterprises. Many of these industries themselves operate on the cooperative plan.

PROFOUND CHANGES

Fifteen years of REA have made profound changes all across the country. Over and over again, rural electric cooperatives have demonstrated that farm electrification has brought about a higher real farm income and better farm living. It has stimulated private business, both locally and nationally. For example, surveys show that for every dollar invested in rural power facilities, the farmer invests an additional $4.50 in wiring, plumbing, and electrical appliances.

Not only have REA borrowers kept their promise to repay their construction loans with interest, they have actually made payments of more than $20,000,000 in advance of the due date, including $305,398 by Wisconsin borrowers.

Amounts overdue more than 30 days for the entire Nation represent less than one-twentieth of 1 percent of the total loan funds approved.

ECA IS NEXT

The successful REA pattern in rural electrification is now being applied to the rural telephone field. REA was authorized in October 1949 to make loans for the extension and improvement of rural telephone service to the widest practicable number of subscribers. The first telephone loan was approved in February 1950 to a small commercial company operating on the Alabama-Florida border. The first allocation of funds for a loan to a telephone cooperative was made by REA in April 1950 to the Emory County Farmers Union Telephone Cooperative of Orangeville, Utah.

As REA enters its sixteenth year, the job is still a sizable one. More than a million farms are still unelectrified, besides hundreds of thousands of rural dwellings, crossroads businesses, schools, churches, and other rural establishments.

Today electric lines built by REA borrowers are designed to serve entire areas, not only densely settled areas. This principle of area coverage has replaced the policy of building a line for an individual pocket or section. Area coverage assures electrification for isolated farms far removed from any established source of electric power.

Tangible results of the advantages of rural electric power have been seen on thousands of American farms. Higher income for the Alabama truck farmer—better light for the Virginia schoolboy—less drudgery for the Kentucky farm wife—these are but a few signposts of the new way of life that rural electrification has brought to the rural American scene.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial regarding the curtailment in postal service from the Worcester (Mass.) Telegram.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POSTAL CUTS

It certainly may be questioned whether the drastic cuts announced in the United States postal service represent a sincere concern for governmental economy or are politically and somewhat ingeniously designed to make such economy so painful and inconvenient for the general public that it will stop its rising clamor of demands for Uncle Sam to stop spending.

No taxpaying American, perhaps, should look an economy gift horse too closely in the face, but this abrupt and sudden decision for economy where the public is certain to feel some immediately bad effects must cause a more than casual look. The timing of these drastic postal service economies has come just when considerable public support had been won to the cause of economy in Government, both by the publicizing of the Hoover report and by the continued attacks of those who fear the result of continued Federal deficit financing. In effect, the Post Office is saying, "So you wanted some economy, well here it is." And the results, unfortunately, may be enough to make many people cry "Uncle" in their economy demands—something the administration would very much like to see happen before the congressional elections.

The public will feel this economy drive in the curtailment of mail deliveries not alone in purely residential districts, but in areas where business and residential districts are mixed. It will feel the results in shortened hours at the post-office windows, and in earlier pickups from street mail boxes at night. People will find important mail delayed, and the post office will blame the public for demanding lower taxes and budget reductions in Washington.

Real economy, gained through efficiency of operation, cannot be scorned by Americans who want just that in all their governmental departments. The type of economy that Postmaster General Donaldson has imposed can be questioned, for he is taking away from the public services which it pays well for in both direct revenues to the Post Office Department and in taxes. His cuts have gone beyond those recommended recently by the

House Appropriations Committee which, in fact, did reduce the over-all Post Office budget to $2,207,500,000 from the $2,235,607,000 requested by Donaldson. Mr. Donaldson's reaction to this is seen in the announced postal cuts.

Mr. Donaldson's concern for economy would have been more impressive and would have seemed more sincere if he had only called for a revamping of his whole department along more economical lines. The Department's bookkeeping and cost accounting system is the same one that was established in 1836, and there has been no basis of establishing costs anyway. The services to other Government departments contribute greatly to its deficit. In a single year, for instance, the Post Office handled 2,000,000,000 piece of mail free for the Government, including some 18,000,000 pieces of registered mail. It has been handling free of charge savings bond sales, documentary stamps, civil-service exam notices and migratory bird stamps.

The public feels that good postal service is a thing to which it is entitled; postal service is not supposed to support itself at all, but to be a public service. It expects efficient operation, and applauds any genuine efforts to achieve that. Mr. Donaldson cannot be applauded on that score yet.

Why Mr. Browder as Witness?

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "Why Mr. Browder as Witness?" which appeared recently in the Washington (Pa.) Observer.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY MR. BROWDER AS WITNESS?

Earl Browder, former boss Communist in America, has been paraded before a committee of the United States Senate as a witness in the continuing inquiry growing out of the charges made by Senator MCCARTHY, of Wisconsin.

Why was Browder paraded before the Senators and given headlines in the American newspapers as a character witness for the defendant?

The guilt or innocence of Dr. Lattimore has not been established.

But the finger was placed on him by Louis F. Budenz, reformed Communist.

Browder took the stand yesterday and under oath testified that Budenz had given false testimony with regard to Dr. Lattimore. Budenz, who became chief editor of the Daily Worker, Communist-journal, repented and returned to the Roman Catholic Church and is now a professor at Fordham University.

Their testimony is conflicting.

What the public must do is to make its choice.

No one wants Dr. Lattimore to be convicted unless he is guilty.

If he is guilty he should be convicted for he is an enemy of our country.

But Browder did not want to testify. The Government had to make arrangements to get him to Washington.

As Communist, his testimony was just what could have been expected. He is sworn to allegiance to Moscow, even to the extent of deliberately lying. Communists are taught to lie deliberately to further their own cause.

The manner of conducting the case is peculiar.

Certainly there are records which contain facts on the case which could be divulged.

Parading of witnesses of the character of Browder only serves to gain publicity, to spread propaganda, for the cause of communism.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article regarding the curtailment in postal service by Robert M. Grannis, published in the Brooklyn Eagle for April 20, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ONE MAN SAYS

(By Robert M. Grannis)

SLASH IN MAIL SERVICE IS POLITICAL FRAUD, NOT A STEP TOWARD MUCH-NEEDED ECONOMY

For a number of years now I have expressed myself about the need for economy in Federal Government operations and I suppose I am expected to hail with deep satisfaction the plan to save a few hundred million by cutting mail deliveries in the Nation to one per day. I am about as enthusiastic as I would be if the city fathers decided that 1 day a week there would be no policemen and that because of the condition of the fiscal affairs a payless holiday for cops was indicated.

Of course, such a maneuver as the mail thing is not without its shrewd implications. The net effect is to make the taxpayer a sucker for the spend-and-tax boys by attempting to convince him that economy is an evil word. Sure, we'll save you some money but, boy, oh boy, how it is going to hurt. I am just not impressed and I wish the taxpayers generally would get up on their hind legs and label the thing as a political fraud.

Some day a decision will have to be made about our postal service. It is either a business or a public service. And there are a lot of public services that just can't pay their own way if the best interests of the people are to be considered. Neither the fire department nor the police department can show a profit, nor do they have any means of breaking even on the year's operations.

The postal setup is one of the most vital services we have. If it broke down the public would be paralyzed. The people in it, particularly the little "guys" who "tote" their 35-pound loads, do a magnificent job and it is no idle boast to repeat the weather never stops them. Furthermore, they are terrifically underpaid.

If the Government is so all-fired economy-conscious so far as the Post Office Department is concerned, what's the matter with having realistic rates for air mail? Air mail is a luxury item in a sense and if a man wants extra-fast service, he ought to be willing to pay for it.

Reversion to one mail delivery a day is a backward step that is not reflected in any other branch of Government. It is a "punch in the eye" for the suffering taxpayer and, worst of all, it won't save him a dime in taxes nor a penny.

Millions on millions are poured into every cause and plan under the sun and the taxpayer must be content with the pious statement of the planners that this money is spent for his own good. Sometimes he knows otherwise, but the dollar bills still pour out in an endless stream.

In the case of the Post Office the taxpayer knows he is on the receiving end of a great and general good and that there is little to complain about. Firing a few letter carriers or knocking off substitutes won't balance the budget, and the theory that every little bit helps just doesn't apply. Some services must be kept at their peak. The taxpayers have it coming to them.

There are plenty of ways to save money in Government and if anybody ought to get hurt when we finally become economy-conscious—no matter how belatedly—it ought to be in terms of politicians getting fat salaries when their mental level and ability rate them nothing more than second-rate jobs in the business world.

As I said before, the proposed cut in postal service smells bad and we shouldn't stand for it.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two articles regarding the curtailment in postal service, from the Amarillo Globe, of Amarillo, Tex.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

MAIL CARRIER LOADS REACH 300 POUNDS

Things piled up on Amarillo letter carriers this morning, to result in mail loads that ran up to 300 pounds per carrier.

Of course, the carrier load has been heavier since the reduction of service to one delivery per day, as ordered by the Postmaster General in a recent economy move to reduce the post-office deficit.

Then Thursday is normally one of the heaviest days of the week, as weekly magazines and other weekly publications are added to the normal mail.

On top of all that the terrific volume of monthly magazines piles into the post office during the last few days of the month.

The service reduction order resulted in release of more than a dozen substitute carriers from the Amarillo Post Office. Reorganization of routes, on a permanent, one-trip basis, will not be completed for several weeks.

SIXTEEN POSTAL MEN DROPPED FROM PAYROLL

Sixteen highly regarded Amarillo post-office employees have been cut off in compliance with the postal-service economy order, and their boss Wednesday appealed to employers to help the men find new jobs.

Mel Benesch, city delivery superintendent, said 16 of my very best men had to be

dropped from the payroll and must have new jobs.

Benesch said the men had been acquired as extra carriers over a period of 3 years and are proven.

"Most of them are young married men who have bought homes. They passed up better-paying jobs, expecting to make a career of the postal service. Now they have to be cut off, overnight, and it tears my heart out to do it. I want to help anyway I can to see that they get new jobs."

The carrier superintendent said the carrier group was culled long ago and all of the 16 are dependable, loyal, hard-working, trustworthy, intelligent employees.

"Anybody wanting excellent help can call on me; I can point out his man," Benesch said.

Each of the men forced out of the post office by the order saying post-office budget for Amarillo must be reduced $75,000 this year had passed his examination for classification as a regular employee and would have been so appointed when vacancies appeared.

Benesch said jobs are not as easy to find in Amarillo as they were a short time ago and appealed to employers to help him in placing the workers. A few, he said, now have jobs in sight.

The economy program reduced deliveries to residences to one a day and cut business deliveries to two a day. The action was ordered by the Postmaster General and went into effect in Amarillo Tuesday.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Columbus Evening Dispatch, of Columbus, Ohio, of April 20, 1950, regarding the curtailment in the postal service.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE POSTAL SERVICE SLASH

There are two possible motives behind the sudden and drastic slash in the postal service ordered by United States Postmaster General Donaldson.

One may be a sincere desire to carry into effect some of the economy recommendations of the Hoover Commission and thus reduce the annual deficit for the Post Office Department.

The second is still another application of the old squeeze play on the public, in which the sequence goes something like this: (1) An economy drive is announced and dramatized by ostentatious firing of personnel and slowdown in operations. (2) The public, displeased by the slower and less efficient service, vigorously objects. (3) Congress reacts to this prod with larger appropriations. (4) Washington piously announces that when it tries to cut Federal spending, the public won't stand for it, hence the public wants more spending and not economy.

The second hypothesis seems more plausible than the first. Why?

Because the action just announced goes beyond the recommendations of the Hoover Commission in some respects and ignores its findings in others.

The Hoover Commission, it is true, proposes reductions in personnel, in many branches of the Federal Government. But what it suggests is the elimination of wasteful, unnecessary, political, overlapping jobs that are not needed to maintain the essential services of government. Anybody who knows anything about the Federal bureaucracy knows that there are multiplied thousands of such jobs in existence.

The slash which has been ordered does affect an essential service of government and cannot help but make it markedly slower and less efficient—and that service, it should be noted, already has deteriorated noticeably under the Truman administration and its predecessor.

The Post Office Department ignores the part of the Hoover report which suggests that facilities, equipment, and procedure could be modernized and further mechanized, thus bringing its operations more nearly on a par with those of private business in this respect.

However, whatever the motive behind the order from Washington, the end-result is that the public, although it is paying the highest postal rates in history in addition to the heaviest peacetime tax burden any nation ever shouldered, is going to receive still more inferior postal service, at least for the time being.

One mail delivery a day will put residential first-class mail service back into the 1890's. Delivery service of the secondary mail categories, already very laggard, promises to be worse.

For example, Postmaster Rowe, commenting on the local situation, points out that magazines now received at the local post office on Thursday and processed for delivery on Friday will probably not be delivered until the following Monday or Tuesday. Directory service will be discontinued, which means that many letters with slight errors in address will never be delivered.

This is the sort of postal service which is found in the more backward European countries. Certainly it would be a long step backward for the United States.

And, incidentally, since the Post Office Department deficit is one of the reasons cited for the sudden "economy wave" in postal services, how about the vastly larger sums being spent to speed deliveries of Marshall plan commodities overseas? Uncle Sam is showering largesse all over the globe, a process for which the American taxpayer is paying an annual bill which makes the Post Office Department deficit look like small change.

If the United States Government can afford to subsidize foreign governments in Europe and Asia to the tune of billions, it certainly should be able to afford a few millions a year to give its own citizens better mail service than they had when the Spanish-American War was big news.

New York State Assembly Protests Unfairness of Federal Aid Programs

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include a memorializing resolution adopted by the New York State Assembly, relating to Federal aid to the various States, including New York. This resolution points out that in the fiscal year ending June 30, 1949, New York paid $401,906,789, or 18.35 percent of the total cost of the Federal-aid programs and received back only $131,158,580, or 5.98 percent of the total. Thus, the citizens of the State of New York suffered a net loss of over $270,000,000.

Furthermore, the resolution shows that the farmers of the State of New York have been discriminated against since they received only 2 percent of the total Government payments to farmers, although the taxpayers of the State pay nearly a fifth of all Federal taxes, and thus will have to bear this disproportionate percentage of the losses of the Commodity Credit Corporation.

These Federal-aid programs and their administration have been rankly unjust. Fifteen States pay in more money than they receive, and thus support the programs for the other 33 States. The Representatives of these contributing States in Congress would do well to bear these facts in mind as they vote on the appropriation bill now before us which would increase the national deficit by nearly $6,000,000,000.

It is the taxpayers of these few States who will bear the overwhelming burden of paying the piper for the expenditures which we are approving by this legislation.

I have consistently opposed efforts to increase the total figures in this appropriation bill and have voted for reductions, not only because of the precarious state of our Federal finances, but also because of the prejudicial treatment received by New York, and these other 14 States, in the various Federal-aid programs.

The matter referred to follows:

Concurrent Resolution 120

Concurrent resolution of the senate and assembly memorializing the President and Congress to revise present Federal-aid program to eliminate inequities

Whereas Federal aid to State governments, to local governments, and to individuals (excluding payments to veterans) amounted to $2,190,000,000 for the fiscal year ending June 30, 1949; and

Whereas such aid will exceed $3,000,000,000 for the present fiscal year ending June 30, 1950, and will approach $4,000,000,000 for the fiscal year ending 1951; and

Whereas pending legislation, if adopted, for public-health aid and Federal aid to education will increase Federal grants-in-aid by more than $500,000,000 per year; and

Whereas the present session of Congress will be requested to grant an additional $2,000,000,000 in borrowing authority for the United States Department of Agriculture and the Commodity Credit Corporation, according to the President's budget, for the agricultural price-support program; and

Whereas the citizens of the State of New York, in the fiscal year ending June 30, 1949, paid $401,906,789, or 18.35 percent of the total cost of Federal-aid programs, and received back only $131,158,580, or 5.98 percent of such total, making a net loss of $270,748,209 to the citizens of the State (as shown in attached schedule A), i. e., the citizens of the State received back less than $1 for every $3 paid; and

Whereas the reserve for losses in the operations of the Commodity Credit Corporation for the present fiscal year ending June 30, 1950, is $315,308,500 and the net loss for the first 4 months of the current fiscal year from July 1 to October 31 amounts to $129,369,849; and

Whereas many commodities held by the Commodity Credit Corporation are and will be given away and a large percentage of the inventory of the Commodity Credit Corporation has deteriorated and has become unusable; and

Whereas these commodities are still being carried on the financial statements of the Commodity Credit Corporation at values wholly disproportionate to the present market sale price; and

Whereas prudent business accounting methods would indicate a loss of $800,000,000 rather than the $315,000,000 set up as a reserve for losses in the financial statement of the Commodity Credit Corporation, and that adequate recognition of losses would demonstrate that the Commodity Credit Corporation is now insolvent; and

Whereas the taxpayers of the State of New York will be called upon to bear a relatively large percentage of this loss, namely, 18.35 percent; and

Whereas the farmers of the State of New York have been grossly discriminated against and the citizens have received practically no benefits from the operations of the Department of Agriculture and the Commodity Credit Corporation, having received only 2 percent of Government payments to farmers and only one-third of 1 percent of price-support benefits (as shown by the following table); and

Federal aid to farmers in New York State and total United States

	New York State	Total	United States percentage
Government payments to farmers 1948 [1] (calendar year)	$5,159,000	$256,505,000	2.0
Agricultural price support:			
Loans 1948 crops [2]	6,533,894	2,197,419,289	.3
Loans 1949 crops [2]	3,600,876	819,543,497	.4
Federal tax payments 1949 (fiscal year)	7,427,220,562	40,463,125,018	18.35

[1] U. S. Department of Agriculture, Agricultural Statistics, 1949.
[2] Commodity Credit Corporation, Report of Financial Condition and Operations as of Oct. 31, 1949.

Whereas the Congressional Committee on Expenditures in the Executive Departments has recommended during the first session of the Eighty-first Congress that a permanent national bipartisan Commission on Intergovernmental Relations be established for the purpose of appraising, clarifying, and systematizing Federal grants-in-aid; and

Whereas the glaring discriminations in benefits received by New York State under the various Federal-aid programs has resulted in a tremendous financial drain upon our citizens: Now, therefore, be it

Resolved (if the senate concur), That the President of the United States and the Congress of the United States be and they are hereby respectfully memorialized to revise the present Federal-aid program so as to remove its present inequitable and injurious effect on the people of the State of New York; and be it further

Resolved (if the senate concur), That copies of this resolution be transmitted to the President of the United States, the Secretary of the Senate of the United States, the Clerk of the House of Representatives of the United States, to each Member of Congress duly elected from the State of New York, and to each Member of Congress of those States which are similarly discriminated against, and that these Members of Congress be urged to devote themselves to the task of accomplishing the purpose of this resolution.

By order of the assembly,

ANSLEY B. BORKOWSKI,
Clerk.

In senate, March 2?, 1950. Concurred in without amendment.

By order of the senate:

WILLIAM S. KING,
Secretary.

SCHEDULE A

Federal aid—payments and receipts by States, 1949 (for fiscal year ending June 30, 1949)

State and Territories	(1) Population July 1, 1949	(2) Total internal revenue collections 1949	(3) State percentage of total internal revenue collections	(4) Federal aid payments within States	(5) State contribution to Federal-aid program	(6) Net gain or loss on Federal-aid program	(7) State percentage of receipts of Federal aid
Alabama	2,920,000	$259,491,422	0.64	$42,993,959	$14,017,000	+$33,732,648	1.96
Arizona	745,000	82,128,231	.20	17,277,014	4,380,000	+12,897,014	.78
Arkansas	1,964,000	115,873,198	.29	33,305,202	6,352,000	+26,953,202	1.52
California	10,665,000	2,955,909,545	7.30	163,678,730	159,887,000	+3,791,730	7.47
Colorado	1,215,000	276,382,454	.68	40,650,130	14,894,000	+25,756,130	1.85
Connecticut	2,019,000	642,578,113	1.59	17,627,121	34,825,000	−17,197,879	.80

EXTENSION OF REMARKS
OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include six articles which were recently written and published in the Minneapolis Star by its president, Mr. John Cowles, on his return from a 2-month trip through Europe and the Middle East. The articles are short but comprehensive and well worth reading. They reveal a remarkable grasp of the main issues and problems in the various areas, and a clear statement of the essential principles necessary for their solution. Especially valuable are the fourth and fifth articles dealing with Asia and Israel, respectively, because they usually are given so much less attention than western Europe.

THE COLD WAR HAS MANY FACES—IT'S GOING TO BE LONG, BUT IT NEEDN'T GET HOT

(By John Cowles)

Before we, as a nation, can make sound decisions on any of the problems confronting us, we must get two facts, disagreeable as they are, etched on our minds.

First of all, we are actually in a war. It's a different kind of a war from any we have ever been in before. It's a halfway war—a cold war—but, nevertheless, a war. Many of us can't or won't believe it.

Second, we of the present generation will probably never again be able to relax in what we used to call normalcy—to lead our lives under conditions of genuine peace. The threat of Russian barbarism sweeping over the free world will cast its ominous shadow over us for many, many years. To believe that there is any quick and easy solution to the fundamental conflict between the east and west is wishful, adolescent thinking.

This does not mean that hot war with Russia is inevitable.

While hot war might flare up at any time, I think the odds are overwhelmingly against its happening in at least the next 2 or 3 years. If we act resolutely and intelligently in the halfway cold war, we can, in all probability, permanently avert a hot war and continue to live in freedom and expanding prosperity. If so, the Communist menace eventually will evaporate.

But we must realize that this halfway war is serious business. The Russians are playing for keeps. If we should lose this peculiar thing called a cold war, the ultimate consequences would be the same as losing a hot war. Probably in its final stages, if we were losing it, it would become a hot war.

In any event, if we lost it, we would end up by losing everything—all our liberties, certainly, and our lives, except for those who survived as slaves of the Communist barbarians.

Threatening as the menace of the spread of Russian communism may be, however, we must not let fear of it stampede us into hysterical actions. We must do nothing to weaken our free institutions or our productivity, for our hope for survival depends upon them.

The cold war has many faces. We must learn to recognize them all. One aspect, but only one, is that of the physical containment of Russia. That means providing military and economic support to weak nations like Greece and Turkey, which are adjacent to Russia or her satellites. We can make it difficult—almost impossible without hot war—for Russia to take them over and then drop the iron curtain, the Soviets' mid-twentieth-century guillotine.

If we hope to save much of southeast Asia from Russia, as we have, at least to date, saved Greece and Turkey, we have no time to lose.

Some qualified observers think Indochina is already all but lost. If it goes, the holding of Siam would be extremely difficult. The situation in Burma, Malaya, and Indonesia is precarious.

No one can deny either the strategic or economic importance of southeast Asia. Its prewar trade with Marshall-plan countries alone exceeded a billion and a half dollars a year.

If trade with southeast Asia is cut off, the difficulties of England's economic recovery are further intensified. If southeast Asia should fall under the Kremlin's control, the likelihood of being able to hold India, Pakistan, and the Middle East for the free world would be greatly reduced.

Throughout history nations have maintained outposts at strategic points against barbarian threats. Unless we give support promptly to southeast Asia, we will in all probability lose a highly important battle in the cold war.

The cost, for economic aid and for weapons, for both south and east Asia has been estimated at three or four hundred million dollars a year. When one is fighting a war—even a half-way cold war to avert a hot war—dollar costs of such dimensions should be relatively unimportant, considering the alternative.

Much more than that amount, however, could be saved without serious risk and possibly with affirmative benefit through trimming our proposed ECA-Marshall plan appropriations for western Europe for the coming year.

Time is running out in southeast Asia. Instead of doing nothing, or doing too little too late, the need is for affirmative action there now.

THE MARSHALL PLAN DID A BIG JOB, BUT SOME WONDER IF CUSHION SHOULDN'T NOW BE REDUCED

(By John Cowles)

Our Marshall plan-ECA aid has been enormously successful in western Europe. It has restored transportation and revived production. It has helped rebuild the morale of the people and has given them confidence that Communist control of the entire continent is not inevitable. The Communist tide has been receding for 2 years in Europe while it has been rising in Asia. The Marshall plan may well prove to have been the decisive factor in permanently stopping Russian expansion into western Europe.

Paul Hoffman has done an excellnet job as head of ECA. Despite his great ability and extraordinary powers of persuasion, however, it is doubtful that the economic integration of western Europe is any nearer than it was 2 years ago.

Many qualified observers feel, moreover, that the Marshall plan has already fulfilled—insofar as there is any real chance of its fulfilling them—the functions for which it was originally designed.

They believe that some of the recipient nations won't begin, so long as American dollar subsidies continue plentiful, to take the hard political and economic steps that are imperatively necessary for their long-run solvency.

Every European government naturally likes to receive as many American gift dollars as possible. It postpones the necessity for dealing with thorny issues. The dollar shortage is a highly convenient phrase that masks totally different things in the various countries.

Britain's basic problem is that the Government is spending more for welfare services—socialized medicine, food subsidies, etc.—than the country can currently afford. Not enough British manufactured goods are being sold abroad to give England the foreign exchange it needs to pay for its dollar imports.

Stafford Cripps has done a good job, within the rigid limitations set by his Socialist convictions, in handling Britain's finances. Despite the criticism which many leveled at him over devaluation, that policy was apparently justified. British gold and foreign currency reserves have increased in the last 6 months, and exports to hard-currency areas have expanded.

British taxes are so high, however, that incentives for employees to work overtime or for investors to risk their savings in new business ventures are stifled.

Almost all of the industries which have been nationalized (that is, taken over by the government) are losing large and steadily increasing amounts of money. Living costs, despite controls, are slowly rising. The unions, which had previously accepted a policy of no wage increases, are becoming increasingly restless.

The majority of the British people like their governmentally provided welfare services, whether or not the country can afford them. Both political parties recognize this fact, and each claims credit for having originated them.

The Conservatives claim that they would administer the welfare services more efficiently and economically than the present Labor government, and would nationalize no additional industries. That is largely the extent of the difference between the two parties.

Except for Winston Churchill, most of the leaders of the Conservative Party are happy, I suspect, with the outcome of the recent election. They want the Labor Party, not themselves, to be in power when within the next year or so it becomes clearly imperative for the government to adopt some unpopular policies that are sure to alienate large segments of the population. Thereafter the Conservatives hope to regain power.

For Churchill, however, the sands are running out. If he is to be Prime Minister again, the governmental overturn cannot be long delayed.

No matter how irritated we Americans may become over specific aspects of Britain's foreign or domestic policies, we should never forget that England and its commonwealth are incomparably our strongest ally.

The United Kingdom is currently spending a slightly higher proportion of its national income on direct military preparations than we are. Continued partnership with the United Kingdom is essential if the free world is to restrain Russian aggression.

In France the fundamental problems are political, social, and psychological, rather than economic. France is basically a rich country. But its political setup encourages weak governments, splinter parties, selfish factionalism.

Income tax evasion, for example, is as widespread and socially accepted today in France as was violation of the prohibition law in the United States 20 years ago. Relatively few wealthy Frenchmen have any of that sense of obligation to their fellow men that is taken for granted in America.

Many of the French labor unions are controlled by Communists who are almost open Russian agents. Membership in the Red-run unions has, however, been steadily declining during the past 2 years.

Whether France would fight unitedly against Russia if a hot war should come is doubtful.

American observers say that Norway would fight to the end if Russia tried to invade it. Apparently the Danes, geographically exposed and numerically weak as they are, would also resist within the limits of their power. It is hoped by the United States

and England that a similar spirit will develop in France, now that modern American military equipment is being supplied her.

Perhaps if western Europe's defense forces are unified under an American commander, and the French become convinced that the United States and its allies have the military power to hold western Europe, the French may become more resolute.

Italy's problems are quite different from those of England or France. Italy is desperately poor in natural resources. Its population, constantly growing, is greater than the country can support. Many Italians live in extreme poverty, and the level of popular education is lower than that of any other major nation.

Two million people are unemployed in Italy today, despite the fact that most employers are compelled by the trade unions to keep more people on their payrolls than they need.

Much of Italy's most productive land is owned by a few rich families, while the peasants live in squalor. The government is talking of taking over the huge estates and dividing them up into small plots on which the peasants should be able to earn a better existence. But the government has not acted with vigor.

Observers say that it is almost a miracle that the Communists did not seize control of Italy a couple of years ago. Only lavish and extremely well-publicized Marshall plan aid, plus an intensive campaign by the Vatican, prevented the Communists from winning the last election.

Until Italy faces such basic questions as population, it is difficult to see how, except for continued American financial aid, her standard of living can be kept at a high enough level so that communism will lose its allure.

WHAT'LL WE DO WITH GERMANY? SHE AND BRITAIN ARE VITAL TO ANY EUROPEAN FEDERATION

(By John Cowles)

Little if any real progress has been made toward finding a safe and workable answer to the German problem, which is the vital factor in solving the dilemma of western Europe.

Perhaps the German people, after having been badly beaten in two world wars, are as fed up with the idea of military conquest as the once-belligerent French were after Napoleon's final defeats. But that is a chance the other western powers naturally fear to risk.

No one makes any great claims for the success of our attempts to educate the Germans on the virtues of democracy. The possibility that some new demagogic fuehrer will arise in Germany cannot be dismissed.

The Russians are building a German Communist army in the Soviet zone of Germany. To date the western allies have not permitted the Germans in their areas to possess more than police forces.

If the foreign powers should withdraw their occupation troops, presumably the superior power of the Communists would result in their getting control of all Germany regardless of the wishes of the majority of the German people.

There seems no present alternative but for the United States, England and France to plan to keep substantial military occupation forces in Germany for many years ahead.

Some people bitterly oppose letting the Germans in the western zones develop any appreciable military strength, for fear they might join with the Russians in war against the west. Even though most of the western Germans may detest the Russians, they might conceivably ally themselves with the Kremlin on the theory that after defeating the west they could somehow manage to rule the combined Russian-German empire. Undoubtedly most Germans have a deep desire to see the partition ended and their fatherland reunited.

In addition, desperate people do desperate things.

Perhaps before long a military federation including the United States, Britain and western Europe will be set up. If so, an American general would probably have to be in command, as the friction between Britain's Marshal Montgomery and the French general staff is bitter.

In such an international army, possibly the Germans of the allied occupation areas could safely be permitted to have substantial units.

Despite Paul Hoffman's vigorous pressure and the responding lip-service acquiescence of the nations receiving Marshall plan aid, nothing is actually being done to establish a real economic union of western European nations.

Americans should not be misled by an occasional speech to the contrary by some foreign dignitary. In most cases these stem from expediency. Even the relatively simple Benelux (Belgium-Netherlands-Luxemburg) economic pact has not been seriously implemented.

The creation of a western European economic federation without including Germany would be futile. If Germany felt that she were to be permanently cut off from trade with France, Belgium, Holland, and Scandinavia, the appeal of embracing Russia and acquiring markets for German manufactured goods all the way east to China would be irresistible.

The formation of a western European federation that included Germany but did not include England would be dangerous. In all probability Germany would rapidly assume a dominating position in it, for Germany is still potentially by far the strongest and most productive nation in western Europe.

The present British Labor Government has not the slightest desire to join in any European economic federation. Socialism in England is nationalistic. In an economic sense it is isolationist.

Britain is determined to follow a policy of trying to maintain full employment in the United Kingdom by whatever national controls may be necessary, regardless of economic fluctuations abroad. She has no intention of agreeing to expose herself to exports from the Continent if they should conflict with what she regards as her internal best interests.

Britain has no intention of restoring convertibility of sterling into other currencies to a point where her present control over foreign trade would be weakened. She hopes to tie the Commonwealth closer to her, and is looking overseas, economically, rather than to western Europe.

England will cooperate wholeheartedly both politically and militarily with the United States and the free nations of western Europe against the Russian threat. But she does not intend, if she can help it, to let outside nations force her to modify her economic policies.

Therefore, it is more than doubtful, for the time being at least, that Britain will enter any really meaningful western European economic federation.

Clarence Streit's proposal for Atlantic Union—the creation of a superstate consisting of the United States, Britain and her Commonwealth, and some or all of the democracies of western Europe which are now receiving military equipment from the United States—has to date attracted little attention in England. I raised the question with various informed people; no one mentioned it first to me.

The majority of them indicated that that was the broad direction in which they hoped Anglo-American relations would ultimately develop. The majority likewise expressed the view that the Streit plan for transferring all sovereignty to a superstate was too sweeping, and that advocates of an Atlantic Union grossly underestimate the staggering practical difficulties that would be involved.

Some called it "a noble ideal." Others suggested that it was the logical step toward that eventual world government in which many Americans believe. But no one displayed any belief that it might come to pass in the foreseeable future.

WE MUST HELP ASIA WIN FREEDOM—COMMUNISTS CAPITALIZE ON EFFORTS TO CURB NATIVE INDEPENDENCE

(By John Cowles)

One highly important aspect of our cold war with Russia is that the Communists know how to exploit legitimate, popular aspirations throughout the world and pervert them to the Kremlin's ends.

Until we understand what is happening, and why and how, we will continue to lose cold-war battles.

Everywhere on the globe peoples who have long been subject to others are beginning to demand their freedom, are becoming increasingly determined to rule themselves, even though it may mean misgovernment. Granted that they are politically immature, not yet ripe for self-government, with the great majority illiterate, the people in the backward areas are, nevertheless, resolving to end colonialism.

The United States must show that we not only sympathize with those aspirations but will try to help bring them to successful fruition.

What we did in educating the Filipinos for self-government and then turning them free under our protection is an excellent example to be followed elsewhere. Otherwise many of these peoples, in their frustration, ignorance, and despair, will turn to Communist Russia for aid.

We must make it clear that the United States is not simply the tail to the French kite in Indochina, nor to the British or French or other European nations in either Asia or Africa.

We are providing arms and support to the French in their current efforts to hold Indochina with a quasi-puppet emperor, Bao Dai. The majority of the people of Indochina are hostile to him because his regime is not completely independent of France. They suspect that the French may subsequently try to restore some of those controls that France, in its desperate efforts to avoid utter defeat in the Indochinese war, has recently grudgingly renounced.

Most of the people of Indochina hate the French, who have been unenlightened or worse in their colonial administration. A Moscow trained Communist, Ho Chi Minh, has consequently been able to rally the majority of the Indochinese—including those who are otherwise anti-Communist—to his side because he represents his movement as a war for freedom.

France has a substantial portion of its total military forces, some 130,000 veteran troops, in Indochina fighting Ho in a bloody and so far unsuccessful war. The United States is supplying military equipment to the French, and is thus becoming identified with imperialism in the minds of the Asiatics.

A solution in Indochina will require statesmanship of the highest order. If we are going to save Southeast Asia for the free world and prevent it passing to Moscow's control, the United States must make it crystal clear that we genuinely believe in independence and self-government for the Asiatics.

One great difficulty, however, is that, if we privately told the French that they must give Indochina its complete freedom, there would

be no incentive for the French Army to continue fighting. If the French forces withdrew, Emperor Bao Dai's regime would collapse and Ho's Communist troops would seize control, even though the bulk of the people might dislike communism.

It is even possible that the French Government will privately serve notice on us that they will not continue defending Southeast Asia from Communist Russian control unless we will provide much greater military aid and financial subsidization.

Some qualified observers who know Indochina well fear it is already lost for the Western World. If Indochina goes, it will be much more difficult to hold Siam, Burma, Indonesia, and Malaya.

Perhaps our best if not our only chance would be, after prior conversations with the British and French, for the United States to announce a clear-cut new affirmative policy of "Asia for the Asiatics."

The British do not want to give up their control of Malaya.

We need, however, to develop a joint American-British policy for dealing with Southeast Asia which the American people can whole-heartedly support and which will appeal to the Asiatics.

The British frequently observe that "The United States has not yet learned how to act as a creditor nation." We may have to remind them diplomatically that perhaps England hasn't yet learned how to act as a debtor nation.

If we could announce, with British and French acquiescence, a policy of helping all the southeast Asian countries establish free, independent governments, it would do more to stop the spread of communism than anything else.

Even the Indochinese people might welcome, or at least peacefully accept, the continued temporary presence of French troops in Indochina to maintain order and prevent Communist seizure of control during the transition period while the government was being strengthened.

In dealing with Asia, moreover, we must not forget that the Asiatics feel a kinship with other colored races everywhere. To win the Asiatics' confidence, as well as to do simple human justice here at home, we in the United States need to move much faster toward giving our own Negroes equal opportunities with whites for education, housing, and jobs.

Russian propaganda in Asia constantly identifies the United States with imperialism, with colonialism abroad and human exploitation at home. Our policy toward the Philippines disproves the first part of the allegation. If we progressed more rapidly toward giving our Negroes a completely fair deal here in America, we could more effectively answer the second charge.

Then we would be more persuasive in pointing out the truth, that it is Moscow which wants to dominate and rigidly control the world.

UNITED STATES LOANS CAN BUILD BETTER, NON-COMMUNIST WORLD; BUT WE MUSTN'T THINK WE CAN SHAPE ALL NATIONS IN PRECISELY OUR IMAGE

(By John Cowles)

It is naive for Americans—no matter how deeply we believe in our form of capitalism—to assume that all of the rest of the world should, or can, pattern its economic set-up on lines precisely identical with ours.

The American economic system, clearly the most productive as well as the freest in the world, is based on the foundation stones of scores of millions of educated, responsible, self-reliant individuals. Many have over the years accumulated savings or productive property. The American system has flowered so magnificently primarily because it has been fluid and classless. Penniless mechanics like Henry Ford and Walter Chrysler could aspire to, and achieve, the creation of great manufacturing enterprises.

In most areas of the globe there are a few rich people on top, almost no so-called middle class, and great masses of illiterates living in poverty. Our middle class has been and is the bulwark and source of America's greatness. Its savings have financed America's development and it has produced the men whose genius has built and managed America's industries.

In so-called backward areas, the middle class is trivial in size, virtually nonexistent. This means that in most places natural resources can be developed and industries created only by a government (state socialism) or by foreign corporations, primarily American ones.

Without spending excessive amounts of our American taxpayers' money, we can win one phase of our cold war with Russia through helping develop backward areas. That will mean higher standards of living for those peoples and greater political stability.

In Suez, Egypt, for example, a huge chemical plant is now nearing completion, the first in that part of the world. Seven and a half million dollars to cover the cost of American-made machinery and equipment was provided by our Export-Import Bank. The balance of $15,000,000 was provided by Egypt.

One highly competent American engineer, Clarke Davis, has been in entire charge of the project. He alone, aided by a small staff of educated Egyptians, has trained hundreds of natives to competency in the different building crafts. Soon the plant will be providing Egypt with huge amounts of fertilizer to improve the productivity of her soil.

Other chemical products that have never before been made in that part of the globe will also be manufactured. Eighteen hundred Egyptians working at the plant will have model housing, a model school, and a model hospital.

The project will tend to raise the standard of living in Egypt and will have some beneficial effect on the whole Near East.

There is every likelihood that the chemical plant will be highly profitable, and that the entire dollar debt to the Export-Import Bank will promptly be repaid in full.

We should not forget, moreover, that the dollars provided by the United States were all spent here, making jobs for Americans.

If we help Israel increase its agricultural and industrial output, it will strengthen the political stability as well as raise the standard of living of another important segment of the globe.

No one who has even briefly visited Israel and seen the determination and industry and devotion with which the Jews are facing the staggeringly difficult problem of developing Israel's productivity can doubt that the Israeli would make good use of such dollars as we provided.

"Inspiring" is inadequate to describe the reaction of a visitor to Israel. The single-minded resolution of the people to build a haven for themselves and their coreligionists who have been persecuted in other nations seems an irresistible force. One has a feeling in Israel not only that he is seeing history made but that he is seeing a nation lift itself by its boot straps through sheer will power.

Israel is so poor in national resources that it is difficult to see how the country can ever produce sufficient wealth to provide a decent standard of living for even its present population, let alone the additional hundreds of thousands who are clamoring for admission. But one senses that the impossible will be accomplished. The Jews have such complete faith that it will be done, and such determination and brains and industry, as to make the idea of failure seem inconceivable.

Throughout the rest of the Middle East, in Turkey, and the semifeudal Arab states, there are undoubtedly many projects which would be self-liquidating, which the United States Government and American corporations might advantageously help finance.

If the management were competent and the funds expended on a prudent basis, the debts would be repaid. Workers in America would have the additional jobs created by the manufacture of machinery to be exported; the standard of living in the foreign area would be raised; more battles in the cold war would be won by the Western World.

Substantial amounts could be beneficially invested in India, for hydroelectric plants, for irrigation projects, for industrial facilities. India's hundreds of millions of people would then be less susceptible to Communist blandishments or threats.

Twenty years ago there were no automobile roads connecting the United States with Mexico City. The thousands of American tourists who, as the roads improved, drove their cars southward profoundly affected the lives and aspirations of the Mexicans who came in contact with them. At first the Mexicans sneered at the gringoes who wanted auto cabins and shower baths. But the American tourists had dollars!

Today there are air-conditioned movie theaters in some Mexican towns that were only a collection of mud huts half a generation ago. The Mexicans' standard of living has been appreciably raised by their direct and indirect contact with American tourists, and Mexico is more stable, politically.

The Pan-American Highway, which before long will be substantially completed from the United States to the Panama Canal Zone, should be extended all the way down South America to Buenos Aires. A 200-mile gap in Darien, Panama, between the Canal and the border of Colombia has not yet been surveyed. If United States Army engineers would complete that survey as an indication of our intention to help see that the whole road is eventually finished, South American countries would undoubtedly accelerate their road construction.

Anyone who assumes that the Western Hemisphere is safe from communism, and that the Soviet has no designs on Latin America, is ill informed. That is one of the many other faces of the cold war.

Completion of the Pan-American Highway would result in scores of thousands of American tourists driving to South America. It is not unreasonable to assume that their contact with Central and South Americans might have the same beneficial effect as has already occurred in Mexico. If so, the $200,000,000 which engineers estimate that we would have to provide in American-built road machinery, etc., while the South American countries furnished the labor, might be well spent in helping win the cold war on the Latin American front.

No one should conclude, however, that what we need to do to win the cold war is simply to toss American dollars extravagantly around the world.

Such expenditures—and they need not be colossal—should come only after we have provided adequate funds for our military services, including ample amounts for scientific research and development of new weapons. And they should only come after we have drastically eliminated governmental waste and have balanced our national budget with a level of taxes that will provide, rather than inhibit, incentives for individual investments that will increase our productivity.

STRENGTH ABROAD BEGINS AT HOME—WE MUST GUARD PRINCIPLES WHICH MADE US STRONG

(By John Cowles)

Will the United States win the cold war? Will the danger that Russian Communist barbarism may sweep over the free world gradually recede and evaporate?

Vitally important as our actions abroad are, both along military lines and in strengthening the economies, widening the liberties, and helping raise the standards of living of the rest of the free world, the decisive part of the answer lies in what we do here at home, in three different areas:

First, we must keep our defense forces strong, with liberal appropriations for scientific research and development of new weapons.

This does not mean, however, that we should become a "garrison state" or spend excessive billions in overbuilding planes that would be obsolescent before they were completed and probably obsolete before a hot war, if any, ever arrived. Nor does it mean that we should weaken our present military unification law and return to the wastes and dangers of three separate, largely uncoordinated, military services.

Second, we must follow policies that will keep the United States financially solvent and will stimulate a steady expansion of our over-all productivity.

In the event of hot war, our hope of survival would largely depend on our productivity. In peace, we can only raise our own citizens' and others' standards of living by enlarging the output of goods and services.

Third, we must intensify our efforts to translate all our idealistic phrases about equality of opportunity in America into living reality.

Then, and only then, will all segments of our population have such complete devotion to our country and to the philosophical and spiritual and economic principles that have produced it as to be totally immune to the seductive half-truths in Communist propaganda. Only then will we be psychologically strong, which is as important as being militarily and economically strong.

Probably our worst domestic danger is that of excessive governmental spending. That leads to one of two results, either of which destroys the mainspring—individual incentive—which has been primarily responsible for the greatness and flowering of America.

If tax rates are too high, incentives for workers to put in longer hours, or for individuals to risk their savings in new businesses or in new machinery that increases output, are extinguished.

That danger point has been exceeded in Britain. We are perilously close to it, if not already there, here in the United States. Yet if tax revenues in periods of high-level employment and prosperity are not large enough to equal the government's spending, inflation inevitably results.

The manifestations of such inflation can be temporarily disguised through government controls—OPA, etc.—but only at the expense of suspending the freedom of individuals to make economic decisions, and even then only for relatively short periods if our system of free enterprise is not to be fundamentally altered.

Most self-styled liberals grossly underestimate the dangers in excessive government spending. They urge large appropriations as a cure for all evils. They contend that opponents of vast Government spending and of crushing taxes are reactionaries who would block all progress.

Actually, if our officials wanted to practice genuine thrift, the United States Government could, without raising taxes, eliminate entirely its huge cash deficit and still provide adequate funds not only for defense and foreign aid but for all the essential needs of the Government and for more actual social welfare than is now provided.

The Hoover commission recommendations, which are being largely distorted or ignored by the Administration, point out ways for saving several billions a year through governmental reorganization.

"Feather bedding" is also rampant throughout the Government. Senator DOUGLAS, of Illinois, an intelligent liberal, is conspicuous in being one of the few Fair Deal Senators who appears to comprehend the dangers of our present course.

We can, if we will, make our democratic system stronger and more equitable in many basic ways without spending billions doing it.

Grant, for example, that 8 or 10 Southern States which have large Negro populations are financially unable to provide the quality of public-school education that all American youth deserves.

Instead of the Federal Government's proposing an elaborate system of Federal aid to education for all 48 States, with all the dangers of thought control which that entails, why not simply appropriate one-fifth of that amount of money for those few States which because of their peculiar problem have a special need for it?

We can, if we will, greatly improve job and housing opportunities for our Negroes without huge Federal expenditures.

Why should any individual or corporation be lent or given funds by any Government agency, whether a mortgage loan on a real-estate construction project or RFC financing, if he practices discriminatory policies against any race or religion? We mustn't forget that 10 percent of our American citizens are colored, along with a billion more on other continents.

Our main task here at home is to keep our social system fluid, our economic system productive, our Government solvent.

Ten years ago a great American stumped the country repeating, "Only the productive can be strong. Only the strong can be free."

It is equally true today.

If we will just be wise enough to keep our incentive system unimpaired and, at the same time, speed our progress toward our goal of equality of opportunity for all citizens, we, and not Russia, will be the magnet that attracts the areas of the world which are now in the twilight zone.

Americans have the genius to find new ways of providing more welfare for our citizens, and within the framework of free institutions, than Russian communism can even dream of attaining.

Perhaps some day in the distant future the Russian people will come to realize it.

Refusal of Communists To Acknowledge Membership in Communist Party

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "Why No Answer?" which appeared in the Evening News of Harrisburg, Pa., on May 1.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY NO ANSWER?

Senator TYDINGS, head of the committee boring into the MCCARTHY charges of espionage in the State Department, announces that he will ask his committee to cite for contempt two witnesses who refused to answer questions. One of the questions was, "Are you a member of the Communist Party?"

The witness grabbed the Constitution and refused to answer. Why? If there is nothing infamous, no moral turpitude, no disgrace in membership in the Reds, why hesitate to confess membership or keep mum about it?

Men who believe thoroughly in America and its system of life are not embarrassed by such a question. They answer with a roaring "No." They do not wrap themselves in the Constitution. Such persons know the Constitution was drafted for those who believe in America.

Polish Independence Day

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following address which I delivered at the Commemoration of Polish Independence Day, United Polish American Organizations of Lynn, Mass., on Sunday, May 7, 1950, at St. Michael's Hall, 21 Elmwood Avenue, Lynn, Mass., under the sponsorship of Rev. John A. Dronzek, of St. Michael Archangel Church, Lynn, Mass.:

One hundred and fifty-nine years ago, the free people of Poland adopted a democratic constitution.

That was only 2 years after the adoption of the American Constitution.

Almost at the same time and with the same spirit Poland and the United States led the way in establishing representative government which should be the servant and not the master of the people.

Our two Christian nations were the real pioneers in opening up the field of opportunity to all people, and to the protection of their fundamental religious, political, and economic rights.

It is no wonder that this kinship of ideals and practices has ripened through the years and has developed such a strong affection between the Polish and American people.

It explains why so many of your ancestors came to this country where freedom would not be endangered by powerful and envious neighbors. Transplanted to the United States, your people have made good with a will. Through intermarriage, they have brought good health and religious faith and steadfast courage into the making of that fine, new race that we call American.

But you are properly concerned with the fate of your relatives in the homeland and ask yourselves what you can do to help them in this their hour of need.

The Communist tyranny under which they suffer, also reaches out to threaten us. It is a powerful, clever, and merciless foe, that will not be defeated easily. It has conquered smaller nations through fear and treachery. It can and will be overthrown in the long run by a combination of political, economic, and spiritual strength and the greatest of these is faith in God. This quality, your people have in abundance. It is the rock against which the tide of atheism will finally break and fall back in confusion upon itself.

The Communists betray their fear of religion. With their own puppets in control of the Government of Poland and with their own powerful armies on the spot to make armed revolt impossible one would think that they would feel sure of their iron grip.

But they are not.

As long as there is a strong bond between the church and the faithful, they cannot feel

secure. During the war they were obliged to make temporary religious concessions to the Russian people so that they might have something more inspiring to fight for than the poverty-stricken materialism that has been their lot under communism.

And so, even now, they are persecuting the Catholic Church in Poland because they know that the teachings of the church which proclaim the dignity of man under the fatherhood of God is the last obstacle in the way of complete Communist domination of the bodies, the minds, and the souls of men.

The church and the faithful in Poland know that they are not alone. In spite of the iron curtain, there is communication with the Vatican and the free western nations.

They know that evil always gains the first advantage but never the last.

The greatest weapon in our arsenal is truth, and our job is to find a way to get it through to the Russian people themselves. For this is the one thing that communism fears most of all.

That fear was revealed when they shot down four of our Navy planes in the Baltic. We do not yet know all the facts of that tragic incident, but one does emerge clear and revealing. The Russians are jittery when anyone comes near their false frontiers. Why? Is it because the news of this will leak through to the enslaved people and thereby expose the lies of Soviet propaganda? Those in chains will be encouraged when they learn that the United States is still in Europe and has no intention of leaving it until the Communists also withdraw to their own original frontiers.

If the Reds took a little time out to study history, they would discover that our peoples have experienced the benefits of liberty for many years. We know that it is good for individuals and for nations. We will not surrender it to the deceptive promises of the cruel tyranny that overthrew a lesser tyranny in Russia only 33 years ago.

When World War II ended, we made concessions to Communist Russia in the hope that this, in turn, would win corresponding concessions from them and enable the nations of this world to live in peace, if not in complete agreement.

That policy has failed, and in the process Russia has taken over other nations by conspiracy and by betrayal of the people concerned.

It is a poor rule, however, that does not work both ways.

Russia has made quick and fradulent gains but not without paying a heavy price.

The schemers in the Kremlin have outwitted themselves, for they have lost the confidence of the free world. This does not seem much to them at the moment. But as their internal troubles, and those with their restless satellites increase, they will have to come forward with a genuine proposal for peace which will fall on deaf ears.

And then communism will learn the hard way that it will have to give up each and every one of its ill-gotten gains and retire to its own ample territory, before it can earn the right to be considered as a trustworthy member of the family of nations.

We will not wait for the inevitable to happen.

We must hasten its coming.

So far we have been on the defensive, trying to arrange a working arrangement with Russia, but have been rebuffed on every issue.

That phase is past. We are definitely on our guard. We are helping to restore the war-shattered economies of western Europe and in that respect we have saved France and Italy from Communist-inspired revolutions from within. Now we are arming ourselves and providing military assistance for the Atlantic Pact nations.

The time is near when we must seize the initiative.

The truth must be brought home to the Russian people that we have no designs on them. We must prove to them that their worst enemy is communism itself which is breaking their backs to produce arms while withholding from them the good things of life that they might produce and enjoy in a world at peace. We must show them that they are the principal victims of Communist propaganda which keeps them in fear and ignorance of their fellow human beings in the free world.

This is the weak spot of communism and it must be our target.

How can we reach it?

We have the greatest advertising brains in the world. Let's give them the tools to work with on the biggest selling job in all history.

I suggest that the Congress appropriate enough money to set up the most powerful radio transmitters in those nations which are friendly to us and which are located near Russia. From western Germany, Italy, Greece, Turkey, Iran, the Philippines, and Japan, let these experts beam the unvarnished truth to the Russian people and all those who sweat under the Communist yoke. The undeviating truth which can be backed up by facts of freedom—this can crack the Communist structure of lies and open the way for the rout of tyranny as it is caught in the confusion of its own making.

The time for gentle diplomacy is past. We need an all-out campaign to win this struggle for the minds of men with the weapons of truth and justice and faith in ourselves and what we have accomplished.

It is amazing to me that our Government has not pushed such a policy to the fullest extent possible. To my mind, it is the one, bold, imaginative program that has any hope of defeating communism short of the dread possibility of war itself.

On this observance of Polish independence day, we recall the glories of your motherland. We know that yours was the first nation in eastern Europe to fight for freedom. That is proof of its sturdy faith.

The sad fact of the moment is that liberty has been forced underground by the fanatical power of communism.

It is not dead.

It lives on, like a prayer that gathers devotion with repetition, in the hearts of all Polish people and the millions of others who believe as they do, that the spirit is stronger than the sword.

Today we do not merely pay homage to the past.

From it we turn to the future resolved to work for the restoration of Polish independence.

As crusaders for peace and freedom we must reach through the unnatural wall which imprisons the Russian people. We must establish contact with them as fellow human beings and prove that we come to share and not to take.

Once they are enlightened, I am confident that they themselves will overthrow their ruthless masters. And when the top-heavy structure of communism is undermined the Polish people and all other captive peoples will rise again in the full dignity of a civilized world.

Simplification of Our Customs Practices

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1950

Mr. MULTER. Mr. Speaker, on April 27 I introduced a bill in this House calling for the simplification of certain of our customs laws and practices. On May 1, the Washington Post published an editorial Customs Simplification, dealing with certain phases of the customs laws. In response to these comments, I wrote to the editor of that newspaper calling his attention to my bill and emphasizing the need for making the desired changes in our customs laws, as suggested in his editorial and in my bill.

My bill is now before the Committee on Ways and Means. For the benefit of the members of that distinguished committee and of all of my colleagues, I am placing in the RECORD my letter to the editor, published in the Washington Post today, and the editor's original editorial of May 1. I trust this material will help bring about early action to improve our customs practices.

CUSTOMS SIMPLIFICATION

I was interested to read your May 1 editorial, Customs Simplification. Four days prior to the publication of your editorial I had introduced a bill in the House dealing with the very same subject.

I agree wholeheartedly with your description of our customs procedures as "antiquated and unnecessarily complicated." You cite interesting examples of confusing and arbitrary classifications, such as carpets with or without fringes, earthenware ash trays, etc., which make it difficult to ascertain what tariff rates are applicable.

Permit me to point out another phase of our customs procedure which is not only complicated but which is injurious to manufacturers and businessmen in this country and harmful to exporters in foreign countries.

I am referring to the practice of our customs officials to impose, retroactively, increased import duties as a result of delayed reclassification of goods, sometimes many months after the American manufacturer imported these goods at prices established on the basis of the duty imposed.

Here is a case which came to my attention recently: A New York firm purchased from a Canadian company certain wooden carrying cases which it uses for its machinery. Before entering into agreement to import these cases the manufacturer showed them to the appraiser's office at Ogdensburg, N. Y., and furnished all the necessary particulars, including the cost of production. After careful examination, the United States customs officials at Ogdensburg decided that these cases could enter under the customs law at a stipulated import duty. The representative of the New York firm was further advised that if any change was made in the classification of these cases the firm would be notified within 4 or 5 weeks.

Between the months of June and December 1949, the firm imported approximately 2,600 cases from Canada. No notification of a change in classification was received until December 1949. The American importer was notified of a reclassification and retroactive increase in duty of $1.35 per case was imposed. This increase made importation of this article unprofitable, thus putting an end to all further imports. In addition, the increase was made retroactive on the 2,600 cases already imported, all of which was charged to the American importer. None of it could be recouped from the ultimate consumer.

It required a good deal of time and effort to bring this matter to the attention of our customs officials and to convince them of the harmful effect on business in this country such arbitrary decisions have. In this particular instance the reclassification was nullified, but what about the many instances where no relief was granted?

My bill will stop such practices. It provides that any reclassification of import duties previously determined and approved by our customs authorities shall apply only to future imports and is not to be made retroactive to such goods and have already been imported or are in the process of being imported.

In line with the suggestions, contained in your editorial, for a simplification of our customs operations, I submit that early adoption of my bill and its incorporation into the tariff laws would go far in allaying the fears of many business firms abroad concerning the obstructions in our customs procedure and it would convince them that we are seriously interested in fostering freer trade practices.

ABRAHAM J. MULTER,
Representative from New York.

WASHINGTON.

[From the Washington Post of May 1, 1950]

CUSTOMS SIMPLIFICATION

Our antiquated and unnecessarily complicated customs procedures have acted as a sort of invisible protective tariff by discouraging foreign exporters from entering the American market. Customs classifications are confusing, highly detailed, and often arbitrary, making it difficult for exporters to ascertain what tariff rates are applicable to their goods. For example, carpets without a fringe are subject to import duties of 25 to 30 percent. Carpets with fringes pay a duty of 45 percent. And a manufacturer exporting earthenware ash trays to the United States is not sure whether these goods will be classified as household articles (duty 15 percent) smoking requisites (duty 30 percent) or luxury earthenware (duty 50 percent). Labeling and packaging requirements are also needlessly complex and sometimes involve cost that make them equivalent to a ban on shipments. The practice of valuing goods for assessment of customs duties at the wholesale price at which they are offered to domestic buyers in the exporting country is another cause of complaint, as well as the stiff penalties imposed for unwitting undervaluation of imports and undue delays in appraisal.

Although the Treasury has made some reforms in procedure, many of the practices that give rise to complaints are required by law. A bill amending the administrative provisions of the tariff act has, therefore, been sent to Congress by Secretary Snyder. It is designed to reform and simplify customs procedures along the lines of the Geneva Tariff Convention of 1947 and the ITO. While present methods of classification are undoubtedly in need of reform, changes in the classification system would create controversy and impair the chances for enactment of a less ambitious program. Wisely therefore, the provisions of the bill are restricted to administrative and procedural matters. It aims to make valuation formulas more equitable, to eliminate special marketing requirements, abolish undervaluation penalties in cases where the importer is not at fault, and speed up appraisal of merchandise.

The bill, based on recommendations from customs officials, representatives of other Government departments, private trade groups, and a firm of management consultants, is the product of prolonged expert study. This strong backing, together with the facts that the proposed legislation would not reduce the protection now accorded domestic industry under the tariff laws and would lower the cost of customs operations, ought to commend it to Congress. If this reasonable simplification program should be rejected, it would confirm the suspicion of many foreigners that our obstructive customs procedures are deliberately designed to exclude imports and that Congress is opposed to the freer trade practices that this Government is pledged to foster and has urged other nations to adopt.

An Excellent Eulogy by an Ex-Classmate

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Lynn Telegram News, Lynn, Mass., Sunday, May 7, 1950:

MONSIGNOR SALLAWAY'S WORK IS LAUDED BY EX-CLASSMATE

Following is the eulogy of Rt. Rev. Francis X. Sallaway, S. T. D., delivered Saturday in Sacred Heart Church by Rt. Rev. Thomas F. Markham, P. P., P. A., pastor St. Peter's Church, Lowell, as solemn obsequies were held for the beloved local pastor. Monsignor Markham was a classmate of Monsignor Sallaway at the North American College in Rome as they prepared for the priesthood.

"To one of his servants the lord gave five talents, and to another two, and to another one; to everyone according to his proper ability: and immediately took his journey. After a long time the lord of those servants came, and reckoned with them. And he that had received the five talents coming, brought other five talents, saying: 'Lord, thou didst deliver to me five talents; behold, I have gained other five over and above.'

"His lord said to him: 'Well done, good and faithful servant: because thou hast been faithful over a few things, I will place thee over many things; enter thou into the joy of thy lord.' (St. Matthew, ch. 25, verses 15, 20, 21.)

"Your Excellency, Rt. Rev. Vicar General, Rt. Rev. Monsignori, Very Rev. and Rev. Fathers, devoted religious friends in Christ Our Lord, 'Let us praise men of renown,' says the Holy Book, 'for their glory shall not be forsaken.' Ecclesiasticus 44. Msgr. Sallaway was a man of great renown, and before we consign his lifeless body to the earth whence it came, let us dwell briefly on his talents and the use he made of them. He was born on St. Cecilia's Day, the heavenly patroness of music, in the year 1890, of a deeply religious father and mother. He enjoyed the comforts and refinements of a Catholic home and training. He studied under the Sisters of Charity in St. Peter's Parochial School in Dorchester, at Boston College High School, and graduated with honors from Boston College in the class of 1913. While at college he excelled in his studies, was famous as an orator, was an outstanding debater on his college team, and was the first editor-in-chief of the Sub Turri, the yearly class book of Boston College.

"In the fall of that same year he began his immediate preparation for the priesthood at the North American College in Rome. Here he soon became a universal favorite, for his was a genial soul, and his friendliness was ever manifested in his happy smile and a cheery good word. His talents were developed in this center of catholicity, and the grandeur and the beauty of the church's liturgy made an indelible imprint on his truly artistic soul. The plain chant of the Gregorian music sung in monasteries as well as the music sung by the Sistine Choir gave him a deeper insight to the richness of church music, and enlarged his knowledge of this gift of singing, an art that men share with the angels. He already played the piano and the organ. Truly he developed his talents according to his proper ability.

"His studies he pursued during the troublesome days that existed before World War I, when the entire world was filled with rumors of war, and finally with war itself. On December 2, 1917, he was ordained priest and on the next day, the feastday of St. Francis Xavier, Rev. Francis Xavier Sallaway, from Dorchester, Mass., said his first mass at the shrine of St. Francis Xavier, in the city of Rome, in the great church of that eternal city. Six months later his professors declared him worthy of high scholastic honors, and they awarded him the degree of doctor of sacred theology. Then came his departure from Rome, across the seas filled with mines and submarines, for World War I was still raging in its fierceness, his return to his family, to his mother and sisters and brothers, but not to his father—who died shortly before he left Rome.

"You know well the rest my friends—of his days as an assistant in St. Mary's Parish, West Quincy—in St. Mary's Parish in Dedham—in the Parish of the Immaculate Conception in Revere, and of his first pastorate in the parish of Our Lady of the Assumption in Lynnfield, and finally of his years here as your pastor, in this parish dedicated to the sacred heart.

"With all his talents it is not surprising that he used the newest means that man has devised to spread the truth—the radio. The deep, mature tones of his well-trained voice have been heard on the Essex County Catholic radio program broadcasting for God and country. The sound of his voice has been heard all over the land for he spoke frequently on a national hook-up. He was chosen president of the National Association of Catholic Broadcasters, and his name and fame were well known in the field of radio. Plans he made also for the new medium of television, but another must carry out those plans. Our beloved archbishop, realizing the good that could come from the exercise of Dr. Sallaway's talents, appointed him diocesan director of radio activities and presented his name to the sovereign pontiff, with the recommendation that the head of the church would show to the world his approval of the various activities of this talented priest.

"The holy father graciously accepted his excellency's recommendation and proclaimed your pastor a domestic prelate with the title of right reverend monsignor.

"Priest, professor, pastor, prelate—so runs his life story. For him, as for all men, the paths of glory lead to the grave. But the poet tell us that—

"'Life is real. Life is earnest.
And the grave is not its goal;
Dust thou art to dust returnest,
Was not spoken of the soul.'

"For him and all others, life is everlasting. However, the light that shines around the throne of God reveals the slightest imperfection. In the presence of God no man is justified. Pray then, my friends, that any fault that he may have committed may soon be washed away.

"As one who was at his side on his ordaination morning, and as one who shared his joys and sorrows for nearly 37 years, I feel that I bespeak the minds of all those who knew Monsignor Sallaway when I express to his sisters and brothers our heartfelt sympathy on the loss of their brother. Separation is always difficult to bear, but with tears in our eyes and sorrow in our hearts, we say what the church has always taught us to say: 'God

knows best. His holy will be done." That, I am sure, will be their prayer also.

"Because thou has been faithful, good and faithful servant, enter into the joy of thy Lord. Singer of His praises here below, sing and sound, thou annointed one, His praises forever and ever. Amen."

Address by Hon. Joseph R. McCarthy, of Wisconsin, Before Midwest Council of Young Republicans

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered before the fifth annual convention of the Midwest Council of Young Republicans at the Hotel La Salle, Chicago, Ill., on May 6.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE PHONY FILES TO BE USED IN OPERATIONS WHITEWASH

What a relief it is to come out here tonight to speak to you young people and to breathe the fresh, clean air of the great Midwest and for at least a few hours to get away from the battle I have been having in Washington.

I would like to give you a brief picture of some of the infighting.

The President 2 days ago on the eve of his "nonpolitical" junket across the Nation suddenly and very generously decided to give the committee files in a number of cases. Mr. TYDINGS said 81 cases. However, White House spokesmen immediately corrected him with the statement that they would only give those files and only those parts thereof which had been seen in 1948 by a House committee. Perhaps the Senator was relying on hearsay that all 81 cases had been previously investigated.

Three weeks ago it was a matter of high principle with the President to keep the files inviolate. He cited numerous precedents which, in his opinion, made it absolutely mandatory to keep secret the record of Communists and fellow travelers.

Now, 3 weeks later, this is no longer so. Part of the files—the part that will make his cross-country junket less embarrassing—suddenly become unsecret and Mr. Truman cancels out his high principles.

The files which Mr. Truman is so generously giving at this time can perhaps best be described by quoting from the report of the chief investigator of the House Appropriations Committee—the report which, according to Mr. TYDINGS, cleared all of those investigated.

This report refers to an FBI survey and report criticizing the State Department for the incompleteness of its files because of the slipshod manner in which they are handled.

On page 37 of the investigator's report we find the following:

"It was also determined that there were file jackets for which there were no cases in the files, and jackets were out of file without charge-outs. These failures or errors can largely be attributed to the fact that apparently most everyone and anyone in the State Department has access to the files—removes files and replaces them with very little regulation or control."

On page 38 the following is found:

"In reviewing the security files on numerous occasions, papers were missing from the files which obviously belonged there because other papers in the files would refer directly to them. * * * Further, in this connection it may be stated at this point that there is an over-all laxness in the entire Department of State in the handling of documents."

This is what I had in mind when I warned the committee time after time that this job could not be done with only the skinny rib bones of the files.

Now if a job is to be done, all of the files must be broken open. We must have the files of the Federal Bureau of Investigation, the Civil Service Commission, the Central Intelligence Agency, Army Intelligence, Navy Intelligence, and the Secret Service.

To make these skeleton files of even less value, Mr. TYDINGS has decided to keep them secret from his own staff of investigators who are supposed to be experts and could detect how badly the files were rifled.

Certainly the Senators themselves have not been trained in this kind of work. This is another long step forward in the famous Lucas-Tydings-McMahon Operation Whitewash.

We have already had a good example in one case of what the Tydings white paper will undoubtedly contain. You will recall that I suggested to the committee that if they could not get the files in the more than 100 cases given to them, that, as a test case, they get the files of Owen Lattimore and thereby determine whether I was correct or not in my statement of what that file contained. The committee did not get the Lattimore file, but got a 14-page résumé of what it contained. You will recall that shortly thereafter Senator TYDINGS, in the proper setting before the news reels and movie cameras, made the solemn statement that he owed it to the Nation and to Mr. Lattimore to inform him that in the opinion of the four Senators, J. Edgar Hoover, and the Attorney General, the files cleared Mr. Lattimore absolutely.

However, Mr. TYDINGS grossly misjudged J. Edgar Hoover and Attorney General McGrath, two honest men, for Mr. Hoover and Mr. McGrath would have no part of him on that deal. Attorney General McGrath promptly made the statement (1) that TYDINGS had no right to speak for him or J. Edgar Hoover; (2) that both he and Mr. Hoover had been very careful not to indicate how they felt about the Lattimore case, so that Mr. TYDINGS could not possibly have known whether they thought the files proved or disproved the charges against Lattimore. Mr. HICKENLOOPER, one of the members of the committee, promptly stated that TYDINGS' statement was completely unwarranted. Mr. LODGE, another member of the committee, stated that TYDINGS had no authority to speak for him; that he could not and would not make any decision on the Lattimore case until he had seen all of the evidence. Even the other two members of the committee, even McMAHON and GREEN, who had been going along with TYDINGS 100 percent up to that point, could not stomach this and when called upon by the press to confirm Mr. TYDINGS, stated "No comment."

I cite this case to give you an idea of what you can expect from the Tydings examination of the purged files.

How much of this nonsense does the administration think the American people will buy?

How much deceit and dishonesty must we be subjected to before we can get some honest action? This is serious business. It is not the time or the situation for politicians to play a fraudulent political game. There are Communist traitors on our Federal payroll. The American people have a right to demand that they be routed out.

Now I have a suggestion for Mr. Truman—the only alternative to his making all these files available. It will help clear away the litter of deceit that has collected about the administration on this Communist issue.

Mr. Truman, call in FBI Director J. Edgar Hoover, call in the head of the Secret Service, call in the Director of the Central Intelligence Agency, and call in the men who head our military intelligence agencies. These men will reverse Loyalty Board fumbling, and will give America the benefit of the doubt.

Tell them, Mr. President, that you are asking them to perform an unusual duty for their country.

Tell them to compile a list of names of men and women in the Government who in their opinions are dangerous to the security of the country.

Tell them to study the list, use tough standards, cut them to fit the cloth of Communist treachery, and tell you who to fire. Take their word for it, Mr. President, not McMAHON'S, not TYDINGS', not Earl Browder's.

Let these experts in their line rid the Nation of its spies and traitors. Let's clean house, with decency and honesty. Let's forget petty politics and do for America a job that is long overdue.

Americans are honest people, with pride and decency woven throughout their mode of living. Let's match this honesty, Mr. President, without political conniving. There is strength in truth, even among politicians.

Now getting back to this phoney offer of phoney files. This is 1950, Mr. Truman. Why are we offered 1947 and 1948 files instead of 1949 and 1950?

In the case of John S. Service, for instance, seven supplementary reports have been submitted in 1949. Why won't you even trust your political puppets, TYDINGS and McMAHON, to see those files?

Now let's take a quick look at what we are getting for the $25,000,000 Federal loyalty program.

First of all, it permits each department to investigate its own people. Those doing the investigating know little or nothing of Communist techniques—even less about how to conduct an investigation. In countless thousands of cases the departmental loyalty investigators accept statements from others in the department as all the clearance necessary. In dozens of cases, for instance, recommendations from Alger Hiss on State Department employees was all that was needed to completely clear them. It is like accepting a recommendation from John Dillinger in hiring a bank clerk.

Those cleared by the Loyalty Board included William Remington, John S. Service, George Wheeler, and others I have mentioned previously.

Did the Loyalty Board take note of the two Communist Party organizers who said Remington was a member of the party? It did not.

You will recall that a former State Department employee by the name of George Wheeler recently retired behind the iron curtain after making typical Communist name-calling statements, damning and cursing the United States. This man, George Wheeler, who had been assigned tremendously important work by the State Department, had first been given a clean bill of health by the Loyalty Board, even though his file would have convinced anyone who could add two and two that he was a full-fledged Communist.

Another example of how the Loyalty Board operates and a good reason why we must have all the files—not up to 1948, but up to May 7, 1950—is being demonstrated today in the case of John Service.

Mr. Service, you will recall, was picked up by the FBI in connection with the Amerasia case. This, you will recall, involved the theft of a vast number of top-secret, confidential, and other classified documents from the State Department, Navy, Army, and other Government agencies. The papers carried the story at that time that J. Edgar Hoover stated that this was a 100-percent air-tight case of espionage. However, Mr. Service was not indicted or tried, but was reinstated and under Mr. Acheson was promoted and put in charge of placements and promotions of personnel in the far eastern area. The FBI, however, continued its investigation of Mr. Service. During last year the FBI gave the State Department reports on Service on the following dates: February 18, 1949, March 10, 1949, April 4, 1949, May 11, 1949, August 9, 1949, September 7, 1949, and September 21, 1949. Nevertheless the State Department's Loyalty Board gave him a clean bill of health again last year, although the Review Board disapproved his clearance.

And incidentally, the State Department, which is about to hear Mr. Service, is now busily giving Mr. Service's lawyer the secret documents which the President has denied the Senate. This so that he can properly defend Service.

Does the Loyalty Board use Elizabeth Bentley, Whittaker Chambers, Louis Budenz? It does not. But the FBI, the Secret Service, the CIA and committees of Congress do. And they expose Communists.

The Tydings-McMahon subcommittee, on the other hand, pays the fare of Communists to come to Washington and dispute the testimony of those witnesses who are responsible for putting the Hisses and the Communist Party officials and their lawyers in jail.

There are those who very honestly say, "Oh, we think you are on the right track, McCARTHY, and we like the results you are getting, but we just don't like your methods. You should have done this secretly. You should not have done it in public and embarrassed the United States before the world."

Ladies and gentlemen, take my word for it. There is no way on earth this could have been done secretly.

People have been trying to do this with kid gloves for the past five years and have gotten nowhere. Either I had to do a bare-knuckle job or suffer the same defeat that a vast number of well-meaning men have suffered over past years.

The depth that the festering rot had eaten made it necessary to cut painfully deep.

Ladies and gentlemen, I have faith that the American people can stand the pain so that when we are through, this Nation will be cleansed of this cancerous, Communist growth.

When President Truman refused to make available the great wealth of information in the files, I decided to hire the best investigators I could find to produce enough evidence, even before a hostile committee, to convince the Senate and the American people of the dangerous situation, with the hope that public opinion would force the President to crack those files. These men are the best former FBI counter espionage agents I could find.

Perhaps you would like to have a brief review of some of the evidence produced.

Let us take the case of Philip Jessup, the State Department's Ambassador-at-Large. Now he was really a great joiner—especially of Communist front organizations. In case you care to see them, here are photostats of documents of five Communist fronts proudly bearing the Jessup name.

Now let me make it clear that when I refer to a Communist front, I do not refer to an organization that McCARTHY has listed as a front for the Communist party. I am referring to organizations which the President's own Attorney General and congressional committee have labeled as agencies of the Communist Party. But his proclivities as a joiner of Communist fronts is not what concerns me most. The evidence shows—and listen to this if you will—that this man, Jessup, our Ambassador-at-Large, upon whose judgment we are supposed to rely in carrying our fight to the Communists, was largely in charge of a publication known as the Far Eastern Survey—the publication of the American Council of the Institute of Pacific Relations. He was in charge at the time when the Communists launched their all-out campaign to take over China and, of course, there was no secret about that campaign.

We find that this publication spewed forth the perfumed Communist Party line sewage and was financed to a considerable extent by Communist money. Now it is easy to make such charges, so let's have the proof here tonight. I have, therefore, brought with me and they are here on the desk photostatic copies of checks representing thousands of dollars of Communist money paid to Jessup's organization.

The checks were signed by Frederick Vanderbilt Field, who brags that he is the Nation's leading Communist and who has spent millions of dollars for Communist causes.

I have asked the Tydings-McMahon committee to subpena the bank account of Mr. Field. They did not do that, but they did call Mr. Field as a character witness for Mr. Lattimore and to prove that Mr. Budenz was a liar.

When this was called to the attention of Mr. Truman, he took immediate action. He promptly gave Mr. Jessup top secret clearance to A- and H-bomb secrets.

Then there is another man whom you may have heard about—Owen Lattimore. Mr. Lattimore, as the Nation knows, has long been referred to as the architect of the State Department's Far Eastern policy—the architect whose shadow lingers over the corpse of China.

To give you some picture of the importance of Lattimore's backstage operations, let me quote to you from a news story in a Washington paper, August 14, 1945:

"Finally, in order to convince Truman, Acheson asked him to discuss the matter with Owen Lattimore, one of the foremost American authorities on China and former adviser to Chiang Kai-shek. "Lattimore talked to Truman for 30 minutes just 2 days before he departed for Potsdam."

And so that you will have a full picture of the extent to which Lattimore shaped our dismal policy of failure in the Far East, I call to your attention a secret document which he furnished the State Department in August 1949, a document which the State Department itself labeled as a guide for Ambassador-at-large Jessup.

But to understand that document fully, it must be compared with the official Communist program for Asia. I have with me copies of the Lattimore secret document and a brief of the Communist official program for Asia for any of you who care for them.

Let me give you a brief résumé of the official Communist program for Asia: (1) Destroy the armies of Chiang Kai-shek; (2) get the United States out of Korea; (3) force the withdrawal of the United States forces from Japan; (4) prevent the formation of a Pacific Pact against Communist aggression.

Now what does Lattimore tell Jessup our policy for Asia should be? And listen to this if you will: (1) Abandon Chiang Kai-shek; (2) get out of Korea; (3) get out of Japan; (4) deny the need of a Pacific Pact.

Just to give you a more complete picture of this State Department adviser and architect of our far eastern policy, let me quote to you briefly from a script prepared under his supervision while he was head of the Pacific Division of OWI—a radio program beamed to the Chinese people on July 23, 1944.

"The Chinese Communists have established 4 colleges. Education is compulsory behind Communist lines. The schools are free. Once this was a poverty-stricken region. Today everyone works or fights. There is no opium traffic. There is little vice. There are no laggards, for only those who believe in the cause of Chinese liberation are here. This is the Chinese Communist government. The Communists have worked out the problems of all the people, living, working, and fighting together. * * * If we are to succeed we must organize the workers politically. The Chinese Communists want political rights for themselves and all the people. They want a thorough going democracy."

Now let's discuss the State Department.

Let me first give you one example of why at this moment we are a Nation without honor among other nations of the earth. Some 18 months ago, Sgt. Elmer Bender of Cincinnati, Ohio, of the United States Marine Corps, and Chief Machinist Mate William C. Smith of Long Beach, Calif., of the United States Navy, were captured by the Chinese Communists. That was 18 months ago, ladies and gentlemen, and they are still prisoners of the Communists. Not 18 days, but 18 months. What is being done about it? I can tell you in one word—nothing. But perhaps that is being unfair to Mr. Acheson. He has sent some notes. In fact, I believe he is employing some total diplomacy. We find Secretary of State, Dean Acheson, who would not turn his back on Alger Hiss, turning his back upon two of our young men in uniform—two young men who are being held by the Communists—the same Communists whom the traitor, Hiss, was serving.

Now are these two young men worth more than Harvard-accented notes and powder puff diplomacy—those men who were captured while proudly wearing the uniform of this Nation? The answer is "Yes."

Mr. Truman says there is nothing wrong in the State Department; that everything is just fine; that if anyone hears of anything wrong, just call him collect and he will personally take care of things.

Mr. Truman, your telephone is ringing. A sailor and a marine are calling—calling from a prison somewhere deep inside of Communist China. They're homesick, lonely, and maybe a little afraid. Answer your telephone, Mr. Truman, it will be interesting to hear what you have to say. They haven't heard an American speak for 18 months. Mr. Truman, they are getting a busy signal on your line. They will call again—when you are through with Acheson, Jessup, Lattimore, and Service.

During Teddy Roosevelt's first term of office a Tangiers bandit named Raisuli captured an American citizen named Perdicaris with the apparent approval of the Tangiers Government. Teddy Roosevelt ordered his Secretary of State to send the following message: "Perdicaris alive or Raisuli dead."

Ladies and gentlemen, that kind of a policy would regain our lost prestige among the nations of the earth and would actually insure peace.

Why is it that wherever it is in the world that our State Department touches the red-hot aggression of Soviet communism there is heard a sharp cry of pain—a whimper of confusion and fear?

Others in the world have ears to hear with as well as those of us in America. And it must be to them, as it is to us, the sound of a whining indecision that echoes around the world and robs us today of the great heritage of courage and might that your ancestors and mine—and you in a recent war—established with grit and guts.

Why must we be forced to cringe in the face of communism? What has happened to

our courage, our determination, and our intelligence?

That is not what America wants. We are not soft, nor are we afraid. What we need in Washington is someone to express the resolute determination of the people of the United States to back down no further, to fight back with the weight of skill, intelligence, courage, and the truth that is ours. We can as a country no longer stand idle as the prancing mimics of the Moscow party line sell us short. The days of dilettante diplomacy are running out on Mr. Acheson and his fancy comrades of the Kremlin. Sugared phrases in a British accent are fine for Washington teas. But this is not a tea party. Put some men with grass-roots common sense in charge of the State Department and then watch America go. It is peace we want and peace we can have. Peace with courage and with honor.

But we cannot have that peace if the policy of this Nation continues to be shaped by those who are either disloyal to this Nation or half-hearted in their loyalty—and remember that a Communist-minded individual strategically placed in a State Department position is much more dangerous than an A-bomb. An A-bomb will kill thousands of people, but a Communist-minded State Department officer in a key position whose disloyalty is hidden by Presidential fiat can enslave this Nation.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "It's Time To Cool Him Off," published in the Lancaster (Pa.) Intelligencer Journal of April 19, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IT'S TIME TO COOL HIM OFF

We predict hard sledding for Postmaster General Donaldson, and rightfully so.

His order, of yesterday, cutting mail service is ridiculous, to say the least.

The simple fact of the matter is that Mr. Donaldson has a mad on at Congress, and so he's going to take it out on all the people.

He may get away with it, but we doubt it.

We look for mail service to be restored to normal, posthaste, as soon as Congress has a chance to get into action, as well as the citizens.

It seems to be a well-established fact that the Post Office Department has not been, in recent history at least, efficiently run. There is no evidence that Mr. Donaldson has done any better in this respect than his predecessors.

So Mr. Donaldson asked Congress to increase rates, to take care of the Department's deficiency. Congress in effect has said thus far, put your house in order before you ask for increased rates.

Then Mr. Donaldson sought to erase the deficit through a deficiency appropriation, which has been the usual procedure. Congress balked again, as it did in considering the appropriation for the 1951 fiscal year.

Now Mr. Donaldson is mad.

He's going to show Congress. And the people, too.

We are for economy in Government. And we are against those who preach economy, and then holler their heads off when some one in the Government economizes.

We may seem to be doing that very thing right now. But we are not.

We are complaining because Mr. Donaldson has chosen to reduce mail service rather than reorganize his department and, in so doing, put it on a paying basis. For it is a business, a big business, a monopoly, if you please, and as such, in these times, at least, it could and should be made to operate evenly, if not show a profit which, it would seem, would be legitimate in view of the services rendered, up until yesterday.

Another thing we do not like, and do not think is good business, is cutting service when the need is for greater service. The bus companies seem to have the idea, hereabouts, that the way to get business is to reduce service and raise fares.

But it won't work, we feel certain.

In the case of the Post Office Department, the reduced service will undoubtedly turn postal business to the telegraph and telephone companies. And that will happen without a rate increase.

So, as we see it, Mr. Donaldson is cutting off his nose to spite his face.

What Mr. Donaldson should do is reorganize his Department on a businesslike basis, increase service and reduce rates, and he wouldn't have to go running hat in hand to Congress every couple of days for deficiency funds.

And he soon would be breaking even, or showing a profit, if he chose to do so.

Congressman Dollinger's Preliminary Report to His Constituents

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. DOLLINGER. Mr. Speaker, the half-way mark of the second session of the Eighty-first Congress has been reached. At this time, I wish to make a preliminary report to my constituents, and at the close of the session, I shall make a complete one.

My efforts for a strong Federal rent-control bill have been unceasing. In November 1949, I wrote the President, urging that he make a recommendation in his next message to Congress that rent controls be extended at the expiration of the present law in June 1950. In that letter I stated: "Rent controls are a vital necessity to us, and to end such controls in 1950 would cause dire hardship and extremely disastrous results." The President thereafter recommended extension of the Federal rent-control law.

When the plan for the New York State rent control law was announced, I spoke out against it, saying that it would be only another spineless attempt by New York State to regulate the vital matter of rent control, and would not provide adequate safeguards against increases and evictions. We find that the New York State law indicates that no increases can be applied for before December 1, 1950. This provision sticks out like a sore thumb, and we know it might possibly mean that increases will be granted and tenants exploited. It also shows that there is still great need for Federal rent control. Recognizing the need to give tenants the protection they must have, I shall continue to do everything within my power to assist them.

The question of extension of Federal rent control is now before the House Committee of which I am a member. I will make my views known and urge such extension. I believe that a strong Federal rent control law is essential to the welfare of the people, and shall continue my efforts toward passage of the bill.

FEPC has been one of my strong objectives, and I have fought for it, not only this year, but for many years past. I need not reiterate my stand, for you know that I firmly believe in the principle that all people are entitled to employment, and that discrimination is un-American. On February 22, 1950, when the measure finally came up for debate in the House, I was present to fight for FEPC. I hoped for the long-awaited victory. However, the McConnell Amendment, sponsored by a Republican from Pennsylvania, was introduced. That substitute bill was bad enough, but then, due to the coalition of Dixiecrats and Republicans—amendment after amendment was offered to further cripple the bill.

The measure that was finally before us for a vote was such a spineless, worthless, toothless thing that it made a mockery of FEPC. I could not compromise a principle nor rest short of the goal I had aimed for during the years. The friends of FEPC know who has stood the test. I pledge that I will continue the struggle until the American people have a strong FEPC which will assure equal opportunity in employment to all—without discrimination because of race, color, religion, or national ancestry.

My efforts in behalf of our postal workers continue. The orders of the Postmaster General, curtailing delivery and other essential postal services have caused grave concern both to postal workers and the people of the Nation whom they serve. I sent a vigorous protest to the President and the Postmaster General, demanding that the orders be rescinded at once. I stated:

> Our postal employees deserve commendation—not threats to their livelihood, when we consider the fine record they have achieved through the years.

I pointed out that there was no justification for this destruction of our fine postal system, and that a rescission of the orders was imperative.

I am very anxious that our veterans receive from our country all the benefits, care, and consideration to which they are entitled. I was pleased to have the opportunity to vote in favor of the bill providing for 16,000 additional beds for veterans' hospitals. I have strongly protested cuts in Veterans' Administration hospital staffs and other services, and

will always have our veterans' welfare at heart.

The arms race in the Middle East has been a serious problem to all of us who wish to preserve peace—for we have learned that a conflagration in any part of the world today endangers all nations. As soon as the news broke that England was rearming the Arab States, I protested to the Secretary of State, pointing out that our assistance to England made us an unwitting participant in the threat against the new State of Israel. I maintained that the threats of a "second round" were very real, and that Israel was the potential target of the Arab States; that the United States must make it clear that the security of Israel is our concern, and that we will insist upon it.

Thereafter, in a personal interview with Secretary Acheson, I protested the lack of action by the State Department. Reporting on that meeting, Drew Pearson in his column of April 2, quoted me as follows:

"If arms shipments keep up, the Arabs will eventually have a preponderance, and that will mean war," said Representative DOLLINGER of New York. "Unless the British stop, the United States should lift its embargo to Israel."

The new state of Israel, fighting for its life against terrific odds, needs our help as a democracy, and I shall continue to ask necessary protection for her.

The people of Ireland should be allowed to govern themselves, and should be independent. I introduced House Resolution 529 which would assist the people of Ireland to establish their complete independence, and be given the opportunity to settle, by a majority vote of her people, how she wishes to be governed. Thereafter, I spoke in committee urging favorable consideration of the legislation before it in this regard.

My interest in democracy is sincere and deep, and Ireland, who helped us so much in our fight for freedom and in the building of our own great Nation, must be given proof that we are standing by her at this critical time.

Claiming that the Government of the United States has permitted the resurgence of German fascism, antisemitism, militarism and cartels, and has failed miserably in promoting democracy in Germany, I introduced House Resolution 413. This provides for a full and complete investigation and study of the American military government in Germany and the civilian administration which succeeded it, with particular reference to the extent to which they have permitted or encouraged the reestablishment of cartels, the resumption of power by former Nazis, the resurgence of fascism and antisemitism and the rebuilding of German military strength.

There is no excuse for the failure of United States High Commissioner for Germany—John J. McCloy—to delay the execution of death sentences of the top Nazi war criminals imposed at Nuremberg. I have called upon him several times, to obey the mandate given him, insisting that a further delay is a travesty upon American justice. Our failure in this regard is a shining example of how quickly we are forgetting the unspeakable crimes of the Nazis.

I know that excise taxes are strongly objected to by my constituents, and I am doing all I can to bring about their repeal. I am hopeful that we will soon be given the opportunity to vote for the repeal of all of them.

There are many others matters in which you are interested, which are too numerous for me to cover in this report. I wish that it were possible to discuss them all.

The problems and opinions of my constituents are of primary interest to me. So that they may receive proper attention, I maintain a congressional office at 938 Simpson Street, Bronx, which is open daily, where the people of the Twenty-fourth District of New York are welcome to discuss matters of interest to them. It is my wish to serve them to the best of my ability, and they may rest assured that my earnest efforts in their behalf will continue.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article regarding the curtailment in postal service from the Idaho Falls Post-Register.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AS THEY LOOK—AND AS IT LOOKS TO THEM

Question of the week: "Do you believe reducing postal expenditures is the right step towards Government economy?"

Dean C. Ekstrom, 169 East Eighteenth street: "I don't think so. The postal service is the most important part of the Government. It not only helps the people in the United States but is a great comfort and necessity to our people overseas."

Bud Jensen, 1353 June Street: "They should never change postal service, specially now that it's doing more good than ever before. It would upset the whole business world, because all business houses are set up as to be dependent of postal service."

Jay Griggs, 1275 Sage Avenue: "If the Government cuts the postal service it will put men out of work. People out of work is one of the first signs of depression. There should be a way of cutting expenditures without taking jobs."

Ada Baker, Irwin, Idaho: "I think there are many other places that would be more suitable to cut expenditures such as having less Government employees. It wouldn't really bother me but so many people depend on mail service."

Mrs. J. D. Lowder, 143 North Third West, Rigby: "The postal department is one part of the Government functions that should be left alone. This service causes no unnecessary expenditure as far as I can see. I am on a new one delivery a day route now and would sure hate to see any less service."

Mrs. Jack Hart, Rigby: "I would rather they cut postal service than have to pay more for stamps and money orders. One delivery is all they get in the country and is all that is necessary."

Danger in the Middle East

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. KLEIN. Mr. Speaker, under leave, I am inserting in the RECORD an editorial from the May 1950 issue of the Jewish Forum, a magazine of wide circulation published in New York, which discusses the dangerous situation in the Middle East realistically:

A DIABOLICAL SCHEME AND OUR STATE DEPARTMENT

The Economist of London, a weekly review, stated in an article on Jordan, Israel, and the Arab World, that it was most likely that the Hashamite Kingdom of Jordan and Arab Palestine would eventually become one and that, as King Abdullah always relies on the Arab Legion to maintain himself in power, without its support, he could not keep his throne for a week and realizes that he owes his position to the British "who are responsible for building up, training, maintaining, and financing the legion."

Hence, it is obvious that the so-called peace negotiations, almost reaching fruition, between Jordan and Israel, were merely a blind to learn how much Israel was ready to concede in order to attain peace, so that British Bevin might estimate how much to demand of Israel by way of the threat of the British concocted and controlled Mufti's Arab League and of the heavy armament Great Britain has been introducing among the Arab States that might be prepared for the second round, in the hope of recapturing all of Palestine and the Arab world under British suzerainty. All else is camouflage. Abdullah's surrender to the Arab League was a foregone conclusion as soon as Britain thought the time ripe.

Handing over "Arab" Palestine to Abdullah is tantamount to turning it over to the British. Is there any legal or logical reason why Jordan should be permitted, by a mere unilateral declaration, in view of the UN resolution of November 29, 1947, or any subsequent events, to annex "Arab" Palestine and thus become a constantly threatening thorn in Israel's sides?

The chief disappointment, however, is the agreement with this diabolical scheme manifested by our State Department.

When will it recognize that America's acquiescence to the British Foreign Office conspiracies is entirely out of harmony with American interests? These demand a strong, democratic, and industrialized Middle East, not a Middle East eroded and milked dry by the greedy appetite of British colonialism. The willingness of certain influential members of our State Department to follow the British line wherever it happens to lead, surely is as fit a subject for congressional investigation as was the activity of those other men who were fascinated by the Communist idea and who have done so much

incalculable harm through their influence in the making and carrying out of American policy. Whether consciously or unconsciously, a subversion of our policy in favor of the British is quite as dangerous to our welfare as one in favor of the Communists.

This entire issue ought to be brought out into the open for discusison on the floors of Congress where it would be brought to the attention of the country that these British gifts to the Arab feudal lords are actually being paid for by the tax moneys of Americans. Surely our citizens have a right, through their elected representatives in Congress, to know what is transpiring and to demand an accounting. Is it not unfair and even fantastic to expect the innocent citizens of America to pay taxes ultimately to be used for the support, by arms, of Arab chauvinism or British colonialism?

Seaway Run-Around

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1950

Mr. KILBURN. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Watertown Daily Times of May 6, 1950:

SEAWAY RUN-AROUND

We are in the process of another hearing on the St. Lawrence seaway project in Washington. This time the hearing is before the House Committee on Public Works. This is the former Rivers and Harbors Committee. We can recall back in the early 1920's, when Wallace Dempsey, of Lockport, was chairman of the Rivers and Harbors Committee, it was holding hearings on the St. Lawrence seaway. The late Luther W. Mott then represented this district in Congress.

Death takes its toll but, other than that, the cast that appears each year for the seaway hearing, whether it be before a Senate or a House committee, is very much the same. Of course Cabinet officials change so far as personnel is concerned but their position is always very much the same. They are for the seaway. The arguments advanced each year do not vary greatly. Most of the committee members, Senators and Congressmen, have heard them often before. Although we dislike to say it, the chances are they will hear them often again.

The current hearing is being held in the last few months of the Eighty-first Congress. No one expects that a seaway measure can be passed this year. So the current seaway bill will die with the Eighty-first Congress. That means that they must be introduced once more in the Eighty-second Congress. And that means another hearing, perhaps two more hearings, one before the Senate committee and another before the House committee with most of the same witnesses and most of the same testimony.

We are optimistic enough to believe that the St. Lawrence seaway will sometime become a fact. We appreciate that these hearings, year after year, at least have an educational value. Certainly we detect increasing support for the project. But if Mr. Truman is so strong for the seaway as he indicates he is, we wish he would do something about it. There may be something to the Dewey charge that the Truman administration is strong on talk but weak on action.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Adroit Maneuver", published in the Cleveland Plain Dealer of April 21, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ADROIT MANEUVER

We have preached economy in the operation of government just as earnestly and insistently as we know how.

So we are in no position to yelp, now that the head of the big service department of the Federal Government, Postmaster General Jesse M. Donaldson, has announced an economy move which will affect the convenience of practically every citizen and the conduct of a great many businesses, but which the Nation can withstand without any peril. In fact we would applaud Donaldson's action in ordering reductions of postal services, including mail deliveries, if we thought for a moment that this was a genuine, sincere economy measure, and would be a lasting one.

But we don't think it was.

We doubt that Donaldson's order will be put fully into effect, or if it is, that it will stay very long in force.

We think Donaldson's action was a bureaucratic squeeze play, pure and simple. From the timing of the Postmaster General's order, and because any resultant economies will not be proportionate to the service reductions ordered, it is apparent that this maneuver was designed to put pressure on Congress to restore Post Office Department budget cuts.

That's an old and transparent bureaucratic trick, cutting governmental services in the very way that will affect the public most directly and most adversely when the heat is on for economy in Government.

We think a couple of circumstances support our viewpoint in this matter. Notice, if you please, that Donaldson's order for reductions in mail deliveries to homes and businesses went beyond the reductions suggested by the House Appropriations Committee when it recommended cuts in Donaldson's budget. The scope of the service reductions ordered by Donaldson amounted almost to an arrogant taunt of the House committee, as if it didn't know what it was talking about in the field of Post Office Department finances.

Note, too, that the Post Office Department admitted yesterday that it could not estimate how much money could be saved by the service reductions Donaldson ordered. If the Postmaster General's order had been a simon pure economy move, it would have been based squarely on an intelligent calculation of how much money needed to be saved and of exactly how much would be saved by the stipulated cuts in service.

If the Post Office Department were as deeply concerned with economy as it would like to have people believe, it would start by overhauling the notoriously wasteful, inefficient and outdated internal management of the Department.

The pattern for making sound and lasting economies was laid down by the Hoover Commission. But little or nothing has been done to bring about the adoption of the Commission's recommendations. And for that Congress must accept its share of the blame, for Congress has shown no zeal for fundamental economies and substantive improvements in the Post Office Department operations.

We will cheerfully accept reductions in mail service if the Post Office Department, as an earnest of good faith, will make the internal economies it so badly needs. Even a privately owned business which Mr. Truman's socio-economic planners have labeled as a monopoly couldn't stay out of the red over one fiscal year if its management policies and operating practices were no more progressive than those of the Post Office.

Too Clever

EXTENSION OF REMARKS
OF
HON. RALPH A. GAMBLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1950

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks I insert what I consider a very pertinent editorial which appeared in the New York World-Telegram and Sun on Saturday, May 6, 1950, entitled "Too Clever," dealing with and exposing the President's controversial Reorganization Plan No. 12, which would abolish the office of the National Labor Relations Board's independent General Counsel.

The President's purpose is an attempt to repeal a portion of the Taft-Hartley Act, under the guise of the Hoover Commission recommendation. The Hoover Commission's reorganization of the Government made no such recommendation.

The editorial follows:

TOO CLEVER

A number of the 21 Government reorganization plans President Truman sent to Congress on March 15 are in serious trouble.

That is regrettable. If Congress rejects any of these plans for picayune political reasons it will be a blow to hopes for economy and efficiency through the good work of the Hoover Commission.

But Mr. Truman can't put all the blame on Congress.

He, himself, introduced considerations other than efficiency and economy into some of these plans—notably, the controversial plan No. 12.

That's the one which would abolish the office of the National Labor Relations Board's independent general counsel and divide his functions between the Board and its Chairman, who would become chief administrative officer of the NLRB.

There, in effect, Mr. Truman is making a too-clever attempt to repeal an important section of the Taft-Hartley Act. Congress, in that law, made the general counsel independent, on the sound theory that the NLRB's judicial and prosecuting functions should be separated.

The Hoover Commission did not recommend abolition of the general counsel's office.

The nonpartisan Citizens' Committee for the Hoover Report has refused to take a position on plan No. 12, pointing out that it "raises issues which are not wholly organi-

zational, but are matters of national, political, and economic policy."

In fact, the citizen's committee gave outright approval to only 9 of the President's 21 plans, asserting that some of the others fall short of Hoover Commission objectives and that a few go beyond them.

Plan No. 12 is due to come up in the Senate on May 10. It seems probable that at least 49 Senators—the constitutional majority required—will vote to kill it. If so, Mr. Truman can thank himself and the labor-union leaders who are backing this scheme for partial Taft-Hartley repeal under the guise of reorganization.

Soil Conservation Service Commended for Work in Wisconsin

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1950

Mr. DAVIS of Wisconsin. Mr. Speaker, it often falls to our lot as representatives of the people of our respective districts, to prod or criticize various agencies of the Federal Government. On this occasion it is a real pleasure to do just the opposite—to give credit where I believe credit is fairly and honestly due.

Recently I received a letter from my friend, Marvin F. Schweers, State Conservationist for Wisconsin, who is in charge of the work conducted by the United States Department of Agriculture Soil Conservation Service in my State. That letter presented a picture of real cooperative accomplishment. It related that 61 of Wisconsin's 71 counties have, in accordance with State law, been created as soil conservation districts. These 61 districts have undertaken a wide variety of projects under expert guidance to control and prevent soil erosion, thus preserving the precious topsoil of Wisconsin farms.

I was pleased to note that every one of the five counties in the Second Congressional District of Wisconsin is organized and actively functioning as a soil conservation district. The soil conservation work has "taken" in an effective and healthy manner. Farmers are responding to an all-important effective educational program. There is no coercion. The work is entirely voluntary. The primary responsibility rests with the farmer himself. This sound approach unquestionably accounts for the encouraging progress which has been made.

Last year, under the direction of Mr. Schweers and Charles Skaife, district conservationist for my home county of Waukesha, I had the opportunity to view some of the projects in progress firsthand. It was a worth-while experience, which I hope to be able to repeat elsewhere in the Second Congressional District this year.

Accompanying Mr. Schweer's letter to me was a copy of his statement to his soil conservation district supervisors, commenting on their reports to him and reviewing the progress of the conservation program in Wisconsin during 1949. I submit it herewith in order that it may be available to my colleagues and to other interested persons:

DEPARTMENT OF AGRICULTURE,
SOIL CONSERVATION SERVICE,
Madison, Wis., May 1, 1950.

To: Soil conservation district supervisors.
From: M. F. Schweers, State conservationist.
Subject: 1949 soil conservation district annual reports.

Rather than acknowledge each of your 1949 annual reports individually we are again sending you a general statement in lieu of separate letters. In this we are reviewing progress made in 1949 as it relates to you supervisors and the Soil Conservation Service and touching upon your plans for 1950. We would also like to comment on some events of this year which have a direct bearing on the affairs of your district.

REPORTS FOR 1949 HIGHLY INFORMATIVE

In general, last year's district reports top those of previous years in terms of interest and completeness. Many were mimeographed. We understand copies were sent to district cooperators, agricultural leaders, and others interested in soil and water conservation.

A number of the reports contained excellent statements from the supervisors. In some instances the chairman or secretary wrote the introduction while others contained brief letters written by each member of the governing bodies. Some of the philosophies expressed presented entirely new ideas on how to develop in more people an appreciation of our land and water resources and persuade them to do something about it.

Another interesting feature of the reports was the indication that supervisors are definitely formulating policies and directing activities in their districts. That's your job and more power to you.

ACCOMPLISHMENTS, 1949

During the past 3 months either Assistant State Conservationist Raymond Brown or Edwin Hill, with field personnel of the Service and others, met with each of the district governing bodies in the State. At these meetings you reviewed accomplishments made in your district during the year. You compared these attainments with goals you had set for the year at a meeting held during mid-winter of 1948–49. Some districts went over the top on their goals while others fell a little short.

In all district reports you indicated you were more than satisfied with production for 1949. The goals set for the year were ambitious ones. We realize that everyone worked hard enough and would have topped them had weather and soil conditions been right.

Following is a table showing State goals for 1949, the year's accomplishments, the percentage of goals attained, and totals to date:

Activity	Unit	Goal	Accomplished	Percent	Total to date
Land capability inventory	Acres	485,100	583,725	120	8,208,301
Contour farming	do	4,970	7,910	159	174,770
Strip cropping	do	68,685	66,928	97	431,346
Pasture improvement	do	16,129	16,175	100	65,320
Woodland management	do	5,390	6,552	122	42,519
Tree planting	do	1,486	1,851	125	14,649
Terraces and diversions	Miles	561.6	518.0	92	1,746.2
Closed drains	Linear feet	748,580	688,913	92	2,089,820
Open drains	Miles	251.4	286.9	114	733.5
Prevention of grazing damage	Acres	10,076	16,187	161	128,876
Permanent structures	Number	17	24	141	229
Temporary structures	do	474	346	73	1,856
Waterways and outlets	Linear feet	896,690	1,005,313	112	3,448,089
Farm plans and replans	Number	2,361	2,268	96	19,087

As you fully understand, we do not maintain detailed records on practices such as changes in land use; influence on farmers to increase purchases of liming and fertilizing materials; improved rotations; etc. However, these are considered at the time conservation plants are developed with the farm family and are written up as part of the specifications. Furthermore, these soil-conservation measures in general do not require on-the-farm assistance in their establishment.

According to your reports service personnel worked with the Extension Service on numerous education and information activities. They appeared on programs for tours, demonstrations, and general and special meetings. They prepared news stories and presented radio broadcasts.

We were pleased to note the extent of the informational program as it affected groups other than farmers. The homemakers' soil-conservation project in the Green County soil-conservation district is something entirely new. Tours of editors, clergymen, and bankers appeared very effective. Talks before civic clubs, PTA, etc., should also make a definite contribution.

Virtually every report contained some information on the youth-training program being carried out in districts of the State. Credit for this fine showing goes to the county superintendents of schools, teachers, 4–H Club leaders, the State soil-conservation committee, and all others who have contributed to the program. We in the Service were pleased to cooperate in this work. We commend I. O. Hembre, of the State committee staff, for his capable and enthusiastic leadership in spearheading this activity on the State level.

GOALS FOR 1950

Before setting 1950 goals, you supervisors appraised the total amount of work farmers of your district are ready to put into effect this year. To provide farmers with necessary technical assistance, it was estimated that it would take up to five times as many technicians per district as we can make available. This relates only to the type of assistance furnished by the Soil Conservation Service.

You supervisors indicated in virtually all annual reports that the first work priority should be laying out planned practices on the land. This work is very seasonal and in view of limited manpower available you developed your work plans so that all Service personnel will devote full time to it during the spring and fall lay-out seasons.

There were some differences of opinion regarding second priority work. In most cases follow-up services to district cooperators was placed in this category. This servicing job involves calling upon your district cooperators to assist them in planning their layout program for the year; encourage them to speed up the application of practices; advise them on how they can get into the program; and help them determine how best to expend budgeted funds for lime, fertilizer and seed. With acreage allotments now coming into the picture, there will probably be more demands for assistance in arranging cropping systems to coincide with these controls. With regard to allotments, quite a number of supervisors have suggested that

land capability inventories be the governing factor in determining these acreages rather than the historical bases.

You gave both second and third priorty to farm planning for new cooperators and replanning farms which have been sold or on which acreage changes have been made. We agree with your viewpoints that cooperators should assume more of the responsibility of getting their plans into effect. How to do this job presents a real problem.

Whatever your decision on priorities might have been, your goals for the year were set accordingly. We all appreciate that conditions, particularly weather, will alter the best of plans. However, we feel that by setting goals the local staff has something to aim toward. In our opinion each district should hit at least 100 percent of its goals.

SOIL CONSERVATION DISTRICT WORK PLANS FOR 1950

We are very much interested in your district work plans for 1950. These were by far the best we have ever had an opportunity to review. We were especially pleased to note that these plans will permit our men to spend the maximum amount of their time working directly with farmers on the land. A minimum amount of their time will thus be spent in working with you supervisors, the Extension Service and others on administrative matters, in conducting field demonstrations, in preparing news stories, in presenting radio broadcasts and in completing records and reports. By so doing, your local staff is relieved of virtually all responsibilities other than planning and application.

We are also gratified to note the number of agencies which are now participating in the district movement. In addition to the SCS and Extension Service, references are made in your reports to the Wisconsin Conservation Department, State soil conservation committee, vet trainers, FHA, vocational agriculture, PMA, and schools.

Most of you supervisors have planned ambitious educational programs for 1950. As we see it, this is as it should be. These programs vary in accordance with interest within the district. Where a large number of applications for farm conservation plans is on file, supervisors generally are not giving emphasis to securing additional ones. More attention in these districts is given to method and result demonstrations. Where applications are limited in number, efforts will be made to increase this backlog.

Most work plans revealed a definite trend toward having service personnel work with and through neighboring groups. With your encouragement and active participation we feel that working with neighbor groups provides a medium whereby the soil-conservation program can be stepped up. Our personnel who have used this approach find it very effective. It may not immediately reduce time spent in farm-conservation planning but these men definitely report that farmers have a better understanding of their farm plans as a result of working together as a group. Then, too, a group of neighbors working together in an area where soil and water conservation practices have not as yet been accepted can become much more enthusiastic about adopting progressive methods, than can a single isolated farm family. In thinking of neighbor groups we believe the greatest benefit in using this approach will come in application of practices and in follow-up. We sincerely hope you will personally follow through on this procedure and offer suggestions on improving it.

COOPERATION WITH PMA

As you no doubt know, the 1950 appropriation bill for the Department of Agriculture, in the section dealing with the agricultural conservation program, administered by the Production and Marketing Administration, contains the following statement:

"That the county agricultural conservation committee in any county with the approval of the State committee may allot not to exceed 5 percent of its allocation for the agricultural conservation program to the Soil Conservation Service for services of its technicians in formulating and carrying out the agricultural conservation program and the funds so allotted shall be utilized by the Soil Conservation Service for technical and other assistance in such county."

There are three types of assistance PMA and SCS officials have agreed upon as being desirable in this cooperative undertaking. They are:

(a) Furnishing needed data—especially about physical land conditions and the effectiveness of various conservation practices—for formulating and carrying out the agricultural conservation program for the county.

(b) Laying out and supervising the installation of conservation practices approved for assistance under the 1950 agricultural conservation program.

(c) Assisting in training committeemen and association employees.

Nineteen PMA county committees asked for assistance either of the "b" or "c" types. A representative of the State PMA office and a member of our SCS State office staff met with these committees. With the exception of two counties, one or more of you supervisors sat in on each of the 19 meetings held. Seventeen of the PMA committees completed agreements with the Service under the above authority. These are:

Type "b": Pepin, Pierce, Washburn, Eau Claire, Price, Rusk, Fond du Lac, Green Lake, Kenosha.

Type "c": Monroe, Sauk, Taylor, Clark, Calumet, Waukesha, Lincoln, Crawford.

(All of the above are soil conservation districts excepting Kenosha County.)

We feel that this cooperation with the PMA offers some real possibilities. The "b" type of program appealed to most district supervisors since it provides extra assistance to farmers without taking any time of local staffs for training purposes. The "c" type program will require additional time of service personnel in instructing PMA trainees as to the "why's, wherefore's, and how's" of various practices. However, most of this time is on-the-job training and productive accomplishments are thus made during the training period. In our opinion, the help contributed by PMA trainees plus the use of PMA funds for hiring local aids offsets the time utilized in this extra training work. Supervisors in general welcome the extra assistance in districts.

Most of the training plans call for instructing PMA employees on methods of determining soil-erosion losses; familiarizing them with land capability inventories and the potentialities and limitations of various soils in the district; acquainting them with the various soil conservation practices; and planning and laying out less complex practices such as grass waterways, strip-crop systems, etc. In a few instances, PMA employees are being trained to plan, stake out, and supervise installation of simple drainage and terracing systems.

Several supervisors expressed concern over the possibility of this program becoming a single practice affair. We assured these supervisors that we will make every effort in our training program to acquaint PMA employees with the fact that a practical, effective, and lasting conservation program must consider the entire farm as a unit. Various practices such as terraces or strip cropping, which influence the flow of water from one field, can have a direct bearing on what happens to adjoining lands. In the same way, laying out a single field in a strip-cropping system without considering the entire farm could throw the cropping system, the fertility, the soil-erosion control, and the water retention or disposal programs out of balance for the rest of the farm. No one practice can give the farmer protection against undue loss of soil and water. Full conservation can be reached only through a combination of the practices needed according to land use capabilities and for the entire farming unit.

EQUIPMENT

Section 66.34 of the Wisconsin Statutes has been of real benefit toward stepping up application of certain soil-conservation practices where heavy equipment can be used to advantage. As this act is rather short we are quoting it for your convenience:

"66.34. Soil conservation; private roads: Any county, city, village, or town by its governing body or through a committee designated by it for the purpose, may contract to do soil-conservation work on privately owned lands, but no such contract shall involve more than $200 for any one person."

Many district governing bodies have taken advantage of this legislation. Supervisors have contacted town chairmen and governing bodies have met with highway committees and made arrangements whereby equipment will be made available to farmers during layout seasons. Several county boards have appropriated funds for the purchase of motor patrols for use in soil-conservation work. These units, when not in use on soil-conservation work, are used by the highway department in their regular road program.

By virtue of having trained operators and because of the fact that road patrols are particularly well adapted to terrace and diversion construction many more miles of these practices can be installed through the use of this equipment.

Quite a number of contractors have also become interested in soil-conservation work. This should be an inducement to stepping up production.

MEETINGS OF SUPERVISORS

A majority of district governing bodies in the State hold regular meetings; either on a once-every-2-months or a monthly basis. A number of supervisors have told us that at one time they thought the amount of district business would not justify regular meetings. These same individuals have since been attending scheduled meetings and now wonder how they are going to get the job done without convening more often. Looks as though a supervisor's job is never done.

Just a few words about the recent series of area meetings of district supervisors. The programs were set up with the idea of free-for-all participation. We were surely pleased at the response. Joint meetings of district governing bodies, where carried out on a work-group basis, have the enthusiastic support of participating supervisors. These are called for the purpose of exchanging ideas and experiences with the primary objective of improving district administration and stepping up the establishment of planned soil-conservation practices on the land.

OUTLOOK FOR STAFFING DISTRICTS IN 1950-51

At this time we are in no position to make any commitments regarding the staffing of districts for the next fiscal year beginning July 1. Our plans will be regulated by our 1951 appropriation.

Four soil-conservation districts not previously staffed will have completed their memoranda of understanding with the Department and the Soil Conservation Service by July 1. We know that they are expecting some assistance.

Irrespective of what our appropriation may be, we will continue to provide the maximum amount of assistance for funds expended. Our personnel will be assigned in accordance with workloads. We shall total the workloads for all soil-conservation districts in the State and then pro rate our manpower according to needs for each district.

Before taking action to reduce any staffs we will first discuss this matter with governing bodies of districts involved.

No matter what our appropriation may be, districts will still be short handed. We would like to suggest that farmers do more of this work themselves and that other agencies be called in to contribute wherever possible. As we see it, soil and water conservation is the responsibility and obligation of many organizations, departments, and individuals. We in the Service hope that you supervisors will provide the leadership to muster and coordinate the many forces that are available to participate in this important and vital movement.

IN APPRECIATION

In preparing this report we have only high lighted many topics we would have liked to discuss in more detail. Still it has become overly long.

In conclusion, we want to express our sincere appreciation for the many courtesies and splendid cooperation you have extended to us in the Soil Conservation Service.

Sincerely yours,

M. F. SCHWEERS,
State Conservationist.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article regarding curtailment in postal service, from the New York Journal-American of April 20, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BUSINESS BATTLES SLASH IN MAIL; HEAVY LOSSES FEARED HERE

New York businessmen today were preparing to carry to Washington their fight against the impending slash in mail deliveries.

Estimating that the drastic cuts would cause incalculable losses, representatives in the fields of publishing, printing, mail-order selling and direct-mail advertising were laying plans to appear at a Senate committee hearing on postal rates.

It was charged that the economy order of Postmaster General Donaldson was a political maneuver to win support for a Post Office Department plea for new rates with an estimated yield of $150,000,000 per year.

Concern over the delivery curb was expressed by the Dress Manufacturers Board of Trade, Inc., 220 West Forty-second Street, which pointed out the garment district leans heavily on parcel post.

Under the economy order to postmasters, no parcel post would be received at post offices after 6 p. m. At present, much parcel post is received from garment-area houses at the main post office, Eighth Avenue and Thirty-first Street, after that hour.

Letter carriers have been thrown into a "panic" by the economy order, according to Philip Lepper, president of the New York branch of the AFL Association of Letter Carriers.

Lepper estimated that 10 to 15 percent of the letter carriers in the city would be furloughed or dismissed as a result of the economics to go into effect July 1.

That would mean some 4,300 to 6,450 carriers would be laid off.

The seven postmasters in the city today were hard at work fitting their organizations into the pattern imposed by the economy order, called "the most drastic in the history of postal service."

In the Manhattan-Bronx-Pelham districts, presided over by Postmaster Goldman, it was estimated that a considerable number of temporary workers would be affected by the first cutbacks.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial and an article from the Wichita Beacon regarding the curtailment in postal service.

There being no objection the editorial and article were ordered to be printed in the RECORD, as follows:

CONGRESS SHOULD HAVE AVOIDED THE IMPAIRMENT OF POSTAL SERVICE BY OTHER APPROPRIATION ECONOMIES

The Postmaster General, Jesse Donaldson, has been forced to lay off 10,000 employees of the postal service, due to lack of funds with which to maintain the service at its present high level. Congress failed to give the Post Office Department the appropriation for which it asked.

The result of these layoffs for lack of funds will seriously affect the service. It will be slowed up materially. Congress should have given the Postmaster General the appropriation that was needed. Money could have been saved from other less necessary and less essential appropriations.

The Marshall plan appropriation could have been cut. Less money could have been earmarked for housing. Less could be spent by reorganization of Government agencies and bureaus. We could give less money to Chiang Kai-shek and his Chinese Nationalists.

The United States postal service is the most efficient in the world. Postal employees give their lives to their work. They are underpaid. No Government employees are more faithful or render greater public service. Ten thousand of these conscientious workers should not be laid off to save money for less necessary purposes.

We have the money. We do not appropriate it wisely and rightly. Our postal service should be maintained at its present efficiency and not be selected for economizing when economies could be made elsewhere without harm to the American public.

Appropriation Committees can do as they see fit. They easily could have saved money in other ways, instead of refusing the Post Office Department the money it needs to prevent layoffs of devoted postal employees and deprive the American people of the postal service they need and for which they are taxed.

MAIL SERVICE IS REDUCED IN WICHITA

Postmaster C. M. Fitzwilliam released a statement Thursday afternoon regarding changes in postal service, which are to become effective May 1:

Window service at the main office will be provided between the hours of 8 a. m. and 6 p. m., Monday through Friday. All substations will offer window service from 8 to 5:30, except the airport branch and Planeview which will close at 5 p. m.

Saturday window service at all the stations and main office will be from 8 a. m. to 12 noon.

Cuts in carrier service from 2 daily deliveries to 1 in the residential area, and from 3 to 2 in the business area, will be announced during the next 3 or 4 days.

These changes will be put into effect during the next 30 days.

Effective May 15, all bulk mailings of second, third and fourth class matter will be accepted for mailing only between the hours of 8 a. m. and 6 p. m. Third class matter having a time value no longer will be given preferential treatment unless it carries first class postage.

Outgoing parcel post received by 6 p. m. will be distributed or dispatched promptly. Third class after 6 p. m.

Fitzwilliam explained that first class matter will continue to be handled at night, but that the change eliminates such consideration for second, third and fourth class mail.

Soviet Expansionism in Europe and Asia Since 1939

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include the following address given by Mr. William C. Bullitt at Georgetown University on March 31, 1950. No American has had a more brilliant record in diplomacy and especially in diagnosing the true nature of Soviet communism and prescribing the proper way to treat it. Tragically, our State Department ignored his advice and led our country and the world to its present perilous state. Nothing can be more useful, even at this late date, than to study the enemy we face, our own errors, and what to do now—under the guidance of a real master in the field of world affairs:

SOVIET EXPANSIONISM IN EUROPE AND ASIA SINCE 1939

Soviet expansionism springs from the Communist creed: The Marx-Lenin-Stalin creed which denies God and claims to be based on science. It attributes all evil to private ownership of the means of production. It teaches that the establishment of Communist dictatorship throughout the earth and the abolition of private ownership of the means of production will end all war and so improve the nature of all men in all nations that "the state will wither away," and all men will live without a state in perfect freedom and happiness. This is the utterly unscientific faith which, in the name of science, Communist-controlled governments teach as absolute truth to the children they control. They prepare the children to live and, if need be, to die for it. A large percentage of the children, having no other faith taught them, become believers in the Communist creed, and, as Communist believers, offer their lives for their faith as gallantly as did the early Christians. They believe that they are fighting for the emancipation of all humanity from all evil. They think they serve eternal

UNIVERSITY OF MICHIGAN LIBRARIES

truth. The Communist Party, to them, is a union of the faithful. Their old testament contains the books of Marx and Engels; their new testament, the works of Lenin and Stalin. Since the highest moral goal, according to their creed, is to achieve the destruction of the state following the establishment of Communist dictatorship throughout the earth, the highest moral duty of man is to promote such dictatorship. This supreme moral end, they believe, justifies all means for its achievement, including the pledged word given and broken, character assassination, torture, murder, and war. In the words of Lenin: "It is necessary * * * to use any ruse, cunning, unlawful method, evasion, concealment of truth. * * * It is inconceivable that the Soviet Republic should continue for a long period side by side with imperialist states. Ultimately one or the other must conquer. Meanwhile a number of terrible clashes between the Soviet Republic and the bourgeois states is inevitable."

The dynamo of Soviet expansionism is the Communist creed. Many older Communists become skeptical and disillusioned. But they do not dare to express disbelief. The penalties are too terrible. So the old, however skeptical, render lip service. But the young believe. And while the old die off, the young come on forever. In consequence, so long as mighty races and resources are controlled by Communists, there will be no peace in this world. The aim of the Soviet Government and the other Communist-controlled governments will continue to be the conquest of the world for communism. The Communists will not stop. They can only be stopped.

Stalin sits in the Kremlin with members of the Politburo, who compose his planning staff for the conquest of the world. He prepares his attacks on a world scale as carefully as the commander in chief of an army prepares plans for his advances. He decides when and where to strike, and what forces will be needed to seize his objective. He is a careful and crafty leader who never takes great chances. He always remembers that the physical strength of the Soviet Union is the most important factor in the spread of communism, and he does not risk destruction of that primary source of strength.

In 1939, Stalin controlled about 170,000,000 persons. Today he directs about 800,000,000. The chief methods which he has employed in making this extraordinary advance toward control of the entire human race have been the following:

First. Easy war. For example, 17 days after Hitler had attacked Poland in 1939, when the Polish armies had been disrupted, Stalin attacked Poland and seized all of eastern Poland. Similarly, in the Far East, after we had pulverized the military resistance of Japan, Stalin, only 4 days before Japan surrendered, declared war on Japan and seized Manchuria.

Second. Occupation by the Red Army and gradual imposition of absolute Soviet rule. This was the method employed from 1945 onward in Poland, Rumania, Hungary, and, with slight variations, in Czechoslovakia. Its effectiveness is demonstrated by the simple fact that Stalin has now been able to install as commander in chief of the Polish Army a marshal of the Soviet Union.

Third. The method of the camel's nose. You all remember the old story of the camel who was cold one night in the desert and put his nose under his master's tent and persuaded his master to let him keep it there. Soon afterward, the camel was inside the tent and his owner was out in the cold. That method, in 1940, was used by Stalin in taking over Estonia, Latvia, and Lithuania. First, under threats of war and promises of peace, he persuaded the governments of those three little Baltic countries to accept the presence of Soviet garrisons at certain strategic points. The Soviet soldiers behaved themselves well, and many Balts believed their prospects for survival were good. However, when Stalin considered that the moment had come to close his hand on those countries, he closed it. He murdered or deported to death at slave labor his political opponents of all classes. He finally reduced his victims to a terrorized mass of despairing individuals whom he then compelled to go to booths and "vote" for Soviet-chosen candidates under penalty of losing their bread cards which were nothing more or less than permits to live.

Fourth. Use of local Communist movements in areas where Communists have been strong enough to organize armed resistance to existing governments. The foremost example of the success of this method is, of course, China. By turning over to the Chinese Communists all the arms captured from the Japanese Army in Manchuria; by sending a few generals who were masters of strategy and tactics to plan the attacks of the Chinese Communists, Stalin succeeded in bringing the whole of continental China under Communist control. When he attempted to use the same method in Iran and Greece he met such determined opposition from the United States that he allowed his local agents to be defeated—temporarily at least.

Fifth. Communist control or infiltration of nationalist independence movements in colonial countries. At the present moment Stalin is advancing by this method in Indochina and at other points in southeast Asia.

Sixth. Psychological warfare.

Under this heading must be included two different methods of deceiving victims.

A. The pledged word of the Soviet Union given and broken. Stalin lulls his prospective victims to sleep by entering into all sorts of pacts and agreements with them—and breaks the agreements as soon as it becomes convenient for him to do so. Stalin's violations of the most solemn international agreements have exceeded in number similar violations by Hitler.

B. The deception of naive government officials in all countries. We do not have to go further than our own country to observe Stalin's notable achievements in this domain. Quite aside from Soviet agents in our Government departments and atomic-energy organization, we have had in Washington and throughout the world a number of Government officials who were not Soviet agents but served the Soviet Government as effectively as if they had been Soviet agents. You will all recall that from 1942 until 1947 our Department of State was bamboozled into treating the Soviet Union as a "peace-loving democracy." Officials of our Government so described the Soviet Union in a long series of documents.

The Yalta agreements—including the secret one by which we promised Stalin control of the great Manchurian ports of Dairen and Port Arthur and the Chinese Eastern Railroad—were signed during that period. They were one of the greatest triumphs of Soviet psychological warfare. Had we acted in accord with the national interests of the United States and of our faithful ally China, we would have done everything in our power to prevent the Soviet Union from entering the war against Japan. But our leaders had been bamboozled into believing that the Soviet Union would work with us cordially to produce a world of liberty and peace, and in addition had been fooled into believing that we would need Soviet help to defeat Japan. So we secretly sponsored Soviet domination of Manchuria and enabled Stalin to arm the Chinese Communists with the vast armaments of the Japanese armies.

You will recall that officials of our Department of State had also been persuaded by Soviet propaganda to believe that the Chinese Communists were "Mere agrarian reformers who had no connection with Moscow." Our Government, acting on their advice, attempted to compel the Chinese Government to take Communists into the Government, and when Chiang Kai-shek refused to do this, cut off all military supplies to him for a period of nearly 2 years. You will remember that we refused his repeated pleas for a top-rank American general to organize the defense of China in the same manner that top Soviet generals were organizing the attacks on Chinese independence. Thus we allowed China to slide into Stalin's hands.

Similarly, the Yalta agreement with regard to Poland resulted in the present absolute control of Poland by the Soviet Government.

Much ink has been used by apologists for the Yalta agreements in an attempt to prove that what was wrong was not the agreements themselves, but the fact that the Soviet Union did not carry out the agreements. This is as if a banker who had been appointed trustee of the fortune of a child should place the funds entrusted to his care in a Ponzi get-rich-quick scheme; and then when the money was lost, plead that the trouble was not with the trustees—who accepted Mr. Ponzi's promise to pay 200 percent per year—but with Ponzi's failure to carry out the agreement. The people of the United States hire officials to work in the Department of State because they need experts to handle complex world questions. The officials of that Department are trustees of the vital interests of the American people, and the most contemptible excuse that can be offered by or for them is that they meant well but were "played for suckers."

There is a great moral difference between traitors and Soviet dupes. It is the same difference that is recognized in law between a man guilty of murder and a man guilty of manslaughter. In the case of manslaughter, there is no intention to commit the crime. But in both cases the victim ends up dead. Soviet dupes may do as great harm to the United States as Soviet agents.

Seventh. Infiltration of respected organizations: One of Stalin's most effective weapons to reduce resistance to his attack is, of course, infiltration of educational institutions, scientific societies, welfare organizations, and trade-unions by Soviet agents. He managed to use this weapon so effectively in both France and Italy that leadership of the great trade-unions of both of those countries was seized by the Communists and for a time it seemed that both countries might be hopelessly paralyzed by Communist-led strikes. At the present moment, the non-Communist members of the trade-unions in France and Italy have set up their own organizations; but the Communist-led unions are still able to organize strikes of huge dimensions for purely political purposes. Fortunately for our own country, although for a time some of our labor leaders were as deceived as was our Government with regard to the Communists, our great trade-unions have either purged their ranks of Communists or are in the process of purging them. Stalin is having little success in our trade-unions, and I think we should congratulate ourselves on the patriotic qualities of our top labor leaders. I wish I could say as much about our professors, some of whom appear to be too educated for their brains.

Eighth. The final weapon employed by Stalin to disintegrate opposition to Communist advance is fear. Now that Stalin has atomic bombs and plenty of bombers to deliver them to any spot in Europe, Asia, or North America; now that he has China as an ally and is increasing his military power much faster than we are increasing ours; his propaganda has taken a new line—the line of warning his opponents of all classes in Europe and in Asia that power is on his side and that time is on his side and that, unless they desire to meet the fate which he accords to

defeated opponents, they had better leave the camp of the United States and join the Soviet side.

The fear which he is thus able to engender has been vastly increased by revelation of the methods which are now used by the Communists to break down and destroy human personality. You have all read recently in the newspapers Shipkov's statement of the relatively simple methods used to break him down and force him to make a false confession to the Bulgarian Communist authorities. Far more sinister and horrible pressures are used when the individual presents more resistance. The final method is that of narco-hypnosis. The victim in that case receives quantities of drugs until he can be hypnotized so deeply that he can be deprived of all memory of the actual facts of his past life and made to believe in a new set of facts invented by his hypnotizer. Human personality can thus be totally changed. No man can any longer say that he is master of his fate or of his own actions and thoughts. If he falls into the hands of the Communists, he can be reduced to a puppet with a new personality invented by his hypnotizer. This is a final horror—an unexampled triumph of satanism. To die in battle is nothing compared to the living death of personality under narco-hypnosis. Recently a French lady said to me: "We are all of us enjoying ourselves as much as possible in Paris since we know that within a few years we shall either be destroyed by Soviet atomic bombs, or raped, or hypnotized into new personalities." That is the state of mind which is growing in western Europe.

We have now glanced at the Communist creed which underlies Soviet expansionism, and at some of the methods employed by Stalin to achieve world conquest. Let us now look briefly at the attacks which armed Communists are making at the present moment.

As we have already noted, they are advancing by open warfare in Indochina, or—to be exact—in the eastern portion of Indochina, which is known as Viet Nam. The war in Viet Nam is one of the saddest that has ever been fought, for three-fourths of the troops of Ho Chi Minh, the Moscow-trained leader of the Annamites, who are fighting the French, and the forces of the Emperor Bao Dai, are not Communists but simple patriots who believe that they can achieve complete independence only by throwing the French and Bao Dai into the sea. Yet, in truth, the only result of such a victory would be that the Annamites would exchange the yoke of France—which has now become relatively light—for the terrible yoke of Stalin.

The French, 3 years late, have given Viet Nam independence with the French Empire, retaining for themselves control over foreign relations and military affairs. To us, this seems a limited, almost nonexistent form of independence. Yet if the French were to withdraw now from Viet Nam, the country could collapse at once into the hands of the Communists. This is so because of the failure of the French to train Annamites for high administrative and military posts. The French reserved those posts for themselves. They never built up in Viet Nam a native civil service comparable to the civil service which the British built up in India. In consequence, Bao Dai, if left to his own resources, could not find the men to staff efficiently the military and administrative services of his country.

For a period, the Annamites, who are highly intelligent as well as patriotic people, will be obliged to rely on the advice and assistance of foreigners of some sort. They would like to have Americans instead of French running their army and their administration; but no American speaks their language. The secondary language of Viet Nam is French, and so few Americans of first-rate quality speak French adequately that it is hopeless to expect that thousands of efficient, French-speaking Americans can be found to go to Viet Nam. The Annamites would also like to have American troops replace the 130,000 French troops now resisting the forces of Ho Chi Minh. Quite aside from other considerations, we have no such number of troops to spare. And we should be thankful that the French Army is fighting Ho Chi Minh in Viet Nam. They will probably have to meet stronger attacks in the near future. For the Chinese Communists have now reached the borders of Viet Nam, and are passing arms and munitions to Ho Chi Minh.

In consequence, unless Indochina is to fall into the hands of Stalin, we shall have to work with and through both Bao Dai and the French. If we fail to do so because some State Department dupe of Soviet psychological warfare takes the position that we must not give help to Viet Nam until all the French shall have left, we shall merely be handing the country by default to the Communists.

If we let Indochina fall, Burma, Siam, and British Malaya—with its vast production of rubber and tin—will also fall. Then it will be India's turn.

At another point, the Communists are making small attacks preparatory to a great attack. The Chinese Communists for some time have been attempting to seize small islands on the way to the great strategic island of Formosa. Formosa is still being held by the Chinese Nationalist Army which, just 2 weeks ago, gave proof of its good morale by seizing a port on the mainland. If the Chinese Communists should capture Formosa, Stalin's forces would be within 250 miles of the northern Philippines. It was from Formosa that Japan attacked and captured the Philippines. Our Joint Chiefs of Staff, headed by General Bradley, pleaded with President Truman to send munitions and equipment, as well as economic aid to Formosa, and a few American officers to advise regarding defense. Secretary of State Acheson opposed our military leaders, and persuaded President Truman to decide that we would continue to give no support to the Nationalists, do nothing toward preventing the fall of Formosa. That is our present policy. For the Philippines, the Department of State is preparing another Bataan.

Recently Secretary Acheson announced that we must wage "total diplomacy." And in San Francisco he intimated that if the Chinese Communists should commit aggressions against the countries of southeast Asia, they would find themselves in trouble with us. But his "total diplomacy" does not include Formosa. He and his closest associates and friends have a vested interest in their own mistakes with regard to China. In any European parliamentary democracy, a minister for foreign affairs who had tossed a great ally like China into the hands of Stalin would have been dismissed from his post. Mr. Acheson retains his office and turns his back on Formosa.

In the Near East, Iran, with its huge oil production which plays such a large part in British economic life, is again threatened by Soviet-directed revolutionaries of the Tudeh party. They have a fertile field in which to work. The poverty among the peasants of Iran is so grinding that they are close to revolt. Unless the Government of the United States moves rapidly to alleviate the suffering in Iran, Stalin may soon add that ancient country to his long list of satellites.

These, for the moment, are the areas in Asia where Stalin is pressing his advance strongly. But we cannot congratulate ourselves that even the situation in western Europe is satisfactory.

In Italy, more than 20 percent of the workmen are unemployed, and the Communists, who gathered one-third of the votes at the last elections, are gaining in strength.

In France, the government is far weaker than any French government before the Second World War, and its entire apparatus is riddled with Communists. Even the head of the French atomic research is a Communist.

Great Britain is staggering toward another financial and economic crisis. In 1945 the British voted themselves a higher standard of living than, under existing world conditions, they could possibly earn. Today they can neither feed themselves nor defend themselves.

Western Germany, under the pressure of unemployment, is beginning to listen to the Soviet propaganda which says: Side with the United States and you will have unemployment, underfeeding, shortage of raw materials, a divided country and, finally, Soviet atomic bombs on your cities; side with the Soviet Union and you will have all the wheat and raw materials you want, no unemployment, and a united Germany including the part that is momentarily Polish. Pastor Niemoeller, much admired by Americans, has now declared himself in favor of a united Germany even at the price of Communist rule.

Moreover, the whole of western Europe is without defense, and everyone in western Europe knows it. Its cities cannot be protected against Soviet atomic bombs except by our Air Force, which today is not strong enough for the task. To oppose the 125 Soviet divisions, the French have 6, the British say they can furnish 1, the Belgians 1. To have a chance to stop the Red Army for a few months, the European democracies would need from 50 to 60 divisions. Modern equipment for such a number of divisions would cost from 10 to 20 billion dollars. And most military authorities agree that no western European defense system can be effective unless both the western Germans and the Spaniards are included in it.

When we began to give Marshall plan aid, and when we signed the Atlantic Pact, our object was to make western Europe a strong ally. We have succeeded only in keeping alive 17 picturesque, competing countries which cannot feed or defend themselves. If they would unite their economies by entering a European federation, they would be on the path to strength. But their governments refuse to take any serious steps toward federation and our Government is making no effective effort to move them toward federation. They feel confident that, even after 1952, we will not stop our doles to them. And, indeed, we do not dare to stop for fear that they will all collapse into the hands of Stalin and be organized as Soviet satellites for his final attack on us.

When will such an attack come? To that question I can, of course, give no definite answer. But I can give you my own opinion and the reasons for it.

Today Stalin has atomic bombs and at least 350 long-range bombers capable of carrying them to any spot in the United States. We have no radar warning net to detect the approach of his planes. We have only a fraction of the number of pursuit planes needed to make effective use of a warning net. The authoritative Finletter Commission in 1948 recommended as a minimum for national security 70 air groups. We have 44. Stalin's total air force outnumbers ours by about 3 to 1. His annual production of war planes is about 3 to our 1. He has 125 army divisions to our 10—among them, 30 armored divisions to our 1. In addition, he has approximately 270 submarines—about 30 of the latest type against which we have not yet produced effective counter weapons. Furthermore, thanks to his agent Fuchs who

UNIVERSITY OF MICHIGAN LIBRARIES

transmitted to him all our secrets for production of both A-bombs and hydrogen bombs, he may be ahead of us in production of H-bombs.

Some officials in Washington who have access to most secret information believe that Stalin will attack us this year. They argue that by August 1950 he will probably have 50 A-bombs—enough to destroy our great cities and our atomic production plant, and thus prevent effective American counter-attack. But my opinion is that Stalin will not launch shooting war until he is certain that he can defeat us easily. As I have said before, he is a cautious and crafty leader who strikes only when he feels sure of quick victory. This year his first surprise attack might not be successful. We might be able to strike back effectively. Therefore, it seems likely that he will not start bombing in the near future but will go on increasing his military strength faster than we are adding to ours, and seize more peoples, resources, and strategic areas, until he feels that his power is irresistible. We are allowing time to run on his side. And he knows it.

What, then, is the real state of our defenses against Soviet expansionism? Our own military strength is falling behind the growing military strength of Stalin. Asia is slipping into Stalin's hands; the Near East is threatened; Europe is defenseless. The Soviet atomic bomb threat to our homes, our families, and our country is increasing each day. The Communists are advancing; we are retreating. They are on the offensive; we are on the defensive. And no war, hot or cold, was ever won by forces which remained on the defensive.

Why are we doing so badly? Because our Government has never faced the fact that Stalin will not stop, but can only be stopped. Our President has not understood that an over-all plan for defense, not only of our own country, but also of those countries which still remain outside Stalin's domain, is essential. Not so long ago he said "I like old Joe." In consequence, the systematic advances of the Communists, executed by carefully planned attacks, have been met for the most part either by American retreats or spasmodic and inadequate defensive efforts.

Time is running against us; but at the present moment our Government is behaving exactly as the French Government behaved from 1936 to 1939. In that period, when the Nazis were preparing for war and working 60 hours a week, the French cut their working hours to 40 a week. When the Germans were producing seven to eight hundred planes a month, the French cut their plane production to 50 a month. They did this for much the same reason that we are now reducing our expenditures for our military forces and for support of our friends throughout the world. The people of France, like all other peoples, wanted a higher standard of living and leisure. They did not realize that a higher standard of living would soon give them a higher rate of dying. In 1940, Hitler destroyed the independence of France.

Today we should be living hard, as our forefathers lived hard in the days of Valley Forge. We are living soft. Our President has staked his political future on a program of handouts for crop support, housing, education, and other projects which appeal to groups of voters. To get more tax money for the handout program which produces votes, he has cut down the defense program which might produce survival. Our tax money is being used to buy surplus potatoes instead of jet planes.

In consequence, the balance of power in the world is swinging rapidly in favor of the Soviet Union. And our President, who is an entirely patriotic American, has not yet found within himself the intelligence and the spirit to take the offensive effectively against Soviet expansionism. Unless he will take the offensive, unless we—the American people—will let him know that we do not want to hear from him what we can get from our country, but do want to hear from him what we can give to our country, we shall suffer the fate that France suffered in 1940.

We restored the independence of France. There is no nation standing behind us to restore our independence.

Is it too much to hope that we will find within ourselves the courage and the will to save our country and our Christian civilization? It is not too much. It is late—very late. It is not too late. We can begin today to take the offensive. We can increase vastly our expenditures for national defense and cut our expenditures for handouts. We can take action to prevent Communist conquest of Formosa. We can help the Annamites and the French throw the Communists completely out of Indochina—as we helped the Greeks throw them out of Greece. We can achieve the federation of western Europe and make that federation a strong ally. We can give effective economic aid to Iran. We can help the Albanian exiles to rescue Albania from the Communists and thus give new spirit to all the enslaved peoples behind the iron curtain. We can give far greater aid than we have been giving to the resistance forces in all the Soviet satellite countries. We can stand up with force to the threat of the Communists in eastern Germany who have had the effrontery to announce that on May 28 they intend to arrange an invasion of west Berlin by Communist-led bands from east Berlin.

Those Americans who are still befuddled by Soviet psychological warfare will argue that such a course of action would produce an unbridgable chasm between the free world and the Communist world. That chasm already exists. It was dug by the Communists. There is no bridge, and there will be no bridge. We face today, not a struggle for security, but a struggle for survival. However much we all wish and pray for peace, this is the hard fact which we cannot get rid of by wishful thinking. We can stop Stalin only by keeping him constantly confronted by superior force and by daring to use that force whenever and wherever he commits direct or indirect aggression. Today we are the last strong power on the side of liberty and Christian civilization. We have to find within ourselves the same courage and will that our forefathers found at Lexington and Concord. We have to be ready once more to give all that we have and all that we are to save the greatest adventure in human freedom that this earth has known—our America.

United States-Israel Copyright Benefits

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1950

Mr. MULTER. Mr. Speaker, it is my pleasure to call to the attention of my colleagues that a proclamation, dated May 4, 1950, by the President of the United States establishes copyright privileges and relationship with the State of Israel according to title 17 of the United States Code, section 9, entitled "copyrights," as codified and enacted into law by an act of Congress.

In his proclamation of that date President Truman states that satisfactory official assurances have been received by our Government that since the establishment of the State of Israel, on May 15, 1948, United States citizens have been entitled to obtain copyright protection for their works in Israel on the same basis as accorded to citizens of Israel. As the same time, citizens of Israel have been accorded the same privilege and have been entitled to all the benefits of the copyright law in this country.

I am happy to know that this reciprocity in the granting of copyright privileges and benefits between this country and Israel is now being formally realized into an international agreement. This is a further step in the direction of cementing the bonds of genuine friendship between the world's largest democracy and the world's youngest democracy.

Some Comments on the Current Utility Scene

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. JOHNSON of Texas. Mr. President, I have read with great interest a very fine address delivered by one of the newer members of the Securities and Exchange Commission, the Honorable Donald C. Cook.

Mr. Cook's address to the New York Society of Security Analysts presents an excellent picture of the success of the Holding Company Act and the great good that has been accomplished by it.

I ask unanimous consent that Mr. Cook's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SOME COMMENTS ON THE CURRENT UTILITY SCENE

I am glad to have the opportunity of meeting you and exchanging views on the utility industry.

The electric utility industry was first subjected to intensive Federal regulation about 15 years ago, largely because this basic industry had been severely victimized by the high and low finance of the twenties. The numerous bankruptcies and preferred-stock arrearages among both electric-operating companies and holding companies in the thirties were primarily, if not exclusively, attributable to these financial practices, for the operating electric utility industry showed remarkable stability in the great depression. I think it is easy to prove this statement. Kilowatt-hours generated declined only 15 percent from 1929 to 1932, while in the same period, for example, the Federal Reserve Board index of industrial production fell 47.3 percent. We know, too, that the net operating income of private utility companies, before depreciation and taxes, was greater in every year during the thirties than it was in 1928—a year which itself was better than previous years. The industry's

gross income was actually higher in 1932 than it was in 1928. This great industry was too important to the Nation's economy to permit it to remain ensnared in the tangled web of frenzied finance. The Holding Company Act, one of the great and enduring New Deal reforms, was soon forthcoming. The statute, drafted in the finest traditions of New England conservatism, was bitterly fought by interests standing for radical finance. Oddly enough, the act, which demonstrably was a bulwark of our system of free enterprise, was branded, as the handiwork of wild-eyed and impractical Washington visionaries, or—and even worse—college professors. But that was before the professors built the bomb.

Primarily, the Holding Company Act was intended to perform two major surgical operations upon the utility industry: First, to break up the nonintegrated holding company systems and to create an industry pattern of (a) operating companies returned to local control or (b) regional integrated holding company systems most of which, because of their interstate nature, would remain subject to the Holding Company Act; and, second, drastically to simplify corporate structures by eliminating pyramided holding companies, trick securities, and excessive leverage. As you know, the ideal in this latter respect was a simple, understandable, and well-balanced capital structure which would inspire investor confidence and permit public utilities to attract, on economical terms, the vast sums of new capital needed by them to finance their uninterrupted growth.

But in a relatively short time, as these things go, remarkable results have been achieved. Let me quote some late figures as to the extent of the progress made. From December 31, 1935, to December 31, 1949, 696 companies with assets of $9,106,000,000 have been removed from the jurisdiction of the act through divestment. Some of the properties divested were sold to neighboring utilities who integrated them with their own operations. In addition to the figures just cited, 250 companies with assets of $5,470,000,000 have been divested by holding companies but remain subject to the act by reason of their relationship to another registered holding company.

Comparable results have been achieved under the corporate simplification section. Many unnecessary holding companies and other useless but expensive corporate entities have been eliminated, and the pyramided holding company system is becoming as archaic as the Pyramids of Egypt.

Practically all pertinent ratios reflect the tremendously improved financial health of this industry since 1935. More than $1,300,000,000 of sheer wind, or, as it is sometimes referred to, "balloon juice," has been eliminated from utility property accounts. Ratios of depreciation and amortization reserves to gross property went up from 10.8 percent in 1937 to 21.7 percent at the end of 1948. Coverages of all fixed charges and preferred dividends went up from 1.9 times to 2.7 times. While total debt and preferred stock have increased about 10.3 percent since 1937 to December 31, 1948, generating capacity of privately owned utilities has increased by 42 percent and generation is up by 107 percent. Of course, much of this progress must be ascribed to better economic conditions. But I have seen too many of these improvements emerge from conferences at the Commission not to ascribe some of the accomplishments to the operation of the Holding Company Act.

There has been another development in this industry which I want to mention. The capital structures and complicated corporate systems which flourished in the twenties reflected, in part, the type of men who then dominated this industry. Today, the utility tycoon, with his unresponsiveness to investor and consumer needs, is gone—or almost gone. In his place a new generation of utility executives has grown up. The new generation executives recognize the social responsibility of management. In varying degrees, they tend to be aware that they stand in a sort of trustee relationship to their investors, consumers, and the areas they serve. These men also tend to feel obliged to consider the interests of the public in every important decision they make. To the extent that the management of any particular company contains such men—and many managements do—it has intangible assets of substantial importance.

Under the old regime, by and large, financial policy for most of the Nation's operating companies, whether they were located in Maine or California, was determined by a small group of holding company executives and their affiliated investment bankers in New York City or Chicago. Investment banking business of individual utility companies tended to be monopolized by a traditional banker. Competitive bidding was then a theory—not a reality. The breakup of centralized control over utilities has given operating management the opportunity of doing its own planning and of hiring banking, servicing, and other technical assistance of its own choosing, according to its needs and the requirements of its area.

I am not here primarily to talk about competitive bidding. As you know, however, it was designed, in part, to overcome the influence of traditional relationships between banking houses and public utility companies, and its consequent deleterious effects on financing. But whatever else may be said about it, competitive bidding has diversified the management of security offerings. The Commission's fifteenth annual report to Congress for the fiscal year ending June 30, 1949, contains a table covering 24 companies whose securities have been marketed at competitive bidding on at least 4 occasions during the last 5 years. The table shows the number of managing underwriters who have been successful in purchasing the securities of these companies. In only one instance was a single manager able to win all securities offered by a particular company over this 5-year period. This manager had not been that company's traditional banker, and a number of other bids were submitted for each of the issues offered. Examination of the membership lists of underwriting syndicates also reveals that individual banking firms now participate in offerings under widely diverse leadership.

We at the SEC cannot help but believe that the diversification in underwriting is healthy both for the utility company and for people in the securities business. Logically, one cannot profess to believe in the competitive free-enterprise system and yet insist on restricting the scope of its operations to only the other fellow's business.

But it seems that these hard-won gains must periodically be rewon. Not long ago, a partner of one of the largest investment banking firms in America, in a speech to a utility industry group, invited the industry to institute an arrangement with competent people to advise you with respect to your financing. In less euphemistic-language, the invitation was, of course, for a continuing banking relationship which, obviously, would not be limited to financial advice but would also include underwriting the company's securities. I, for one, do not believe that the history of the past quarter of a century can be erased so easily. I think we have learned that a financial adviser to a company should not also underwrite its securities. The two functions are inconsistent, for, as a buyer of the company's securities, the underwriter-financial adviser has an immediate conflict of interest with the company—the seller. I believe we have also learned that, apart from combining the functions of adviser and underwriter, it is unhealthy for a company to enter into a tacit understanding whereby management of the underwriting of its securities is monopolized by a single firm. There are too many others in the investment banking business who, in any given case, may have fresher ideas or would otherwise be more enterprising, particularly as to price and spread. Once a utility, voluntarily or otherwise, permits the management of its investment banking business to be handled by a single firm, the custom of the investment banking business is such that other bankers will not in any way compete for the business or in other respects infringe upon the traditional banker's relationship. The utility, therefore, must inevitably incur the higher costs and other disadvantages of monopoly price.

Electric utility capital is turned over only once every 4 or 5 years; capital costs are, therefore, an important factor in the fixing of rates. The national public interest and the particular interest of consumers in low-cost power and the interest of utility common-stock investors in maximizing their income require that the industry's securities be issued and sold only on the most economical terms. Management, if it perseveres in its efforts to strengthen and preserve the private utility industry, must insist on following this course.

The electric-utility industry is now in the middle of a great construction program. In the 5 years since the war, 1946–50, new generating capacity totaling over 17,000,000 kilowatts has been, or will be by the end of 1950, installed by the electric utilities. Excluding Federal projects, money expended, and to be expected, in the 5-year period totals over $9,000,000,000. While the rate of increase may now be declining, the industry is of the general opinion that installed capacity of all electric systems, including Federal, contributing to the public supply will reach a total of about 92,000,000 kilowatts by 1955, as compared with about 68,000,000 kilowatts at the end of 1950. Obviously, this growth will require going to the capital markets for substantial sums.

Of course, this construction program can continue to be financed successfully only if utility securities remain attractive to investors. Earnings, naturally, are basic in this respect, and, while, to a considerable extent, the trend of earnings is beyond managerial control, there are many other factors which are within managerial control. These latter factors are sometimes not given sufficient weight, I think, in considering how to attain investor appeal.

The main appeal of utility securities in the coming years will be, I believe, not to the speculative investor interested in large, quick capital gains, but to the investor attracted by the industry's stability and prospects for growth over the years. The decline of interest rates, both governmental and corporate, and the many undesirable characteristics of preferred stocks, have forced "defensive investors," including institutional ones, into common stocks. Fortunately for them, a whole new field of relatively conservative investment—as things go in these troubled times—has now been opened—utility common stocks. Primarily as a result of the Holding Company Act, highly leveraged and speculative holding-company securities have now been converted to the more stable common stocks of operating utilities. This is a major development in American finance. All of you are aware, I am sure, of the trend to change State laws to permit various types of institutional investors to buy common stocks. In some jurisdictions it is being done, in part, by extending the definition of "legals" to include stable utility equities; in other jurisdictions, including New York,

UNIVERSITY OF MICHIGAN LIBRARIES

there is pending legislation to substitute the "prudent man rule" for the legal list—a substitution which will permit trustees to invest in common stocks. Capital from savings banks, life-insurance companies, and personal trusts is becoming available for investment in this industry in ever-increasing amounts. The great growth which is now taking place in common-fund trusts, in investment companies, and in industry pension funds will increase the supply of capital for this industry.

These great sources of capital, primarily in the hands of sophisticated investors, will gravitate toward those utility companies which best maintain the essential characteristics of this industry—stability and growth—and which treat the investor fairly. The company which does not attain and maintain a balanced corporate structure without undue leverage will not appeal to these investors and will be at a disadvantage in competing for capital. As to what proper ratios are, the minimum objective today, I think, should be definitely higher than the 25-percent minimum common-stock equity which the SEC spoke about in 1939. Obviously, no one capital-ratio formula is suitable for all the companies in this industry, but a more conservative pattern is clearly discernible.

I want to mention a number of other factors within managerial control which are important to investors. Most of the industry is fully aware that investor confidence can be retained only by a policy of full and current disclosure. The word "current" should be emphasized. By and large, the utility industry does a good job in keeping investors currently informed and is conscious of the need of doing a better job. Many electric utility companies now announce monthly earnings figures, and most companies publish quarterly earnings statements. However, there are still a few electric companies and a number of gas companies who give general release only to semiannual or even annual reports. While some of these companies appear willing to provide quarterly statements upon request, the ordinary investor looks in vain for this information in the major financial services.

It is difficult to see why all utilities in the electric and gas industries should not, at a minimum, publish quarterly earnings data. Indeed, the time will come when utility investors, some of whom are required to make important investment decisions almost daily, will demand monthly earnings data from these industries. Publication of quarterly and monthly data not only keeps investors informed but also serves the additional function of keeping management "on its toes."

One of the most important attributes of a utility company to investors is its dividend policy. In the growing utility industry, many companies find that they must utilize retained earnings to assist in financing construction. Some utility companies, however, have attempted to finance their construction programs through a maximum of retained earnings and a minimum of new common-stock financing. Our experience has been that it is difficult to maintain or attain proper capital ratios in this manner because of the large amounts of new capital needed. It is well known that electric utility common stocks sell more on a yield basis than on an earnings basis. All other elements being equal, dividends paid, rather than income earned, is the most significant price-determining factor. A utility management which relies too heavily on retained earnings is, therefore, consciously or unconsciously, cheapening the price of its stock. If it errs too much in this respect, it is unfair to the utility investor interested primarily in income rather than in capital gains, and it is to the investor for income to whom it must look for new capital. If its price-earnings ratios are too low, it exposes itself to relatively severe dilution of earnings when it goes to sell common stock, and this in turn intensifies its reluctance for common-stock equity financing.

Of course, dividend policy must vary for each company and must take into consideration numerous factors, such as capital ratios, the nature and volatility of the company's load, size and history of the company, trend of earnings, rate problems, margin of safety of the proposed dividend policy, to mention only a few.

I do not want to be understood by what I have said as urging general dividend increases. But there is an optimum dividend policy for each company, and I am expressing doubt that all companies have given full weight to all the factors involved. One may err, of course, on the high side as well as on the low side, considering the necessity of having balanced ratios and financing construction needs.

We are now in the fourth year of the electric utility expansion program. During the first 2 years—1947 and 1948—many companies financed their expansion through heavy reliance upon senior securities, particularly debt money. It is estimated that common stock and retained earnings were only 24 percent of new-money financing, exclusive of intrasystem transactions, in the 2-year period 1947 and 1948, the balance being raised by 64 percent of debt and 12 percent of preferred stock. For the year 1948 alone common stock and retained earnings were only 19.8 percent of the new money raised. The common-stock market had been very good in the first half of 1946, and, apparently, companies could not reconcile themselves to selling common stock at the materially lower levels prevailing in 1947 and 1948. As you know, of course, the market has been steadily rising since June 1949, and we have seen a substantial amount of common-stock financing for this industry in 1949. It is estimated that in 1949 common stock and retained earnings constituted 33.3 percent of new money, exclusive of intrasystem transactions, the balance consisting of 53.6 percent debt and 13.1 percent preferred. The gamble that many companies took that markets would be better in 1949 paid off. But it was a gamble, and, considering the senior securities of the industry, it was gambling on a margin of only 31 percent for the median publicly held company in the industry. Utility managements should not be in the business of speculating on the stock market, and they do not, any more than you or I, have a crystal ball which can assure them that the market will be better next fall or the following spring.

In many cases appropriate common-stock financing is postponed because of the expectation that the next 6 months or the next year will see better earnings. Such a decision involves the assumption that the market will value those higher earnings on at least as favorable a basis as today's earnings. Of course, that is merely another way of betting on the market—which is not the business of an electric-utility company.

It is time to abandon the view that new issues of electric utility common stock should be confined to "boom" markets. By and large, the capital needs of the utility industry should be financed on an as-you-go basis. Under this policy, and in the light of the company's objective as to an optimum capital structure, permanent financing would always include common stock among the securities offered to finance expansion. In this way its capital ratios will be constantly maintained and it will assure itself of attaining its ultimate objective as to capital structure. As W. F. Stanley, of Southwestern Public Service Co., recently pointed out, a financing-as-you-go policy is similar to the policy followed by insurance companies in investing their funds as they go. The averaging of prices involved in financing-as-you-go programs should result over the years in relatively low money costs. A financing-as-you-go program reflects the growing status of electric-utility common stocks as a relatively stable investment security and assigns to them a constant and major role in the financing of utility construction.

As security analysts, your work has been greatly facilitated by the developments in the utility industry in the last 10 years. The elimination of "wind and water" from utility accounts and the simplification and integration of holding company systems have now placed security analysis in the utility industry on a rational basis. In the past, with few operating company equities available and with all the complexities and uncertainties surrounding holding-company securities, you could put only the speculative investor into securities of this industry—others had to be warned: "Danger, stay away." Today it is possible for you to speak with relatively greater confidence—I emphasize relatively—about this industry than perhaps about any other.

You, as security analysts, can play a dynamic role in keeping utility securities a relatively stable investment. Your views tend to be reflected in the investment advice people receive in all parts of the country. Investment decisions made by a small local trust fund in Kalamazoo or a large insurance company in New York reflect your recommendations. Utility companies should realize that, to the extent that their financial policies and other practices affecting investors minimize investor appeal, you, as a group will divert funds to companies which treat investors more considerately and more fairly. I would urge you to speak out, both individually and through the society, against unfair-to-investor practices. To the extent that you will reflect the long-run needs of the investor as distinguished from the in-and-out speculator in utility common stocks, you can become the articulate voice of the owners of this industry—its common stockholders. And don't forget the consumer. His interest in a public service industry should be, and is, parallel, and not antagonistic, to the interest of your clients'—and, therefore, your—interests.

Fuel Resources and the National Defense

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address entitled "Our Fuel Resources and the National Defense," delivered by Roderick Stephens, president of Roderick Stephens and Associates, Inc., public relations counsel, at the Eighth Annual Anthracite Conference of Lehigh University, on May 4, 1950. I may add, Mr. President, that the address is most pertinent, because it pertains to the recent coal crisis and the coal situation as a whole.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OUR FUEL RESOURCES AND THE NATIONAL DEFENSE

At the beginning of this century, bituminous coal and anthracite were the dominant

fuels of our Nation. The petroleum industry was in its infancy; the motor vehicle was still looked upon as a curiosity and the airplane was no more than the inventor's dream. Natural gas was not recognized as a major fuel resource.

Bituminous coal powered the locomotives of the Nation's rapidly growing network of railroads and except for the rapidly disappearing sailing ship, propelled our merchant marine, our infant Navy, and refueled the foreign-flag vessels that visited our ports to discharge and pick up passengers and freight.

Anthracite was the dominant fuel for domestic purposes in its distribution area which then extended to the Mississippi River and included a large share of the market of eastern Canada.

Then came the automobile, and with it the development of the petroleum industry. Its growth was predicated upon its fluidity which gave it a monopoly of the business of supplying motor fuel and lubricants to pleasure cars, trucks, busses, and farm equipment. Later, it fell heir to a similar monopoly of the fuel and lubrication requirements of the aviation industry.

Had the petroleum industry confined itself to these areas we would not now have to face a serious defense problem. However, we all know that the technological skills and marketing vigor and resourcefulness of the petroleum industry soon led to an invasion of every phase of the fuel business. As a result, today, substantially one-half of the Nation's energy needs once supplied by solid fuels are now furnished by liquid and gaseous fuels.

The progressive substitution of liquid fuels for solid fuels in maritime and naval service has created a major supply hazard in the event of war.

The extent to which our railroads have recently turned from coal to oil, creates another serious defense problem, for this means that another vital transportation service is now almost wholly dependent upon the petroleum industry.

Remember, too, that these vessels and these locomotives cannot be converted to coal in the event of war. They must be supplied with oil or must be laid up. Obviously, they must be kept in service.

Not only has the use of oil for all forms of transportation grown with the constant increase in the number of vehicles, planes, locomotives, and vessels in daily service, but oil has also become a major source of energy in stationary heating and power plants.

The still more recent and rapid development of transcontinental pipe-line networks for the transportation of natural gas from southern fields to distant markets has injected a new major competitor to both coal and oil. Having a demonstrated appeal as a laborless automatic fuel, natural gas is popular, not only with the domestic consumer but with industry. On that basis, natural gas as such, or in admixture with manufactured gas or as an enriching agent in gas manufacture, has become a major factor in the energy market. New and still more serious defense problems are thus being created, as to which the public is blissfully ignorant and the gas industry generally complacent.

From the standpoint of national defense, there are two basic problems which relate necessarily to all fuels. Do we have sufficient reserves and is our productive capacity sufficient to supply the total fuel needs of our civilian economy and of our Military Establishment, in the event of war? Also, do we know with any degree of exactitude, the extent of the reserves of solid, liquid, and gaseous fuels upon which we must depend, in the event of war, and do we know what will be the total fuel requirements of the Military Establishment, in the event of another war? Perhaps it should also be asked here whether the possibility of war is sufficiently remote so that we need not concern ourselves with the problem of our fuel resources and the national defense.

The last question is one on which the most responsible and best-informed authorities are in substantial agreement. General Marshall gave his estimate of the situation in the phrase, "the chips are down." General Eisenhower's public statements make it clear that he believes the possibility of world war III cannot be disregarded. The recent reestablishment of bipartisanship in the conduct of our foreign relations is significant.

The designation of W. Stuart Symington as head of the National Security Resources Board fills a post of vital importance with a man of ability and experience. It also serves to fill out the personnel of the National Security Council, which together with the Department of Defense, constitute the two key agencies jointly responsible for planning, preparing, and organizing the Nation's war potential, whether for offense or defense. Through these agencies and these leaders, we should be able to assume that our defense needs, in terms of fuel resources will be accurately estimated.

In World War II, the armed forces consumed approximately 1,750,000 barrels of oil a day. Of this amount something over a million barrels came from reserve productive capacity, about 200,000 barrels by forcing production beyond the maximum efficient rate, and about 500,000 barrels came from rationing. World War II taught us, however, that oil which has gone into commerce cannot readily be reclaimed for war needs. It is certain that if war comes within 5 years the purely military needs for oil would have a stunning effect on our entire economy. Industrial users of petroleum products who could not convert to other fuels would, presumably, be given high priority. Whether any liquid fuel would be left over for home heating can only be guessed now. Probably very little. Obviously, military needs will have top priority.

We now come to a question that can be reduced to a factual basis. What do we know about the Nation's reserves of coal, petroleum, and of natural gas? The answer is not reassuring, except as to coal. I assert, as a fact, that there are no data from disinterested sources on reserves of petroleum or natural gas. What these reserves really amount to has yet to be determined with any degree of accuracy or assurance. Further, I assert as a fact that the data that are available, all of which come only from interested industry sources, are so conflicting and contain such glaring discrepancies, that no sane person could afford to place any reliance upon such estimates in planning the Nation's defense. The facts are that the nature of the deposits and reserves of oil and gas do not lend themselves to precise determination, either of the extent of subsurface deposits or of recoverable amounts. Leading authorities on the subject agree that all such reports are estimates at best, which cannot be supported by evidence of the same validity as can be adduced for solid fuels.

The data upon which the Bureau of Mines rely for their published estimates of reserves of bituminous coal and anthracite was obtained by a comprehensive survey of coal deposits made by the United States Geologic Survey. No similar survey of deposits of oil or gas has ever been undertaken by any governmental agency.

Interested industry data contain glaring discrepencies on all types of liquid and gaseous fuels. I shall cite several authenticated examples. Many more examples are available. My first examples disclose discrepancies between figures published by the Oil and Gas Journal, recognized as an official publication of the oil and gas industry, in which are reported estimates of so-called proven reserves of various liquid and gaseous fuels, and corresponding estimates made by committees of the American Petroleum Institute and of the American Gas Association as contained in official publications of these associations.

PROVEN RESERVES OF TOTAL LIQUID HYDROCARBONS AND DRY NATURAL GAS IN UNITED STATES

Example I: From Oil and Gas Journal, issue of Jan. 26, 1950, page 190:

	Jan. 1, 1950	Jan. 1, 1949	Change
Crude oil, condensate and other natural gas liquids (millions of barrels)	28,586	27,325	[1] 1,261
Dry natural gas (billions of cubic feet)	178,136	175,187	[1] 2,949

[1] Gain.

From Official Reports, published jointly by American Gas Association and American Petroleum Institute, volume 4, Dec. 31, 1949:

	Dec. 31, 1949	Dec. 31, 1948	Increase 1949 versus 1948
Crude oil and natural gas liquids—total liquid hydrocarbons (millions of barrels)	28,378	26,821	1,557
Natural gas (billions of cubic feet)	180,381	173,869	6,512

Example II: Same date from Oil and Gas Journal, issue of Jan. 27, 1949, p. 189:

	Jan. 1, 1949	Jan. 1, 1948	Change
Crude oil, etc. (millions of barrels)	27,325	25,984	[1] 1,341
Dry natural gas (billions of cubic feet)	175,187	174,279	[1] 908

[1] Gain.

Same data from Reports of Petroleum Institute and Gas Association, vol. 3, Dec. 31, 1948:

	Dec. 31, 1948	Dec. 31, 1947	Increase 1948 versus 1947
Crude oil, etc. (millions of barrels)	26,821	24,741	- 2,079
Natural gas (billions of cubic feet)	173,869	165,926	7,942

Industry estimates of gain in reserves of crude oil, etc., exceed the estimates of the Journal by 23.5 percent for the year of 1949 and by 55 percent for the year of 1948. Greater discrepancies exist as to gains in natural gas reserves where industry figures exceed Gas and Oil Journal figures by 120 percent in 1949, and by 774.7 percent in 1948.

Other examples disclose discrepancies in estimates of reserves of gas attributed to specific fields as published in the Oil and Gas Journal and as estimated by a geologist who qualified as an expert for testimony before the Federal Power Commission:

Oyster Bayou field, Chambers County, Tex.

Field total as at Jan. 1, 1950:	*Barrels*
Oil and Gas Journal	60,000,000
Geologist	114,272,400

The geologist in question was Mr. David Hawthorne, a partner in Petroleum Consultants, Inc., Houston, Tex. He testified before Federal Power Commission on January 31, 1950, for Piedmont Natural Gas Co., Docket G-1165, Exhibit 359 C.

Fig Ridge field, Chambers County, Tex.

Field total as at Jan. 1, 1950:	*Barrels*
Oil and Gas Journal	18,000,000
Hawthorne	23,875,000

UNIVERSITY OF MICHIGAN LIBRARIES

This figure represented Mr. Hawthorne's estimate of the total capacity of that portion of this field owned by Sun Oil Co., approximately one-half of the area, the remainder being owned by the Texas Co., which was not a party to the proceedings and which portion of the field was not included in Mr. Hawthorne's estimate. Above testimony was given in same proceedings as involved Oyster Bayou Field.

In these two examples, the discrepancies are also startling. Mr. Hawthorne's figures exceeded the Gas and Oil Journal's estimates in the first field by more than 90 percent and in the second field, by more than 150 percent after equalization on an area basis.

Evidence of inaccuracy or uncertainty of estimates of qualified, expert geologists could be multiplied, indefinitely, from the records of the Federal Power Commission. As typical, I cite from the record, estimates by nine qualified geologists, three testifying as to reserves in the San Salvador field and six testifying as to reserves in the Carthage field. As to the San Salvador field, the facts are:

Estimator	Estimate made	Title of proceeding	Estimate (trillions of cubic feet)
SAN SALVADOR			
Ralph Davis.	Jan. 1, 1945	SEC	[1] 1.59
Albert Brokaw.	do	FPC Docket No. G-621.	[1] 1.32
Ralph Graham	Not available; probably 1948.	FPC Docket No. G-902.	[1] .97

[1] A different pressure base was used in each of the 3 estimates. For the purpose of comparison all 3 estimates have been converted to the same base (14.65 psia).

The difference between the Davis and Graham estimates is nearly two-thirds of a trillion cubic feet; between the Brokaw and Graham estimates, more than one-third of a trillion. The discrepancy is said to be accounted for by the discovery of a fault in the field which was not known to exist at the time of the Davis and Brokaw estimates.

As to the Carthage field the record is as follows:

Estimator	Estimates made	Title of proceeding	Estimate (trillions of cubic feet)
CARTHAGE			
E. O. Bennett.	Jan. 1, 1945	FPC Docket No. G-621.	7.27
F. S. Kelly, Jr.[1]	Apr. 28, 1945		8.00
Neil Williams.[2]	May 19, 1945		4.23
John T. Scopes.	Dec. 25, 1946	FPC Docket No. G-880.	5.35
Ralph Graham.	Jan. 1, 1947	FPC Docket No. G-808.	7.25
I. I. Gardescu.	July 1, 1948	FPC Docket No. G-859.	4.17

[1] President, Arkansas-Louisiana Gas Co.
[2] Special writer, Oil and Gas Journal.

The difference between the highest and lowest estimate for this field, which has been referred to as the third largest field in the country, is in excess of 3¾ trillion cubic feet. The Federal Power Commission's staff reported that the Carthage Field embraces about 300,000 surface acres, whereas Mr. Gardescu estimated its area at about 200,000 acres.

Another factor that creates a very special defense hazard is the fact that this Nation is importing a substantial gallonage of crude and residual oil from abroad. Some of these imports come from the Far East, the balance from South America. The effect of these imports is necessarily to diminish domestic production and discourage exploration for new pools. How then can we hope to raise production in the event of war, if our domestic productivity has remained stationary? Remember that we must assume that enemy action against surface ships, such as tankers, will be no less effective in world war III than in World War II. Where then will we get the gallonage to replace the imported fuel? Where will we find the excess productive capacity without which our war effort will be seriously impaired?

Our national defense is in jeopardy for lack of authoritative knowledge of what our oil and gas reserves amount to, and how much of each will be required by the military and how much will be left for civilian usage. Without such basic information no intelligent estimate of the fuel situation can be made by our military authorities.

Also, we had better not assume that "tidelands oil" can be relied upon if war comes, for we have no reason to believe that offshore production and transportation facilities can be protected against long-range bombers, snorkel submarines, rockets, guided missiles, or atomic bombs.

For all these reasons, therefore, we will be wise to encourage the adjustment of our civilian economy to a final pattern that will make it possible to meet the Nation's needs for fuel, not only from within our shoreline, but from sources of supply known to be available and by production facilities known to be adequate. To say that is to stress again the need to know what supplies of oil and gas and hard coal and soft coal are actually available and what output of each can be relied upon in the event of war.

It was with precisely such thoughts in mind that Senator FRANCIS J. MYERS from Pennsylvania introduced on the floor of the United States Senate by unanimous consent, on March 15 past, a resolution of inquiry which was referred to the Senate Committee on Interior and Insular Affairs. This resolution, known as Senate Resolution No. 239, proposed that the committee (or a subcommittee) shall inquire into "the available fuel reserves of the United States, with the aim of formulating an over-all domestic fuel policy." Other proposals are also pending in the Senate and in the House to create commissions to study and investigate the American coal industry or to regulate the coal industry. Senator MYERS' resolution, however, seems not only to be aimed at the heart of the problem of national defense, but seems also to be the one proposal with an excellent chance for speedy passage.

In introducing his resolution, Senator MYERS made reference to a parallel situation which was faced and solved by American industry and ingenuity, working in harmony with the Federal Government at the outset of World War II. His reference was to the problem created when our principal sources of crude rubber were cut off by enemy action. We had to hastily improvise a synthetic-rubber industry, by which process we solved a situation that threatened our war machine and our civilian economy.

To improvise a synthetic-fuel industry, however, on such short notice would be quite another problem. However there is one interesting fact, which is that we have the know-how to produce; in fact, we are already producing synthetic oil, either in the form of fuel oil or Diesel oil or gasoline from natural gas and at costs competitive with the natural product. That fact has an important bearing on the problem of fuels for defense. It suggests that we should not casually assume that natural gas can safely be substituted in unlimited amounts, either for oil or for coal, whether anthracite or soft coal. Rather should we establish by authoritative evidence, that there is enough natural gas and to spare, to serve the domestic and industrial needs of the States where it is found; enough and more to supply markets to which it is already committed for a 20-year period; and enough and more to supply new and distant markets, now being served by liquid or solid fuels. Also, we would do well to study the desirability of conserving a portion of our natural-gas reserves for production of synthetic gasoline for defense.

This proposed inquiry should be a matter of urgent concern to Senators representing States that must draw their fuel supplies from outside sources. Many such States are already dependent upon long-distance pipelines for a substantial quantity of natural gas. Those States will be well served by the passage of the Myers resolution. The inquiry it proposes should disclose just how much of the remaining gas reserves are already dedicated to pipelines now serving these areas, and for the usual 20-year contract period. Certainly no new lines should be permitted to tap those fields unless surplus reserves are proved to exist.

Another such group of fuel-dependent States that should demand such an inquiry are the New England States, into which it is proposed to feed natural gas from the deep South. This gas will presumably displace coal and oil in homes and industries. Despite high-pressure selling by promoters of natural-gas pipelines, Yankee shrewdness will discourage the buying of "a pig in a poke." It won't take long to find out for sure just how certain it is that the supply of natural gas is adequate to guarantee a definite and substantial quantity for an uninterrupted period of 20 years. Until such assurances are had, New Englind will be well advised to defer final approval of the project. The cost of converting coal- or oil-burning facilities to gas-burning facilities is substantial. Also, it is by no means certain, in the light of recent developments, what actual savings will be realized. But, most important is it to be assured that New England homes and industries will not face the same distress suffered by industries and their employees, in the winter of 1947–48, when automotive plants in Detroit and elsewhere had to close, due to failure of the supply of natural gas.

It must be remembered that conversion of fuel-burning equipment is costly and cannot be improvised. Some installations lend themselves to conversion; some do not. However, conversion equipment is not the only problem. Equally important is it to be able to increase production of the fuel to be substituted for the fuel that will be no longer available.

Certainly coal production facilities cannot be improvised. It is also difficult and costly to maintain idle coal-production facilities on a stand-by basis. Even more difficult and costly is it to maintain an idle coal mine for any length of time in "moth balls." It is literally impossible. That is another important unsolved defense problem.

Nor can we improvise the manpower needed to mine coal. There lies another problem with an important bearing on national defense. It also has an impact on public welfare that should not be ignored in time of peace.

Rail transportation service and facilities are also directly involved in the problem of national defense. Transportation of men and material involves the military problem of logistics. There is no more important problem of logistics than the logistics of fuels for defense. Here, too, it is vital to recognize that we cannot improvise rail facilities and we will do well to determine what rail transportation needs will be involved if a widespread conversion of fuels will be demanded by defense needs.

National security should not be left to chance or guess work. The Nation's need for fuels should be definitely forecast and its requirements assured by intelligent provision. It does not appear feasible to stock-pile coal, or at least, not soft coal, which is subject to spontaneous combustion and which disintegrates with exposure to the atmosphere.

Stockpiling of any coal is a costly process and should not be attempted unless there is no other way to provide against a national fuel scarcity. Crude oil can be stock-piled but it makes little sense to pump it out, then to force it back into underground pools from which it may then be withdrawn a second time. The same remark applies to natural gas.

However, the purpose of this address is not to solve the problem but rather to state the problem and suggest how we should move toward a solution.

Abraham Lincoln once said, "If we could first know where we are, and whether we are tending, we could better judge what to do and how to do it." I know of no better way to accomplish this purpose than to pass Senate Resolution 239 and then proceed with the inquiry as authorized.

The Senior Partner

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1950

Mr. COOLEY. Mr. Speaker, under leave to extend my remarks, I submit for the record a speech delivered by the Honorable Knox T. Hutchinson, Assistant Secretary of Agriculture, before the National Rivers and Harbors Congress, on March 24, 1950:

THE SENIOR PARTNER

I welcome this opportunity to appear before the National Rivers and Harbors Congress.

A richer, safer, and happier life will be assured for all our people when we have learned to use to best advantage all our resources in land and water. This is the goal of true conservation which we in the Department of Agriculture share in common with you.

This is the reason, I presume, for inviting me to talk about the Department's land and water policies. I must add—with all good will—that you were preeminently wise in limiting me to 15 minutes.

Nearly everything we do is connected in the long run with the conservation and use of those resources. My text, therefore, is one upon which we could dwell for many hours in going over the broad sweep of the Department's work to advance the cause of conservation.

In research alone, we are pushing ahead with scores of projects which will give us a firmer hold upon our valuable topsoil. And I mean that in its most literal sense. Nothing short of a bulldog's undying grip will preserve our heritage of soil for the America of tomorrow. The wide range of our research includes tillage, grazing, and forestry practices, the selection and breeding of superior varieties of grasses and legumes, and the application of lime, fertilizers, and other minerals to the soil.

More and more we are coming to understand that our research, like agriculture itself, does not fit into neat little subdivisions. We must conduct our research so that the findings of all its visible parts can be usefully applied in a complete farming operation. This has logical appeal for farmers. Their farm work is often complicated by the difficult task of jigsawing the splendid recommendations of the specialists into a workable farm system.

But there is a far deeper reason for research which employs new discoveries and new methods in combination. Often there is a high degree of interaction among them which gives the separate practices added value in the right combination. The principle of interaction assures maximum benefits far exceeding the results of piecemeal application.

We must employ this same principle in our farm programs. It is the highroad to a satisfactory solution of the interrelated problems of farm income, soil conservation, and family farm living. We cannot treat them in fragments with any genuine hope of permanent improvement.

This is true when we approach agriculture as the primary use of our resources in land and water.

This is equally true when we view farming as the potential soft spot in the Nation's economic welfare.

In fact, there is a vital connection between these approaches.

Let's put it down—here and now—as a No. 1 fact that soil and water conservation problems have economic roots.

Rapidly plunging farm income is a storm warning. It tells us in unmistakable terms that erosion and fertility losses will rise with increasing speed.

The unblinkable fact is grounded in the realities of farming.

Let me illustrate.

First, the ordinary reaction to falling income is to increase production by mining the soil.

This is often the only recourse for farmers pressed with debts and fixed farming costs. By increasing their marketings, farmers can manage for a while at least to keep up their income.

But this practice sets the spurs to erosion and fertility losses.

You may well consider the farmer's choice unwise.

But let me speak for my fellow farmers.

They are usually confronted with the bitter reality of making less and less income do the job of feeding, clothing, and caring for farm children, meeting interest and payments on the mortgage, and paying out what cash they can to keep their farms operating. This skeleton of words fails by far to describe all the hardships and sacrifices that go into the painful task of keeping the family on the farm.

Second, conservation costs money in cash and often in temporary reductions in farm income.

Even some of our stout-hearted conservationists forget this fact and expect farmers to live up to their stewardship of the land without the cash and capital for the essential work. This armchair attitude reminds me of the proverbial prize-fight manager who urged his battered and reeling contender on with these brave words:

"We can lick him!"

Farmers need real backing all the way to carry the main burden of the Nation's efforts to retain its reserves in fertility and its resources in topsoil. Indeed, we have to get in and help them fight—when we can and where we can.

A fair income for farmers rightfully should stand in the first line of defense which the National Congress of Rivers and Harbors has long endeavored to build and strengthen against floods and their choking tides of silt. For this reason, sensible and workable income supports have a proper place in conservation. But our programs should do more than protect farm income. Farmers should be encouraged to undertake the types of farming, especially livestock and grasslands enterprises, which are best designed to maintain our resources as well as to feed and clothe the Nation.

In our conservation, in our flood-control programs, in our resolute efforts to harness great rivers for navigation, irrigation, hydroelectric power, recreation, and improved water supplies, we cannot safely ignore the sum total of individual farming operations which constitute the business of farming.

Farmers have an interest in the utilization of land and water and the policies which influence such use.

This interest must be clearly recognized if we are to achieve good farming everywhere. In its fundamental sense, good farming, which is the basis of soil conservation is nothing more nor less than the use of those resources to the best advantage of the farmer, the community, and the Nation. The widespread failure to understand this fact has created a gulf which separates the programs of the Department of Agriculture and the programs of other public agencies in land and water utilization.

There is a world of difference between the methods employed in an engineering program of public works and the Department's and—I must add—the farmer's usual approach to the same problem on his land.

In an engineering program, the Government acts as its own agent, uses public funds for all the costs, even when they are partially reimbursable, and carries forward the work on sites where the Government has established certain property rights.

But a farm program can only advance when it has won the confidence and cooperation of farmers.

Their conservation work must dovetail with going farm operations which must pay their own way and yield returns over and above net out-of-pocket costs. Even when the Government offers reimbursement in part for conservation, the farmer's share of the cost usually far outweighs the Government's contribution. Conservation farming has to demonstrate that it offers a fair return on this investment. Nor can this return be figured in intangible benefits.

The farmer is our partner in conservation—the senior partner at that.

As a result of these interests and responsibilities, a basic understanding has grown up between the Department and the farm and livestock people. We put a high value on this partnership.

The power of the Government's conservation dollars get a real boost from the dollars that the farmers put up. This is something worth thinking about. Here is a fund-matching system in which the private citizen—in this case, the farmer—puts his own money on the line on his own initiative.

It has been the means of accomplishing many important jobs in which the vital interest and security of the Nation have been protected as well as the basic welfare of farm people.

The dual objectives of production and conservation require a unified approach.

On individual farms the treatment of cropland, forests, and range forms one over-all farm problem.

On large areas of forested lands, forestry improvements must be considered in the light of the need for grazing the same lands. In many areas in the West, the use of grazing areas is closely related to the production of supplemental feed on irrigated land.

Cutting across these separate problems and tying them together is the problem of the conservation, use, and control of water. On the individual farm, the relationship of water to land has primary importance whether the problem is erosion control, conservation of water for crop production, safe removal of excess water, or bringing water to arid lands. What we do on upstream forests and ranges has a bearing on flood control farther downstream. The impact of conservation on the farm goes beyond flood control and irrigation and influences our fish and wildlife resources, recreational opportunities, and water supplies for navigation and for domestic and industrial uses.

This same unified treatment likewise applies to the intimate interrelationships among all the segments of the Nation's conservation and land-use problems.

The Nation is becoming increasingly aware of the pressing necessity for the development and conservation of all its natural

UNIVERSITY OF MICHIGAN LIBRARIES

resources. Comprehensive, multiple-purpose plans for resource development are gaining widespread recognition as the best way of doing the job. We likewise are learning that a river basin or some other large region with common interests offers an ideal base for developing and advancing these plans. The evolution of this idea began with flood control, navigation, irrigation, and water power.

But these regional programs with their accent on water have only served to emphasize the inseparability of land and water. As a result, the agricultural agencies are finding it increasingly necessary to adapt their programs to the basic need for treating land and water as a unit.

My lifetime business is farming where we have learned and learned again the lesson that land and water must work together.

We should endeavor to deal with our problems at their very beginning on the land where the water from rain and melting snow starts rushing downhill. This is the beginning of one of nature's most powerful forces. Here on the farm it is still a man-size problem instead of the monster it becomes farther downstream. We should begin to meet the challenge of floods back on the farm. Here we can summon the aid of our strongest allies—the land itself—the furrow contoured across the slope—terraces and waterways and ponds—and trees and grass. Upstream dams have their place in conservation. But they offer at best only temporary benefits unless they are supported by good farming. Silt and sediment from unprotected and poorly managed farm land can turn into folly our reliance upon channel control str' ctures—large or small, upstream or down. We must never forget that the land itself is our foundation.

Agriculture has only begun to show what it can do in meeting the Nation's land and water problems. The present disparity between agricultural conservation and other water programs must be closed if we are to obtain the full benefits of a balanced attack.

The Department has recently taken an important step to adapt its work to the severe problems of the Missouri River Basin. Our proposed program is now before the Congress for consideration. Nine agencies of the Department and the agricultural and forestry agencies of the basin States pooled their knowledge and technical resources in its preparation. We have also taken the necessary first steps to bring the essential benefits of integrated agricultural work to the support of a comprehensive program for the Columbia Basin.

The question may well be asked: "Why is a special agricultural program necessary for the Missouri Basin?" The Federal and State agricultural agencies now do a lot of work in the basin as part of our Nation-wide programs. It is necessary, however, to fit these activities to the pressing needs which are arising from the swift progress of the engineering program Congress has authorized for the main channels of the Missouri and its larger tributaries.

Soil surveys, for instance, illustrate the need for accelerating our work. Under the regular Nation-wide agricultural programs, we expect eventually to make classification studies of all the soils of the basin. In the case of lands proposed for special development, use, and treatment, however, this information is needed in time to guide these developments in their formative stages. This same principle applies to the other aspects of our agricultural programs.

The problem has been met by making an inventory of all agricultural needs in the Missouri Basin, determining a timetable for meeting these needs, and setting up an action program to meet them.

The Department's Missouri River Basin proposal is significant. It points the way to a balanced effort in basin improvement throughout the country. Up to now, the agricultural work has lagged behind the installation of public works for flood control, power, navigation, and other purposes. The principle of interaction should be given opportunity to demonstrate the worth of soil and water conservation in complete land and water programs.

In closing, I want to emphasize again the need for a continuing close working relationship between farmer and government in all efforts to utilize land and water. This should be the dominant theme as we move forward.

Public welfare requires that farmers have the support and assistance of effective and well-adapted public programs. But there is a vital function that only the farmers can perform through the wise management of their own farms and by working together in their own organizations and local institutions. Government can never provide a substitute for the farmer's own efforts. Government's role is essentially one of assistance. We must always remember that each farm family is the custodian of the basic resources upon which the destiny of a great nation ultimately depends.

Articles by Howard Watson Ambruster

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. SABATH. Mr. Speaker, under leave granted me, I desire to insert into the RECORD three articles by the well-known expert on German affairs, Howard Watson Ambruster, which appeared in the Daily Compass. One article is entitled "McCloy Ducks Denazification Mess in Reich," and bears the date of February 22, 1950. The second article is entitled "United States Apology for Nazism Spread in West Reich," under date of February 23, 1950; and the third article is entitled "The Cartels That Worked Against Us When It Hurt," bearing the date line of March 8, 1950.

These facts should be brought to the attention of the American people, and the articles follow:

[From the Daily Compass of February 22, 1950]

McCLOY DUCKS DENAZIFICATION MESS IN REICH

(By Howard Watson Ambruster)

United States High Commissioner John J. McCloy has not waited long to recant publicly his tough talk to the Germans on February 6. He has now let it be known that he has no intention of exercising his authority in the denazification bribery scandal uncovered at Stuttgart.

This flagrant denial of his own official responsibilities came only a few days after McCloy had denounced to a press conference the high German official who endeavored to cover up this denazification mess. The latter, Reinhold Maier, minister-president of Wurttemberg-Baden, had made a vicious public attack upon Maj. Gen. Charles P. Gross, the United States State Commissioner. This was because General Gross, very properly, had asked for a thorough investigation and drastic action against those involved in the fixing of denazification trials.

JUDGES BRIBED

It has been revealed that considerable sums were paid out in bribes for the whitewashing of more than 500 Nazis by so-called court action. Prominent Stuttgart industrialists were among those who were cleared of all charges of Nazi activities by the simple process of buying the judge. Thousands of others were pardoned after conviction.

The defiance of United States authority by Maier appears more flagrant in that one of his own denazification ministers, Karle Stroele, is involved. Stroele's own acquittal of being a Nazi, by an earlier German tribunal, has also been questioned. It is charged, too, that Stroele made the deal with Dr. Hjalmar Schacht by which the 8-year labor camp sentence against that notorious Nazi was nullified in North Wurttemberg on June 13, 1949.

After this Stroele skullduggery, Maj. Gen. George P. Hayes, Deputy United States Military Governor, publicly announced that Dr. Schacht was thereby fully qualified for appointment to high place in the new government of West Germany.

Aside from protecting Stroele, Herr Maier appears to have a very odorous record personally on denazification. A parliamentary committee of his state of Wurttemberg-Baden has been instructed to investigate some 10,000 pardons or commutations which he granted to Nazis. These were Hitler followers whose records were so bad that even the packed German tribunals had not dared to whitewash them.

M'CLOY SIDESTEPS

In this connection, Herr Maier is on record as declaring that American denazification policies are all bunk.

Before McCloy returned from his recent Washington trip, some of the United States staff at Frankfurt fully expected that he would invoke the occupation statute and make use of his unquestioned authority to clean up this noisome mess as soon as he got back on the job.

The High Commissioner did use some hard words when he returned. Now he has meekly subsided. He has sidestepped the issue as a "purely local situation." Herr Maier's blast at General Gross is thus vindicated. So, it would seem are his views on denazification.

It has been given out, officially, that the United States High Commissioner has no powers to intervene in this affair unless it is clearly proved that the Minister-President has violated the German state constitution.

HOSTILE ACT

On the record this excuse appears to be an arrant fabrication. The attack made upon General Gross constituted an openly hostile act directed at the authority of the Allied forces. That offense comes squarely within the powers expressly reserved to the Allies by the statute under which the Government of western Germany exists.

As such McCloy can, and should, back up his scolding by drastic action—at least the removal of Maier from his office.

[From the Daily Compass of February 23, 1950]

UNITED STATES APOLOGY FOR NAZISM SPREAD IN WEST REICH

(By Howard Watson Ambruster)

Denial of war guilt by the Germans presents one of the most serious obstacles to establishment of the Bonn government as a peaceful democracy. Despite this, a bold apology for German war lust and Nazi murders is now being distributed in Germany with apparent United States official approval.

Even worse, this rank pan-Germanism propaganda is an article written by a high-ranking subordinate of James W. Riddleberger, director of political affairs on the staff of United States High Commissioner John J. McCloy.

Dr. Kurt Glaser, an American-born citizen now serving in Germany, is the author

of the article. Entitled "The So-called German Mind" it appeared first in the Antioch Review, published at Yellow Springs, Ohio. This quarterly enjoys the prestige of Antioch College, although not an official publication of that institution.

The article, in effect, purports to refute the accepted belief in the intellectual dishonesty of the German mass mind. It also denies the average German's willingness to respond with incredible brutality when even a ruthless leadership believes the right moment for world conquest may come again.

Dr. Glaser's apologies had been translated and is being distributed throughout western Germany by the German Institute of Public Affairs.

According to a German correspondent of this reporter, the Institute is a pseudo-official organization made up of representatives of a dozen or so German groups. Its headquarters are at Frankfurt. With official sanction and approval from the McCloy staff, the Institute appears to be one of the most important sources of so-called Allied or democratic doctrine in Germany.

Through this authoritative voice, the western Germans are now being given, as a reliable American viewpoint, such sophistries as a comparison of the Nazi mass murders with the treatment of Negroes in America and the political morality of the British during the European expansion of the last century.

German weltanschauung is justified with the naive assumption that the fatherland, as put together by Bismarck, is merely going through a growing-up process a little later than England, France, and the United States. The thinking Germans of today, says Dr. Glaser, demand that they be accepted as a nation which is just as moral as the western allies.

They should also insist, he says, that the evilness of the Treaty of Versailles has already been conceded by the Allies, and that no de facto cession of German territory should ever be recognized.

CITES "WRONGS"

A dramatic Germany is thus instructed to "plan for the day when these wrongs can be righted." They are informed that their justifiable dissatisfaction with "conditions of the armistice does not mean that the 'German mind' is planning new deviltries."

In view of the chaotic conditions now existing in Germany due to the scuttling of every vital war objective and occupation policy the sanction of this kind of propaganda is like pouring oil on a blazing fire.

[From the Daily Compass of March 8, 1950]

THE CARTELS THAT WORKED AGAINST US WHEN IT HURT

(By Howard Watson Ambruster)

Robert Bosch, founder and mechanical genius of the great German combine bearing his name, had a younger brother, Dr. Carl Bosch, who was a founder and chemical genius of the German Dye Trust, and of its successor, I. G. Farben.

Each was a master technician of the industry in which he played so important a part. And each made full use of the economic mechanisms of combine and cartel to dominate German Government policies and promote the world conquest dreams of pan-Germanism.

Both were highly educated aristocrats with the arrogance typical of their class toward their fellow men.

INDISPENSABLE IN WAR

Robert, in the electrical and petroleum motor industries, Carl in the production of chemical and synthetic materials, were indispensable for plotting and waging modern war.

Total war (mass destruction) dates back to the turn of the century, when the gasoline engine replaced the horse for ground transport and made aerial warfare possible. The inventive genius of Robert Bosch emerged here. TNT, the original explosive suitable for mass destruction, was first made from dye byproducts 10 years before World War I. Synthetic nitrogen and poison-gas warfare were two of Carl Bosch's notable achievements in that era.

Neither lived to witness the final destruction which resulted from the nefarious use to which their great talents were directed. Carl died in 1940 and Robert in 1942.

Their successors did not change the pattern they designed.

CONTEMPT FOR UNITED STATES

Another close parallel in their careers appears in their hatred and contempt for the United States. It is also found in the fact that the American Bosch Magneto properties and the Dye Trust subsidiaries in this country were both seized by the United States as enemy-owned during World War I, and then sold to American citizens who pledged never to permit them to be returned.

Those pledges were violated contemptuously and illegally. The German Bosch regained control of the American Bosch Co.; Farben regained control of its World War I properties.

During World War II, these properties were again seized as enemy-owned. Now American Bosch and some of the Farben properties have again been sold. And more pledges have been given, as will be told later.

A notable characteristic shared by the two brothers appears in the use which these men caused to be made of their American properties. These German "hide-outs," their ownership disguised with incredible duplicity, were used before and during both world wars as secret headquarters for German espionage, sabotage, and propaganda.

FANTASTIC DOUBLE-DEALING

All this was made possible by fantastic double-dealing bribery and corruption. Some of this has been made known through congressional investigations, criminal prosecutions, and other court proceedings. Much of it, especially of the last war period, while known to exist, has not yet appeared in official public records.

Before the United States entered World War I, Otto Heins, manager of the American Bosch Magneto Co., was accused by German Ambassador of violating the German code by supplying magnetos for British airplanes. Heins' defense was that he accepted the contracts in order to retard production and cripple war material production. The excuse was accepted—by the Germans.

During World War II American Bosch for months delayed the production of airplanes which were being made here for the Allies.

ESSENTIAL PARTS UNDELIVERED

Essential parts were not delivered and the United States Government failed to do anything about it until after we entered the war. United States production of Diesel engines also was retarded before and during World War II by actions of American Bosch dictated from its German owners.

Likewise, espionage of confidential technical data, highly important for the German military, was conducted during both war periods through the American Bosch companies. Bosch engineers who formerly had free run of the United States Army and Navy technical data were finally ordered to keep away from our experimental fields.

Despite this warning, in 1941 the United States Bosch management defiantly attempted to sandbag another American manufacturer into revealing his own technical secrets in return for a sublicense to use a Bosch device.

Surplus Food to Needy

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1950

Mr. HAND. Mr. Speaker, a few days ago the Atlantic City Union published an editorial entitled "It's Time To Place Surplus Food Within Reach of Poor." This is in line with persistent efforts that many of us have been making here in Congress, and points up the problem very clearly. It seems to me it should be read by the membership of the House.

The editorial follows:

IT'S TIME TO PLACE SURPLUS FOOD WITHIN REACH OF POOR

Surplus butter and cheese, owned and stored by the Federal Government—that is, by you and me—have been made available for free distribution to needy Americans. We have fed the world; now it's time to do something for our own hungry folk.

The Agriculture Department has placed 15,000,000 pounds of butter and 5,000,000 pounds of cheese on the list of "give away" commodities. Those eligible for the food gifts will include public and private relief agencies, the school-lunch programs, and the Bureau of Indian Affairs.

The provisions will be added to items already on the free distribution list, such as potatoes, dried eggs, and dried milk, and issued from the stock of foodstuffs acquired by the Government, and now valued at approximately $4,000,000,000.

Now, we're doing something beneficial with this mountain of products, raised on American farms, and processed.

There are marked differences of opinion in both political and economic circles as to whether Uncle Sam should continue to buy surplus outputs from his kinfolk on the farms and in the dairies in order to regulate prices. But having become a buyer on a gigantic scale—probably the biggest in the history of any country in time of war or peace—practical use should be made of the stuff—perishable for the most part.

It should not be permitted to spoil. There are many persons of very small income, inadequate means, who should be enabled to share the use of this enormous store of edibles, bought at great expenditure of public funds.

But the question is, how to distribute it so it will reach all who need it. Surely, in a country noted for its efficiency and ingenuity that should not prove an insurmountable obstacle. Bring the goods to designated points for distribution. Make it accessible. Undoubtedly it will prove to be a big task—and cost money—but the details can be worked out by experts.

Incidentally, the handling of these huge stores would give employment to some of the jobless in every area where the stuff would be sent. The important point is that the produce of the soil, and of poultry farms, and dairies—the best food in the world—will be placed within reach of those who do not get enough, who may be undernourished, easy prey to disease—and there are too many of these people in a land of plenty.

It's little short of criminal to permit good nourishing food to perish when people need it—all for lack of initiative in working out distribution methods.

Bountiful providence has blessed us with an abundance. There is grim want in some lands. There is famine in others—due to war ravages, and crop failures. Therefore, it

UNIVERSITY OF MICHIGAN LIBRARIES

is virtually flying in the face of providence to delay doing something about handing out this surplus food to those unable to buy it—or rather to buy enough of it.

Yet, this has been going on in the United States ever since the Government began buying the food. At the same time, huge sums are being distributed in every State in the form of grants-in-aid to the indigent, or near-indigent. These grants are inadequate. Augment them with the surplus bought with public funds.

President Truman's May 8, 1950, Speech at Lincoln, Nebr.

EXTENSION OF REMARKS
OF

HON. EUGENE D. O'SULLIVAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1950

Mr. O'SULLIVAN. Mr. Speaker, I know that every Member of this House of Representatives, and every other citizen of our country, whose political faith and judgment is founded upon true loyalty to his country and respect for duly constituted authority, regardless of his or her own political faith, will be interested in knowing that President Harry S. Truman made an important speech in the State of Nebraska, my home State, yesterday. It was his first major speech on his present westward journey across the United States on several dedicatory missions in Western States.

His speech was as follows:

I have been looking forward very much to this visit to the Middle West. This is my home country, and I always enjoy coming back to it.

I am particularly glad to be in Lincoln on this trip.

Here in the center of the Nation, where the Corn Belt merges with the Great Plains, we can see clearly the greatness and the importance of American agriculture.

The city of Lincoln depends on the farming areas around it for the sources of its livelihood. The city draws products from agriculture, and in turn provides goods and services to the smaller towns and farm families nearby. This is the pattern all over our country.

The whole development of this Nation shows how city and country, industry and agriculture, can grow and prosper together, by cooperation and with mutual benefit.

What's true of our country is true of the world.

This country today, along with other free countries, is engaged in a tremendous effort to bring about peace based on freedom and justice. Make no mistake about it, the struggle we are in now is just as important to our future as was our victory in the last war.

If we are to win through to peace, we must maintain a healthy and strong economy. And our economy can grow and prosper only if the other free countries grow and prosper also. For the genius of freedom is to succeed not by exploitation but by cooperation.

American agriculture is directly concerned with the success of our program for peace. You here in Lincoln are directly affected by what happens these days in Berlin, in Paris, in Singapore.

No one should know that better than the American farmer, because farmers remember what happened to them after the last war.

In the early 1920's the bottom fell out of agriculture in this country. Export markets disappeared. Prices plummeted down. The price of corn dropped in 18 months from $2 to 42 cents a bushel. The price of cotton fell from 40 cents to 10 cents a pound. Land values collapsed. The resulting agricultural depression in the 1920's was the forerunner of the national depression of the early thirties.

Those were the days when international trade barriers were built up and up, in a foolish and futile effort to gain advantage at the expense of somebody else. Those were the days when the farmers were left alone to struggle with their problems while the rest of the country went up and up on the bubble of the boom.

When the bubble burst the hollow nature of that boom was revealed. Our country and the whole world suffered the agony of the great depression.

It is perfectly evident now how the world-wide depression paved the way for the Second World War.

That is why we are doing everything we can to see that the same thing doesn't happen again. That is why we are working so hard to bring about a sensible development of world trade and a healthy world economy. That is why we are determined to prevent another agricultural depression.

Fortunately, we have the experience of the last 17 years to guide us.

In 1933 we started in to attack the national depression at its roots. One of our first efforts was to overcome the farm depression. We developed special credit programs to rescue farm families. We stepped up agricultural research to develop better crops and broader markets. We started national soil-conservation programs to restore the basis for abundant production. We developed a price-support program to assure farmers a fair income.

These and other farm programs helped farmers and they helped the whole country. The national farm income in 1940 was twice as large as in 1932—which meant twice as big a farm market for industrial products. As farm income increased, the income of the rest of our people also increased. This was a practical demonstration of the truth that the people of this country prosper together, or they suffer together.

Of course, these new farm programs were opposed by selfish or short-sighted people. It was the same kind of mud slinging, name-calling opposition that you hear now every time we bring up a new proposal for the benefit of the people.

I remember when I first went to the Senate, an important farm bill was being debated which became the foundation of our present agricultural conservation program. Over in the House of Representatives, one Congressman said this legislation was "an attempt to enslave the farmer," and that it was "communistic." Another Congressman said that under this legislation farmers would be "dominated and regimented for all time"—they would "no longer * * * be free men."

These were the same people whose weird brand of "statesmanship" had brought us to the low point of 1932. They and their kind opposed all the efforts that were made to get the country out of the trouble they had got us into—just as they are opposing our efforts to improve things today.

When you think how miserably wrong they have proved to be in the past, you can see just how little truth there is in the wild charges they are throwing around now.

They said—back there in the thirties—that our farm program was "an attempt to enslave the farmer." Instead, it has made the farmer free—free of the crushing burden of debt that had driven him to the verge of revolution in those dreadful days of the depression.

They said our farm programs were "communistic." Instead, they have strengthened the foundations of democracy by making the farmer more secure in the ownership of his own land.

They said farmers would be regimented. Instead, farmers regained control over their own destinies, and under these programs they have enjoyed more liberty and led a better life than ever before in history.

That is the real story of what happened under our new farm laws.

These laws led to freedom and prosperity. They were and are strong bulwarks for our free an democratic society. Remember that fact when you hear people today croaking the old charges of socialism and regimentation about every new proposal for progress.

Then, when the war came along, our farm programs proved their worth all over again. The soil conservation, research, and education programs made possible an enormous rise in farm output, even though fewer people were available for farm work. The stored-up surpluses of cotton and wheat and other crops, which had been bitterly criticized before the war, turned out to be extremely valuable.

The price-support system was adapted to wartime needs. It was used to encourage farmers to increase total production and to turn out the right amounts of each essential product. As a result, we provided well for our fighting men and our war plants, we shipped great supplies to our allies, and our civilians had more and better food than ever before.

The tremendous expansion of production during the war was equally valuable when the shooting stopped. In the years since the war, literally millions of people have been saved from a starvation diet by the products of our fields. Food from this country helped to stop and roll back the advance of communism. Without that food, many of our friends in Europe would have been lost to the cause of freedom.

Today, our farm programs are undergoing new tests. They have proved their worth in bringing about economic recovery and meeting the demands of war. During the last few years, we have been faced with the problems involved in readjusting to peacetime needs.

Two things have been made abundantly clear. First, that our programs have served us well—have indeed been our salvation—in preventing the kind of disaster that followed the First World War. Second, that there are defects in the present system which require correction.

One of the main reasons we have had no serious economic downturn since the war is the farm price-support system. After the First World War, net farm income dropped nearly 50 percent in a single year. This time, when the market prices of some commodities began to fall sharply, the price-support system checked the decline and protected farmers' incomes. Everybody in this country is better off today as a result of this fact.

However, our present farm price-support program is not fully satisfactory. It is not encouraging the substantial readjustments in production that are needed now. It has allowed farm income to slide downward too much and too fast.

In the last 2 years, farm income has dropped more than 20 percent. That is nothing like what happened after the First World War. Nevertheless, it is serious. This drop is not good for farmers, and it is not good for the rest of the country. We need to take positive action to stop and reverse the trend.

Furthermore, the present law provides no satisfactory basis for dealing with perishable crops. The present program relies on the Government's taking off the market commodities which are in temporary surplus. That works all right for products that are storable, as long as we don't build stockpiles bigger than may be needed in an

emergency. But such a system doesn't work for perishables.

It is foolish to have the Government buy and store food that people want to eat now. It is even worse to have the Government buy food and destroy it, but that sometimes happens under the present program.

Everyone knows about the shameful potato situation. This can lead to public resentment strong enough to discredit the whole farm program. The taxpayers should not be expected to foot the bill for buying food which has to be wasted.

These obvious defects of the present support program have led to a great clamor. Some people would like to abandon the program altogether. Others would like to abandon all of it except the part that helps the crops they are particularly interested in. Others are just interested in muddying the waters for partisan political advantage.

It is not easy to disregard this clamor and see clearly what is right to do in the interest of the whole Nation. We must base our decisions on the facts that are demonstrated by our experience.

We must preserve the good features of the present program. They are built on a solid foundation. They are necessary for our own welfare and that of the free world. But we clearly need to improve and strengthen existing legislation.

This administration has made a very careful study of the changes that are necessary to adjust our farm support program to present conditions. A series of recommendations were worked out within the administration and were presented to the Congress last year by the Secretary of Agriculture. Those recommendations take the existing program which has been built up through years of experience, and seek to improve it further to meet the shortcomings which are evident.

No one claims that these recommendations are perfect in every detail. We are constantly looking for ways to improve them. I am firmly convinced, however, that they form by far the most comprehensive, effective, and progressive proposals that have yet been offered.

The essential purposes of these proposals can be very simply stated.

First, they are designed to obtain the amounts and kinds of farm products that are needed in an expanding economy, and to assure farmers the opportunity to earn a fair income for producing those products. The support program must encourage farmers to reduce costs, and to shift production to the commodities for which we ought to have expanding markets. In particular, it should encourage farmers to shift into livestock, rather than to continue producing surpluses of such crops as grain and cotton.

Under the proposals we have made farmers would be given incentives to make the needed shifts in production. Farmers would be assured of support for all the crops which yield a major share of farm income. At present some of the most important ones are left out. Furthermore, recent production and prices, rather than some out-of-date historical period, would be used in calculating fair income support levels. These are obviously desirable changes.

It would continue to be necessary, in some cases, to limit production to genuine consumer demand, in order to avoid surpluses greater than amounts which are needed for storage. There are some people—the same people who have been against the farmer all along—who seize on this fact and go around crying "regimentation" and talk about how the farmer is going to lose all his liberty.

Now, this is just as strange as it can be. The truth is that such limitations have been provided for in our major farm support programs for many years. We have known since the experience of the Federal Farm Board, some 20 years ago, that there are times when some control of production is needed to make a support program workable. Unless production controls are available on some crops, for use when needed, price support could be an impossible burden on the taxpayers.

And here is something to remember: under our system quotas are not imposed unless two-thirds of the farmers affected vote for them. When two-thirds of the farmers vote to adopt quotas for themselves it is preposterous to go around calling that regimentation. Moreover, quotas are administered by local committees, elected by the farmers themselves. These production controls are in complete accord with the tradition of democratic self-government.

The second purpose of the administration's proposals for changes in our support program is to provide a method for using our entire supply of perishable products, instead of taking part of it off the market and putting it on the shelf. Under our method, all the product would go into the market and be consumed. A system of direct production payments to farmers would make up any difference between the average market price and a fair return.

Such a system would be simple and efficient. The farmer would be sure of getting at least the support price. The people of towns and cities would get the benefit of what is produced.

I have heard this system attacked on the ground that it would cost too much. Most of the fantastic estimates of cost you hear are made by those who don't understand how it would actually work. When you study the facts, you will see that this plan should cost no more, and may well cost less, than the present system. And it would have the tremendous advantage of using, instead of wasting, perishable products.

The plain fact is that the productive-payment plan is the best plan yet proposed for getting an abundant production of perishable crops consumed without knocking the bottom out of the farmer's income. It is in the farmer's interest. It is also in the consumer's interest. I firmly believe that it should be made a part of our national farm program.

Our third purpose is to encourage the conservation and wise use of our land and water resources.

A price-support program can do this in two ways: The first is by encouraging livestock production. If we produce the livestock products that our people want, we shall need more land in grass and hay. And that is one of the major things we need to do in order to conserve our soil.

The second way is to make soil conservation practices a requirement for anyone who wants the benefit of price support. The whole Nation has an interest in soil conservation and benefits by it, just as the whole Nation has an interest in and benefits by a sound price-support program. It does not make sense to provide just as much price support for the individual who is deliberately ruining his soil as we provide for the good farmer who is keeping his land productive for future generations.

The need for soil conservation is one of the most important challenges confronting us. Our price-support program can and should help us meet that challenge.

The fourth purpose of our recommendations is to give the most support where it is most needed—that is, to the family-size farm. The present program channels too much of its benefits to the largest farms. Of course, we must not ignore the welfare of the large farms, which contribute so importantly to agricultural production and income. But it is only sensible, where public funds are involved, to provide a higher degree of protection for the family farm, which is so fundamental to our democratic society.

These are the four major purposes of the recommendations this administration has made for improving the farm-support program. They are designed to contribute to a stable and prosperous agriculture as part of a strong Nation. They will encourage a sustained, realistic abundance of farm production as the basis of rising living standards for our people.

They are an expression of our faith that we can all go forward together toward well-being and abundance—farmers together with city folk—the people of the United States together with free people everywhere.

That is the only way to assure peace and prosperity for ourselves and for the world.

Let Us Follow the Advice of Our Beloved President and Admiral Nimitz

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1950

Mr. SABATH. Mr. Speaker, last week our beloved President Truman issued a statement to the press wherein he stated that he is not alarmed over the cold-war situation. He said conditions are better than in 1946 and he is optimistic over hopes for peace.

Since reading that statement, I have received many letters from all parts of the country approving the President's statement, and urging me to aid the President in every way possible so as to make an early and lasting peace a reality.

Yesterday, I had occasion to read an article in the Chicago Sun-Times under date of May 7, 1950, concerning the great and beloved Admiral Chester W. Nimitz. The article was entitled "Admiral Nimitz, Opponent of Force, Takes Rest."

Unlike many military gentlemen and the Joint Chiefs of Staff, who thrive on war and war preparations because it means promotion and personal glory, Admiral Nimitz and other well meaning, honest, and sincere gentlemen, prefer, however, to settle their differences amicably at a peace table before a war is made possible with its killing and crippling of millions of people and the destruction of billions upon billions of dollars worth of property.

It is indeed unfortunate, Mr. Speaker, that some of our radio commentators and so-called radio reporters, at every opportunity, scare the public and instill fear into their minds. They try to involve us in every conceivable way with their war-mongering statements. They could serve their country better if, every Sunday night, they would cease their alarming utterances. To my mind, if these reporters would devote their abilities and influence toward channels of urging and advocating peace, they would surely endear themselves to the American people. I hope for their own future standing and influence, these commentators will so do.

Therefore, Mr. Speaker, I feel that the statement made by our great Admiral Nimitz will be welcome by 95 to 98 percent of the American people who are opposed to war and who are continually

UNIVERSITY OF MICHIGAN LIBRARIES

praying for a lasting peace. The article follows:

ADMIRAL NIMITZ, OPPONENT OF FORCE, TAKES REST

LAKE SUCCESS, N. Y.—The United Nations most famous man of war—Fleet Adm. Chester W. Nimitz—has taken indefinite leave from his work after 13 months' service in which he built a reputation as the United Nations most persistent speaker against use of force—even by the United Nations itself.

The white-haired sailor, who during the war in the Pacific commanded the mightiest battle fleet ever assembled, came to the United Nations as administrator of a planned plebiscite in Kashmir, to settle whether that disputed state joins India or Pakistan.

But, when political events prevented holding the plebiscite during his stay at Lake Success, Nimitz turned himself into a busy public speaker who could be heard week after week denouncing the use of force, by anyone, at any time.

OPPOSE POLICE IDEA

The other day he looked down from the rostrum of a UN committee room at 110 West Point cadets and opened with the quip:

"I hope we can win a football game from you some day."

Then, figuratively, he held up the UN Charter and ripped out of it article 43, which calls for establishment of a world police force. The 65-year-old admiral told the future American Army generals that the UN probably never would be able to agree on creating a police force.

"And in my opinion," he said "its a good thing they don't agree. The UN is not and cannot be an enforcement agency."

For example, he said, "if the UN had tried to use a police force when the General Assembly sought to internationalize Jerusalem over objection of both Israel and Jordan, "we would still be in a bloody bath today."

VIEW ON H-BOMB

A few days earlier Nimitz faced another group of West Pointers and told them he didn't think he'd live to see a hydrogen bomb developed—"and I hope I don't."

He enlarged on this a little:

"I personally hope they don't ever learn to trigger it, but if anybody does, I hope we do, because I believe if we possess weapons like that and have a few of them, that will prevent the others from using them."

The Texas-born admiral is headed for his home in Berkeley, Calif., where he will remain until such time as his services are required at UN.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Cuts in Face of Increased Mail Volume Worry Rhode Island Postmasters," published in the Providence (R. I.) Evening Bulletin of April 21, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CUTS IN FACE OF INCREASED MAIL VOLUME WORRY RHODE ISLAND POSTMASTERS

Rhode Island postmasters said last night they didn't know how they could put into effect the sharp cuts in postal service ordered this week by the Postmaster General—"but we've got to do it."

Postmaster Raymond A. Creegan of Providence, one of those who spoke at a meeting of the Rhode Island Chapter of the National Association of Postmasters in Westerly, said the Providence post office had been running on a 24-hour basis with business firms doing a great volume of mailing up to midnight.

"I checked today on the night differential in pay for clerical help," Creegan said, "and I found that by cutting out night work we will save $80,000 a year. But if the work is now being performed in 24 hours, how can we do it in 12 hours?"

Postmaster George A. Dolan of Westerly said he had just completed a survey in his town which showed "we will have to add 18 miles of foot carrier service in our area. As soon as we completed the survey, I received the curtailment order."

Dolan urged the group to "take this up with your Congressman," and Creegan urged the postmasters to build a strong organization. Postmasters are going to seek a reclassification from Congress to obtain salary increases, he said, and "one strong association" would help "educate your Congressman."

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Is This Economy?" published in the Texarkana Gazette of Texarkana, Tex., of April 22, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IS THIS ECONOMY?

Although it may seem inconsistent to call for economy in Government one day and protect cuts in the postal service on another day, we cannot see the logic behind a so-called economy move that would eliminate a few low-salaried postmen and allow a swarm of nonessential Washington bureaucrats to continue to feed at the trough.

With the possible exception of the men and women doing really essential jobs in the building of our national defense, we do not know of any group of civil-service employees of the Government who work harder for less pay than do the postal workers.

The postal service is a part of the daily lives of the people and is the one Government service upon which business depends more than any other.

Somehow we cannot keep from believing that there is method in the madness of the Government in this approach to economy. To hit the service most essential to the people appears to us to be a calculated move to bring about a grass roots protest against economy in Government.

Greater economy could be achieved by starting in the high-salaried brackets of those agencies of the Government who spend their time developing new theories on a planned economy.

Israel After 2 Years

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1950

Mr. MULTER. Mr. Speaker, we recently observed in this House the second anniversary of Israel's independence. A review of the accomplishments of the State of Israel during the 2 years of its existence in the military, political, and economic fields, as well as in immigration and other phases of activity, was prepared by the American Zionist Council, 342 Madison Avenue, New York, and issued on April 23, 1950, on Israel's second anniversary. It is entitled "Israel After Two Years." I commend it to my colleagues' attention:

ISRAEL AFTER 2 YEARS

The State of Israel becomes 2 years old on this 5th of Iyar, 5710—April 23, 1950. A purely objective observer—ignorant of Israel's history and its unique character—would be likely to describe it as a poor, small country, whose boundaries are still not fixed; whose hostile neighbors have not yet concluded peace treaties with it; whose cost of living is high; whose economic future depends upon large-scale outside investment; whose trade balance is unfavorable; whose agricultural productivity is dependent upon the introduction of irrigation projects; whose established population is being flooded by a mass immigration of perplexing variety and great poverty.

There is truth in this objective picture, but it is very far from the whole and the essential truth. It omits the significant human factors of historic attachment and overwhelming need; the factors of intelligence, determination and ingrained habit of collective effort. Those were the factors which made the proclamation of the State of Israel 2 years ago an inspired act of destiny rather than the mad and dangerous whim it seemed to many. The land was full of Arab irregulars who had been attacking since December. Air communications with the outside world had ceased and the ports were under Egyptian aerial and naval bombardment. Five regular armies marched upon a community whose defense force, always having had to train underground, had never functioned as an army. Israel's store of weapons was so limited that camps of many hundred trainees had one rifle to practice with. Hardly more than a dozen tiny, patched-up cast-off British training planes were its entire air force. The British-owned Haifa refineries had been closed in April and British tankers had removed the remaining crude oil. There was almost no oil for the air force and other mechanized equipment. Yet during the period up to the first truce of June 11, 1948, Israel's improvised army and home guards staved off the Syrians with their tanks and armored cars in the north; encircled the Egyptians near Isdud in the Negeb; and, though losing the Old City of Jerusalem to the Arab Legion, saved the beleaguered New City from what seemed inevitable surrender to large and well-equipped forces. In the intertruce period of July 9–July 18 Israel forces seized the Lydda Airfield, Ramle and Nazareth.

Israel was winning its ordeal by battle—but, looking backward, one is shocked by the realization of the precarious state it was in even after the great exertions of the first campaigns. "In the fall of 1948," Prime Minister Ben Gurion wrote a year later,

"Israel actually held only a quarter of the area of the state. Central Galilee was in the hands of Kaukji's gangs and the Lebanese army. The entire south was cut off. The Egyptian forces held, on the one hand, the Rafa-Gaza-Majdal-Isdud line along the coast up to a point less than 40 kilometers from Tel Aviv, and a second line across the country south of Be'er Tuvia. All settlements and defense forces in the Negeb were cut off and the approaches to Jerusalem were blocked. At that time the United Nations meeting in Paris, was presented with a plan to exclude the Negeb from Israel."

The "plan to exclude the Negeb from Israel" was contained in the Bernadotte report which was launched at the United Nations in September 1948, with the enthusiastic support of Secretary Marshall and the British Foreign Office. The security and territorial integrity of the new State were never in such jeopardy as in the months between September 1948, and February 1949. Aside from the military difficulties, there was the very present danger of the adoption of the provisions of the Bernadotte plan, and the reiterated threat—spearheaded by the British—of sanctions against Israel for noncompliance with United Nations orders. No historic record, however, brief, would be complete without mention of the notable part played by American Jewry and President Truman in defeating the threat of sanctions and preventing the passage of the Bernadotte plan. It is difficult now to remember how perilous Israel's situation was then and how close actual war between Israel and Britain seemed in January 1949, after Israeli fighters had shot down five RAF reconnaissance planes over the Egyptian-Israeli frontier, and British troops had been dispatched to Aqaba on the Red Sea "at the request of King Abdullah under the provisions of the Anglo-Transjordan Treaty of Alliance."

The crisis of the fall and early winter of 1948-49 was averted not only by political action at the United Nations but—concomitantly—by hard military facts which turned Israel's theoretical rights into actualities, and at last convinced the Arab governments to enter into the negotiations that culminated in the armistice agreements of the late winter and early spring of 1949. Egyptian violation of a United Nations order for shared use of a highway in the Negeb had led in October 1948 to renewed fighting in the Negeb which ended in Israel's conquest of the keypoint of Beersheba. Almost at the same time fighting broke out in the north after Arab forces out of Lebanon attacked a height inside Israeli territory in Galilee. Within a fortnight Israel controlled all of Galilee. On December 7 a new road connecting Jerusalem with the coast was dedicated to take the place of the main route still blocked by Arab forces. Built over the mountains by youngsters and men past fighting age, Kvish Hagvurah—the Road of Heroism—was the triumphant climax of Israel's desperate effort to save its historic capital from a third destruction. Now, after suffering thousands of casualties during almost a year of bombing, hunger, and thirst, Jerusalem's 100,000 Jews and the shining city they had built were safely linked to the rest of Israel.

A new pattern of governmental control and geographical relationships developed during the war. According to the partition plan of November 1947 western Galilee and Jaffa and part of the Negeb were to have been in an Arab Palestine state, linked by an internationally administered economic union with the Jewish state; Jerusalem was to have been set up at the close of the mandate as an internationally administered area. None of these things happened. The United Nations, charged with responsibility for internationalizing Jerusalem, did nothing. The Arabs of Palestine did not move to set up a state in the territory assigned to them; instead the overwhelming majority of them, incited by their leaders and by British advice, fled to the neighboring countries. According to the partition plan, Israel was to have had a large Arab minority of about 400,000. Ruling now over large areas not included in the area assigned to it by partition, Israel has an Arab minority of only 180,000.

Moving into the vacuum left by Arab flight and Arab and United Nations failure to act, the new Israel took on a shape and form not anticipated by the United Nations nor even by itself. The logic of events in these 2 years has eliminated the distinction between territory assigned by the United Nations and territory occupied in the course of the war. Both are Israeli in population, government, and development. Where 2 years ago there were a half dozen Jewish villages in the largely Arab hinterland of Jerusalem, there are now some 30 Jewish villages and almost no Arabs. Where outside Jerusalem there were stony hills which the White Paper of 1939 forbade Jews to buy and work, 300,000 trees were planted this winter. To take the place of Jerusalem's always inadequate water supply line—still cut by Arab forces—a new aqueduct is being built which will treble the amount of water brought to the city and provide for an expanding population. Most important of all, Jerusalem, almost wrecked by British sabotage and Arab siege, is once more a thriving capital.

It was the scene of the first meeting of Israel's parliament, the Knesseth, on February 14, 1949, and—in swift reaction to the United Nations vote of December 1949 for internationalization of the city—has been made the permanent home of the Knesseth, of the prime minister's and president's offices, and of most departments of the government. If its exalted and central place in the great drama of Jewish history needed the confirmation of a symbolic modern ritual, it received such confirmation in August of 1949 when the bones of Jewry's modern prophet, Theodor Herzl, were brought from Vienna and laid to rest in a tomb on a high hill now known as Mount Herzl.

Western Galilee and the Negeb are, like Jerusalem, integral, constantly changing and developing parts of the new Israel. Of the more than 180 agricultural settlements founded since the establishment of the State (an average of about 8 a month), a particularly large number are in Galilee and the Negeb. The need of peaceful conquest by the plow is as acutely felt throughout Israel as the need for adequate military preparedness. A geobotanical research station, newly established in Beersheba, experiments with trees, plants, and crops, to determine which are most suitable for the Negeb. Pipe lines now under construction will be bringing 15,000,000 cubic meters of water to the Negeb this summer, revolutionizing its agricultural possibilities. A systematic government drilling program has led to the discovery of large quantities of sweet water in the desolate Azaba Valley south of the Dead Sea. The sluggish little Arab town of Beersheba has become a Jewish municipality whose population is expected to reach 10,000 by the end of this year. In the north the small Arab town of Acre has become an expanding Arab-Jewish city. Jewish and Arab workers have begun work on a 5-year plan to convert 10,000 acres of malarial marshland east and southeast of Acre into fertile soil. The Ministry of Agriculture has established a special department for the guidance and advancement of agriculture in the 76 Arab villages of Galilee.

Beersheba, southern limit of Jewish settlement in the Bible's familiar delimitation of Israel's boundaries, is Jewish once more, but it is no longer Israel's southern boundary. Military clashes with the Egyptians in the Negeb grew in intensity in December of 1948 and January of 1949, and in their most effective action of the war the Israeli forces bottled up the Egyptians in a pocket at Faluja. Israel now controlled the southern Negev, and the ground was laid for armistice negotiations with Egypt which began on January 13 and concluded on February 24, 1949, leaving Egyptian forces only in the coastal strip between Gaza and Rafah. In March, despite British political and military maneuvering, Israel secured the right, given it by the partition resolution, to Eilat, the little strip on the Gulf of Aqaba at the southeast tip of Palestine. King Solomon's port of Etzion Gever had been a stone's throw from Eilat which can become Israel's gateway to the Indian Ocean and the East. Eilat is Israel now—inhabited by a small pioneering military force, a goal of pilgrimages, a center of activity. It is linked by air to Lydda. Docks are being built for boats. Private investment is establishing a factory to grind the tiny fish caught in the Gulf into meal for chicken feed. Israel—from Dan to Eilat—is a much larger land now than its most devoted children conceived of only 2 years ago. For the southernmost point of the Negeb, facing Egypt, Transjordan, and Saudi Arabia, is no longer a dot on a map, but an important and cherished part of its new life.

The State of Israel's first obligation had been the defense of its people against attack by land and sea and air. In the midst of this agonized, extemporaneous struggle for life it had to carry out the practical, peacetime task of setting up a government. The mandatory regime had deliberately left Israel a legacy of chaos. It had made no provision for the functioning of any sort of administration to take over after the High Commissioner's departure on May 14, 1948. Here the years of semigovernmental experience which the Jewish Agency and Vaad Leumi had had, proved their extreme usefulness. The task of governing the country was assumed naturally and with as little strain as possible under the circumstances, by the Provisional Council of State established on May 14, 1948, in accordance with an agreement between the principal parties represented in the Jewish Agency and the Vaad Leumi.

In the turmoil of the fall of 1948 a census of the population was carried out, preparatory to the holding of a countrywide election on January 25, 1949. The election was a model of peace and order in a part of the world where elections are notable for violence and fraud. Every adult resident of the State of Israel, Jew or non-Jew, man or woman, was eligible to vote, and over 80 percent of them did so. The Arab women who voted that day in Israel broke a new trail in the history of the Arab world. They were the first ever to have had the privilege of the franchise and they stirred feminist demands in Egypt and Syria, Lebanon and Iraq. They were the inspiration behind a startling development in Syria where Husni Ziam, the revolutionary swept into power during March 1949 in the unrest caused by the Syrian Army's defeat in Palestine, gave the franchise to women with primary education.

Husni Zaim had come to power in a military coup d'état; he was shortly assassinated in a second military coup d'état; the perpetrators of the latter were themselves displaced by a third coup d'état. An attempt at a similar coup d'état, led by the chief of police, took place this winter in Iraq, where cabinets have been changing with unusual rapidity. What bore all the signs of an armed revolt by the Syrian Popular Party of Antoun Saadeh was nipped at the very last moment in Lebanon during the summer of 1949. Political assassinations had become the order of the day in Egypt last year.

UNIVERSITY OF MICHIGAN LIBRARIES

In striking contrast to the rest of the Middle East, the Government of Israel—the youngest state and the most exposed to hostility—has been as stable and orderly in its workings as an old and well-established democracy.

The governmental structure of Israel has in fact developed swiftly and comprehensively in these 2 years. The President's functions are similar to those of the President of the French Republic. The 120-member Knesseth functions very much along the lines of the British House of Commons. The Government is responsible to the Knesseth and the latter has shown itself to be very far from a rubber stamp body—debates in it are both lively and, on a high level and frequently lead to amendment of government policy. The Knesseth has 9 committees, each of which is composed of representatives of all parties and is responsible for thorough study of all bills falling within its scope. The 17 ministries into which the government is subdivided, are each headed by a director general, who is a permanent civil servant. A nonpartisan state comptroller, directly responsible to the Knesseth, checks the accounts and efficiency of all government offices. The supreme court has the power to check the government where it seems to it to be infringing upon democratic and constitutional rights. It may summon any government official and demand an explanation of his conduct. It has on several occasions reversed decisions and rulings made by ministries, and has won the confidence and gratitude of those concerned with genuine democratic development in Israel.

The Knesseth has proved to be a mature and hard-working body of law-makers. In its first session from February 14 to September 12, 1949, it passed 70 laws, of which the most important pertained to the budget, military conscription and education. The Prime Minister had asked for a budget of 37,000,000 pounds for current expenditure; the Knesseth, after grave and extensive debate, reduced this to 35,440,000 pounds. In March 1950 at the end of the fiscal year, Finance Minister Kaplan was able to report to the Knesseth that the budget had been met without a deficit—a result which could never have been obtained if not for the high income and inheritance levies passed by the Knesseth.

National manpower has been mobilized as well as national income. The universal conscription bill passed in September 1948 imposes military training of various lengths upon all men between 18 and 49 and all unmarried women between 18 and 34. A service bill, passed in February 1950 provides for the drafting of men and women for a year of agricultural and military training and a year of specialized vocational training. Children are required, without exception, to go to school. The education bill passed by the Knesseth provides for free education for all children between 5 and 13 years of age. In succeeding years the age range is to be gradually increased till the goal of free compulsory education for all children from 4 to 16 is reached. In this present school year 100,000 Jewish children and 15,000 Arab children—boys and girls alike—are enrolled in school. During the mandate period 25 percent of the Arab children in urban areas and 50 percent of those in rural areas did not attend school at all.

In faithful reflection of the cooperative tendencies which have dominated the development of the Jewish community in Palestine, Israel's two labor parties—the moderate Mapai, which controls the Government, and the leftist Mapam—are the two strongest groups in the Knesseth. The leaders of the Government have made no secret of their hope for a Socialist Israel, but they are undogmatic and practical enough to understand how vitally necessary private investments are if the country is to be developed adequately and quickly. Hence, on March 29, 1950 the Knesseth by a 47 to 15 vote adopted a law providing special privileges for private investors: 25 rather than the usual 75 percent income-tax ceiling on their earnings; 5 years exemption from property taxes on new buildings; customs exemption till June 30, 1952 for machinery and raw materials; permission to transmit abroad in dollars 10 percent of their investment a year.

It is difficult enough to establish a new independent state in time of war. It is even more difficult to establish a new state in time of war for a population constantly being augmented by immigrants from many different lands and backgrounds. In 1947, after 66 years of Zionist resettlement in Palestine, there were some 700,000 Jews in the land. In the 2 years of Israel's independence, almost 400,000 were added—more than half the number six and a half decades had brought. The process of return from exile, begun on so tiny and tentative a scale by the few young Biluim of 1882, has taken on a swiftness of tempo and a greatness of scale that carry the mind back to the mighty, soaring prophecies of the bible:

"And I will bring you out from the peoples and will gather ye out of the countries wherein you are scattered, with a mighty hand and with a stretched out arm and with a poured out fury. * * *"

"Lift up thine eyes round about and see: all they gather themselves together, they come to thee: thy sons shall come from far. * * * Who are these that fly as a cloud, and as the doves to their windows? * * *"

"Behold these shall come far: and lo, these from the north and from the west; and these from the land of Sinim."

The prophecy is being fulfilled with almost literal exactness. The children of Israel have been returning from the furthest corners of their exile—from every western land, from India and Afghanistan, Morocco and Shanghai, Turkey and Cyrenaica, and, "flying as a cloud" in the airplanes of "Operation Magic Carpet," from out of the medieval prison of Yemen. The arrival on November 20, 1949 of 660 immigrants from Tripoli brought the Jewish population of Israel to 1,000,000. Most months bring more newcomers—20,000 to 30,000—than all but a few of the 28 years of the Mandatory period. There have been days on which three or four thousand landed at Haifa; in a single week of December 1948 one-third of Yugoslavia's 11,000 surviving Jews sailed from Fiume in two ships; and as recently as February 26, 1950, 1,200 came on a single boat from North Africa. The total for 1948 was 118,993; for 1949, 239,331—an average of more than 655 persons every day. There is comforting irony in the fact that 60 percent of the new immigrants are transported, economically and appropriately, on Israeli ships—the very same ships that were the ghost fleet of illegal immigration during the last, bitter years of the Mandate.

The face of the Jewish world has already been radically altered by the 2 years of unrestricted immigration to the State of Israel. The Jewish community of Bulgaria may be said to have disappeared, for 42,000 have come to Israel, leaving only 4,000 or 5,000, most of whom wish to remain in Bulgaria. Yemenite Jewry will be completely transferred to Israel by 1950, 40,000 having come since the establishment of the State. Almost half the Jews of Turkey—about 35,000—have so far arrived in Israel. About 2,000 a month are leaving Tripolitania, and more than half of Libya's 30,000 Jews are now in Israel. Seven thousand—practically all those who wish to leave—have come from Yugoslavia. Twenty thousand have come from Czechoslovakia, leaving 15,000, of whom about 5,000 have applied for immigration to Israel. Some 20,000 of the 45,000 Jews remaining in Germany are to be expected in Israel during 1950, and 30,000 of the remaining 50,000 Polish Jews. The exodus from North Africa has a Messianic haste and fervor. Iraq appears to be ready to allow its Jewish citizens to emigrate. Only Hungary with its 150,000 Jews, and Rumania with its 360,000 have followed the Soviet's example in barring emigration to Israel; unlike the Soviet, they have, however, relented enough to allow a few thousand Jews with relations in Israel, to leave.

The Messianic tempo of immigration is hardly matched by the tempo of absorption in a small, undeveloped land like Israel. That is Israel's burning economic and social problem. It is true that in the period between May 15, 1948, and January 1, 1950, 264,370 immigrants were absorbed into the life of the country, 165,000 of them in towns, 13,000 of them in communal settlements, 14,000 in cooperative settlements, 34,000 in villages, while 15,000 child and adolescent immigrants are being supported and trained for productive living by the Youth Aliyah movement. But satisfaction over these comforting figures is tempered by the inadequate standard of living and inadequate employment of a great many of these 264,000 immigrants and by the shattering fact that there are still at least 80,000 persons in reception camps, for whom not even the barest housing is available.

Normal economic thinking and procedure can hardly apply to Israel's abnormal immigration situation. It is an immigration which, in its vastly greater part, cannot wait, for it flees from present dangers or from the valid fear of the closing of the gates of the lands in which it lives. Swift improvement in the living conditions of the newcomers and acceleration of their absorption into the country are pathetically dependent upon the free-will offerings of Zionists throughout the world, for they cannot wait upon the gradual process of the broadening of the economic base of Israel.

Before Israel's economy can be expanded to the point where it will adequately sustain its present population of over 1,200,000 and its anticipated population of 2,000,000 within 10 years, many obstacles will have to be overcome. The general objective is clear: A mixed cooperative and private economy based on intensive agriculture and highly specialized light industries, supplemented by fishing, maritime trades, and tourist traffic. That this objective can be reached is proved by the agricultural and industrial experience of the mandatory period during which the Jewish community created a self-supporting economy in an utterly undeveloped land. But large investment of both private and public funds is required. Robert Nathan has estimated the amount needed as $2,000,000,000 for the next 10 years. Investment must be supplemented by careful control of imports and currency; sharp reduction in the cost of living and consequently of labor; soil and water conservation of maximum efficiency; moderization of factory and transport equipment; and intensification of agricultural and industrial skills.

How far has Israel gone toward those goals in its first two troubled years? There is reason to feel that the worst is over and that there are encouraging signs on many sectors of the economic front. During 1949, 250 new industrial enterprises were established and 200 others are now being established. Most significantly, an unusually large sum for so small a country—$241,000,000—an amount equal to 40 percent of Israel's total national income, was invested on capital development in Israel in the course of the year. Sixty percent of this investment was public capital; 40 percent was from private sources, more than half of it provided by Israelis. American private capitalists invested $25,000,000 during 1949, and 1950 has brought the news of large new industrial projects in which the technical know-how

and part of the capital are to be provided by American firms; a Kaiser-Frazer automobile assembly plant to be opened in Haifa in August for the production of 6,000 cars a year; an Israeli branch of the General Tire & Rubber Co., of Akron.

Rigid rationing and import and price controls—the so-called austerity program, directed by Dr. Bernard Joseph, minister of supply and rationing—brought the cost of living down by 12.8 percent between January 1949 and January 1950. A satisfactory agreement has been reached with the British Treasury regarding Israel's frozen sterling balance and the settlement of all claims and counterclaims arising out of the termination of the mandate. Though imports (which amounted to 87,700,000 Israeli pounds) exceeded exports (which amounted to 10,600,000 pounds) by about $215,600,000 in 1949, one of the main reasons for this is the inevitable necessity for import of capital goods into the country. Increased production will eventually enable Israel to export more.

As matters now stand, half of Israel's exports—largely citrus fruit—go to the United Kingdom, but Israel has by now signed trade agreements with the Netherlands, Hungary, Poland, Finland, Uruguay, Yugoslavia, Denmark, France, Czechoslovakia. Taking the $3,200,000 pact with Uruguay as a typical example, we note that it provides for Israel's importing frozen meat, wool, and rice and exporting polished diamonds, artificial dentures, wines, oil stoves, and olive oil. The agreement signed with Czechoslovakia in March 1950 provides that $8,400,000 worth of Czech goods—iron and steel wares, food and glassware—be imported by Israel which is to sell Czechoslovakia $2,800,000 worth of citrus products, pharmaceuticals, and other goods. In the period between November 1949 and March 1950 Israel-manufactured textiles valued at $2,800,000 were sold abroad, a million dollars worth in Denmark alone. Large quantities of optical lenses have been exported to Yugoslavia; machinery and paper from Sweden have been bartered for six thousand dozen nylon stockings from Israel and timber from Austria, for artificial teeth.

These are all hopeful beginnings. Moreover, the entire economic set-up should shortly be reflecting the therapeutic effect of the carefully administered Export-Import Bank loan of $100,000,000. Since January 19, 1949, when the loan was announced in Washington, over $96,000,000 worth of credits have been authorized by the Bank, in each case for the purchase in the United States of equipment and materials. Half the credits authorized have so far been spent, and about a quarter of the total equipment to be purchased has arrived in Israel. Israel's key agricultural need is large-scale irrigation, and that is being made possible by the $35,000,000 credit for agriculture, half of which has been allocated for the purchase of irrigation pipe. Dr. Walter Clay Lowdermilk has pointed out after his recent trip to Israel that there is actually a greater abundance of water in the country than experts had thought, making it better-watered than southern California. About 400,000 acres of arable land can be redeemed by irrigation during the next 3 or 4 years, and it is notable that Dr. Lowdermilk with his world-wide experience in conservation is to be adviser to the Government of Israel next year. He will be empowered to set up a coordinated program of full land and water use for the entire country, including the dry southern Negeb whose grazing possibilities must be fully developed.

The Export-Import Bank credit for agriculture has brought Israel many hundreds of heads of cattle and other requisites. The Ministry of Agriculture can now look soberly ahead to cultivation within 4 years of 1,250,000 acres which should provide Israel with all the garden vegetables it needs, half its potatoes and tobacco, one-third of its fish, and one-quarter of its bread grain. The constant expansion that is going on and that will soon be felt in Israel's food basket may be gaged by the fact that this year 23,000 dunams of land—10 times the present potato area—have been put under potato cultivation.

Efficient transport is a prerequisite of efficient agricultural and industrial development. An Export-Import Bank credit of $11,000,000 for communications has already brought Israel 4,000 new trucks and busses and will modernize the overtaxed, archaic telephone and telegraph facilities. A $5,500,000 loan for port installations is enlarging Haifa Harbor and equipping it so as markedly to reduce loading and unloading time and in every way increase the efficiency of the port. A recent $20,000,000 credit for construction materials will alleviate the housing shortage and facilitate building and rebuilding of interurban highways and the expansion of the water-supply and sewage-disposal facilities of Israel's municipalities. Industrial development—key to enlarged employment and a more favorable balance of trade—will be stimulated by a $20,000,000 credit for the purchase of machinery and raw materials.

Economic adjustment is not the only one of Israel's large, present problems. There is the painful struggle about the future of Jerusalem and the uncertain status of the Arab refugees who, having abandoned their homes and left Palestine to become a completely altered land, must now be aided to find a new life—preferably, Israeli and many British and other observers feel, in underpopulated sections of the Arab countries. Over and above all other questions looms the problem of peace and decent neighborly relationships with the Arab countries.

Looking at these vexed problems in the long perspective of Jewish history, one is somehow persuaded to feel that an answer to them should not be too long delayed. The mystery and the tragedy of the exile have found their answer in the third Jewish Commonwealth. The Jewish people has recovered its national entity; its state on May 11, 1949, entered into the fellowship of the United Nations and has been accorded the recognition of most of the governments of the earth, including even the two islamic lands of Turkey and Iran. The incredible has happened; the prayer of generations has been answered.

There is no truer expression of the marvel of Jewish history today than the noble ritual that takes place on the airfield at Aden every time a plane load of Yemenite Jews leaves for Israel. As the passengers go into the modern American planes and the pilot prepares to take off, the Shofar—ancient ceremonial horn of the Jewish people—is solemnly blown. For the airfield at Aden is the threshold of redemption.

Withholding Tax on Dividends at Their Source

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram from the commissioner of corporations and taxation of Massachusetts:

BOSTON, MASS., *May 8, 1950.*

Hon. EDITH NOURSE ROGERS,
House Office Building,
Washington, D. C.:

Tax revenues for Massachusetts and its 351 cities and towns are likely to be seriously affected if Congress approves withholding tax on dividends at their source. Massachusetts has an income-tax law taxing income from intangibles, major portion of which comes from tax on dividends all of which is distributable to cities and towns of commonwealth under formula established by legislature. Five-sixths of tax on foreign and business corporations measured in part by income is distributed to cities and towns and balance retained by Commonwealth. It is conceivable courts would hold if tax on dividends were withheld that the entire dividend credited to the stockholder actually received or constructively received could not be taxed under Massachusetts law. Under present Massachusetts law dividend of $1,000 would be taxed at 6 percent and that same $1,000 would be subject to Federal tax if amount stockholder received instead of $1,000 was $900. Massachusetts for its cities and towns would be restricted to taxing $900 thus losing $6 tax on that $1,000 dividend. In the aggregate this would deprive the Commonwealth of upward of $2,000,000 annually. If there is anything you can do to prevent this it is my opinion you will be benefiting State and its 351 cities and towns. Your opposition to the proposal is respectfully requested.

HENRY F. LONG,
Commissioner of Corporations and Taxations.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Dubious Postal Economy," published in the Buffalo Courier Express, of Buffalo, N. Y., of April 20, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DUBIOUS POSTAL ECONOMY

According to Postmaster General Jesse M. Donaldson, operating funds recommended by the House Appropriations Committee for the fiscal year will not be enough to maintain postal service at present levels. Complying with a congressional mandate, the Post Office Department has ordered a sharp reduction in services, including limitation of residential deliveries to one a day and some curtailment of business deliveries.

This will result in some inconvenience to the public, and possibly some financial loss to private business. It will save several millions of dollars, but by no means wipe out the Department's annual half-billion-dollar operating deficit. Unfortunately, it will cause about 10,000 postal employees to be laid off, a severe and undeserved hardship for a faithful and none-too-well-paid group of public servants.

UNIVERSITY OF MICHIGAN LIBRARIES

President William C. Doherty of the National Association of Letter Carriers (AFL) called the reduction "a rape of the postal service" and said the union would ask the Senate Post Office Committee to block "this devastating, ill-advised, and unnecessary order."

The Hoover Commission's comprehensive report on the postal service made various recommendations to put the Department on a pratical business basis. In regard to fiscal management, it said that the Post Office is "in need of greater flexibility than the customary type of appropriation budget ordinarily permits." It also recommended that Congress authorize the Postmaster General to raise certain postal rates, estimated to increase postal revenues by $113,000,000 annually. It made no specific recommendation for a curtailment of service necessitating layoffs of the postal labor force. So it appears that the congressional mandate has only an inferential basis in the Hoover Commission report.

Incidentally, Congressmen never are slow about appropriating money for new post offices in their home districts. In view of this and other Federal spending, to appropriate funds for continued employment of 10,000 postal employees, now threatened by the reduction of essential services, hardly could be challenged.

Near Eastern Armaments Situation

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

DEPARTMENT OF STATE,
Washington, May 5, 1950.

The Honorable ANTHONY F. TAURIELLO,
House of Representatives.

DEAR MR. TAURIELLO: I am grateful to you and your colleagues for the letter of May 3, 1950, in which were set forth your joint views relative to my forthcoming discussion with Mr. Bevin on the Near Eastern armaments situation. Such expressions of opinion by Members of the Congress are extremely helpful to us in preparing for the meetings shortly to take place at London.

Several of the points which you have raised merit our comments at this time. With reference to your question as to whether the supply of armaments by Great Britain to the Near East is facilitated, directly or indirectly, by the settlement of that country's lend-lease account, the mutual defense assistance program or ECA aid, I assure you that it is not. The mutual defense assistance program for the 1950 fiscal year does not provide to the United Kingdom any items being furnished by that Government to the Arab states, nor does this program furnish Great Britain replacement items for items thus furnished. With regard to ECA, the relationship between this program and the Military Assistance Program was thoroughly explored by the Congress when the latter was pending last year. There has been no indication that the United Kingdom is diverting any undue proportion of its resources into military production.

I assure you also that the United States has consistently sought to persuade both Arabs and Israelis to reach a settlement of their differences through negotiation and voluntary agreement. This has been American policy both in the United Nations and in the direct relations of the United States with the countries themselves.

The same policy has been followed by the American representative on the Palestine Conciliation Commission, which was established by the UN General Assembly on December 11, 1948, and instructed to take steps to assist the governments and authorities concerned in the Palestine dispute to achieve a final settlement of all questions outstanding between them. The Commission is now engaged in discussions with representatives of Israel, Jordon, Egypt, Syria, and Lebanon.

You suggest in your letter that it would be helpful if the United States declared its policy to be opposed to a Near East arms race or a renewal of Arab-Israeli hostilities. That this is United States policy regarding an arms race was set forth by the United States representative in the United Nations on August 4, 1949, when he stated in the Security Council that "So far as the United States is concerned, it does not intend to allow the export of arms which would permit a competitive arms race in the area." This Government has on several occasions declared itself to be firmly opposed to a renewal of hostilities in the Near East.

You suggest further that point 4 technical assistance be made available only to those Arab states which were at peace, by which I assume you mean those Arab states which had reached peace settlements with Israel. You may recall that the point 4 program was specifically designed to improve the health and general living standards of the people of a country, as well as to raise their productivity. The Department believes that it would be undesirable to use this program as an instrument of political pressure. The Department also considers that the economic development of the Near East as a whole would lay sound foundations for permanent peace and stability in the area.

I hope that you will convey these observations to your colleagues, together with my thanks for the views expressed in your letter.

Sincerely yours,

DEAN ACHESON.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "How Do You Like the New Set-Up?" from the Holyoke Democrat of Holyoke, Mass., of April 22, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE BYSTANDER—HOW DO YOU LIKE THE NEW SET-UP?

Postmaster General Jesse M. Donaldson has ordered an economy measure that you, citizen, will have to suffer, grunt, holler and whatnot.

Postmaster Philip F. Ryan will do the best under circumstances but orders are orders and he will have to put them into execution, whether he likes it or not, and it is a cinch that you, citizen, are not going to hold bonfires to celebrate the new schedule.

The regulars will squeeze in their regular hours, but the poor substitutes will have to take it on the chin and enjoy a diet of cheese and crackers. Still, some "monkeys" in Europe will keep on receiving American goods from America with the postal authorities acting the Santa Claus part.

The overtime basis is "in the bag" ready to be closed in the "dead letter" closet. The residential districts will see their favorite mail carrier once a day. If some club or social matron intends to receive an invitation for tonight's meeting or social, she better arrange her affairs in advance to be sure to receive her "invite" in the morning mail—Niema in the afternoon, lady.

It might have its good side if you intend to send a check. You could say: "I mailed it last night." It would be all up to you to find out where they won't collect at night. You would be sure to have "freedom of mind" and feel safe that you will have time to cover said check by the time it will reach its destination—it might take 3 or 4 days. Business districts from Monday through Friday will receive two deliveries instead of three and one on Saturday. Somebody in these districts will "pray" in undertone voice we bet. At night, mail will be picked up only from street boxes which are widely used. From the less popular boxes there will be no stop. It sounds to us as a catch as catch can stuff. From now on, citizen, you will have to speak "sweet little things" to your letter carrier in asking him where in heck you can deposit your correspondence at night. As it will hit the residential sections the most, better use the family car and bring your mail to the post office to be sure of delivery. Wonder if residents from those sections will accept with good grace?

If your correspondence is local or just across the river you may as well deliver in person and economize the 3-cents.

Post-office windows will close at 6 p. m. but the chances are that it will be five. In that case the boys may be able to listen to a couple of innings of broadcast on baseball.

The cut is one supposedly set for economy purposes. But you will notice that Congress is still in session and it is only a short while back that the Postal Department gave us a present in the form of an increase in postal rates.

Congressman JOHN W. HESELTON scored some success by sending telegrams, potatoes, tomatoes, etc., to President Harry S. Truman. We have about 2,000 stamps ready for collection purposes. Wonder if our Congressman would care to present them to the President thereby giving him a hint about the postal curtailment?

Write to your Congressman and Senators, citizen.

The Little Marginal Farmer Is the Homesteader of Today in a Costly Era

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1950

Mr. SMITH of Kansas. Mr. Speaker, perhaps for the last 25 years, more space has been devoted in the American press on ways to help agriculture than any other subject. Many plans have been introduced in the Congress. Some of these plans have been enacted into law. Yet all seem to have been lacking in some respects. Some of these plans have been rather severe in their application. The most notable one perhaps was to create the doctrine of scarcity—by the use of

the gun and hammer—and some more recent proposals seem to sound more like the program of the "hammer and sickle."

Perhaps the main trouble has been that the planners did not have an overall picture of farming. Many base their ideas on a one-crop farm. So many, in approaching the farm program, lose sight of climate, soil, topography, geography, and moisture. All thinking persons who try to solve this perplexing problem, soon come to the realization that a yardstick and a formula made and enforced by bureaucrats in Washington is not and will not be the answer.

Any farm program, to be successful, must be voluntary and controlled by farmers themselves.

Recently it was pointed out from statistics of the Agriculture Department that there were 25,000 less farms in Kansas in the year 1945 than in 1930, and I am sure that the number of farms have decreased since 1945.

It seems to me that any farm program should be based upon this question: "Will it help the family-sized farm?"

I herewith submit for my colleagues' attention the ideas of Mr. E. I. Chilcott, of Mankato, Kans., who comes from a long line of ancestors engaged in agriculture since the Revolutionary War. He has been an agricultural county agent and knows agricultural problems from a practical standpoint.

His ideas are as follows:

We dare America. Yes, we farmers that grow the food and every laborer that eats it dares America to cut out a lot of red tape, counting of acreages, bushels and pigs, and really get behind America's agriculture.

Did we not finance industry for a war to create a lot of stuff to destroy and kill on a cost-plus basis?

We dare America to get behind agriculture on a cost only, not cost plus, basis to make a prosperous peace. No country heavily endowed with soil and climate like our great Mississippi River Valley can have a sound and enduring prosperity without a sound and prosperous agriculture.

We do not need or desire to have the ownership of property in the hands of the Government. For is not that selling ourselves into communism and socialism? If all our money goes to the Government for taxes and bonds and they in turn buy and own the corn and wheat and the bins on our farms and communities, mortgages on homes, etc., etc., are we not taxing and buying ourselves into socialism, losing our individual liberties and rights?

We all have to keep a record of income and expenses for tax purposes so Federal and State collecting gangs can extract the profit. What are small business and farmers supposed to do with the losses, forget them? Try it. Those things, if over too long a period, get harder to forget and stagnate our whole economy.

Would it not be a sound investment in security of Americanism to stand behind the small marginal and submarginal farmers, not to the limit of $25,000 as Brannan suggests, but even $500, $1,000, or $1,500 to the extent Congress deems economically feasible and desirable, letting them book their feed, seed, fertilizer, repair costs and deduct from income, also deduct one-tenth or 10 percent of the value of auto, tractor, machinery, and home equipment. If the book shows a profit, take the necessary 20 percent (if it is necessary?). If book shows a loss, just mail him a check to that predetermined limit.

The little marginal farmer is the homesteader of today in a costly era. They are the untouched market. Forget socialized medicine, bank guaranties, pig counting, acreage measuring, spud rolling, even a lot of unemployment insurance checks, relief, etc. Let 'em all farm if they want to.

A few small checks to offset these losses, if they do occur, would underwrite our whole national economy. The investment would be economically justifiable and sound. The profit share from all business along the line would many times pay the investment. We would see the national debt shrink, the red tape cut out, a happy prosperous country owned by its individual citizens into which socialism and communism could not creep.

Yes, we dare America to stand behind the little basic farmer upon whom all peacetime prosperity hinges. We dare America to really turn our economy back to the individual citizens.

We dare America to let the regular individual-owned business channels own and distribute the commodities of production, the law of supply and demand set the price. Just assure the farmer his costs and let nature and business take its course. That's Americanism. You'd be surprised what a country they'd make of it.

Where's the Fire?

EXTENSION OF REMARKS
OF
HON. CHARLES R. HOWELL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1950

Mr. HOWELL. Mr. Speaker, under permission to extend my remarks in the RECORD, I want to praise the work which is done by America's volunteer firemen. The first volunteer fire company in America was chartered by the King of England under date of July 11, 1752. I am familiar with the date because the company so chartered is still in existence and has been continuously since that time, and is located in the district which I represent. This is the relief fire company of Mount Holly, N. J., which is now making plans for its bicentennial.

Only those who have had the privilege of growing up and living in a small American town can appreciate the important place which the volunteer fire company holds in the life of the community. Besides the work for which it is chartered, the volunteer fire company contributes immeasurably to the social and civic life of the people. To be a member of the fire company is something to be proud of. I am very proud of the fact that I was a member of the Pennington, N. J., fire company.

Recently the volunteer company of White Horse, N. J., a suburb of the city of Trenton, was selected by the March of Time to play the central role in their documentary film, Where's the Fire. An editorial in tribute to this fine group of men and this outstanding honor which has been paid them was printed recently in the Hamiltonian, the weekly newspaper of Hamilton Township, printed in Yardville, N. J. The editorial, also entitled "Where's the Fire?" follows:

WHERE'S THE FIRE?

One of the most deserving groups of men we can think of will receive recognition on a Nation-wide scale in the near future. The men are our volunteer firemen, and the well-deserved recognition will be provided by a motion picture which should be of special interest in Hamilton Township.

The March of Time recently completed a film entitled "Where's the Fire?" It traces the development of fire-fighting equipment from the early days of hand-pumped engines to the present with its motorized, highly efficient fire trucks. After examining the workings of large and small city departments, the film turns to the volunteers.

The White Horse Fire Co. was selected to illustrate the work of the volunteers. "Typical of the modern volunteer fire company is that at White Horse," a March of Time spokesman says. "Practically all community activities center around the fire house of the White Horse volunteers. The firemen sponsor boys' baseball, basketball, and football teams, a 50-piece brass band, and they stage semimonthly dances for teenagers of the community."

The film is a real tribute to the White Horse firemen and to the volunteers everywhere. Like their White Horse brothers, the members of Hamilton's other fire companies serve their communities ably and willingly. It is difficult to over-praise the volunteers.

To many, the fireman is a professional, paid to risk his neck in battling fires, yet the volunteers outnumber paid firemen by 10-to-1 in the United States today. These volunteers are expertly trained in the latest fire-fighting methods and their equipment, notably in Hamilton Township, is often the envy of large city departments.

We urge you to see this picture. It will give you a good idea of what these altruistic fire fighters are doing in your interest. We salute the White Horse firemen and all the volunteers of the township for a difficult job well done.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Sputtering About Postal Matters," published in the Carthage, (Mo.) Evening Press of April 20, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SPUTTERING ABOUT POSTAL MATTERS

The same day Carthage celebrated improvement of the mail service by inauguration of a mail bus between here and Kansas City the Postmaster General at Washington lobbed a gloom grenade.

Nation-wide cut in urban mail service to one delivery a day.

Post Office Department going deep into red.

Congress won't make up the difference.

Result a cut in service through cutting work hours and hence workers' total pay. An endeavor to make ends meet.

Businessmen can understand that sort of thing, though this may be the first recorded indication in recent American history of a Government department doing so.

But there might be an alternate to this plan of reducing costs at the financial expense of the postal worker and the inconvenience of the letter-getting public.

UNIVERSITY OF MICHIGAN LIBRARIES

In view of the tremendous number of Government offices and bureaus and this-and-thats which use the mails free and freely, it is perhaps not unreasonable to assume that maybe a third or a fourth of the volume of mail is this deadhead stuff.

The Post Office Department could figure it out quite accurately.

Then it could bill Congress for this load which should be charged to the Government direct or to the agencies or bureaus concerned.

If all the postal load were pay load the department very likely would be plenty in the black.

The Hat Industry

EXTENSION OF REMARKS
OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1950

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks, I include the statement made by me this afternoon when I personally appeared before the United States Tariff Commission which is currently investigating a complaint having reference to the hat industry. Most seriously affected are the workers in some 10 concerns located in the Danbury and Norwalk areas, in my district, the State of Connecticut. Other areas in Massachusetts, New York, and New Jersey are likewise affected by the issue involved. The statement follows:

STATEMENT OF HON. ANTONIO N. SADLAK, CONGRESSMAN AT LARGE, CONNECTICUT, BEFORE THE UNITED STATES TARIFF COMMISSION

Mr. Chairman and members of the Tariff Commission, it is the well-known function and capacity of the Tariff Commission in cases of this kind to search for and evaluate details and technical information.

I recognize that a Member of Congress would not normally be able to submit more technical details that would assist the Commission than are made available by research members of your own staff and by the many experts in the industry, some of whom are here to present their statements.

There are some points, however, that are of particular interest to Members of Congress—and one or two have come to my attention as applying to the case which is now before you. I feel, therefore, that it would be of some assistance if we could clear the air a little and get down to the heart of the discussion as to whether, under existing law, the industry now before you can rightfully expect some relief.

I have read with considerable interest the written statement of Vice Chairman Edminster in a previous escape-clause report on spring clothespins. We feel he is to be congratulated for putting in plain language something which has been quite nebulous heretofore, and which, as a matter of fact, seems to have been carefully avoided by those administering the trade-agreements program.

I refer to the statement in which he has spelled out the fact that when tariffs are reduced in trade agreements, it is expected, and therefore foreseen, that increases in imports and decreases in production might take place. This is very logical, for in general, the domestic market is usually blessed with about all of a particular product that it can absorb, and when we manipulate the import end, it should be anticipated that increases in imports would be accompanied by decreases in domestic production.

Now, as I recall, the distinguished Vice Chairman once told a group of businessmen in New York City that it was his interpretation of the escape clause that the President of the United States was the only person who would do the foreseeing. It was pointed out then that the President was the person authorized by Congress to enter into trade agreements and to issue the proclamations lowering rates of duty. Of course, we must assume that he would have expert assistance and some recommendations, but the responsibility ultimately is his.

Summed up, it is clearly evident that the President, when he makes a concession—that is lowers a rate of duty—foresees some increase in imports and quite possibly, some cutback in domestic production.

It appears, then, that the appellants appearing before you now have the Herculean task of proving—if they are to get redress—that the President did not foresee the injury to the fur-felt-hat industry that is so evident.

It would be difficult for me to prove beyond a doubt that injury has occurred. That will be done by the injured, and who is there that could do it better? I am assuming injury, for it appears obvious to me that reductions in output, layoffs of workers, and idle equipment is injurious.

It does not take an economist to figure that, if imports from low-wage-scale countries are increasing; if retail sales in our own market are more and more of foreign origin and less and less of domestic origin, then the imports are responsible for the injurious reduction in United States production. The connection is obvious, the result inescapable. The case before you, one in which unemployment, dwindling sales, curtailment of output, and loss of dollar income coincide closely with increased imports, seems to be one of definite injury as a result of increased imports.

Mr. Chairman, I by no means desire to prejudge this case, but, assuming that some of the firms producing fur felt hats and bodies, have been injured as a result of increased imports, they must still prove that the increase in imports, and therefore the injury, is the result of the concession made on the products they manufacture.

I firmly believe they can and will do that—as nebulous and difficult as such a requirement is. The evidence appears conclusive that foreign producers were induced by lowered tariff rates to enter the domestic market on a much larger scale than formerly. They were quite aware of the great advantage they would have. I recognize that certain foreign currency devaluations may have had some effect, and that the gradual strangulation of free enterprise in one of the principal competing countries by Communist dictators has wiped out other competitive advantages we may formerly have had. Nevertheless, the initial and most important factor was the reduction in duty.

But the end is not yet. Assume the domestic producers prove to your satisfaction that they have been injured, that the injury is the result of increased imports, and that the increased imports are the result of the concession.

They must still show a greater amount of injury than was foreseen by the President when he reduced the duty, and that, gentlemen, is the $64 question, and the one in which I am particularly interested. It is the answer to that question which will decide whether the unemployed go back to work and whether the idle equipment begins operating again.

I do not believe the Tariff Commission has come to grips with this problem in any prior investigations under the escape clause. Either injury has not been proved or the appellants have failed to show the injury has been the direct result of the concession.

In this case, I feel confident you will find both. Your report to the President might then state that you have found those elements to be present and might make recommendations accordingly. I do not presume that you will be able to indicate to the President whether he foresaw the extent of the injury—that will be a decision which only he can make.

However, in the making of your report, may I suggest that you dwell on one of two incident factors. When the negotiations with Czechoslavakia started, it was a free country and, although wages were very low and most of the numerous expenses besetting our own producers for the public good were absent, nevertheless it was unfettered by the imperialism of another country. Since that time, the yoke of rigid communism with all its civil evils has taken over the government reins. I hope the Commission will remind the President of this and point out that he probably did not foresee the injury to the American producers that developed as a result of the despotism that enveloped the principal competing country. I cannot believe that the President would make a concession to a Communist-dominated satellite if he foresaw a resulting injury of any magnitude to any domestic industry because of that action.

Mr. Chairman, the competition between domestic producers of the articles which are the subject of this appeal has always been very keen. Processes have ben improved and efficiency increased to a great extent. The improvements made by research and expensive testing and experimenting have been transmitted abroad almost as fast as they have been put into effect here. In some industries the output per worker is much greater in this country than abroad. It is not true of fur felt hats and bodies.

Labor costs, then, play a very important part in the competitive picture. I need not ask you to make comparisons of the costs of labor in the principal competing country and in our own. Furthermore, you are cognizant, I am sure, that no domestic industry would dare to form a trust or combine, or would presume to fix prices and regulate sales, or force its workers to put in long hours at almost starvation wages. Unfair competition is a phrase that has, by careful Government regulation and inspection, been practically eliminated in our own country.

We cannot inspect, regulate, or make illegal those same practices in any foreign country. We can, however, take steps to protect our own industries from the devastating effects of the unfair methods of foreign competitors. You have the opportunity of taking such a step in the interests of this industry. We cannot dictate to Czechoslovakia that employees there shall receive minimum wages and decent working conditions, health insurance, retirement, or other reasonable blessings accorded our own workers. We can, however, prevent the products of such conditions as exist in Czechoslovakia from driving our own industries to the wall and our employees to the dole.

Again, Mr. Chairman, I realize that a strict administration of the escape clause by the Tariff Commission would require that you decide only whether there was injury, and whether that injury was the result of increased imports because of a concession. You would not be required to take cognizance of the foreign conditions that make the cutthroat competition possible, except as they developed after the concession was made. It is my firm belief that the Congress, when it passed the Trade Agreements Act, and the President, when he ordered the escape clause written into all future agreements, joined in one common principle, that of maintaining our standards of employment

and our system of free competitive enterprise. If that is so, the various fringe elements that I have mentioned here may well be taken into full consideration and when you prepare your recommendations to the President.

This industry is being injured by increased imports. Almost one-fourth of the domestic market has already been taken over. The imports increased rapidly after the duty rate was lowered and this was undoubtedly the main factor in the injury now taking place. While some increase in imports was probably foreseen when the concession was made, it does not seem logical that the President would have allowed the cut had he foreseen the extent of the increase in imports and the extent of the cut-back in our own production.

I shall look forward to seeing the Tariff Commission report on the results of its investigation.

The Last 50 Years in New Hampshire

EXTENSION OF REMARKS
OF

HON. NORRIS COTTON

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1950

Mr. COTTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I insert an article written by Dr. J. Duane Squires of the faculty of Colby Junior College at New London, N. H., a well-known educator, author, lecturer, and civic leader in our State. This article, entitled "The Last Fifty Years in New Hampshire," appeared in the April number of the New Hampshire Troubadour, a monthly publication issued by the State planning and development commission.

The article follows:

THE LAST 50 YEARS IN NEW HAMPSHIRE

(By J. Duane Squires)

On the 31st of August 1899 Mr. and Mrs. F. O. Stanley, of Newton, Mass., drove their Stanley steamer up the carriage road on Mount Washington. It was the original ascent of that mountain by automobile and a fitting augury of the remarkable changes that the next 50 years were to bring. In this brief survey of those changes in New Hampshire life since 1899 three questions will be posed and answers sought: How have New Hampshire people altered their ways of making a living? What new developments in the art of living together have they devised? In what spiritual and intellectual ways have they reacted to the fast-flowing tides of change?

The United States census in 1900 showed New Hampshire to have a population of 411,588. Slightly more than 53 percent of these people are described as rural; i. e., living in the country or in villages of fewer than 2,500 population. By 1940 the rural proportion had dropped to 42 percent, and by 1950 it was expected to be still lower. At the same time, however, the product of farm and field in terms of dollar value rose steadily during the years after 1900; by 1949 it was approaching $70,000,000 in annual value. The establishment of the State Department of Agriculture in 1913, an extensive growth in poultry raising, the appearance of the 4-H Clubs and the county agent, State control of the milk market, and a great increase in tested dairy herds, the modernization of the maple-products industry—all these have been notable agricultural developments in the Granite State since 1900.

Transportation in the last half century has similarly changed. Edwin V. Mitchell in his charming "The Horse and Buggy Age in New England" has reminded us that 1900 was the high point of the equine era. There were then fewer than 8,000 automobiles in all the United States, and at least 20,000,000 horses. Harness makers, blacksmiths, gristmills and feed stores, livery stables, giant snow rollers in the winter, and dusty roads in the summer, in New Hampshire as elsewhere in the Nation were apparently basic aspects of American life. Yet within 50 years what a difference. Old Dobbin has almost disappeared, an ox team is a rarity, more than 100,000 motor vehicles are registered in New Hampshire alone, and even the "iron horse" is not the imposing figure he was in 1900. New Hampshire's modern highway development began in 1905 with the passage of the State-aid road law. A short stretch of bituminous road was laid near Nashua in 1908, and the original stretch of concrete highway cut down in Hooksett in 1918. Interstate bus service started in 1923 between Manchester and Lowell, and interstate air travel began in 1934.

During the same decades consolidation in New Hampshire's principal industries—textiles, shoes, and timber products—waxed and then began to wane. In the latter nineteenth century New Hampshire had 6,000 industrial establishments; today the number is perhaps one-sixth that number, but fortunately increasing. The prototype of the early twentieth century industrial giant was the Amoskeag Mills in Manchester, at one time the world's largest cotton-textile factory. By 1935 such consolidation brought its own downfall, and today the single establishment of yesteryear is functioning as several dozen varied and independent industries. In 1950, as in 1900, manufacturing, including such activities as printing and the processing of materials from Mother Earth, is New Hampshire's chief method of earning a living.

The expansion of the recreational industry in the Granite State over the last 50 years has been impressive. Even in the nineteenth century thousands of persons came annually to New Hampshire, to enjoy its mountains, lakes, and forests. Since 1900 the numbers have hugely increased. The establishment of the 600,000-acre White Mountain National Forest in 1909 was followed a few years later by the beginning of State forest reservations. Today these have expanded into more than 20 attractive State parks. In the last 50 years golf clubs have dotted the State, numerous boys' and girls' camps have been founded, and many summer theaters have flourished. Tourist accommodations have been so well developed that it is now possible to sleep 75,000 visitors to New Hampshire at one time. In recent decades the Cannon Mountain Aerial Tramway, the Cranmore Mountain skimobile, the Belknap and Mount Sunapee chair lifts, snow trains, and winter carnivals, the efforts of the six regional agencies in the State, and the skill of the State highway department in maintaining good roads have raised tourism to unprecedented heights. Thousands of Granite State men and women now derive their livelihood from this important industry.

What new developments in the art of living together have New Hampshire people devised in the last half century? In candor it must be said that, more important than any single act of will by our people themselves, have been the effects of the social revolution throughout the whole Nation wrought by technology in the last 50 years. Among these effects which have influenced New Hampshire mightily have been the wide use of electricity; the marvels of modern medicine, hospitals, and public health; radio and television; the moving picture; the automobile, tractor, and truck; frozen foods and fuel oil; consolidated schools; supermarkets and synthetics of all sorts; and many other technological changes of our age. All these developments have altered our whole manner of living together, and in New Hampshire as elsewhere their impact has been profound.

Nevertheless, in other ways by deliberate acts of their will Granite State citizens have altered the pattern of public and group life. In 1899 "Old Home Week" was begun; 2 years later the present judiciary system was inaugurated; and in 1909 the direct primary law was instituted. In 1911 New Hampshire adopted the Nation's first workmen's compensation law and did pioneer work with the idea of a Public Service Commission, child labor regulation, and factory inspection legislation. During World War I the Granite State furnished more than 20,000 men for the armed services, invested upwards of $80,000,000 in war securities, and produced the author of that famous song, "The Long, Long Trail." A quarter of a century later, during World War II, New Hampshire gave 59,000 men and women to the uniformed services, and in war bond drives and by interim buying invested more than $539,000,000 in the cause of victory.

In other ways New Hampshire people reacted to the problems and needs of the contemporary world. In 1936 after devastating floods and again in 1938 after the terrible hurricane New Hampshire showed the traditional New England spirit of surmounting grave difficulties. In 1905 the State's oldest city, Portsmouth, was host to the Conference which ended the Russo-Japanese War, and in 1944 its largest hotel at Bretton Woods sheltered the conference which led to the creation of the International Bank and the International Monetary Fund. In 1949 New Hampshire was proud to furnish the granite cornerstone for the United Nations headquarters building now being erected in New York.

In what spiritual and intellectual ways have New Hampshire people reacted to the fast-flowing tides of change since 1900? Among Protestants there has been a noticeable increase of the ecumenical spirit, and a lessening of narrow sectarianism. Among those of other faiths similar trends have been at work, and all religious people have cooperated closely in manners of social reform and general welfare. "Brotherhood Week" in 1950 for all the United States was headed by a distinguished Catholic son of New Hampshire. Throughout the half century service clubs, youth organizations, fraternal groups, women's clubs, and welfare agencies, all with a basically religious motivation, have had a steady growth and a far-reaching influence.

Traditionally partial to the "district school," New Hampshire did not establish a real State school system until 1919. As early as 1901 the Normal School at Keene had been established, to do for the southern part of the State what its older sister at Plymouth had long done for northern New Hampshire. In 1923 the modern University of New Hampshire at Durham was organized, and has rapidly grown to a status of leadership among institutions of its kind. In private education Dartmouth College attracted students from all over the Nation, as did Colby Junior College, Exeter, St. Paul's, and Holderness. Other fine schools flourished, both on the secondary and higher level; among these were the Catholic colleges of St. Anselm, Mount St. Mary, and Rivier.

In the field of books and the arts New Hampshire had a proud record over the years since 1900. In 1950 almost every town in the State had a free, tax-supported, public library; an efficient State library furnished bookmobiles; and in per capita circulation of books New Hampshire ranked high among the 48 States. Early in the century Augustus St. Gaudens was a towering figure in the art colony around Cornish, and his beautiful home and studio are now a public preserve. Daniel Chester French, a native of Exeter,

UNIVERSITY OF MICHIGAN LIBRARIES

gained world renown from his creation of the Lincoln Memorial in Washington in 1922. The handsome Currier Gallery of Arts in Manchester opened in 1927, and the Orozco murals at Dartmouth became famous a decade later. Since 1908 the MacDowell Colony at Peterborough has been a stimulus to writers and musicians, while at nearby Swanzey in 1914 Joyce Kilmer was inspired to write his immortal poem, Trees.

In summary, it is clear that New Hampshire has changed amazingly in the past 50 years. Yet, as Carleton J. H. Hayes has properly reminded us, the forces of continuity are always stronger than those of alternation. Underneath, the character of the Granite State has been constant. It was no accident that the FBI reported in 1946 that New Hampshire was the most law-abiding State in the Nation. Perhaps with this thought in mind, the late Lawrence Shaw Mayo wrote in 1948:

"Conservative they are indeed, these country people of New Hampshire * * * but it does not follow that they are dull. Far from it. They are as shrewd as they are conservative, and so must occupy pretty nearly the first place among the shrewd peoples of the world. * * * That is merely one phase of the uncanny sense which gives unusual value to their judgments upon everything from uncertain weather to even more uncertain human nature. * * * Is it possible that the countryside in which they live is a tiny cosmos containing all types of human character? * * * Perhaps it is so. At all events their keenness in judging individuals is equaled only by their knowledge of human nature in general."

It is a tribute of which New Hampshire folk in the middle of the changing twentieth century have a right to be proud.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "How To Blackjack Congress," published in the St. Petersburg (Fla.) Evening Independent of April 20, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOW TO BLACKJACK CONGRESS

The difficulty in enforcing economy in Government is well illustrated by Postmaster General Donaldson's order sharply reducing postal deliveries. There can be little doubt but what Donaldson's order is simply a high-handed attempt to blackjack Congress into appropriating the funds the postal department feels it needs to carry on. He obviously hopes that his order will result in a great hue and cry from the people demanding the restoration of the department's funds.

Undoubtedly that pressure will soon be forthcoming. How Congress will deal with it remains to be seen. Nevertheless Donaldson knows, and so does Congress, that there would be no necessity for a retrenchment in postal service if the department were operated efficiently and sensibly.

The Hoover Commission has pointed measure by measure how the annual postal deficit can be eliminated without curtailment of service. In fact, under the Commission's plan service would actually be increased instead of decreased.

But entrenched bureaucracy in the postal department, as in other agencies is difficult to fight. When faced with a showdown, the bureaucrat invariably finds a means of making the public suffer; for his first allegiance is to the world of bureaucracy, never the people.

Proposed Loan to Spain

EXTENSION OF REMARKS
OF
HON. JAMES J. MURPHY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1950

Mr. MURPHY. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the following article by John O'Donnell:

CAPITAL STUFF
(By John O'Donnell)

WASHINGTON, D. C., April 27.—It was only 9 months ago that Secretary of State Acheson—then riding high, wide, and handsome—coldly told the Senate that he opposed lending $50,000,000 to Spain on the ground that Spain was a poor security risk.

A couple of days later, in his White House press conference, President Truman backed up anti-Spain Acheson. He declared that if the Senate bill then under consideration carried provisions for a $50,000,000 loan to Spain through the Export-Import Bank, he'd be against it and he bluntly proclaimed that this Nation just didn't have friendly relations with Spain.

CONNALLY STATES REVERSAL

Now the powerful chairman of the Senate Foreign Relations Committee, TOM CONNALLY, of Texas, solemnly assures the Senate that he has just talked with Truman and Acheson and can assure the upper House that, if Spain applies for an Export-Import Bank loan, the O. K. of White House and State Department will be forthcoming—and pronto.

We can assure the readers that this would never have happened if Acheson and Truman hadn't been nursing the bruises and wounds suffered in their defense against the Communist infiltration charges hurled at the administration by Senator JOSEPH MCCARTHY (Republican, Wisconsin).

It took CONNALLY'S solemn pledge that Acheson and Truman had reversed themselves before the Senate agreed it should pass the foreign-aid bill without a mandatory provision that Spain must receive a $50,000,000 loan out of the over-all $3,250,000,000 appropriation. The mandatory loan to Spain lost, 42 to 35.

Now all this and its background is extremely important as it relates to the individuals who are consciously playing the Commie game in the higher echelons of diplomacy in this Republic.

The facts are that Generalissimo Francisco Franco and the forces behind him have been the foes of the Kremlin since the first shot was fired in the effort to recapture the government of Spain from Moscow-dominated Reds, syndicalists, radicals, anticlericals, etc., who had seized power. That was soft-pedaled along with the record that the anti-Franco groups in this country at the time of the civil war have now, on the whole, been publicly denounced as Commie-front and subversive. In that group are formally listed these organizations: The Abraham Lincoln Brigade, the Action Committee to Free Spain Now, the American Committee for Spanish Freedom, the Comite Coordinator pro Republica Espanola, the North American Committee to Aid Spanish Democracy, and the North American Spanish Aid Committee.

BARRIER LAID TO MRS. ROOSEVELT

In the UN sessions, even after such Republican leaders as ARTHUR VANDENBERG, of Michigan, and Democrats like CONNALLY had proclaimed months back that the majority of the Senate wanted us to resume normal relations with Spain, and send back our Ambassador, Mrs. Eleanor Roosevelt in the UN blocked the move and made it impossible for the United States to switch from the Kremlin line.

Then and today, our military leaders will point out, privately, the necessity of having Spain and Portugal on our side when the cold war takes on the heat of battle.

Today's move in the Senate—if Acheson and Truman make good the promise to Spain that CONNALLY proclaimed in the Senate—may well mean the end to the persistent, sinister attack which Moscow's mouthpieces in America have been hurling at Spain during the war years and since.

Roosevelt in his official papers, Churchill in his historical report, Eisenhower in his account and the wartime diary of our Ambassador to Spain, Carleton Hayes, all have emphasized the long-ignored fact that Franco was on our side and not on Hitler's and that without Franco's aid our North African landings would have ended in bloody disaster.

SUPPORT FROM GERMAN SOURCE

Their endorsements of Franco have long been deliberately skipped over or given scant notice. But we notice from another source—this one German—that the American judgment on Franco was correct—even back in the opening days of 1941, when the British were being battered in North Africa and the German armies were riding the crest of victory.

In B. H. Liddell Hart's The German Generals Talk (William Morrow & Co., New York, 1950, 308 pp., $4), Gen. Kurt Student, commander in chief of Germany's airborne forces, was quoted as saying the Germans could have taken Gibraltar only with Spanish help, and Student so reported home, where a parachute attack had been planned.

"After my report, General Student went on, that plan was changed into the bigger one of capturing Gibraltar by an attack on the mainland. Eight divisions from France were to race through Spain. But this depended on the Spanish agreeing to let us through. Hitler did not want to take the risk of having to fight his way through Spain. He tried to persuade Franco, but Franco would not agree. The discussions went on for some time but proved fruitless. So the Gibraltar plan had to be dropped."

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Post Office—Cat's Paw," published in the Nashville (Tenn.) Banner of April 22, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POST OFFICE—CAT'S PAW

In one of those sweetly chiding "come now" editorials rebuking the unreasonable, a contemporary asks: "Do you absolutely have to have your mail twice a day?" With that as its headline, it goes on to justify the slash of service which Mr. Donaldson has ordered for the Post Office Department. As a stanch defender of the New Deal and then the Fair Deal, it refrains from all suggestion, naturally, that the Post Office has been used to rake squanderbund chestnuts out of the economy fire.

But back to that question: The answer is "No." Most citizens don't absolutely have to have even one mail delivery. They could go to the post office and call at the general delivery window. Or they could communicate by telephone or telegraph or buy time on the radio in lieu of written correspondence. Or they could get in their cars, or even walk, to go see the folks personally, with whom they have social or business contacts.

The point is that they don't have to do that—or haven't had to—because the postal service has built up the finest mail-carrying system of any land. It has steadily improved that service; not as a boondoggle venture, but as a responsible discharge of public service obligations justifying the slogan which declares that neither storm nor other calamities and handicaps shall stop these couriers.

Another point is that this essential service, proudly maintained and improved over the years, has been curtailed by Mr. Donaldson's order when there are dozens of Federal units—each with its encumbering personnel—which could be abridged or lopped off entirely without detriment to the operating efficiency of government, and actually to every taxpayer's benefit.

If the question were asked "Do you absolutely have to have the services of these surplus agencies—these supernumeraries of big Government?" the answer would be an unequivocal "No."

When these, and not the post office, are curtailed, no responsible citizen would register a complaint.

Partition of Ireland

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1950

Mr. PHILBIN. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I insert the very impressive resolutions adopted by the Clan-na-Gael at the Hotel Astor, Easter Sunday night, April 9, 1950, sent to me by my valued friend, James Reidy.

These admirably drawn resolutions set forth clearly and forcibly the viewpoint and arguments for the elimination of partition in Ireland. To my mind the arguments presented are unanswerable to any American who believes in the basic principles of freedom and democracy.

I hope that Members of the House will read these resolutions and other similar communications concerning this great contemporary problem which affects so profoundly the destiny of a courageous people who will not be deterred in their age-old fight for liberty and unity.

Americans would do well to ponder the question, of Irish unity and Irish autonomy. It is bound up inseparably with our own ideals of free government for which so many persons of Irish descent and blood have so valiantly and indomitably fought and died. It is bound up with eternal principles upon which this Nation was founded, by which it has risen to incomparable greatness. It is bound up with the avowed aims for which this Nation has stood, fought, and sacrificed so much—the dignity of man, the supremacy of moral and civil law, the predominant political significance of self-determination for all nations, great and small, and the right of every people worthy of the name to establish the government of their choice under free institutions and free traditions. It is bound up with strategic values in this time of peril.

Freedom exists for all, not for the favored and the privileged. It exists for mankind, for the Irish as well as every other people. It exists particularly for those peoples, like the Irish, who have cherished it enough unselfishly to die for it throughout recorded time. Let us never compromise the cause of freedom. Let us hold out the hand of encouragement and assistance to the Irish as well as other nations in their gallant struggle to achieve unity and independence.

I hope the Congress will soon express itself on this question. And I hope the great British Government will recognize that the early unity and deliverance of Ireland will do much indeed to cement the bonds which bind that nation to ours in the confraternity of freedom-loving peoples.

The resolutions follow:

Resolved, That we, members and friends of the Clan-na-Gael, assembled in the Hotel Astor, New York City, on Easter Sunday night, April 9, 1950, to honor the men of our race who fought and died for Ireland's freedom in Easter week, 1916, again pledge ourselves to work earnestly, in cooperation with all the other American-Irish organizations, in support of the demand of the people of Ireland for the withdrawal of the English armed forces and the English flag from the six counties of northeast Ulster, which were arbitrarily separated from the Irish Nation by a partition act passed in the English Parliament in 1920; and be it further

Resolved, That as the Government of England dismembered Ireland in 1920 for the evil purpose of fostering division and discord among the people of Northeast Ulster to serve the interest of English imperialism and did so without the approval of even the Irish Unionists who were sitting in the Imperial Parliament at that time, we again charge that Government with being solely responsible for the grievous wrong which was done to the people of Ireland and to the Irish race everywhere by the passage of the Partition Act, and we demand that the English Parliament, which perpetrated this injustice, undo it by restoring to Ireland the six separated counties that have been part of the Irish Nation from time immemorial; and be it further

Resolved, That we charge that the puppet government known officially as the Government of Northern Ireland has from its beginning violated, and still continues to violate, every one of the four freedoms, which were declared to be the things for which the Government of England and our own Government were fighting in the Second World War, and we cite in proof of this accusation the ban against celebrations in honor of St. Patrick issued by the despotic regime in Belfast and the reimposition, on April 6, of the provisions of the infamous Special Powers Act, including authority to the regular police and the auxiliary police force known as the B. Specials, which is recruited from the most fanatical members to raid the homes of the people and search them without a warrant at any hour of the day or night; and be it further

Resolved, That we brand as untenable the argument which has been advanced in some quarters that American citizens of Irish blood should not ask or expect the Government of the United States to interfere in a dispute between the people of Ireland and the Government of England, and we declare, in answer to that contention that the Government of the United States has already injected itself into this situation—and on the side of England—by shoveling, unconditionally, billions of dollars of the American taxpayers' money into the Treasury of the United Kingdom, in which is included the Government of Northern Ireland, and some millions of those billions have been and are used by the English Government to subsidize and support the puppet government in Belfast, keep part of Ireland unfree and prevent the people in the northeast corner of the island from living together in peace and uniting amicably with the inhabitants of the other twenty-six counties of Ireland; and be it further

Resolved, That we, remembering the pledges which were made to the unfree peoples of the world by the spokesmen of our Government in wartime and aware also of the friendship of millions of liberty-loving Americans, not of our race, for the people of Ireland, pledge ourselves to continue insisting that the Government of the United States, which by its prodigality in the use of the money of its citizens, has kept the British Empire from collapsing completely, has not only the right but also the duty to tell the English Government that it is violating American principles by its conduct toward Ireland and that, if it continues to do so, the flow of American dollars into the English Treasury will cease; and be it also

Resolved, That we request our representatives in both Houses of Congress to keep in mind the misuse by the Government of England of part of those billion dollar handouts which it has received from the United States and we demand that no further appropriations be voted to that government while it continues its oppressions in Ireland and maintains a garrison there.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Walter E. Waring to the editor of the Philadelphia Inquirer, published in the Philadelphia (Pa.) Inquirer of April 21, 1950.

UNIVERSITY OF MICHIGAN LIBRARIES

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THAT CUT IN MAIL SERVICE

To the EDITOR OF THE INQUIRER:

It has just been announced that the Post Office Department has decided that there shall be one instead of two deliveries of mail in the residential districts of our cities.

This is certainly a raw deal for the ordinary citizen who for years has been footing more than his share for the maintenance of the Post Office Department.

Every letter sent by humble John Doe must bear a 3-cent stamp. I understand that the average letter weighs slightly less than one-half an ounce. This means that first-class mail pays the Government somewhat more than 6 cents an ounce or about $1 a pound. Simple arithmetic shows that this means $2,000 a ton. The Government can carry letters, at a profit, to any part of this Nation at that rate of payment. But the citizens paying this high rate of postage are to have their daily deliveries cut in half.

Why does the Post Office Department have a deficit? Because any firm acquiring a second-class mailing permit can send John Doe circulars, pamphlets, prospectuses, and what not for practically nothing in comparison with the $2,000 per ton which John Doe must pay for the necessary letters that he sends to friends, relatives, and creditors.

From my own experience I am sure that John Doe consigns immediately to the wastebasket at least 90 percent of this second-class mail. Yet he must not only pay for such mail with his 3-cent stamps but he is penalized by having his mail deliveries cut in half.

Surely the Post Office Department has not considered the rank and file of its citizens—and its patrons—in issuing its decree.

WALTER E. WARING.

LINCOLN UNIVERSITY, *April 18.*

Pension Plans and Public Policy

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1950

Mr. VAN ZANDT. Mr. Speaker, Mr. Beecher E. Hess, for years identified with the movement to provide adequate old-age pensions, visited central Pennsylvania last week and addressed large groups at Altoona and Williamsburg in my congressional district.

Mr. Hess' analysis of the general problem of old-age pensions is of timely interest and for that reason I am inserting in the CONGRESSIONAL RECORD a copy of his address:

PENSION PLANS AND PUBLIC POLICY

Following the legislative trends in our National Capitol I am impressed with the great public interest that is focused on the preservation of our Americanism and the general subject of pensions. Americanism versus foreignism of one kind or another is of vital concern to every true American citizen today. Never before in our Nation's history have we been confronted with a problem dealing with so many of those within our own border who would destroy our form of government, enslave us under a dictatorship and subject us to the rule of the iron curtain. It is scarcely believable that such a condition could exist in free America, but it is a fact and not a red herring drawn across the path of our national life. It is a great satisfaction to me to be identified with an organization, as a member, that has for one of its objectives patriotism. I refer to the American pension committee under whose auspices I am speaking now. This nonpartisan organization is national in scope having clubs and memberships in 17 States. I am glad to say that it is particularly active in this area of Pennsylvania where its influence for Americanism and pensions is substantial. In the pension field this organization is devoting its best efforts toward better pensions and improved social security.

Our old folks represent one segment of our population that from year to year are placed in greater jeopardy. This is perhaps due to our national development and to our everchanging economic order. Age limitations for industrial employment are decreasing while it becomes more difficult for older people to get or hold a job. The elderly man or woman has little chance of earning a livelihood today.

The Census Bureau tells us that our population is increasing beyond all past estimates—the population is more than 150,000,000. This represents a gain of 17,000,000 since 1940. That gain is more than the population of all the New England States combined. And the largest percentage of all this increased population comes in the age group of 60 years and over. There are now more than 16,000,000 American citizens over 60 years of age and an estimated 10,000,000 of them are dependent more or less upon someone else for their existence.

Modern science, hygiene, medical care, hospitalization, etc., have greatly prolonged their lives. They sometimes feel that they are too young to die and too old to live. The tragic result of our speeded-up industry is an ever growing army of aged folks forced into unemployment, poverty, and obscurity. While we are most thoughtful for the rest of the world, I feel we are prone to ignore our own needy old folks and let them suffer without attention or concern.

In this Congress there were long debates on the famous minimum-wage proposition. Again and again we were told that 75 cents an hour or $30 per week was an absolute minimum on which an individual could live. If that be true we are guilty of relegating more than 2,500,000 good American citizens to slow starvation, for there are that many who are on the old-age-assistance rolls getting the pitiable sum of about $10 a week, average, throughout the country. By what process of reasoning do we assume that one man must have a minimum of $30 a week to live on and at the same time refuse to hear the plea of the man or woman who is forced to live or die on $10 a week? The answer is obvious. It is unfair, unjust, and un-American.

To guard ourselves against communism we spend millions beaming the Voice of America to the rest of the world. We support ECA to the tune of $15,000,000,000, and we rightly seek to protect ourselves against any and all subversive elements. But let us not forget that one of the greatest perils to our American way of life is the fear of destitution, dependency, and poverty when our productive days are over. Millions of destitute senior Americans find it difficult to enthuse over a security system that provides them only $10 each per week when living costs are at the highest peak in history. While they are proud and perhaps not so vocal as other groups getting Government aid and support of one kind or another, their feeling of neglect is deep-seated and their being ignored is bitterly resented. I have yet to find anyone who is satisfied with old-age assistance as it is operated by the present Administration. All are agreed that it is in need of revision or improvement and many feel that it should be scrapped and replaced with a new system whereby pensions would be paid as a matter of right. Perhaps the most frequent criticism of the present old-age assistance are the lien laws that prevail in many States. Under these laws old persons cannot secure a pension if he or she has property, insurance, or anything else of value. In effect they must proclaim themselves paupers regardless of cause or circumstances which may be beyond their control.

Pensions as security in old age has within a short time become one of the foremost public issues of our day. Industry throughout the country has adopted pension programs for their workers. But can many companies or corporations provide real old age security for their employees? How can anyone know whether or not a large and prosperous enterprise may not be completely out of business 5 or 10 years hence.

You hear it said that pensions are paid for by the company and the workers. Now if we are realistic we must agree that such pension costs are added to the price of the product and paid for by the purchasing public. The United Mine Workers have a $100 a month pension and I am glad to see them get it. But how is it paid? It is paid by adding 30 cents to the price of every ton of coal sold. Everybody pays directly or indirectly into this pension fund. But only the mine worker gets the pension. But even in this instance the mine workers are not absolutely secure. A few months ago when there was disagreement among the managers of the fund, payments were stopped and the retired miners found themselves without pension security. The problem is too big and too complicated to be solved by companies, industries, or unions.

The old age pension issue is national in its scope. About 11 percent of the population of every county in every State is in the old age class and nearly every family has its aged dependents. It is little wonder that pension news gets the newspaper headlines and radio time. What are we doing about it? But first, let us see what has been done.

The present old-age assistance was enacted into law in 1935. The first year's payments averaged about $18 a month to some 435,000 recipients. As time went on the average monthly payments were raised and the pension lists were increased. Last year an average of $44 plus per month, each, was paid to approximately 2,500,000 recipients throughout the country. No one denies that these pensions have not served a humanitarian purpose. Small and inadequate as they are, they have helped—and only helped—to keep body and soul together. Our pension experience over the past 15 years points up the following facts:

That pensions are here to stay; that each year a greater percentage of our population graduates into the old-age class, and that even 45 years of age is too old for industrial employment; that $10 a week will not support an adult human being; that there are millions of needy and suffering aged citizens who are denied pensions because of technicalities, State laws, or the social worker; that organized attempts here and there to find jobs for the oldsters have failed because the young man and the machine get the preference; that we have the financial ability to pay decent livable pensions—we raise billions to send abroad; that pensions clubs, groups, and national organizations have been organized for the purpose of improving the plight of the aged. These organizations deserve great credit for promoting and advancing the cause of pensions. Their insistence and influence have kept the issue alive and before the legislators, both State and National.

In view of the above and other pertinent facts, two schools of thought have developed, particularly in the Congress, in regard to old-age pensions, one believes that the old-age

assistance provision of the Social Security Act should be retained but extended and improved, this position is the one taken by the Democratic administration. The other believes that it is wrong in principle and should be discarded. It believes that a national, uniform old-age pension law should be passed by the Congress, providing a pension to all citizens of a given age with perhaps certain minimum restrictions.

The American Pension Committee is supporting a bill in Congress that would pay a pension of $60.00 a month to any citizen 60 years of age and over who had not paid a Federal income tax the year previous to making pension application. This would provide a man and his wife $120.00 a month. Incidentally, I want to state that the Congressman representing this Twenty-second Congressional District of Pennsylvania, the Honorable JAMES E. VAN ZANDT, has been most active in behalf of better pension legislation during his service in Congress. I want to assure those who are interested in the cause of pensions that you have a sincere, stanch supporter serving your best interests in Washington. He is capable, experienced and respected by his colleagues and associates as one of the hardest working men on Capitol Hill, impartial in his services and thoroughly devoted to his duties as a Member of Congress. He is serving as cochairman of a congressional steering committee for old-age pensions. Congressman VAN ZANDT is doing a good job for you and therefore deserves your full cooperation and support.

There are some 15 social security or pension bills before Congress now—hearings have been held by the House Ways and Means Committee and by the Senate Finance Committee. Some kind of social security pension legislation will certainly be passed in this Congress. I hope it will enact legislation to provide pensions for those who qualify now and not tie it in with an insurance proposition that only anticipates future payments. Pensions are needed now. I know of no action that this Congress can take short of that which deals with our national security that will yield as much in happiness and general good as to provide a genuine American pension for our deserving retired American citizens.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Postal Service Not a Business," published in the Canton (Ohio) News of April 22, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POSTAL SERVICE NOT A BUSINESS

Whenever the United States Post Office Department gets into the news, as it is now in connection with the Postmaster General's retrenchment order, effective next July 1, its failure to be businesslike is discussed.

This stems from a widespread belief that the postal service is a business because it collects payment for some of its services. Consequently, its operations are expected to be like the operations of a business, with balance sheets and profits and losses. A deficit is alleged to be a sign of mismanagement, as it would be in a business.

The truth is that the United States Post Office Department was not set up as a business, nor is it operated as a business. It is operated according to the will of Congress, which expects it to do many things no business would be asked to do, such as maintaining some 30,000 post offices that don't handle enough mail to pay their own way.

The Department has no control over its rates, furthermore; it cannot make itself more nearly self-sustaining without congressional authority. It has been used throughout its history as an agency for carrying out certain vital public policies, such as providing public subsidy for development of aviation; distributing publications to as many persons as possible, in order to inform the public; and giving service at no direct cost to every person in the United States.

It cannot bargain with railroads and airplanes over the cost of carrying mail; that is left to Congress. Though the difference between the money it takes in and the money it pays out is referred to as a deficit, this is not the case in any other department of the Government. No one would think of referring to the money spent by the Department of Agriculture as a deficit merely because it isn't offset by revenue from benefited farmers.

In a recent issue of the Postal Record, Jerome J. Keating, secretary of the National Association of Letter Carriers, pointed to the fact that of the 18 percent of Federal spending chargeable to normal operations of Government only one-fifteenth is spent on the Post Office Department.

He declared: "The Post Office Department is operated as a service. It is up to Congress to establish rates that it feels are fair and equitable. It is also the responsibility of Congress and the responsibility of the officials of the Post Office Department to secure sufficient funds to operate the postal service so that the American people are given the service they are entitled to. * * * A doctrine that the postal service should be operated fundamentally to give good service to the American people is absolutely necessary. Poor service gives great distress to conscientious postal employees."

Elsewhere, Mr. Keating pointed out that the Department does not run a business but a service. "Postal operations are always managed by Government," he explained. "There isn't a single country in the world where the postal service is owned and operated by private capital. * * * Even today in this great country of ours the postal service is the only universal public service. There are millions of people who do not have telephones; there are millions who do not have access to telegraphic service; there are millions who do not have running water; there are millions who are not served by public transportation; there are millions who do not have the benefit of electricity."

Biggest Story

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the fifteenth article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY

(By Frank C. Waldrop)

History wastes no time on losers. But even so in this limited little story there must be mention of a shadow known as Trotsky.

He is a shadow. But of all the murderers of our age, he was the one who most appealed to American lovers of communism 40 years ago.

And so, to understand today's communism you must know something about him.

Like Marx, Lenin, and the other early builders of the machine, Trotsky was a son of the well-to-do. More than that, he was educated, polished, and elegant in dress and manner.

His born name was Lev Davidovitch Bronstein, and if you are interested in such things you can read a story of his upbringing in his own words, for he was a gifted writer and as a historian of the revolution that cost him his life, he has no equal.

He had wit, charm, and a love of malice. Once in New York City as an exile from the czars, he wrote a widely quoted piece about the gum-chewing crowds on the subway.

But to accept it, you had to forget that no matter how grinding the poverty of one might be at a given moment, the standard of living in the free air of America was moving steadily up, for all.

To let Trotsky persuade you, it was essential to forget that every American was then, as every American remains today, a human being whose lot is the envy of the world.

A good understanding of the difference between the mind of a Trotsky and the mind of an American might be summed up in the case of Siberia.

From the earliest times, the rulers of European Russia have been trying to fill up that vast emptiness. Somehow, it does not work. Right today, the machine guns and the prisons are doing little better for Stalin than did the knouts and the chains of the czars.

Long railroad trains of victims are moving steadily from European Russia to the plains beyond the Ural mountains. And yet it is impossible for the Communists to conceal that the basic drift stays steadily west.

The stubborn nonpolitical will of the people is to huddle into the region that lies between the Baltic and Black seas.

Trotsky was once sent to Siberia in one of the many efforts of the czar to combine dissolution of troublesome politicians with populating undermanned territories.

But Trotsky was a city slicker. He liked drinking tea out of a glass and wiggling his toes and spinning yarns of diversion while his lightning instinct for intrigue worked to cut opponents' throats.

He hated the forests and the snows and the summer winds and the smell of the great outdoors, even though he had been born on a farm, himself. Or maybe it was because of that.

So with his gift for words, he made Siberia an image of horror for the class of people in the Western World who are today commonly known everywhere as intelligentsia. The word is Russian.

And what are the intelligentsia? Well, about the only people who know intelligentsia when they see them are other intelligentsia.

Apparently, though, their main idea is that they know what's good for the rest of us and will give it as they please—New Dealers, so to say.

Forty years ago, Trotsky was laying down a formula for the "intelligentsia" that now is perfected and glazed. He had no taste for the earth to which he had been born.

In contrast, I have in my memory the words of an American who was hired by the Soviet

UNIVERSITY OF MICHIGAN LIBRARIES

Government in the 1920's to set up and operate a hunt for gold in the Siberian reaches.

To him, Siberia was a place of wonder and beauty and opportunity. It was nature to be conquered and yet lived with in pleasure. The life, he said, was easier than Alaska, where he had spent many years.

Surely any American who has any knowledge at all can understand that engineer's feelings. Here on this continent our breed has beat the worst that nature can do.

We even dig the borax out of Death Valley. We cut down one forest and plant another. Tear the sod off the western plains and then spend hundreds of millions tacking it back.

If the spirit of America were let loose on Siberia it could be a land of rich fulfillment. But under the czars the Russian people huddled timidly up against the edge of Europe and so they do, today; because they have never been told to go out and make a profit for themselves out of the earth.

And what little development there is behind the Urals can be traced directly to the importation of American and German and a few English and French engineers, first by the czars and later by the Soviets in the 1920's, when the cry of communism was "catch up with and pass America."

Address of Hon. William C. Bullitt

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 6, 1950

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of an address delivered by William C. Bullitt at the Yale Law School at New Haven, Conn., Friday, April 14, 1950. Mr. Bullitt spoke under the auspices of the Pierson College International Relations Club:

Forty years ago when I was a student at Yale we were all obliged to go to compulsory Sunday chapel—which often meant returning to New Haven by the milk train from parties in New York. Our pain was eased, however, by President Hadley. The visiting preachers would invariably ask him how long they should preach. Hadley invariably would reply: "Your time is, of course, unlimited; but the oldest Yale tradition is that no souls are saved after the first 15 minutes."

At the risk of saving no souls at all, I shall take more than 15 minutes because I want to try to give you an over-all picture of the world situation. When you complete your studies you will step onto a field of battle. All of us wish that were not so; but it is so. And you had better know now what you will face.

Why isn't it reasonable to believe that if we display enough good will we can reach an agreement with Stalin that will give peace to the world? After all, the Soviet Union contains a sixth of the land surface of the earth. It is sparsely populated. It could be developed as our own country was developed between the Civil War and the First World War—peacefully, with a constantly rising standard of living for all its inhabitants. Why doesn't that happen? Isn't the trouble with ourselves? Isn't the Soviet Government afraid of us—legitimately afraid of us?

It is not. The Soviet Government knows better than any other government in the world the exact state of mind of the American Government and the American people. It has plenty of agents and sympathizers in our country to give it the facts, and there is no better informed group of men in the world than the Politburo. The leaders of the Soviet Union know as well as we know that we desire to live in peace with all nations.

One day in 1934 when our Government was attempting to establish cordial relations with the Soviet Government—hoping that a combination of the forces of Great Britain, France, and the Soviet Union might prevent Hitler from making war in Europe and the Japanese militarists from pushing further into China—a number of commissars were having a drink with me at our Embassy in Moscow. I showed them the Soviet Second Reader. In it was a chapter entitled "America." At the head of the chapter was a drawing of starving children working at factory machines in a cellar, while on the floor above fat, bejeweled women and fatter men danced jazz. The text read: "America is a country where children of workers and peasants are forbidden to get an education. They are forced to work all day at machines in dark cellars, and get nothing to eat but bread, while the rich dance over their heads." I asked the commissars how they expected to educate leaders for the Soviet Union if they taught their children such lies? They laughed and one of them replied: "Have you ever found any one of us that doesn't know the facts?" I answered that I thought they were better informed than the members of any government I knew. The commissar then went on: "It will always be so. We shall educate in special schools leaders who will know the truth, but as for the rest—we shall teach them exactly what it is in the interest of the Soviet Union for them to know."

Stalin and the members of the Politburo have no fear whatsoever that they will be attacked by the United States. They know the facts. The tremendous trumpetings of anti-American propaganda in Soviet schools, plays, movies, books, press, and radio are merely means to drive fear and hatred into the ignorant in order to make them docile instruments of Stalin.

From 1941 to 1947 we tried to appease Stalin. Hopefully we gave him everything he asked. We failed. His appetite remained as great as ever. We failed to appease him then, and we would fail now if we should try again to appease him. We cannot develop friendly relations with the Soviet Government as we could develop such relations with a normal government because we are facing, not a normal government, but a clique of men who, by their own will, deliberately and consciously, have chosen to declare themselves the enemies of all peoples that live in freedom. They are the high priests of a fighting faith which requires of its adherents conquest of the world. The Russian people, who are capable of performing prodigies of good, are driven by that privileged and persecuting clique to prodigies of evil. In 1939, Stalin ruled 170,000,000 persons. Today he controls 800,000,000—more than a third of humanity. His objective is conquest of the entire human race. He will not stop. He can only be stopped. We cannot get off this planet. We shall have to stop him or submit to his rule.

To believe that it is still possible to appease Stalin, it is necessary to be ignorant both of Soviet history and of the doctrine which inspires the actions of the Communists.

The Communist creed teaches that establishment of Communist dictatorship throughout the earth and abolition of private ownership of the means of production will erase all envy, hatred, and malice from the human heart. It promises that the state will then wither away and that all men will live without a state in perfect happiness. In the name of science, the Communists teach this fantastically unscientific creed to the peoples they control. They educate their children to live by this faith and, if need be, to die for it. A large percentage of the young in the Soviet Union and the Soviet satellite countries have no other creed taught them. So they have faith in the Communist creed and give their lives for it, believing that they are fighting to emancipate all humanity from all evil.

Since the Communists believe this, they are convinced that the highest present moral duty of man is to achieve Communist world dictatorship. This supreme end, they hold, justices all means for its achievement—all means including the pledged word given and broken, character assassination, torture, murder, and war. They revere the words which Lenin wrote: "It is necessary * * * to use any ruse, cunning, unlawful method, evasion, concealment of truth." They hold as gospel truth his portentous statement: "It is inconceivable that the Soviet Republic should continue for a long period side by side with imperialist states. Ultimately one or the other must conquer. Meanwhile a number of terrible clashes between the Soviet Republic and the bourgeois states is inevitable."

There is not the slightest evidence that Stalin disbelieves in this doctrine which now bears his name as well as the names of Marx and Lenin. Even if he should disbelieve in it, he could not abandon it. For the Marx-Lenin-Stalin creed is the fighting faith which holds the Communists together. Without it the Soviet Union and all other Communist states would disintegrate. Stalin must and will continue to try to conquer the world.

No vice in international affairs is so fatal as the vice of wishful thinking. If we continue to believe that we can appease the unappeasable, we shall not survive. We cannot turn a tiger into a cat by stroking it.

In our short history we have never had to face any problem as complex as the problem of this Communist assault. The western world once did face a similar problem. The fighting faith of Mahomet overwhelmed the Christian states of the Near East and north Africa and Spain, and the Moslem forces were not stopped until they reached Tours on the Loire not very far from Paris. I do not wish to compare the Moslem religion, which is a noble one, to the Communist creed, which is satanic; but I do wish to point out than in the hundred years between Mahomet's death in 632 and the defeat of the Moslems by Charles Martel in 732, country after country fell before that fighting faith until it seemed that it was irresistible.

The Communist attack is no more irresistible than was the Moslem attack. But to meet it successfully, we shall need the same faith and courage that the Christians had at Tours. Furthermore, we shall need wisdom. We shall have to be wise in time. And there is not much time. We shall have to grow up quickly, for the burden of defeating the Communist attack has fallen on us at a moment when we are intellectually ill-prepared to carry it. We have always been so occupied with out domestic affairs, so happy in our own continent, that few Americans have taken any long-continued interest in foreign affairs. In consequence, our foreign policies have often been not expressions of our vital interests, but mere spasmodic reactions to the demands of domestic political expediency. The few Americans who have devoted their lives to foreign affairs since 1914 are so exceptional as to be almost oddities. As a nation, we are amateurs in the foreign field. Our leaders play by ear or by hunch. Stalin sits in the Kremlin with the members of his Politburo who compose his general staff for conquest of the world and plans his advances on a world scale as carefully as the commander in chief of an army plans his attacks. Our Government has never prepared an over-all plan of political, economic, and military defense for ourselves and the rest of the free world. Indeed, our

administration has not even understood that such a plan is vital. It is not so long ago that President Truman said, "I like old Joe."

What should we be doing?

Can we stop Stalin without war? It is not impossible but it will not be easy. For Stalin will not stop unless we keep him constantly confronted by superior force and unless he knows that we will use that force against his direct or indirect aggressions. To stop Stalin without war we must, therefore, have both the superior force and the will, if necessary, to use it.

Do we have the superior force? In 1945 we had the atomic bomb and the world's greatest air force to carry it. Our industrial plant was intact. China, the key to all Asia, was our ally. Stalin had no atomic bomb and no long-range bombing planes. His industrial plant was, in large part, worn out or destroyed. Compared to the Soviet Union we were overwhelmingly strong.

Today Stalin has China as an ally. He has atomic bombs and at least 350 long-range bombers capable of carrying them to any spot in the United States. We have no radar warning net to detect the approach of his planes. We have only a fraction of the number of pursuit planes needed to make effective use of a warning net. The authoritative Finletter Commission in 1948 recommended as a minimum for national security 70 air groups. We have 44. Stalin's total air force outnumbers ours by about 3 to 1. His annual production of war planes is about 3 to our 1. He has 125 army divisions to our 10—among them, 30 armored divisions to our 1. In addition, he has approximately 270 submarines—about 30 of which are of the latest type against which we have not yet produced effective counter weapons. Furthermore, thanks to his agent Fuchs, who transmitted to him all our secrets for production of both A-bombs and hydrogen bombs, he may be ahead of us in production of H-bombs.

Moreover, the whole of western Europe is without defense, and everyone in western Europe knows it. Its cities cannot be protected against Soviet atomic bombs except by our Air Force, which today is not strong enough for the task. To oppose the 125 Soviet divisions, the French have 6, the British say they can furnish 1, the Belgians 1. To have a chance to stop the Red Army for a few months, the European democracies would need from 50 to 60 divisions. Modern equipment for such a number of divisions would cost from ten to twenty billion dollars. And military authorities agree that no western European defense system can be effective unless both the western Germans and the Spaniards are included in it.

The balance of military force is swinging so rapidly to the Soviet side that some officials in Washington who have access to secret information believe that Stalin will attack us this autumn. They argue that by August 1950 he will probably have 50 A-bombs—enough to destroy our great cities and our atomic-production plants, and thus prevent effective American counterattack. But my belief is that Stalin will not launch shooting war until he is certain that he can defeat us easily. He is a cautious and crafty leader who strikes only when he feels sure of quick victory. This autumn, his first surprise attack might not be successful. We would probably be able to strike back effectively. Therefore, it seems likely that he will not start bombing this year but will go on increasing his military strength faster than we are adding to ours, and seize more peoples, resources, and strategic areas, until he feels that his power is irresistible. We are allowing time to run on his side. And he knows it.

Unless we strengthen quickly our own military forces and those of our allies and prevent further Soviet aggressions, we shall throw away our last chance to keep Stalin confronted by superior force—and shall throw away, therefore, our last chance to stop Stalin without war.

We shall not even be able to defeat Stalin in war unless we build up our strength and that of our allies faster than Stalin is building up the strength of the Soviet Union and its satellites, and unless we stop further direct or indirect Communist aggressions.

At the present moment the Communists are advancing by open warfare in Indochina. If we let Indochina fall, Burma, Siam, and British Malaya—with its vast production of rubber and tin—will also fall. Then it will be India's turn.

At another point, the Communists are making small attacks preparatory to a great attack. The Chinese Communists for some time have been attempting to seize small islands on the way to the great strategic island of Formosa. Formosa is still being held by the Chinese Nationalist Army which, some weeks ago, gave proof of its good morale by seizing a port on the mainland. If the Chinese Communists should capture Formosa, Stalin's forces would be within 250 miles of the northern Philippines. It was from Formosa that Japan attacked and captured the Philippines. Our Joint Chiefs of Staff, headed by General Bradley, pleaded with President Truman to send munitions and equipment, as well as economic aid to Formosa, and a few American officers to advise regarding defense. Secretary of State Acheson opposed our military leaders, and persuaded President Truman to decide that we would continue to do nothing to prevent the fall of Formosa. That is our present policy. For the Philippines, the Department of State is preparing another Bataan.

In the Near East, Iran, with its huge oil production, which plays such a large part in British economic life, is again threatened by Soviet-directed revolutionaries of the Tudeh party. They have a fertile field in which to work. The poverty among the peasants of Iran is so grinding that they are close to revolt. Unless the Government of the United States moves rapidly to alleviate the suffering in Iran, Stalin may soon add that ancient country to his long list of satellites.

These, for the moment, are the areas in Asia where Stalin is pressing his advance strongly. But even in western Europe he is undermining our friends.

In Italy, more than 20 percent of the workmen are unemployed, and the Communists, who gathered one-third of the votes at the last elections, are gaining in strength.

In France, the Government is far weaker than any French Government before the Second World War, and its entire apparatus is riddled with Communists. Even the head of French atomic research is a Communist.

Great Britain is staggering toward another financial and economic crisis.

Western Germany, under the pressure of unemployment, is beginning to listen to the Soviet propaganda which says: "Side with the United States and you will have unemployment, underfeeding, shortage of raw materials, a divided country and, finally, Soviet atomic bombs on your cities. Side with the Soviet Union and you will have all the wheat and raw materials you want, no unemployment, and a united Germany including the part that is momentarily Polish." Pastor Niemoeller, much admired by Americans, has now declared himself in favor of a united Germany even at the price of Communist rule.

When we began to give Marshall plan aid, and when we signed the Atlantic Pact, our object was to make western Europe a strong ally. We have succeeded only in keeping alive 17 picturesque, competing countries which cannot feed or defend themselves. If they would unite their economies by entering a European federation, they would be on the path to strength. But their governments refuse to take any serious steps toward federation. And our Government is making no effective effort to move them toward federation. They feel confident that, even after 1952, we will not stop our doles to them. And, indeed, we do not dare to stop for fear that they will all collapse into the hands of Stalin and be organized as Soviet satellites for his final attack on us.

What then is the real state of our defenses against Soviet aggression? Our own military strength is falling behind the growing military strength of Stalin. Asia is slipping into Stalin's hands. Western Europe is defenseless. The Soviet atomic bomb threat to our homes, our families, and our country is increasing each day. The Communists are advancing. We are retreating. They are on the offensive. We are on the defensive. No war, hot or cold, was ever won by forces which remained on the defensive.

Why are we on the defensive? Why has our Government failed to defend our vital interests?

Because American foreign policy since 1941 has been a supreme triumph of Soviet psychological warfare. In 1941 our Government was bamboozled into treating the Soviet Union as a "peace-loving democracy," and the Chinese Communists as "mere agrarian reformers who have no connection with Moscow." Our Department of State forgot that the Soviet Government was a predatory totalitarian tyranny and that the Chinese Communists were agents of Stalin. In 1941 the Soviet Government was in desperate straits. Thanks to our aid—$11,000,000,000 worth—it survived. Today, Stalin controls more than a third of the human race, and we are not sure that we shall survive. The measure of our foreign policy is the fact that in 1939 Stalin controlled 170,000,000 people, while today he controls 800,000,000.

Apologists for the Tehran, Yalta, and Potsdam agreements have used many words in an attempt to prove that what was wrong was not the agreements themselves but the failure of the Soviet Union to carry out the agreements. This is as if a banker, who had been appointed trustee of the fortune of a child, should place the funds entrusted to his care in a Ponzi get-rich-quick scheme and then, when the money was lost, plead that the trouble was not with the trustee—who accepted Mr. Ponzi's promise to pay 200 percent per year—but with Ponzi's failure to carry out the agreement. The people of the United States hire officials to work in the Department of State because they need experts to handle complex world questions. The officials of that Department are trustees of the vital interests of the American people, and the most contemptible excuse that can be offered by or for them is that they meant well but were "played for suckers."

To explain the sacrifice of the vital interests of the people of the United States by our National Government, it is not necessary to conclude that our Department of State is filled with Soviet agents. We know that there have been some in influential posts. But most of the damage has been done by naive dupes of Soviet psychological warfare. We still have in office, in Washington and throughout the world, duped officials who have not been Soviet agents but have served the Soviet Government as effectively as if they had been Soviet agents.

In our Army, a general who loses a division through incompetence is court-martialed. In our Department of State, men who throw away whole countries are promoted. They have a vested interest in their own mistakes. They cannot detach themselves from their past or their friends—even though those friends turn out to be Soviet agents. In any

UNIVERSITY OF MICHIGAN LIBRARIES

parliamentary democracy a minister of foreign affairs who had tossed a great ally like China to Stalin would have been dismissed from his post. Mr. Acheson remains Secretary of State.

There is a great moral difference between traitors and Soviet dupes. It is the same difference that is recognized in law between a man guilty of murder and a man guilty of manslaughter. In the case of manslaughter, there is no intention to commit the crime. But in both cases the victim ends up dead. If our President continues to keep as advisers on foreign policy men who have played a part in the sacrifice of our vital interests from 1941 to the present time, we shall have small chance to survive.

Perhaps it is difficult for you to feel profoundly that all you care about may be destroyed. Have you ever thought how many great civilizations have been totally annihilated? Have you thought of the Athens of Pericles and of the Roman Empire? Of all the great cities of Syria and North Africa where today stretch only lonely sands? Have you understood that a similar extinction may come, and come soon, to the whole Christian civilization of Europe—and may come to us here? This is hard to believe but it is so.

Under these circumstances, what should we do? Let us remember two facts in approaching the problem of our foreign policy:

First, let us remember always to distinguish between the Russian people and the Soviet Government. There can be no peace on earth so long as the Russian people and the peoples of the Soviet satellite states are driven by men who prefer a murderous doctrine to the "plain exigence of charity." In the year 1830, the Poles in revolt against the tyranny of the Czars inscribed on their banners a phrase addressed to the enslaved Russian people: "For your freedom and ours." We should approach the Russian people in the same spirit. However hard it may be, we must make the Russians comprehend that we stand for their freedom no less than for our own, since in our battle against the Communist dictator, the Russian people must be our final allies. We have had freedom for so many years, we have lived so long in Christian civilization under a bill of rights honestly enforced, that we are apt to forget that the idea of freedom is the most explosive force in the world of politics. Freedom is an atomic bomb in the field of ideas. All men hate to live under the eye and hand of an omnipotent secret police. Tyranny, whether it be called by the name of communism, fascism, or by any other name, is loathed by all normal men and women. And however absolute may be today the grip of the Soviet dictator on his subject peoples, that grip can and will be ended eventually by the idea of freedom.

Second, let us remember always that many years will elapse before the peoples of the Soviet Union and the satellite states achieve freedom and that, throughout those years, we and the other free nations will be in danger of extinction unless we keep the Soviet Union constantly confronted by superior force. If any one of you is morally disturbed by that idea, let him remember that the most legitimate use of force on this earth is to hold the field to permit the growth of moral ideas.

Within the framework of these general conclusions, what should be our foreign policy?

1. To build up our military strength faster than Stalin is increasing his military strength.

2. To achieve the federation of western Europe and give adequate arms to that federation.

3. To stand up with force to the threat of the Communists in eastern Germany have announced that on May 28 they will march 500,000 youths from east Berlin into west Berlin.

4. To give far greater aid than we have been giving to resistance forces in all the Soviet satellite countries.

5. To help the Albanian exiles rescue Albania from the Communists, and thus give new spirit to all the enslaved peoples behind the iron curtain.

6. To give adequate and effective economic aid to Iran.

7. To prevent Communist conquest of Formosa.

8. To help the Annamites and the French throw the Communists completely out of Indochina.

9. To insist that the UN—now paralyzed by Soviet veto and boycott—function as if there were no Soviet boycott.

These are but a few of the obvious steps that we must take immediately if we are to wrest the offensive from Stalin.

Won't such a policy be terribly expensive? Of course it will be. Each one of us will have to make sacrifices—genuine sacrifices that will be hard to bear. We have allowed Stalin to acquire such strength and to take over such races, resources, and strategic positions that nothing short of the full efforts of the American people will suffice to stop him. We are not technically at war; but we shall have to live and work as if we were at war.

We know what happens to a people that refuses to face—in time—a mortal danger. Yet today our Government is behaving as the French Government behaved from 1936 to 1939. In that period when the Germans were preparing for war and working 60 hours a week, the French cut their working hours to 40 a week. When the Germans were producing 700 planes a month, the French cut their plane production to 50 a month. They did this for the same reason that we are now reducing expenditures for our military forces and for aid to our friends throughout the world. The people of France, like all other peoples, wanted a higher standard of living and leisure. They did not realize that a higher standard of living and leisure would soon give them a higher rate of dying. In 1940 Hitler destroyed the independence of France. We restored the independence of France. There is no nation standing behind us to restore our independence.

It may be difficult for us to persuade our Government to change its present policies. President Truman has staked his political future on a program of handouts for crop support, housing, education, and other projects which appeal to groups of voters. To get more tax money for the handout program which produces votes, he has cut down the defense program which might produce survival. Our tax money is being used to buy surplus potatoes instead of jet planes. It will not be easy for him to change his course; but our best hope lies in the fact he is a patriot. If we can let him know that henceforth we want to hear from him not what we can get from our country but what we can give to our country, we shall make it easy for him to take the course which will enable our Nation to survive.

The burden of decision is on our President. He, by our Constitution, controls our foreign policy. He commands our armed forces. If he is to act in time to save our country from conquest by Stalin, he will have to change his thinking quickly. He will have to experience something like the transformation which Saul experienced on the road to Damascus when "there shined about him a light from heaven," and he became Paul the Apostle. We should hope and pray that a light from heaven will fall on President Truman; but we should also try to shed upon him a light from the public opinion of Americans who do not want to live soft for a few years and then be conquered, but do want to live hard and keep their country free.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Those Postal Cuts," from the Jamestown Sun, of Jamestown, N. Y.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THOSE POSTAL CUTS

To the party out of power the Post Office Department is always run by either an incompetent politician who got his job for faithful work in the party vineyard or a bureaucrat whose sole consideration is building up his bureaus with drones who slyly get around the civil service rules to swing a few votes at election time.

The operation of the Post Office has always been the classic example of the inefficiencies which attend the Government's attempts to run a business.

Jesse Donaldson, having come up from the ranks of the civil service to head the Post Office Department, doesn't fit very neatly into any of the categories reserved by the opposition for the Postmaster General. He not only knows the operation of the Post Office better than anyone to fill the office within memory, but he has also been a voice crying in the wilderness for greater postal efficiency and especially for requiring that those receiving concealed subsidies from the Department be made to pay a greater part of their share of the cost of operation of the Department.

Congress proposes now to cut the cost of postal operation. So, as an economy measure, Jesse Donaldson issues an order curtailing postal service to a single delivery a day in many places where residential delivery was on a two-a-day basis. This is calculated to save about $30,000,000—the equivalent of 10,000 carriers and clerks added to the ranks of the unemployed.

But Congressmen are howling. So are many who believe implicitly in economy until some specific act of economy is undertaken. This isn't the kind of economy they were asking for. Their idea of economy is something which affects the other fellow. Moreover, it's quite embarrassing to return home to campaign for reelection and face the embattled postal clerks and the voters who have had their mail service cut.

Now, as a matter of fact, Mr. Donaldson's order to curtail mail service and throw 10,000 carriers and clerks out of employment is of doubtful validity as an economy measure. It is more than just a drop in the bucket, but the question of its wisdom from an efficiency viewpoint is to be doubted. It is, however, a dramatic and forceful way of bringing home to the voters the demands for postal economy.

But anyone familiar with postal operations, as Mr. Donaldson certainly must be, knows that hundreds of post offices across the land are understaffed, rather than overstaffed; that better mail service, rather than curtailed service, is a crying need; and that a general order of curtailment such as he issued can have only the effect of increasing confusion in the post offices and hampering work already too great for a staff to handle properly.

There would perhaps be good reason for limiting home delivery of mail to a single

delivery a day, but most of the carriers who would be released could be absorbed into other postal operations needing more personnel. That, however, wouldn't provide the reduction in the postal budget which is sought.

The Hoover Commission report on the Post Office calls for economies in many directions. But Congress has avoided those economies in response to the pressures of those who have been receiving postal subsidies. Secretary Donaldson has now countered with a proposal which hits the Congressmen of both parties in their most vulnerable spot—the home folks.

We can be sure that the Congressmen will wriggle and squirm, and they may come to a decision that it is far better to increase rates on subsidized postage and save votes than to take a chance on the displeasure of those who go to the ballot box.

Mr. Donaldson has, however, put the generals on the spot—those generals who are always in favor of general economy but never in favor of a specific act of economy that affects them.

Americans in Asia Doubt United States Policy

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following extremely informative dispatch to the New York Times from its experienced correspondent in Asia. A wise doctor is always eager to change an erroneous or obsolete diagnosis in order to alter the treatment and save the patient's life. Will our Government be equally eager to change its erroneous diagnosis regarding the Chinese Government in order to alter drastically its policies and save the freedom of Asia? Our security depends whether it puts first its face or our freedom.

AMERICANS IN ASIA DOUBT UNITED STATES POLICY—SAID TO FEEL STATE DEPARTMENT FOLLOWS OUTDATED PLANS—TAIPEI HELD BEST HOPE

(By Burton Crane)

TOKYO, April 21.—Discontent with the State Department has become widespread among Americans working in Asia. In a 3-month trip to Formosa and Hong Kong this correspondent found few compatriots who defended present American policies.

The virtually unanimous opinion is that the Asiatic situation has changed tremendously in the last 6 months, and the State Department still is following policies that may have been valid a year ago but are not now. Even among Foreign Service officials there is a tendency to agree to the view that trying to check communism in the small southeast Asian countries will get nowhere and the best American bet is to help and use the reborn Nationalist Chinese Government as long as possible. It is the only force in Asia with a sizable anti-Communist army.

In justice it must be noted that many of the State Department's loudest critics are the same men who last autumn would have gone even further in the other direction. Then they would have rushed to recognize Communist China in the hope that by working with Mao Tze-tung's government the United States could prevent it from orienting its foreign affairs exclusively to Moscow.

But, argue the critics, the situation has changed since then and the policy also should change. Mr. Mao already has "leaned" toward Moscow, to use his own phrase, and there is no longer any advantage in continuing to advocate a policy designed to keep him from leaning. Besides, it is contended, Nationalist reorganization has made the Formosa regime a potentially valuable anti-Communist instrument.

Although inflation has been halted and financial affairs arranged so the Taipei Government meets its bills without printing banknotes, it is doing so at the expense of gold and supplies that won't last forever. Unless those stocks are replenished soon, collapse appears inevitable. Therefore, any aid must be prompt.

Even among Foreign Service employees this correspondent found no supporters for the view aired by Prof. Owen Lattimore in a Johns Hopkins speech last week. Professor Lattimore proposed that the United States let the Nationalists die, even hastening their fall on the theory after they had gone Mr. Mao would not be pressed so hard against Premier Stalin and the United States might be able to deal with him.

Men on the spot contend that Mr. Stalin already has taken steps to prevent any such eventuality by placing Soviet advisers in all branches of the Chinese Communist Government.

Both those who want immediate American aid for the Nationalist war effort and those who caution against going too fast agree that the Taipei Government has managed a virtually complete rebirth.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Postal Cut Called Shock Treatment," published in the New York Times of April 20, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POSTAL CUT CALLED SHOCK TREATMENT—CITIZENS BACKING THE HOOVER REPORT SAY IT IS HARDLY THE ANSWER TO DEPARTMENT'S ILLS

WASHINGTON, April 22.—The Citizens Committee for the Hoover report issued a statement today characterizing curtailment of postal services as "sudden shock treatment" that was "hardly the answer" to the Post-office Department's ills.

Tuesday's order to reduce most mail deliveries to one a day and otherwise cut expenses should have been preceded by congressional action on recommendations of the Hoover Commission on Organization of the Executive Branch of the Government, it was asserted.

The comments were made by Robert L. Johnson, national chairman of the citizens committee, in a statement distributed by committee headquarters here. Dr. Johnson is president of Temple University.

"The bipartisan Hoover Commission clearly showed the way to substantial savings in postal operations," he said. "All told, the Commission's recommendations, if fully adopted and installed, could mean a reduction of over $200,000,000 a year in the huge postal deficit of $500,000,000. Moreover, by streamlining and modernizing the post office structure and equipment, the efficiency of its services would actually be improved."

Nevertheless, Dr. Johnson continued, "absolutely no affirmative action" has yet been taken on any of a number of pending bills based on the Commission's report and endorsed by President Truman and Postmaster General Jesse M. Donaldson. The measures have been before Congress since July.

Dr. Johnson asserted that he was at a loss to understand the inaction, and went on to say:

"Postmaster General Donaldson and the 400,000 hard-working postal employees will be constantly hampered by an obsolete organizational structure and by antiquated methods and equipment until Congress acts. Meanwhile, Tuesday's action, causing hardship to thousands, highlights even more strongly the need for action.

"In effect, the post office is suffering from the chronic, wasting disease of inefficiency for which the Hoover Commission recommended concrete remedies and a healthful regimen. Sudden shock treatment is hardly the answer. Yet inertia and reluctance to give up special privileges are keeping the patient from treatment."

By the term "special privileges," Dr. Johnson alluded to congressional patronage in the appointment of postmasters, a practice which the Commission proposed to end.

"The Hoover Commission," he said, "distinctly pointed out that the lowered morale wrought by political appointment of postmasters was one of the basic causes of inefficiency in the Department."

Errors in Foreign Trade Policy

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1950

Mr. BYRNES of Wisconsin. Mr. Speaker, I call the attention of the House to two editorials that recently appeared in the Green Bay Press-Gazette which is published in Green Bay, Wis.

Our foreign trade policy is of great importance to the economy and security of this country. Jobs of American workers are at stake. The ability to maintain a supply of strategic goods is involved. The foreign trade policy of the United States must be realistic.

The following editorials point up some of the errors we must avoid in our thinking on this subject:

HERESIES IN FOREIGN TRADE

The President has appointed Gordon Gray as an assistant "to mobilize the resources of the Government and the experience and thinking of our people in charting our course" so as to maintain a high level of exports.

Hitler, in his flamboyant way, told the German people shortly after he came to power: "Export or perish."

UNIVERSITY OF MICHIGAN LIBRARIES

It is obvious that nations, like Germany, Britain, Italy, and Japan, to name important ones that are over-populated, must create manufactured products to trade for food and raw materials with such nations as have the latter but do not have the industries.

America is not such a Nation. It, like Russia, is self-supporting in all important particulars.

We should like to see every nation able to maintain a high standard of living. But in dividing up the American market with other nations, some errors of thinking have developed that should be stopped in their tracks.

The argument is, that we would like a lot of foreign trade but that to secure it we must permit imports from foreign countries in order to provide the necessary dollars to others to buy our products.

If this were true in all particulars, why would it not logically follow that the more of our own market we gave away, the better off we would be?

Politicians who play with this subject avoid entirely a discussion of normal trade. They are more interested in the immediate happy results of artificially created trade than they are in genuinely constructive building.

An illustration may suffice. Say we buy from the countries to the south of us nearly or about $2,000,000,000 worth of coffee, fruits, oil and a numerous list of other items peculiar to the tropics and that we can use. They spend most of that $2,000,000,000 purchasing the products of our industries that they cannot create. This is natural trade. It is healthy trade. But if we import from such countries cotton, potatoes, eggs, cheese, butter, or other items that we have in abundance in order to whoop up the figures and provide a few specialized industries with enlarged profits, we create a problem for ourselves while we tend at the same time to bloat the economy of the nations with which we deal.

Obviously countries like Germany, Britain, Italy, and Japan, overpopulated as they are, should arrange their trade agreements with nations that have raw materials and great food supplies but lack manufactured articles.

This idea has no relation to existing circumstances in any of these countries that were torn or ravaged by war and whose industrial plants have been seriously crippled. Marshall-plan gifts when limited to such replacements were not without supporting argument once it be conceded that vast presents between nations could actually tend to pacify the world.

The recent discovery of rich iron ore in forbidden parts of Canada and Venezuela and of manganese in Brazil will greatly increase the normal exports and imports between this country and our neighbors. There is no froth to that kind of trade. It carries no kinks. It wrecks no American business and no American producer. It makes no specialized taxes here in this country, no subsidies, no peasantry, and no political handout.

The President, we think, would have been a much wiser man had he appointed an assistant both to encourage and protect private enterprise in this country as it searches the Hudson Bay area of Canada and the jungles and mountain ranges of Central and South America for other hidden wealth.

Russia, of course, has made it much harder to normalize world trade because it rules from the Pacific Ocean clear to Berlin and Vienna and its obvious purpose is to employ force and violence to secure and maintain a corner on all the trade originating in that tremendous area. Nonetheless, the rest of the world should build its future upon normal demands instead of those highly stimulated trade conditions that are bound eventually to collapse.

Cutting His Throat To Help the Other Fellow

Emil Riebe, president of the CIO Textile Union, with its 400,000 members, told the assembled delegates at the union's convention at Boston that it would be better for American economy to give away surplus goods than to accept imports.

About the same time Mr. Holman, head of Standard Oil of New Jersey, made an address in which he favored increasing our imports by 100 percent in order to provide dollars to the rest of the world and therefore increase our output just that much more.

Columnist Sokolsky recently wrote an article with a linen napkin on his knees that had been made in the Soviet Union by the hollow-eyed slaves who dare not open their lips except to repeat a formula written for them by their master. These napkins naturally were for sale in this country below the price of the identical article made by American labor.

And while spokesmen for the "new concept" were urging us to drop our already low tariff barriers, a canning establishment in our Pacific Northwest was closing and sending all its workers home because it said it could not compete with canned crabmeat imported into this country by Russia. Our Atlantic canneries were also screaming for help because the British were rushing here great quantities of canned crabmeat which they had secured from Russia and could not dispose of among their own people.

American furriers and shoe manufacturers have also complained that they cannot continue to pay the American standard of wages if they must compete with slave labor either from Russia or its satellite countries.

We warn our readers to examine carefully the language employed by those who advocate opening up the American market to aliens. Try to find if you can, any one of them who will put his finger upon the particular article to be admitted and who will face the consequences of describing to us what will happen to American competitors in the same business. It is easy to sing a lullaby if one has the voice. It is not so easy to make bread and butter out of the words.

The Washington administration, knowingly or otherwise, is attempting to create in this land during peacetime a hectic wartime condition in which some plants will be closed down and other plants will be excessively taxed to take care of the unemployed. This is a childish and foolish policy. It is as absurd as if our Government could order us all to buy twice as many articles as we needed in order to give business to foreign firms, and then taxed the more prosperous among us to provide the money to pay for such goods although those who bought them could do nothing more with them than stack them up in the attic.

We are forgetful of the fact that we should aim at a normal life. We cannot wear two pairs of shoes at the same time. We do not need two suits of underclothes even in winter. It is silly to put on two neckties, one hanging down the front and the other hanging down the back. If we eat twice as much as we need, we will get high blood pressure. And if we drink twice as much as we should we will get drunk.

America stands ready and willing at all times to import anything for which it has a call. It does not help to straighten out affairs in the world by importing wastefully or to its own harm. If our country were directed by real leadership, it would show nations like Britain, Germany, Italy, and Japan how to create markets for their products in countries that need them and which have abundant foodstuffs to trade for them.

When the sirens start playing their lullabies, ask them which of our industries they want to close down. We need be that direct.

Disturbing Pattern—Resurgence of Isolationism Described as Threat to United States World Leadership

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1950

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks, I include pertinent paragraphs from Thomas L. Stokes' daily column, published in the Washington Star for Monday, May 8, 1950. The point of Mr. Stokes' remarks seemed to me to boil down to the fact that the same kind of men who caused the United States to become involved in World War II are rapidly planning to have us involved in a third world war. Unless we have the courage to stand up for what we believe to be right now, a third world war will be inevitable at a time and place not of our choosing.

Disturbing Pattern—Resurgence of Isolationism Described as Threat to United States World Leadership

(By Thomas L. Stokes)

A disturbing pattern of confusion of purpose and disunity that threatens our position of leadership in the world at a most critical time has revealed itself recently. It deserves some hard thinking.

It is made up of a resurgence of isolationism of McCarthyism, of economy in the wrong directions, of bitterness and cynicism among our own people. There is politics involved, and it is unfortunate that we have a campaign that lends itself to exploitation just at this time, but it seems to go deeper than mere politics.

It is hard for us, a nation comparatively new in a world role, to recognize what responsibility that entails; to recognize how what we do, often in our careless, boisterous, and frolicking way, now is watched intently all over the world and frequently misunderstood. To perform our mission in the world, and we have a serious one, it is essential that we present a united front and demonstrate a capacity to "stay put," so to speak, so that our friends and allies can depend upon a firm, continuous, and consistent policy without deviation or backing away and can depend upon us and have confidence in us.

We cannot walk alone.

EUROPEANS CAUTIOUS

Ever since our refusal to enter the League of Nations after the First World War and to cooperate with other nations in that era, European nations have had a fingers-crossed attitude about us. They have perhaps been more sensitive to our every whim than was justified. Unable still to understand our free and easy domestic politics, they have sometimes magnified minor political maneuvers of no real consequence beyond their true significance as indications that we wanted to pull out of our assumed obligations.

It must be hard, too, for our European friends to understand how a former President of the United States, Herbert Hoover, would propose to throw Russia out of the United Nations and break up that organization which we, ourselves, initiated. It is still a unifying influence in the world, a source of many humanitarian endeavors of great and lasting value, and the only forum where our allies are continually able to stand

up and reveal to the whole world their own attitude toward Russian designs which are continually exposed there publicly. Isolationists have exploited Mr. Hoover's unfortunate proposal.

Isolationism feeds, too, upon the reckless campaign of Senator McCarthy, who still is trying to find a Communist somewhere in the State Department. It is not only breeding fear and suspicion among our people, shaking their faith with no reason whatever in their institutions, but shows to the world the spectacle of a great nation torn and divided over a matter that a mature nation would handle quietly, as we have handled it quietly and effectively up to now, and without benefit of the McCarthys. It reveals us as an inept, timorous people and to that extent shakes confidence in us beyond our own borders.

The hates and prejudices it has aroused are alarming. It is to be hoped that this does not persist to confuse the real issues that our country faces in the November election, issues affecting our welfare as a Nation and its role of leadership in the world.

It is time to pause and take a look at ourselves.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Post Office Department Seen Using Scare To Get More Cash," published in the Springfield Daily News of Springfield, Mass., of April 20, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POST OFFICE DEPARTMENT SEEN USING SCARE TO GET MORE CASH—PERSONNEL CUT ORDER HELD MOVE TO PRESSURE CONGRESS INTO LINE

Growing resentment against what is termed "political maneuvering" by high Post Office Department officials was seen today as observers branded coming mail service cuts a move to pressure Congress into going easy with expected slashes in post office appropriations.

A recent directive from Postmaster General Jesse M. Donaldson's Washington office ordered drastic cuts in mail service in anticipation of budget cuts amounting to $24,921,000. The trimmed budget was reported out of committee and Congressional approval of the cut is feared by mail officials.

Informed sources in Springfield, who refused to be quoted, said today that the post office hierarchy is trying to scare the public into applying pressure on Congress to prevent the loss of funds, as recommended in Washington.

"It's a bluff," said one observer who knows the situation. "The Post Office Department isn't sure the budget will be cut, but they are afraid of what Congress might do. There are a lot of veterans who would be affected if the decreased service becomes an actuality and each one of those vets is a pressure on his Congressman in Washington."

According to the Washington directive, the change-over to limited mail service must be accomplished by July 1, the date the Post Office's new fiscal year begins.

Scares of what will happen to vets who took out GI loans and bought or built homes, if they are laid off by the post office are rapidly gaining momentum, according to postal workers, who point out that these vets could not collect any unemployment compensation. A lot of behind the scenes politicing will take place, however, before any such moves take place, according to officials.

It remains to be seen just how effective the postal campaign to prevent budget cuts is, and notices won't go out if the "scare" falls flat, as it well might, observers said.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Misplaced Economy," published in the Strafford Star of Dover, N. H., of April 19, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MISPLACED ECONOMY

Most Americans are deeply concerned with the continued national budget and the accompanying heavy tax burden, so that they are eager to see governmental economies—but there will be general agreement that the Post Office Department was not the right place to start.

The decision to discharge 10,000 postmen and to limit home mail deliveries to one a day is not welcome. This move is a throwback, turning back the pages of time for postal service. It means depriving thousands of loyal workers of jobs, causing millions of Americans to be deprived of the early delivery of mail to which they have become accustomed.

There has been plenty of exaggerated growth of other governmental departments. The Hoover report revealed explicitly many places where consolidation, merger and elimination of bureaus could save the taxpayers millions of dollars. We have in mind particularly some of those Federal agencies which sprang up as emergency or war babies but have continued ever since.

One form of minor relief for the Post Office Department could be embodied in a resolution curtailing the amount of free mailing allowed Members of Congress under their franking privileges. While this might be only a small saving, it would hurt no one—except those politicians who might feel that their constituents are thereby deprived of reading their immortal words.

The present maneuver is so ill-advised as to suggest the possibility that it was done deliberately in order to provoke a wave of protest against all economy moves. It could be an attempt to use the Post Office Department as a scapegoat in order to protect other less deserving agencies.

In the meanwhile, we hold that Government economy can be more judiciously directed toward those avenues where a plethora of bureaucratic agencies cling in parasitic fashion to their unnecessary existence. As one department which is performing an excellent job of direct service, the Post Office should be left largely alone.

Twenty Years of Flying Without Fatality

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1950

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following statement made by Mr. Sigmund Janas, president of Colonial Airlines, Inc., on the occasion of its recent celebration of a world record of 20 years of flying without a single fatality to any passenger or any member of its crew:

SAFETY RECORD

Twenty years of flying in all kinds of weather without a single fatality to any passenger or to any member of the crew is indeed an enviable record. It has never before been achieved, and it is made all the more interesting if we pause and reflect that during those 20 years Colonial Airlines flew 310,000,000 passenger miles, and in doing this, made 455,000 landings and takeoffs without a single fatality. This record could only have been achieved through the cooperation of every man and woman in Colonial Airlines, and each and every one of them can be justly proud. The maintenance department and all other employees had to do their part in order that a record of this unequaled excellence could be obtained. To each of them goes my sincere thanks and congratulations.

This record of 20 years of safety without a single fatality is simply an indication of what the future holds for the whole commercial air-transportation industry. All the American airlines have been steadily achieving new highs in their safety records, and the day is not far distant when I believe an airplane accident will be one of the rarest things in the world.

The personnel of all of the American airlines is, in my opinion, the finest to be found anywhere in the world, and many of these men and women are veterans who volunteered their lives in achieving air supremacy in World War II. With the achievements of war behind them, these men and women turned their minds to making American aviation the greatest in the world. The same careful thought which they put into the accomplishment of their missions in the war is now being expended in making air transportation better and safer.

Today we hear a great deal about new types of power for airplanes, and uninitiated are straining on the leash to see inaugurated service in various parts of the world with use of jet liners. Now, there is no question that the jet liner or any other type of new equipment is of great interest to the industry, nevertheless, we must use prudence and judgment and remember that we are the guardians of the lives of our passengers. They rely upon us to see that their confidence is not misplaced. The tremendous increase in speed in aviation and particularly in types of air transport planes makes those of us in the industry realize the increased problems which attend the increased speed and any new equipment.

I have argued for years and will continue to urge that no airplane be permitted to engage in commercial air transportation unless it is flown at least 3,000 hours as a freight carrier or in some type of work where it receives the necessary take-offs and landings and has tested the normal weather that all planes in scheduled air transportation must overcome.

UNIVERSITY OF MICHIGAN LIBRARIES

By all means, we should give every encouragement to builders of new equipment, but we should use that equipment only after it has been proved to be of the quality justifying our confidence and only after it has shown that it is free of bugs and is safe. The standards of safety laid down for American air transport companies is higher than that of any other nation in the world and the primary consideration of all of us is the protection of the American people and our friends throughout the world, who show their confidence in American fliers and American planes by patronizing our flag lines. We must keep the faith with these people.

One day the jet plane will no doubt find a place in air transportation but this should come only after the questions of its safety have been solved. We should not confuse military aircraft with air transport liners because their purposes are entirely different. The Military Establishment has their attention focused upon the success of a mission and the accomplishment of this in safety is not always the primary consideration. In commercial air transportation, safety must be first, last, and all the time the principal consideration governing every flight.

Faster equipment of the jet type will require adjustments in our airports, the extension of the runways, and improved control of flying around any airport which they intend to use. These things are not accomplished overnight, and we must not forget our sacred responsibility to the air traveling public during the experimentation with and eventual adaptation of that sort of plane in the years ahead to air transportation. While the jets and their accomplishments are newsworthy, the conservative air transport operator can only prudently see them as rays of hope on the horizons of the future types of transportation.
